SOCRATES: The definition was assumed to be the interpretation of your difference.

THEAETETUS: True.

SOCRATES: But when I had only opinion, I had no conception of your distinguishing characteristics.

THEAETETUS: I suppose not.

SOCRATES: Then I must have conceived of some general or common nature which no more belonged to you than to another.

THEAETETUS: True.

SOCRATES: Tell me, now — How in that case could I have formed a judgment of you any more than of any one else? Suppose that I imagine Theaetetus to be a man who has nose, eyes, and mouth, and every other member complete; how would that enable me to distinguish Theaetetus from Theodorus, or from some outer barbarian?

THEAETETUS: How could it?

SOCRATES: Or if I had further conceived of you, not only as having nose and eyes, but as having a snub nose and prominent eyes, should I have any more notion of you than of myself and others who resemble me?

THEAETETUS: Certainly not.

SOCRATES: Surely I can have no conception of Theaetetus until your snub-nosedness has left an impression on my mind different from the snub-nosedness of all others whom I have ever seen, and until your other peculiarities have a like distinctness; and so when I meet you to-morrow the right opinion will be re-called?

THEAETETUS: Most true.

SOCRATES: Then right opinion implies the perception of differences?

THEAETETUS: Clearly.

SOCRATES: What, then, shall we say of adding reason or explanation to right opinion? If the meaning is, that we should form an opinion of the way in which something differs from another thing, the proposal is ridiculous.

THEAETETUS: How so?

SOCRATES: We are supposed to acquire a right opinion of the differences which distinguish one thing from another when we have already a right opinion of them, and so we go round and round: — the revolution of the scytal, or pestle, or any other rotatory machine, in the same circles, is as nothing compared with such a requirement; and we may be truly described as the blind directing the blind; for to add those things which we already have, in order that we may learn what we already think, is like a soul utterly benighted.

THEAETETUS: Tell me; what were you going to say just now, when you asked the question?

SOCRATES: If, my boy, the argument, in speaking of adding the definition, had used the word to ‘know,’ and not merely ‘have an opinion’ of the difference, this which is the most promising of all the definitions of knowledge would have come to a pretty end, for to know is surely to acquire knowledge.

THEAETETUS: True.

SOCRATES: And so, when the question is asked, What is knowledge? this fair argument will answer ‘Right opinion with knowledge,’ — knowledge, that is, of difference, for this, as the said argument maintains, is adding the definition.

THEAETETUS: That seems to be true.

SOCRATES: But how utterly foolish, when we are asking what is knowledge, that the reply should only be, right opinion with knowledge of difference or of anything! And so, Theaetetus, knowledge is neither sensation nor true opinion, nor yet definition and explanation accompanying and added to true opinion?

THEAETETUS: I suppose not.

SOCRATES: And are you still in labour and travail, my dear friend, or have you brought all that you have to say about knowledge to the birth?

THEAETETUS: I am sure, Socrates, that you have elicited from me

a good deal more than ever was in me.

SOCRATES: And does not my art show that you have brought forth wind, and that the offspring of your brain are not worth bringing up?

THEAETETUS: Very true.

SOCRATES: But if, Theaetetus, you should ever conceive afresh, you will be all the better for the present investigation, and if not, you will be soberer and humbler and gentler to other men, and will be too modest to fancy that you know what you do not know. These are the limits of my art; I can no further go, nor do I know aught of the things which great and famous men know or have known in this or former ages. The office of a midwife I, like my mother, have received from God; she delivered women, I deliver men; but they must be young and noble and fair.

And now I have to go to the porch of the King Archon, where I am to meet Meletus and his indictment. To-morrow morning, Theodorus, I shall hope to see you again at this place.

CLITOPHON

Translated by George Burges

There is some disagreement between scholars regarding the authenticity of this late dialogue, as Socrates does not emerge victorious at the end of the debate. It is the shortest of all of Plato's dialogues and concerns Socrates' role as an exhorter of other people to engage in philosophic inquiry.

The dialogue features two participants, Clitophon and Socrates, and the central feature of the discussion is Clitophon's lengthy complaint about Socrates. The crux of this complaint is that, while no one excels Socrates in protreptic or exhortation to the virtues and the life of philosophy, no one is more useless to one already persuaded of their importance. Socrates does not respond, or the dialogue does not contain his response.

A medieval depiction of Socrates and Plato

CLITOPHON.

PERSONS OF THE DIALOGUE.

Socrates and Clitophon.

SOCRATES. A CERTAIN person has lately told me that Clitophon, the son of Aristonymus, has been conversing with Lysias, and blaming the passing the time with Socrates, but been praising immoderately the intercourse with Thrasymachus.

CLITOPHON. Whoever he was, Socrates, he has not accurately related to you the conversation I had with Lysias about you. For in some things indeed I did not praise you, but in others I did. But since you are evidently blaming me, although you pretend to care nothing about the matter, I will most willingly go through the conversation myself, especially since we happen to be alone, in order that you may the less imagine that I am ill disposed towards you. For now perhaps you have not heard correctly; so that you appear to be more harshly disposed towards me than is fitting. But if you will grant me the liberty of speech I shall most cheerfully accept it, and am willing to speak.

SOCRATES. Nay it would be disgraceful for myself when you are willing to benefit me, not to bear with you. For it is evident that, when I know in what respect I am better and worse, I shall pursue some things, and avoid others, to the utmost of my power.

CLITOPHON. You shall hear then. For while I am with you, Socrates, I am often astonished on hearing you; and you appear to me, as compared with other men, to speak most beautifully, when, reproving men, you exclaim like a god upon a machine — Whither are ye borne along ? And — Are ye ignorant, that ye are doing nothing that ye ought, ye, — who make every exertion how ye may get money, but neglect your children, to whom ye are to leave it, and the means whereby they may know how to use it justly; and do not find for them teachers of justice, if indeed it can be taught, and who, if it

is to be made the subject of meditation and exercise, may sufficiently exercise them in it. Nor yet do ye previously attend to yourselves; but, seeing that both ye and your children have learnt sufficiently grammar, and music, and the gymnastic arts, which ye have considered as the perfect discipline of virtue, yet afterwards that ye become no less depraved with respect to riches, why do ye not despise the present mode of education, and seek after those, who will cause you to cease from this illiberal line of life ? And yet it is through this neglect of what is right, and indolence, and not through the foot being out of time with the lyre, that brother himself arrays himself against brother, and states against states, and, out of all measure and harmony, are stirring up strife and war upon each other, and do and suffer the extreme of ill But ye say, that they, who are unjust, are unjust not through the want of instruction, nor through ignorance, but voluntarily ; and again, ye dare to assert that injustice is disgraceful and hateful to the gods. How then can any one voluntarily choose so great an evil ? He (does so) ye say, through being conquered by pleasure. Is not this then an involuntary act, since to conquer is a voluntary one ? So that reason perfectly convinces us, that to act unjustly is involuntary ; and that every man privately, and all cities publicly, ought to pay more attention than they do at present to their conduct.”

When therefore, Socrates, I hear you perpetually speaking so, I am greatly delighted with you, and pay you in a wonderful manner the tribute of praise. And when you say what follows in order upon this, that they, who cultivate their bodies, but neglect their soul, ‘do something different of this kind, in neglecting that, which is to govern, but busily attending to what is to be governed ; and when you assert that it is better for him, who does not know how to use a thing, to leave alone the use of it; for if a person does not know how to use his eyes or ears, or his whole body, it is better for him not to hear, nor see, nor to use his body for any need, than to use it in any way; and in a similar manner with respect to art. For it is evident (as you say) that he, who does not know how to use his own lyre, will not (know how to use) that of his neighbour; nor will he, who (knows not how to use) the (lyre) of others, (know how to use) his own, nor any other instrument or chattel whatever; and this your discourse

ended beautifully (by inferring), that for him, who does not know how to use his soul, it is better to be at rest with respect to his soul, and not to live, than to live and act according to his own caprice; but, if there is any necessity for such a person to live, that it is better for him to lead the life of a slave, than of a freeman. For that this is to deliver the rudder of the mind, like that of a ship, to mother, who has learnt the art of governing men; which, Socrates, you have often called the statesman's art, and said it is the same as that of the judge and justice. To these, and many other and very beautiful reasonings, in which it is asserted that virtue can be taught, and that a person ought above all things to pay attention to himself, I have scarcely at any time said a word in opposition, nor do I think that I shall ever say. For I deem them to be very exhortatory and useful, and really awakening us, as if we were asleep. I have therefore given my mind to them, as one about to hear what is to follow and I have asked at first, not yourself Socrates, but your equals in age, or fellow-thinkers, or Mends, or in whatever name one must call the (party) thus disposed towards you. For among them, I have first of all asked those, who are thought by you to be something, by inquiring what would be the discourse after this; and laying down a subject after your manner, I have said to them — How are we to receive for the present, O best of men, the exhortation of Socrates to virtue ? as being merely a word, but that it is not in our power to follow it up in deed, and to comprehend it thoroughly? And will this be our employment through the whole of life, to exhort those who have not been exhorted as yet? and for them (to exhort) others? Or is it requisite for us after this to inquire of Socrates and each other, since we confess that this should be done, what is to come next? How, say we, ought we to begin the discipline relating to justice? As if some one had exhorted us to pay attention to the body, on perceiving that we, like boys, had no notion that the care of the body belongs to the gymnastic and medical arts, and afterwards reproached us by saying, that it was disgraceful to pay every attention to wheat and barley, and vines, and such other things as we labour to obtain for the sake of the body, but that we search after no art or device, so that the body may be rendered in the best condition, and this too when there is such an art. If then we inquired of the person so exhorting us — Do

you say there are such arts as these? perhaps he would say, There are the gymnastic and medical arts. ‘And what now, we said, is the art that relates to the virtue of the soul ? Let it be mentioned. But he, who seemed to be of the greatest strength for giving an answer to these questions, said to myself, that the very art, which you have heard Socrates mention, is no other than justice. And on my saying — Tell me not merely the name of the art, but explain it further in this way. There is an art called the medical. By this two things are effected; one, that physicians are always forming other physicians in addition to those already existing; the other, to effect health. Now of these one is no longer an art, but the work of the art, which teaches and is taught, which we call health. And in the case of carpentry, there is the building and the art; one the effect, and the other the teaching. So too of justice, one part is to make persons just, as each (of the arts mentioned) above (makes) artists. But what shall we say is the other, work, which a just man is able to do for us ? State it. One person has, I think, said in answer to us, that it is “the conducive;” another, that it is “the becoming;” another, that it, is “the useful;” and another, that it is “the profitable.” But I rejoined by saying, that these very names exist in each of the arts, namely, to act rightly, profitably, usefully, and the like. But that, to which all these tend, each art will state itself. Thus, the art of carpentry will say, that “ the right,” “ the beautiful,” “ the becoming,” (tend to this,) that wooden furniture may be (aptly) made; which is not art, (but the work of art). Let in like manner be mentioned, the work of justice. At last one of your friends, Socrates, who appeared to speak most elegantly, answered me, that this was .the work peculiar to justice, which does not belong to any other science, namely, to cause a friendship amongst states. But he, on the other hand, on being interrogated, said that friendship was a good, and by no means an evil. But on being asked about the friendships of boys and of wild animals, for by that name we call (their attachments), he did not admit that they are friendships; for it happened that such (friendships) of theirs were for the greater part hurtful rather than advantageous; and that those, who call them so, call them falsely; but that friendship existing really and truly was most clearly an union of sentiment. But on being asked whether he meant by an union of sentiment, an agreement in opinion or science,,

he repudiated the agreement in opinion; for many and hurtful agreements in opinion are compelled to take place amongst men; but he conceded that friendship was entirely a good, and the work of justice; so that he said, an agreement in sentiment was the same as science really existing, but not opinion. But when we were at this part of our discourse, the parties present being in a state of doubt were competent to find fault with him, and to say, that the reasoning had run round to the point first mooted; and they affirmed that the medical art is a certain agreement in sentiment; 'and so are all the other arts; and that they are able to state about what they are conversant; but that the art called by you justice, or an agreement in sentiment, it had escaped them as to whither it tends, and that it is not manifest what is its work. At last I inquired of yourself, Socrates, upon these points; and you told me that it is the work of justice to injure enemies, and benefit friends,; but afterwards it appeared to you, that the just man will never injure any one, but will act to the ad-f vantage of every one in all things. Having endured this not once, nor even twice, but for a length of time, and being .urgent with you, Socrates, I was tired out; thinking, indeed, , that you effected in the best manner of all men, the exhortation to the study of virtue; but that one of two things (must take place), either that you are able to effect thus much alone, but nothing further — which might happen in the case of any other art — as, for instance, that he who is not a pilot, may exercise himself in praising the pilot's art, as a thing of great value to man; and similarly in the case of other arts — so a person may perhaps apply the same remark on the subject of justice to yourself as not having a greater knowledge than others of its nature, because you praise it in a beautiful manner. Such however is not my (opinion), but (as I say), one of two things (take place) ; either that you do not know (what justice is), or that you are unwilling to impart (the knowledge of it) to me. On this account then, I think I shall go to Thrasyarchus, and wherever else I can, as being in doubt, (and where I hope I shall be freed from doubts; nor should I betake myself elsewhere,) if you were willing to finish your exhortatory discourses to me. Now, for instance, if I had been exhorted on the subject of the gymnastic art, that I ought not to neglect the body, you would state to me what comes next after the exhortation-speech, what is the nature

of my body, and what attention it requires. And let this be done at present Lay it down then that Clitophon acknowledges it to be ridiculous to pay attention to other things, but to neglect the soul, for the sake of which we labour in other things; and imagine that I have really spoken upon all other points, next in order to those, which I have just now gone through. I beg of yon not to act in any respect otherwise, that I may not (hereafter), as at present, partly praise yon before Lysias and the rest, and blame you likewise in part. For I will say, Socrates, that you are worth every thing to the man, who is not yet exhorted; but to him who has been exhorted, you are nearly an impediment to his arriving at the end of virtue, and becoming happy.

TIMAEUS

Translated by Benjamin Jowett

This dialogue, which features a long monologue given by the title character, was written circa 360 BC. *Timaeus* concerns the nature of the physical world and human beings and is followed by the dialogue *Critias*.

The dialogue takes place the day after Socrates has described his ideal state. In Plato's works such a discussion occurs in the *Republic*. Socrates feels that his description of the ideal state wasn't sufficient for the purposes of entertainment and that "I would be glad to hear some account of it engaging in transactions with other states".

Locri, southern Italy, home of Timaeus the Pythagorean philosopher

INTRODUCTION AND ANALYSIS.
TIMAEUS.

INTRODUCTION AND ANALYSIS.

Of all the writings of Plato the *Timaeus* is the most obscure and repulsive to the modern reader, and has nevertheless had the greatest influence over the ancient and mediaeval world. The obscurity arises in the infancy of physical science, out of the confusion of theological, mathematical, and physiological notions, out of the desire to conceive the whole of nature without any adequate knowledge of the parts, and from a greater perception of similarities which lie on the surface than of differences which are hidden from view. To bring sense under the control of reason; to find some way through the mist or labyrinth of appearances, either the highway of mathematics, or more devious paths suggested by the analogy of man with the world, and of the world with man; to see that all things have a cause and are tending towards an end — this is the spirit of the ancient physical philosopher. He has no notion of trying an experiment and is hardly capable of observing the curiosities of nature which are ‘tumbling out at his feet,’ or of interpreting even the most obvious of them. He is driven back from the nearer to the more distant, from particulars to generalities, from the earth to the stars. He lifts up his eyes to the heavens and seeks to guide by their motions his erring footsteps. But we neither appreciate the conditions of knowledge to which he was subjected, nor have the ideas which fastened upon his imagination the same hold upon us. For he is hanging between matter and mind; he is under the dominion at the same time both of sense and of abstractions; his impressions are taken almost at random from the outside of nature; he sees the light, but not the objects which are revealed by the light; and he brings into juxtaposition things which to us appear wide as the poles asunder, because he finds nothing between them. He passes abruptly from persons to ideas and numbers, and from ideas and numbers to persons, — from the heavens to man, from astronomy to physiology; he confuses, or rather does not distinguish, subject and object, first and final causes, and is dreaming of geometrical figures lost in a flux of sense. He contrasts the perfect movements of the heavenly bodies with the imperfect representation of them (*Rep.*), and he does not

always require strict accuracy even in applications of number and figure (Rep.). His mind lingers around the forms of mythology, which he uses as symbols or translates into figures of speech. He has no implements of observation, such as the telescope or microscope; the great science of chemistry is a blank to him. It is only by an effort that the modern thinker can breathe the atmosphere of the ancient philosopher, or understand how, under such unequal conditions, he seems in many instances, by a sort of inspiration, to have anticipated the truth.

The influence with the *Timaeus* has exercised upon posterity is due partly to a misunderstanding. In the supposed depths of this dialogue the Neo-Platonists found hidden meanings and connections with the Jewish and Christian Scriptures, and out of them they elicited doctrines quite at variance with the spirit of Plato. Believing that he was inspired by the Holy Ghost, or had received his wisdom from Moses, they seemed to find in his writings the Christian Trinity, the Word, the Church, the creation of the world in a Jewish sense, as they really found the personality of God or of mind, and the immortality of the soul. All religions and philosophies met and mingled in the schools of Alexandria, and the Neo-Platonists had a method of interpretation which could elicit any meaning out of any words. They were really incapable of distinguishing between the opinions of one philosopher and another — between Aristotle and Plato, or between the serious thoughts of Plato and his passing fancies. They were absorbed in his theology and were under the dominion of his name, while that which was truly great and truly characteristic in him, his effort to realize and connect abstractions, was not understood by them at all. Yet the genius of Plato and Greek philosophy reacted upon the East, and a Greek element of thought and language overlaid and partly reduced to order the chaos of Orientalism. And kindred spirits, like St. Augustine, even though they were acquainted with his writings only through the medium of a Latin translation, were profoundly affected by them, seeming to find ‘God and his word everywhere insinuated’ in them (August. Confess.)

There is no danger of the modern commentators on the *Timaeus* falling into the absurdities of the Neo-Platonists. In the present day

we are well aware that an ancient philosopher is to be interpreted from himself and by the contemporary history of thought. We know that mysticism is not criticism. The fancies of the Neo-Platonists are only interesting to us because they exhibit a phase of the human mind which prevailed widely in the first centuries of the Christian era, and is not wholly extinct in our own day. But they have nothing to do with the interpretation of Plato, and in spirit they are opposed to him. They are the feeble expression of an age which has lost the power not only of creating great works, but of understanding them. They are the spurious birth of a marriage between philosophy and tradition, between Hellas and the East — (Greek) (Rep.). Whereas the so-called mysticism of Plato is purely Greek, arising out of his imperfect knowledge and high aspirations, and is the growth of an age in which philosophy is not wholly separated from poetry and mythology.

A greater danger with modern interpreters of Plato is the tendency to regard the *Timaeus* as the centre of his system. We do not know how Plato would have arranged his own dialogues, or whether the thought of arranging any of them, besides the two 'Trilogies' which he has expressly connected; was ever present to his mind. But, if he had arranged them, there are many indications that this is not the place which he would have assigned to the *Timaeus*. We observe, first of all, that the dialogue is put into the mouth of a Pythagorean philosopher, and not of Socrates. And this is required by dramatic propriety; for the investigation of nature was expressly renounced by Socrates in the *Phaedo*. Nor does Plato himself attribute any importance to his guesses at science. He is not at all absorbed by them, as he is by the IDEA of good. He is modest and hesitating, and confesses that his words partake of the uncertainty of the subject (*Tim.*). The dialogue is primarily concerned with the animal creation, including under this term the heavenly bodies, and with man only as one among the animals. But we can hardly suppose that Plato would have preferred the study of nature to man, or that he would have deemed the formation of the world and the human frame to have the same interest which he ascribes to the mystery of being and not-being, or to the great political problems which he discusses in the *Republic* and the *Laws*. There are no speculations on physics in the

other dialogues of Plato, and he himself regards the consideration of them as a rational pastime only. He is beginning to feel the need of further divisions of knowledge; and is becoming aware that besides dialectic, mathematics, and the arts, there is another field which has been hitherto unexplored by him. But he has not as yet defined this intermediate territory which lies somewhere between medicine and mathematics, and he would have felt that there was as great an impiety in ranking theories of physics first in the order of knowledge, as in placing the body before the soul.

It is true, however, that the *Timaeus* is by no means confined to speculations on physics. The deeper foundations of the Platonic philosophy, such as the nature of God, the distinction of the sensible and intellectual, the great original conceptions of time and space, also appear in it. They are found principally in the first half of the dialogue. The construction of the heavens is for the most part ideal; the cyclic year serves as the connection between the world of absolute being and of generation, just as the number of population in the *Republic* is the expression or symbol of the transition from the ideal to the actual state. In some passages we are uncertain whether we are reading a description of astronomical facts or contemplating processes of the human mind, or of that divine mind (*Phil.*) which in Plato is hardly separable from it. The characteristics of man are transferred to the world-animal, as for example when intelligence and knowledge are said to be perfected by the circle of the Same, and true opinion by the circle of the Other; and conversely the motions of the world-animal reappear in man; its amorphous state continues in the child, and in both disorder and chaos are gradually succeeded by stability and order. It is not however to passages like these that Plato is referring when he speaks of the uncertainty of his subject, but rather to the composition of bodies, to the relations of colours, the nature of diseases, and the like, about which he truly feels the lamentable ignorance prevailing in his own age.

We are led by Plato himself to regard the *Timaeus*, not as the centre or inmost shrine of the edifice, but as a detached building in a different style, framed, not after the Socratic, but after some Pythagorean model. As in the *Cratylus* and *Parmenides*, we are uncertain whether Plato is expressing his own opinions, or

appropriating and perhaps improving the philosophical speculations of others. In all three dialogues he is exerting his dramatic and imitative power; in the *Cratylus* mingling a satirical and humorous purpose with true principles of language; in the *Parmenides* overthrowing Megarianism by a sort of ultra-Megarianism, which discovers contradictions in the one as great as those which have been previously shown to exist in the ideas. There is a similar uncertainty about the *Timaeus*; in the first part he scales the heights of transcendentalism, in the latter part he treats in a bald and superficial manner of the functions and diseases of the human frame. He uses the thoughts and almost the words of *Parmenides* when he discourses of being and of essence, adopting from old religion into philosophy the conception of God, and from the Megarians the IDEA of good. He agrees with *Empedocles* and the Atomists in attributing the greater differences of kinds to the figures of the elements and their movements into and out of one another. With *Heracleitus*, he acknowledges the perpetual flux; like *Anaxagoras*, he asserts the predominance of mind, although admitting an element of necessity which reason is incapable of subduing; like the Pythagoreans he supposes the mystery of the world to be contained in number. Many, if not all the elements of the Pre-Socratic philosophy are included in the *Timaeus*. It is a composite or eclectic work of imagination, in which Plato, without naming them, gathers up into a kind of system the various elements of philosophy which preceded him.

If we allow for the difference of subject, and for some growth in Plato's own mind, the discrepancy between the *Timaeus* and the other dialogues will not appear to be great. It is probable that the relation of the ideas to God or of God to the world was differently conceived by him at different times of his life. In all his later dialogues we observe a tendency in him to personify mind or God, and he therefore naturally inclines to view creation as the work of design. The creator is like a human artist who frames in his mind a plan which he executes by the help of his servants. Thus the language of philosophy which speaks of first and second causes is crossed by another sort of phraseology: 'God made the world because he was good, and the demons ministered to him.' The *Timaeus* is cast in a more theological and less philosophical mould than the other

dialogues, but the same general spirit is apparent; there is the same dualism or opposition between the ideal and actual — the soul is prior to the body, the intelligible and unseen to the visible and corporeal. There is the same distinction between knowledge and opinion which occurs in the *Theaetetus* and *Republic*, the same enmity to the poets, the same combination of music and gymnastics. The doctrine of transmigration is still held by him, as in the *Phaedrus* and *Republic*; and the soul has a view of the heavens in a prior state of being. The ideas also remain, but they have become types in nature, forms of men, animals, birds, fishes. And the attribution of evil to physical causes accords with the doctrine which he maintains in the *Laws* respecting the involuntariness of vice.

The style and plan of the *Timaeus* differ greatly from that of any other of the Platonic dialogues. The language is weighty, abrupt, and in some passages sublime. But Plato has not the same mastery over his instrument which he exhibits in the *Phaedrus* or *Symposium*. Nothing can exceed the beauty or art of the introduction, in which he is using words after his accustomed manner. But in the rest of the work the power of language seems to fail him, and the dramatic form is wholly given up. He could write in one style, but not in another, and the Greek language had not as yet been fashioned by any poet or philosopher to describe physical phenomena. The early physiologists had generally written in verse; the prose writers, like Democritus and Anaxagoras, as far as we can judge from their fragments, never attained to a periodic style. And hence we find the same sort of clumsiness in the *Timaeus* of Plato which characterizes the philosophical poem of Lucretius. There is a want of flow and often a defect of rhythm; the meaning is sometimes obscure, and there is a greater use of apposition and more of repetition than occurs in Plato's earlier writings. The sentences are less closely connected and also more involved; the antecedents of demonstrative and relative pronouns are in some cases remote and perplexing. The greater frequency of participles and of absolute constructions gives the effect of heaviness. The descriptive portion of the *Timaeus* retains traces of the first Greek prose composition; for the great master of language was speaking on a theme with which he was imperfectly acquainted, and had no words in which to express his meaning. The rugged

grandeur of the opening discourse of Timaeus may be compared with the more harmonious beauty of a similar passage in the Phaedrus.

To the same cause we may attribute the want of plan. Plato had not the command of his materials which would have enabled him to produce a perfect work of art. Hence there are several new beginnings and resumptions and formal or artificial connections; we miss the '*callida junctura*' of the earlier dialogues. His speculations about the Eternal, his theories of creation, his mathematical anticipations, are supplemented by desultory remarks on the one immortal and the two mortal souls of man, on the functions of the bodily organs in health and disease, on sight, hearing, smell, taste, and touch. He soars into the heavens, and then, as if his wings were suddenly clipped, he walks ungracefully and with difficulty upon the earth. The greatest things in the world, and the least things in man, are brought within the compass of a short treatise. But the intermediate links are missing, and we cannot be surprised that there should be a want of unity in a work which embraces astronomy, theology, physiology, and natural philosophy in a few pages.

It is not easy to determine how Plato's cosmos may be presented to the reader in a clearer and shorter form; or how we may supply a thread of connexion to his ideas without giving greater consistency to them than they possessed in his mind, or adding on consequences which would never have occurred to him. For he has glimpses of the truth, but no comprehensive or perfect vision. There are isolated expressions about the nature of God which have a wonderful depth and power; but we are not justified in assuming that these had any greater significance to the mind of Plato than language of a neutral and impersonal character... With a view to the illustration of the Timaeus I propose to divide this Introduction into sections, of which the first will contain an outline of the dialogue: (2) I shall consider the aspects of nature which presented themselves to Plato and his age, and the elements of philosophy which entered into the conception of them: (3) the theology and physics of the Timaeus, including the soul of the world, the conception of time and space, and the composition of the elements: (4) in the fourth section I shall consider the Platonic astronomy, and the position of the earth. There will remain, (5) the psychology, (6) the physiology of Plato, and (7)

his analysis of the senses to be briefly commented upon: (8) lastly, we may examine in what points Plato approaches or anticipates the discoveries of modern science.

Section 1.

Socrates begins the *Timaeus* with a summary of the *Republic*. He lightly touches upon a few points, — the division of labour and distribution of the citizens into classes, the double nature and training of the guardians, the community of property and of women and children. But he makes no mention of the second education, or of the government of philosophers.

And now he desires to see the ideal State set in motion; he would like to know how she behaved in some great struggle. But he is unable to invent such a narrative himself; and he is afraid that the poets are equally incapable; for, although he pretends to have nothing to say against them, he remarks that they are a tribe of imitators, who can only describe what they have seen. And he fears that the Sophists, who are plentifully supplied with graces of speech, in their erratic way of life having never had a city or house of their own, may through want of experience err in their conception of philosophers and statesmen. ‘And therefore to you I turn, *Timaeus*, citizen of *Locris*, who are at once a philosopher and a statesman, and to you, *Critias*, whom all Athenians know to be similarly accomplished, and to *Hermocrates*, who is also fitted by nature and education to share in our discourse.’

HERMOCRATES: ‘We will do our best, and have been already preparing; for on our way home, *Critias* told us of an ancient tradition, which I wish, *Critias*, that you would repeat to *Socrates*.’ ‘I will, if *Timaeus* approves.’ ‘I approve.’ Listen then, *Socrates*, to a tale of *Solon’s*, who, being the friend of *Dropidas* my great-grandfather, told it to my grandfather *Critias*, and he told me. The narrative related to ancient famous actions of the Athenian people, and to one especially, which I will rehearse in honour of you and of the goddess. *Critias* when he told this tale of the olden time, was ninety years old, I being not more than ten. The occasion of the rehearsal was the day of the *Apaturia* called the Registration of Youth, at which our parents gave prizes for recitation. Some poems

of Solon were recited by the boys. They had not at that time gone out of fashion, and the recital of them led some one to say, perhaps in compliment to Critias, that Solon was not only the wisest of men but also the best of poets. The old man brightened up at hearing this, and said: Had Solon only had the leisure which was required to complete the famous legend which he brought with him from Egypt he would have been as distinguished as Homer and Hesiod. 'And what was the subject of the poem?' said the person who made the remark. The subject was a very noble one; he described the most famous action in which the Athenian people were ever engaged. But the memory of their exploits has passed away owing to the lapse of time and the extinction of the actors. 'Tell us,' said the other, 'the whole story, and where Solon heard the story.' He replied — There is at the head of the Egyptian Delta, where the river Nile divides, a city and district called Sais; the city was the birthplace of King Amasis, and is under the protection of the goddess Neith or Athene. The citizens have a friendly feeling towards the Athenians, believing themselves to be related to them. Hither came Solon, and was received with honour; and here he first learnt, by conversing with the Egyptian priests, how ignorant he and his countrymen were of antiquity. Perceiving this, and with the view of eliciting information from them, he told them the tales of Phoroneus and Niobe, and also of Deucalion and Pyrrha, and he endeavoured to count the generations which had since passed. Thereupon an aged priest said to him: 'O Solon, Solon, you Hellenes are ever young, and there is no old man who is a Hellene.' 'What do you mean?' he asked. 'In mind,' replied the priest, 'I mean to say that you are children; there is no opinion or tradition of knowledge among you which is white with age; and I will tell you why. Like the rest of mankind you have suffered from convulsions of nature, which are chiefly brought about by the two great agencies of fire and water. The former is symbolized in the Hellenic tale of young Phaethon who drove his father's horses the wrong way, and having burnt up the earth was himself burnt up by a thunderbolt. For there occurs at long intervals a derangement of the heavenly bodies, and then the earth is destroyed by fire. At such times, and when fire is the agent, those who dwell by rivers or on the seashore are safer than those who dwell upon high and dry places, who in their turn are safer when the

danger is from water. Now the Nile is our saviour from fire, and as there is little rain in Egypt, we are not harmed by water; whereas in other countries, when a deluge comes, the inhabitants are swept by the rivers into the sea. The memorials which your own and other nations have once had of the famous actions of mankind perish in the waters at certain periods; and the rude survivors in the mountains begin again, knowing nothing of the world before the flood. But in Egypt the traditions of our own and other lands are by us registered for ever in our temples. The genealogies which you have recited to us out of your own annals, Solon, are a mere children's story. For in the first place, you remember one deluge only, and there were many of them, and you know nothing of that fairest and noblest race of which you are a seed or remnant. The memory of them was lost, because there was no written voice among you. For in the times before the great flood Athens was the greatest and best of cities and did the noblest deeds and had the best constitution of any under the face of heaven.' Solon marvelled, and desired to be informed of the particulars. 'You are welcome to hear them,' said the priest, 'both for your own sake and for that of the city, and above all for the sake of the goddess who is the common foundress of both our cities. Nine thousand years have elapsed since she founded yours, and eight thousand since she founded ours, as our annals record. Many laws exist among us which are the counterpart of yours as they were in the olden time. I will briefly describe them to you, and you shall read the account of them at your leisure in the sacred registers. In the first place, there was a caste of priests among the ancient Athenians, and another of artisans; also castes of shepherds, hunters, and husbandmen, and lastly of warriors, who, like the warriors of Egypt, were separated from the rest, and carried shields and spears, a custom which the goddess first taught you, and then the Asiatics, and we among Asiatics first received from her. Observe again, what care the law took in the pursuit of wisdom, searching out the deep things of the world, and applying them to the use of man. The spot of earth which the goddess chose had the best of climates, and produced the wisest men; in no other was she herself, the philosopher and warrior goddess, so likely to have votaries. And there you dwelt as became the children of the gods, excelling all men in virtue, and many

famous actions are recorded of you. The most famous of them all was the overthrow of the island of Atlantis. This great island lay over against the Pillars of Heracles, in extent greater than Libya and Asia put together, and was the passage to other islands and to a great ocean of which the Mediterranean sea was only the harbour; and within the Pillars the empire of Atlantis reached in Europe to Tyrrhenia and in Libya to Egypt. This mighty power was arrayed against Egypt and Hellas and all the countries bordering on the Mediterranean. Then your city did bravely, and won renown over the whole earth. For at the peril of her own existence, and when the other Hellenes had deserted her, she repelled the invader, and of her own accord gave liberty to all the nations within the Pillars. A little while afterwards there were great earthquakes and floods, and your warrior race all sank into the earth; and the great island of Atlantis also disappeared in the sea. This is the explanation of the shallows which are found in that part of the Atlantic ocean.'

Such was the tale, Socrates, which Critias heard from Solon; and I noticed when listening to you yesterday, how close the resemblance was between your city and citizens and the ancient Athenian State. But I would not speak at the time, because I wanted to refresh my memory. I had heard the old man when I was a child, and though I could not remember the whole of our yesterday's discourse, I was able to recall every word of this, which is branded into my mind; and I am prepared, Socrates, to rehearse to you the entire narrative. The imaginary State which you were describing may be identified with the reality of Solon, and our antediluvian ancestors may be your citizens. 'That is excellent, Critias, and very appropriate to a Panathenaic festival; the truth of the story is a great advantage.' Then now let me explain to you the order of our entertainment; first, Timaeus, who is a natural philosopher, will speak of the origin of the world, going down to the creation of man, and then I shall receive the men whom he has created, and some of whom will have been educated by you, and introduce them to you as the lost Athenian citizens of whom the Egyptian record spoke. As the law of Solon prescribes, we will bring them into court and acknowledge their claims to citizenship. 'I see,' replied Socrates, 'that I shall be well entertained; and do you, Timaeus, offer up a prayer and begin.'

TIMAEUS: All men who have any right feeling, at the beginning of any enterprise, call upon the Gods; and he who is about to speak of the origin of the universe has a special need of their aid. May my words be acceptable to them, and may I speak in the manner which will be most intelligible to you and will best express my own meaning!

First, I must distinguish between that which always is and never becomes and which is apprehended by reason and reflection, and that which always becomes and never is and is conceived by opinion with the help of sense. All that becomes and is created is the work of a cause, and that is fair which the artificer makes after an eternal pattern, but whatever is fashioned after a created pattern is not fair. Is the world created or uncreated? — that is the first question. Created, I reply, being visible and tangible and having a body, and therefore sensible; and if sensible, then created; and if created, made by a cause, and the cause is the ineffable father of all things, who had before him an eternal archetype. For to imagine that the archetype was created would be blasphemy, seeing that the world is the noblest of creations, and God is the best of causes. And the world being thus created according to the eternal pattern is the copy of something; and we may assume that words are akin to the matter of which they speak. What is spoken of the unchanging or intelligible must be certain and true; but what is spoken of the created image can only be probable; being is to becoming what truth is to belief. And amid the variety of opinions which have arisen about God and the nature of the world we must be content to take probability for our rule, considering that I, who am the speaker, and you, who are the judges, are only men; to probability we may attain but no further.

SOCRATES: Excellent, Timaeus, I like your manner of approaching the subject — proceed.

TIMAEUS: Why did the Creator make the world?...He was good, and therefore not jealous, and being free from jealousy he desired that all things should be like himself. Wherefore he set in order the visible world, which he found in disorder. Now he who is the best could only create the fairest; and reflecting that of visible things the intelligent is superior to the unintelligent, he put intelligence in soul and soul in body, and framed the universe to be the best and fairest

work in the order of nature, and the world became a living soul through the providence of God.

In the likeness of what animal was the world made? — that is the third question...The form of the perfect animal was a whole, and contained all intelligible beings, and the visible animal, made after the pattern of this, included all visible creatures.

Are there many worlds or one only? — that is the fourth question...One only. For if in the original there had been more than one they would have been the parts of a third, which would have been the true pattern of the world; and therefore there is, and will ever be, but one created world. Now that which is created is of necessity corporeal and visible and tangible, — visible and therefore made of fire, — tangible and therefore solid and made of earth. But two terms must be united by a third, which is a mean between them; and had the earth been a surface only, one mean would have sufficed, but two means are required to unite solid bodies. And as the world was composed of solids, between the elements of fire and earth God placed two other elements of air and water, and arranged them in a continuous proportion —

fire:air::air:water, and air:water::water:earth,

and so put together a visible and palpable heaven, having harmony and friendship in the union of the four elements; and being at unity with itself it was indissoluble except by the hand of the framer. Each of the elements was taken into the universe whole and entire; for he considered that the animal should be perfect and one, leaving no remnants out of which another animal could be created, and should also be free from old age and disease, which are produced by the action of external forces. And as he was to contain all things, he was made in the all-containing form of a sphere, round as from a lathe and every way equidistant from the centre, as was natural and suitable to him. He was finished and smooth, having neither eyes nor ears, for there was nothing without him which he could see or hear; and he had no need to carry food to his mouth, nor was there air for him to breathe; and he did not require hands, for there was nothing of which he could take hold, nor feet, with which to walk. All that he did was done rationally in and by himself, and he moved in a circle turning within himself, which is the most intellectual of motions; but

the other six motions were wanting to him; wherefore the universe had no feet or legs.

And so the thought of God made a God in the image of a perfect body, having intercourse with himself and needing no other, but in every part harmonious and self-contained and truly blessed. The soul was first made by him — the elder to rule the younger; not in the order in which our wayward fancy has led us to describe them, but the soul first and afterwards the body. God took of the unchangeable and indivisible and also of the divisible and corporeal, and out of the two he made a third nature, essence, which was in a mean between them, and partook of the same and the other, the intractable nature of the other being compressed into the same. Having made a compound of all the three, he proceeded to divide the entire mass into portions related to one another in the ratios of 1, 2, 3, 4, 9, 8, 27, and proceeded to fill up the double and triple intervals thus —

- over 1, $4/3$, $3/2$, - over 2, $8/3$, 3, - over 4, $16/3$, 6, - over 8:

- over 1, $3/2$, 2, - over 3, $9/2$, 6, - over 9, $27/2$, 18, - over 27;

in which double series of numbers are two kinds of means; the one exceeds and is exceeded by equal parts of the extremes, e.g. 1, $4/3$, 2; the other kind of mean is one which is equidistant from the extremes — 2, 4, 6. In this manner there were formed intervals of thirds, $3:2$, of fourths, $4:3$, and of ninths, $9:8$. And next he filled up the intervals of a fourth with ninths, leaving a remnant which is in the ratio of 256:243. The entire compound was divided by him lengthways into two parts, which he united at the centre like the letter X, and bent into an inner and outer circle or sphere, cutting one another again at a point over against the point at which they cross. The outer circle or sphere was named the sphere of the same — the inner, the sphere of the other or diverse; and the one revolved horizontally to the right, the other diagonally to the left. To the sphere of the same which was undivided he gave dominion, but the sphere of the other or diverse was distributed into seven unequal orbits, having intervals in ratios of twos and threes, three of either sort, and he bade the orbits move in opposite directions to one another — three of them, the Sun, Mercury, Venus, with equal swiftness, and the remaining four — the Moon, Saturn, Mars, Jupiter, with unequal swiftness to the three and to one another, but all in due

proportion.

When the Creator had made the soul he made the body within her; and the soul interfused everywhere from the centre to the circumference of heaven, herself turning in herself, began a divine life of rational and everlasting motion. The body of heaven is visible, but the soul is invisible, and partakes of reason and harmony, and is the best of creations, being the work of the best. And being composed of the same, the other, and the essence, these three, and also divided and bound in harmonical proportion, and revolving within herself — the soul when touching anything which has essence, whether divided or undivided, is stirred to utter the sameness or diversity of that and some other thing, and to tell how and when and where individuals are affected or related, whether in the world of change or of essence. When reason is in the neighbourhood of sense, and the circle of the other or diverse is moving truly, then arise true opinions and beliefs; when reason is in the sphere of thought, and the circle of the same runs smoothly, then intelligence is perfected.

When the Father who begat the world saw the image which he had made of the Eternal Gods moving and living, he rejoiced; and in his joy resolved, since the archetype was eternal, to make the creature eternal as far as this was possible. Wherefore he made an image of eternity which is time, having an uniform motion according to number, parted into months and days and years, and also having greater divisions of past, present, and future. These all apply to becoming in time, and have no meaning in relation to the eternal nature, which ever is and never was or will be; for the unchangeable is never older or younger, and when we say that he ‘was’ or ‘will be,’ we are mistaken, for these words are applicable only to becoming, and not to true being; and equally wrong are we in saying that what has become IS become and that what becomes IS becoming, and that the non-existent IS non-existent...These are the forms of time which imitate eternity and move in a circle measured by number.

Thus was time made in the image of the eternal nature; and it was created together with the heavens, in order that if they were dissolved, it might perish with them. And God made the sun and moon and five other wanderers, as they are called, seven in all, and

to each of them he gave a body moving in an orbit, being one of the seven orbits into which the circle of the other was divided. He put the moon in the orbit which was nearest to the earth, the sun in that next, the morning star and Mercury in the orbits which move opposite to the sun but with equal swiftness — this being the reason why they overtake and are overtaken by one another. All these bodies became living creatures, and learnt their appointed tasks, and began to move, the nearer more swiftly, the remoter more slowly, according to the diagonal movement of the other. And since this was controlled by the movement of the same, the seven planets in their courses appeared to describe spirals; and that appeared fastest which was slowest, and that which overtook others appeared to be overtaken by them. And God lighted a fire in the second orbit from the earth which is called the sun, to give light over the whole heaven, and to teach intelligent beings that knowledge of number which is derived from the revolution of the same. Thus arose day and night, which are the periods of the most intelligent nature; a month is created by the revolution of the moon, a year by that of the sun. Other periods of wonderful length and complexity are not observed by men in general; there is moreover a cycle or perfect year at the completion of which they all meet and coincide...To this end the stars came into being, that the created heaven might imitate the eternal nature.

Thus far the universal animal was made in the divine image, but the other animals were not as yet included in him. And God created them according to the patterns or species of them which existed in the divine original. There are four of them: one of gods, another of birds, a third of fishes, and a fourth of animals. The gods were made in the form of a circle, which is the most perfect figure and the figure of the universe. They were created chiefly of fire, that they might be bright, and were made to know and follow the best, and to be scattered over the heavens, of which they were to be the glory. Two kinds of motion were assigned to them — first, the revolution in the same and around the same, in peaceful unchanging thought of the same; and to this was added a forward motion which was under the control of the same. Thus then the fixed stars were created, being divine and eternal animals, revolving on the same spot, and the wandering stars, in their courses, were created in the manner already

described. The earth, which is our nurse, clinging around the pole extended through the universe, he made to be the guardian and artificer of night and day, first and eldest of gods that are in the interior of heaven. Vain would be the labour of telling all the figures of them, moving as in dance, and their juxta-positions and approximations, and when and where and behind what other stars they appear to disappear — to tell of all this without looking at a plan of them would be labour in vain.

The knowledge of the other gods is beyond us, and we can only accept the traditions of the ancients, who were the children of the gods, as they said; for surely they must have known their own ancestors. Although they give no proof, we must believe them as is customary. They tell us that Oceanus and Tethys were the children of Earth and Heaven; that Phoreys, Cronos, and Rhea came in the next generation, and were followed by Zeus and Here, whose brothers and children are known to everybody.

When all of them, both those who show themselves in the sky, and those who retire from view, had come into being, the Creator addressed them thus:— ‘Gods, sons of gods, my works, if I will, are indissoluble. That which is bound may be dissolved, but only an evil being would dissolve that which is harmonious and happy. And although you are not immortal you shall not die, for I will hold you together. Hear me, then: — Three tribes of mortal beings have still to be created, but if created by me they would be like gods. Do ye therefore make them; I will implant in them the seed of immortality, and you shall weave together the mortal and immortal, and provide food for them, and receive them again in death.’ Thus he spake, and poured the remains of the elements into the cup in which he had mingled the soul of the universe. They were no longer pure as before, but diluted; and the mixture he distributed into souls equal in number to the stars, and assigned each to a star — then having mounted them, as in a chariot, he showed them the nature of the universe, and told them of their future birth and human lot. They were to be sown in the planets, and out of them was to come forth the most religious of animals, which would hereafter be called man. The souls were to be implanted in bodies, which were in a perpetual flux, whence, he said, would arise, first, sensation; secondly, love, which is a mixture

of pleasure and pain; thirdly, fear and anger, and the opposite affections: and if they conquered these, they would live righteously, but if they were conquered by them, unrighteously. He who lived well would return to his native star, and would there have a blessed existence; but, if he lived ill, he would pass into the nature of a woman, and if he did not then alter his evil ways, into the likeness of some animal, until the reason which was in him reasserted her sway over the elements of fire, air, earth, water, which had engrossed her, and he regained his first and better nature. Having given this law to his creatures, that he might be guiltless of their future evil, he sowed them, some in the earth, some in the moon, and some in the other planets; and he ordered the younger gods to frame human bodies for them and to make the necessary additions to them, and to avert from them all but self-inflicted evil.

Having given these commands, the Creator remained in his own nature. And his children, receiving from him the immortal principle, borrowed from the world portions of earth, air, fire, water, hereafter to be returned, which they fastened together, not with the adamantine bonds which bound themselves, but by little invisible pegs, making each separate body out of all the elements, subject to influx and efflux, and containing the courses of the soul. These swelling and surging as in a river moved irregularly and irrationally in all the six possible ways, forwards, backwards, right, left, up and down. But violent as were the internal and alimentary fluids, the tide became still more violent when the body came into contact with flaming fire, or the solid earth, or gliding waters, or the stormy wind; the motions produced by these impulses pass through the body to the soul and have the name of sensations. Uniting with the ever-flowing current, they shake the courses of the soul, stopping the revolution of the same and twisting in all sorts of ways the nature of the other, and the harmonical ratios of twos and threes and the mean terms which connect them, until the circles are bent and disordered and their motion becomes irregular. You may imagine a position of the body in which the head is resting upon the ground, and the legs are in the air, and the top is bottom and the left right. And something similar happens when the disordered motions of the soul come into contact with any external thing; they say the same or the other in a manner

which is the very opposite of the truth, and they are false and foolish, and have no guiding principle in them. And when external impressions enter in, they are really conquered, though they seem to conquer.

By reason of these affections the soul is at first without intelligence, but as time goes on the stream of nutriment abates, and the courses of the soul regain their proper motion, and apprehend the same and the other rightly, and become rational. The soul of him who has education is whole and perfect and escapes the worst disease, but, if a man's education be neglected, he walks lamely through life and returns good for nothing to the world below. This, however, is an after-stage — at present, we are only concerned with the creation of the body and soul.

The two divine courses were encased by the gods in a sphere which is called the head, and is the god and lord of us. And to this they gave the body to be a vehicle, and the members to be instruments, having the power of flexion and extension. Such was the origin of legs and arms. In the next place, the gods gave a forward motion to the human body, because the front part of man was the more honourable and had authority. And they put in a face in which they inserted organs to minister in all things to the providence of the soul. They first contrived the eyes, into which they conveyed a light akin to the light of day, making it flow through the pupils. When the light of the eye is surrounded by the light of day, then like falls upon like, and they unite and form one body which conveys to the soul the motions of visible objects. But when the visual ray goes forth into the darkness, then unlike falls upon unlike — the eye no longer sees, and we go to sleep. The fire or light, when kept in by the eyelids, equalizes the inward motions, and there is rest accompanied by few dreams; only when the greater motions remain they engender in us corresponding visions of the night. And now we shall be able to understand the nature of reflections in mirrors. The fires from within and from without meet about the smooth and bright surface of the mirror; and because they meet in a manner contrary to the usual mode, the right and left sides of the object are transposed. In a concave mirror the top and bottom are inverted, but this is no transposition.

These are the second causes which God used as his ministers in fashioning the world. They are thought by many to be the prime causes, but they are not so; for they are destitute of mind and reason, and the lover of mind will not allow that there are any prime causes other than the rational and invisible ones — these he investigates first, and afterwards the causes of things which are moved by others, and which work by chance and without order. Of the second or concurrent causes of sight I have already spoken, and I will now speak of the higher purpose of God in giving us eyes. Sight is the source of the greatest benefits to us; for if our eyes had never seen the sun, stars, and heavens, the words which we have spoken would not have been uttered. The sight of them and their revolutions has given us the knowledge of number and time, the power of enquiry, and philosophy, which is the great blessing of human life; not to speak of the lesser benefits which even the vulgar can appreciate. God gave us the faculty of sight that we might behold the order of the heavens and create a corresponding order in our own erring minds. To the like end the gifts of speech and hearing were bestowed upon us; not for the sake of irrational pleasure, but in order that we might harmonize the courses of the soul by sympathy with the harmony of sound, and cure ourselves of our irregular and graceless ways.

Thus far we have spoken of the works of mind; and there are other works done from necessity, which we must now place beside them; for the creation is made up of both, mind persuading necessity as far as possible to work out good. Before the heavens there existed fire, air, water, earth, which we suppose men to know, though no one has explained their nature, and we erroneously maintain them to be the letters or elements of the whole, although they cannot reasonably be compared even to syllables or first compounds. I am not now speaking of the first principles of things, because I cannot discover them by our present mode of enquiry. But as I observed the rule of probability at first, I will begin anew, seeking by the grace of God to observe it still.

In our former discussion I distinguished two kinds of being — the unchanging or invisible, and the visible or changing. But now a third kind is required, which I shall call the receptacle or nurse of

generation. There is a difficulty in arriving at an exact notion of this third kind, because the four elements themselves are of inexact natures and easily pass into one another, and are too transient to be detained by any one name; wherefore we are compelled to speak of water or fire, not as substances, but as qualities. They may be compared to images made of gold, which are continually assuming new forms. Somebody asks what they are; if you do not know, the safest answer is to reply that they are gold. In like manner there is a universal nature out of which all things are made, and which is like none of them; but they enter into and pass out of her, and are made after patterns of the true in a wonderful and inexplicable manner. The containing principle may be likened to a mother, the source or spring to a father, the intermediate nature to a child; and we may also remark that the matter which receives every variety of form must be formless, like the inodorous liquids which are prepared to receive scents, or the smooth and soft materials on which figures are impressed. In the same way space or matter is neither earth nor fire nor air nor water, but an invisible and formless being which receives all things, and in an incomprehensible manner partakes of the intelligible. But we may say, speaking generally, that fire is that part of this nature which is inflamed, water that which is moistened, and the like.

Let me ask a question in which a great principle is involved: Is there an essence of fire and the other elements, or are there only fires visible to sense? I answer in a word: If mind is one thing and true opinion another, then there are self-existent essences; but if mind is the same with opinion, then the visible and corporeal is most real. But they are not the same, and they have a different origin and nature. The one comes to us by instruction, the other by persuasion, the one is rational, the other is irrational; the one is movable by persuasion, the other immovable; the one is possessed by every man, the other by the gods and by very few men. And we must acknowledge that as there are two kinds of knowledge, so there are two kinds of being corresponding to them; the one uncreated, indestructible, immovable, which is seen by intelligence only; the other created, which is always becoming in place and vanishing out of place, and is apprehended by opinion and sense. There is also a

third nature — that of space, which is indestructible, and is perceived by a kind of spurious reason without the help of sense. This is presented to us in a dreamy manner, and yet is said to be necessary, for we say that all things must be somewhere in space. For they are the images of other things and must therefore have a separate existence and exist in something (i.e. in space). But true reason assures us that while two things (i.e. the idea and the image) are different they cannot inhere in one another, so as to be one and two at the same time.

To sum up: Being and generation and space, these three, existed before the heavens, and the nurse or vessel of generation, moistened by water and inflamed by fire, and taking the forms of air and earth, assumed various shapes. By the motion of the vessel, the elements were divided, and like grain winnowed by fans, the close and heavy particles settled in one place, the light and airy ones in another. At first they were without reason and measure, and had only certain faint traces of themselves, until God fashioned them by figure and number. In this, as in every other part of creation, I suppose God to have made things, as far as was possible, fair and good, out of things not fair and good.

And now I will explain to you the generation of the world by a method with which your scientific training will have made you familiar. Fire, air, earth, and water are bodies and therefore solids, and solids are contained in planes, and plane rectilinear figures are made up of triangles. Of triangles there are two kinds; one having the opposite sides equal (isosceles), the other with unequal sides (scalene). These we may fairly assume to be the original elements of fire and the other bodies; what principles are prior to these God only knows, and he of men whom God loves. Next, we must determine what are the four most beautiful figures which are unlike one another and yet sometimes capable of resolution into one another...Of the two kinds of triangles the equal-sided has but one form, the unequal-sided has an infinite variety of forms; and there is none more beautiful than that which forms the half of an equilateral triangle. Let us then choose two triangles; one, the isosceles, the other, that form of scalene which has the square of the longer side three times as great as the square of the lesser side; and affirm that, out of these, fire and the

other elements have been constructed.

I was wrong in imagining that all the four elements could be generated into and out of one another. For as they are formed, three of them from the triangle which has the sides unequal, the fourth from the triangle which has equal sides, three can be resolved into one another, but the fourth cannot be resolved into them nor they into it. So much for their passage into one another: I must now speak of their construction. From the triangle of which the hypotenuse is twice the lesser side the three first regular solids are formed — first, the equilateral pyramid or tetrahedron; secondly, the octahedron; thirdly, the icosahedron; and from the isosceles triangle is formed the cube. And there is a fifth figure (which is made out of twelve pentagons), the dodecahedron — this God used as a model for the twelvefold division of the Zodiac.

Let us now assign the geometrical forms to their respective elements. The cube is the most stable of them because resting on a quadrangular plane surface, and composed of isosceles triangles. To the earth then, which is the most stable of bodies and the most easily modelled of them, may be assigned the form of a cube; and the remaining forms to the other elements, — to fire the pyramid, to air the octahedron, and to water the icosahedron, — according to their degrees of lightness or heaviness or power, or want of power, of penetration. The single particles of any of the elements are not seen by reason of their smallness; they only become visible when collected. The ratios of their motions, numbers, and other properties, are ordered by the God, who harmonized them as far as necessity permitted.

The probable conclusion is as follows: — Earth, when dissolved by the more penetrating element of fire, whether acting immediately or through the medium of air or water, is decomposed but not transformed. Water, when divided by fire or air, becomes one part fire, and two parts air. A volume of air divided becomes two of fire. On the other hand, when condensed, two volumes of fire make a volume of air; and two and a half parts of air condense into one of water. Any element which is fastened upon by fire is cut by the sharpness of the triangles, until at length, coalescing with the fire, it is at rest; for similars are not affected by similars. When two kinds of

bodies quarrel with one another, then the tendency to decomposition continues until the smaller either escapes to its kindred element or becomes one with its conqueror. And this tendency in bodies to condense or escape is a source of motion...Where there is motion there must be a mover, and where there is a mover there must be something to move. These cannot exist in what is uniform, and therefore motion is due to want of uniformity. But then why, when things are divided after their kinds, do they not cease from motion? The answer is, that the circular motion of all things compresses them, and as 'nature abhors a vacuum,' the finer and more subtle particles of the lighter elements, such as fire and air, are thrust into the interstices of the larger, each of them penetrating according to their rarity, and thus all the elements are on their way up and down everywhere and always into their own places. Hence there is a principle of inequality, and therefore of motion, in all time.

In the next place, we may observe that there are different kinds of fire — (1) flame, (2) light that burns not, (3) the red heat of the embers of fire. And there are varieties of air, as for example, the pure aether, the opaque mist, and other nameless forms. Water, again, is of two kinds, liquid and fusile. The liquid is composed of small and unequal particles, the fusile of large and uniform particles and is more solid, but nevertheless melts at the approach of fire, and then spreads upon the earth. When the substance cools, the fire passes into the air, which is displaced, and forces together and condenses the liquid mass. This process is called cooling and congealment. Of the fusile kinds the fairest and heaviest is gold; this is hardened by filtration through rock, and is of a bright yellow colour. A shoot of gold which is darker and denser than the rest is called adamant. Another kind is called copper, which is harder and yet lighter because the interstices are larger than in gold. There is mingled with it a fine and small portion of earth which comes out in the form of rust. These are a few of the conjectures which philosophy forms, when, leaving the eternal nature, she turns for innocent recreation to consider the truths of generation.

Water which is mingled with fire is called liquid because it rolls upon the earth, and soft because its bases give way. This becomes more equable when separated from fire and air, and then congeals

into hail or ice, or the looser forms of hoar frost or snow. There are other waters which are called juices and are distilled through plants. Of these we may mention, first, wine, which warms the soul as well as the body; secondly, oily substances, as for example, oil or pitch; thirdly, honey, which relaxes the contracted parts of the mouth and so produces sweetness; fourthly, vegetable acid, which is frothy and has a burning quality and dissolves the flesh. Of the kinds of earth, that which is filtered through water passes into stone; the water is broken up by the earth and escapes in the form of air — this in turn presses upon the mass of earth, and the earth, compressed into an indissoluble union with the remaining water, becomes rock. Rock, when it is made up of equal particles, is fair and transparent, but the reverse when of unequal. Earth is converted into pottery when the watery part is suddenly drawn away; or if moisture remains, the earth, when fused by fire, becomes, on cooling, a stone of a black colour. When the earth is finer and of a briny nature then two half-solid bodies are formed by separating the water, — soda and salt. The strong compounds of earth and water are not soluble by water, but only by fire. Earth itself, when not consolidated, is dissolved by water; when consolidated, by fire only. The cohesion of water, when strong, is dissolved by fire only; when weak, either by air or fire, the former entering the interstices, the latter penetrating even the triangles. Air when strongly condensed is indissoluble by any power which does not reach the triangles, and even when not strongly condensed is only resolved by fire. Compounds of earth and water are unaffected by water while the water occupies the interstices in them, but begin to liquefy when fire enters into the interstices of the water. They are of two kinds, some of them, like glass, having more earth, others, like wax, having more water in them.

Having considered objects of sense, we now pass on to sensation. But we cannot explain sensation without explaining the nature of flesh and of the mortal soul; and as we cannot treat of both together, in order that we may proceed at once to the sensations we must assume the existence of body and soul.

What makes fire burn? The fineness of the sides, the sharpness of the angles, the smallness of the particles, the quickness of the motion. Moreover, the pyramid, which is the figure of fire, is more

cutting than any other. The feeling of cold is produced by the larger particles of moisture outside the body trying to eject the smaller ones in the body which they compress. The struggle which arises between elements thus unnaturally brought together causes shivering. That is hard to which the flesh yields, and soft which yields to the flesh, and these two terms are also relative to one another. The yielding matter is that which has the slenderest base, whereas that which has a rectangular base is compact and repellent. Light and heavy are wrongly explained with reference to a lower and higher in place. For in the universe, which is a sphere, there is no opposition of above or below, and that which is to us above would be below to a man standing at the antipodes. The greater or less difficulty in detaching any element from its like is the real cause of heaviness or of lightness. If you draw the earth into the dissimilar air, the particles of earth cling to their native element, and you more easily detach a small portion than a large. There would be the same difficulty in moving any of the upper elements towards the lower. The smooth and the rough are severally produced by the union of evenness with compactness, and of hardness with inequality.

Pleasure and pain are the most important of the affections common to the whole body. According to our general doctrine of sensation, parts of the body which are easily moved readily transmit the motion to the mind; but parts which are not easily moved have no effect upon the patient. The bones and hair are of the latter kind, sight and hearing of the former. Ordinary affections are neither pleasant nor painful. The impressions of sight afford an example of these, and are neither violent nor sudden. But sudden replenishments of the body cause pleasure, and sudden disturbances, as for example cuttings and burnings, have the opposite effect.

>From sensations common to the whole body, we proceed to those of particular parts. The affections of the tongue appear to be caused by contraction and dilation, but they have more of roughness or smoothness than is found in other affections. Earthy particles, entering into the small veins of the tongue which reach to the heart, when they melt into and dry up the little veins are astringent if they are rough; or if not so rough, they are only harsh, and if excessively abstergent, like potash and soda, bitter. Purgatives of a weaker sort

are called salt and, having no bitterness, are rather agreeable. Inflammatory bodies, which by their lightness are carried up into the head, cutting all that comes in their way, are termed pungent. But when these are refined by putrefaction, and enter the narrow veins of the tongue, and meet there particles of earth and air, two kinds of globules are formed — one of earthy and impure liquid, which boils and ferments, the other of pure and transparent water, which are called bubbles; of all these affections the cause is termed acid. When, on the other hand, the composition of the deliquescent particles is congenial to the tongue, and disposes the parts according to their nature, this remedial power in them is called sweet.

Smells are not divided into kinds; all of them are transitional, and arise out of the decomposition of one element into another, for the simple air or water is without smell. They are vapours or mists, thinner than water and thicker than air: and hence in drawing in the breath, when there is an obstruction, the air passes, but there is no smell. They have no names, but are distinguished as pleasant and unpleasant, and their influence extends over the whole region from the head to the navel.

Hearing is the effect of a stroke which is transmitted through the ears by means of the air, brain, and blood to the soul, beginning at the head and extending to the liver. The sound which moves swiftly is acute; that which moves slowly is grave; that which is uniform is smooth, and the opposite is harsh. Loudness depends on the quantity of the sound. Of the harmony of sounds I will hereafter speak.

Colours are flames which emanate from all bodies, having particles corresponding to the sense of sight. Some of the particles are less and some larger, and some are equal to the parts of the sight. The equal particles appear transparent; the larger contract, and the lesser dilate the sight. White is produced by the dilation, black by the contraction, of the particles of sight. There is also a swifter motion of another sort of fire which forces a way through the passages of the eyes, and elicits from them a union of fire and water which we call tears. The inner fire flashes forth, and the outer finds a way in and is extinguished in the moisture, and all sorts of colours are generated by the mixture. This affection is termed by us dazzling, and the object which produces it is called bright. There is yet another sort of fire

which mingles with the moisture of the eye without flashing, and produces a colour like blood — to this we give the name of red. A bright element mingling with red and white produces a colour which we call auburn. The law of proportion, however, according to which compound colours are formed, cannot be determined scientifically or even probably. Red, when mingled with black and white, gives a purple hue, which becomes umber when the colours are burnt and there is a larger admixture of black. Flame-colour is a mixture of auburn and dun; dun of white and black; yellow of white and auburn. White and bright meeting, and falling upon a full black, become dark blue; dark blue mingling with white becomes a light blue; the union of flame-colour and black makes leek-green. There is no difficulty in seeing how other colours are probably composed. But he who should attempt to test the truth of this by experiment, would forget the difference of the human and divine nature. God only is able to compound and resolve substances; such experiments are impossible to man.

These are the elements of necessity which the Creator received in the world of generation when he made the all-sufficient and perfect creature, using the secondary causes as his ministers, but himself fashioning the good in all things. For there are two sorts of causes, the one divine, the other necessary; and we should seek to discover the divine above all, and, for their sake, the necessary, because without them the higher cannot be attained by us.

Having now before us the causes out of which the rest of our discourse is to be framed, let us go back to the point at which we began, and add a fair ending to our tale. As I said at first, all things were originally a chaos in which there was no order or proportion. The elements of this chaos were arranged by the Creator, and out of them he made the world. Of the divine he himself was the author, but he committed to his offspring the creation of the mortal. From him they received the immortal soul, but themselves made the body to be its vehicle, and constructed within another soul which was mortal, and subject to terrible affections — pleasure, the inciter of evil; pain, which deters from good; rashness and fear, foolish counsellors; anger hard to be appeased; hope easily led astray. These they mingled with irrational sense and all-daring love according to necessary laws and

so framed man. And, fearing to pollute the divine element, they gave the mortal soul a separate habitation in the breast, parted off from the head by a narrow isthmus. And as in a house the women's apartments are divided from the men's, the cavity of the thorax was divided into two parts, a higher and a lower. The higher of the two, which is the seat of courage and anger, lies nearer to the head, between the midriff and the neck, and assists reason in restraining the desires. The heart is the house of guard in which all the veins meet, and through them reason sends her commands to the extremity of her kingdom. When the passions are in revolt, or danger approaches from without, then the heart beats and swells; and the creating powers, knowing this, implanted in the body the soft and bloodless substance of the lung, having a porous and springy nature like a sponge, and being kept cool by drink and air which enters through the trachea.

The part of the soul which desires meat and drink was placed between the midriff and navel, where they made a sort of manger; and here they bound it down, like a wild animal, away from the council-chamber, and leaving the better principle undisturbed to advise quietly for the good of the whole. For the Creator knew that the belly would not listen to reason, and was under the power of idols and fancies. Wherefore he framed the liver to connect with the lower nature, contriving that it should be compact, and bright, and sweet, and also bitter and smooth, in order that the power of thought which originates in the mind might there be reflected, terrifying the belly with the elements of bitterness and gall, and a suffusion of bilious colours when the liver is contracted, and causing pain and misery by twisting out of its place the lobe and closing up the vessels and gates. And the converse happens when some gentle inspiration coming from intelligence mirrors the opposite fancies, giving rest and sweetness and freedom, and at night, moderation and peace accompanied with prophetic insight, when reason and sense are asleep. For the authors of our being, in obedience to their Father's will and in order to make men as good as they could, gave to the liver the power of divination, which is never active when men are awake or in health; but when they are under the influence of some disorder or enthusiasm then they receive intimations, which have to be interpreted by others who are called prophets, but should rather be

called interpreters of prophecy; after death these intimations become unintelligible. The spleen which is situated in the neighbourhood, on the left side, keeps the liver bright and clean, as a napkin does a mirror, and the evacuations of the liver are received into it; and being a hollow tissue it is for a time swollen with these impurities, but when the body is purged it returns to its natural size.

The truth concerning the soul can only be established by the word of God. Still, we may venture to assert what is probable both concerning soul and body.

The creative powers were aware of our tendency to excess. And so when they made the belly to be a receptacle for food, in order that men might not perish by insatiable gluttony, they formed the convolutions of the intestines, in this way retarding the passage of food through the body, lest mankind should be absorbed in eating and drinking, and the whole race become impervious to divine philosophy.

The creation of bones and flesh was on this wise. The foundation of these is the marrow which binds together body and soul, and the marrow is made out of such of the primary triangles as are adapted by their perfection to produce all the four elements. These God took and mingled them in due proportion, making as many kinds of marrow as there were hereafter to be kinds of souls. The receptacle of the divine soul he made round, and called that portion of the marrow brain, intending that the vessel containing this substance should be the head. The remaining part he divided into long and round figures, and to these as to anchors, fastening the mortal soul, he proceeded to make the rest of the body, first forming for both parts a covering of bone. The bone was formed by sifting pure smooth earth and wetting it with marrow. It was then thrust alternately into fire and water, and thus rendered insoluble by either. Of bone he made a globe which he placed around the brain, leaving a narrow opening, and around the marrow of the neck and spine he formed the vertebrae, like hinges, which extended from the head through the whole of the trunk. And as the bone was brittle and liable to mortify and destroy the marrow by too great rigidity and susceptibility to heat and cold, he contrived sinews and flesh — the first to give flexibility, the second to guard against heat and cold, and

to be a protection against falls, containing a warm moisture, which in summer exudes and cools the body, and in winter is a defence against cold. Having this in view, the Creator mingled earth with fire and water and mixed with them a ferment of acid and salt, so as to form pulpy flesh. But the sinews he made of a mixture of bone and unfermented flesh, giving them a mean nature between the two, and a yellow colour. Hence they were more glutinous than flesh, but softer than bone. The bones which have most of the living soul within them he covered with the thinnest film of flesh, those which have least of it, he lodged deeper. At the joints he diminished the flesh in order not to impede the flexure of the limbs, and also to avoid clogging the perceptions of the mind. About the thighs and arms, which have no sense because there is little soul in the marrow, and about the inner bones, he laid the flesh thicker. For where the flesh is thicker there is less feeling, except in certain parts which the Creator has made solely of flesh, as for example, the tongue. Had the combination of solid bone and thick flesh been consistent with acute perceptions, the Creator would have given man a sinewy and fleshy head, and then he would have lived twice as long. But our creators were of opinion that a shorter life which was better was preferable to a longer which was worse, and therefore they covered the head with thin bone, and placed the sinews at the extremity of the head round the neck, and fastened the jawbones to them below the face. And they framed the mouth, having teeth and tongue and lips, with a view to the necessary and the good; for food is a necessity, and the river of speech is the best of rivers. Still, the head could not be left a bare globe of bone on account of the extremes of heat and cold, nor be allowed to become dull and senseless by an overgrowth of flesh. Wherefore it was covered by a peel or skin which met and grew by the help of the cerebral humour. The diversity of the sutures was caused by the struggle of the food against the courses of the soul. The skin of the head was pierced by fire, and out of the punctures came forth a moisture, part liquid, and part of a skinny nature, which was hardened by the pressure of the external cold and became hair. And God gave hair to the head of man to be a light covering, so that it might not interfere with his perceptions. Nails were formed by combining sinew, skin, and bone, and were made by the creators with

a view to the future when, as they knew, women and other animals who would require them would be framed out of man.

The gods also mingled natures akin to that of man with other forms and perceptions. Thus trees and plants were created, which were originally wild and have been adapted by cultivation to our use. They partake of that third kind of life which is seated between the midriff and the navel, and is altogether passive and incapable of reflection.

When the creators had furnished all these natures for our sustenance, they cut channels through our bodies as in a garden, watering them with a perennial stream. Two were cut down the back, along the back bone, where the skin and flesh meet, one on the right and the other on the left, having the marrow of generation between them. In the next place, they divided the veins about the head and interlaced them with each other in order that they might form an additional link between the head and the body, and that the sensations from both sides might be diffused throughout the body. In the third place, they contrived the passage of liquids, which may be explained in this way: — Finer bodies retain coarser, but not the coarser the finer, and the belly is capable of retaining food, but not fire and air. God therefore formed a network of fire and air to irrigate the veins, having within it two lesser nets, and stretched cords reaching from both the lesser nets to the extremity of the outer net. The inner parts of the net were made by him of fire, the lesser nets and their cavities of air. The two latter he made to pass into the mouth; the one ascending by the air-pipes from the lungs, the other by the side of the air-pipes from the belly. The entrance to the first he divided into two parts, both of which he made to meet at the channels of the nose, that when the mouth was closed the passage connected with it might still be fed with air. The cavity of the network he spread around the hollows of the body, making the entire receptacle to flow into and out of the lesser nets and the lesser nets into and out of it, while the outer net found a way into and out of the pores of the body, and the internal heat followed the air to and fro. These, as we affirm, are the phenomena of respiration. And all this process takes place in order that the body may be watered and cooled and nourished, and the meat and drink digested and liquefied and carried into the veins.

The causes of respiration have now to be considered. The exhalation of the breath through the mouth and nostrils displaces the external air, and at the same time leaves a vacuum into which through the pores the air which is displaced enters. Also the vacuum which is made when the air is exhaled through the pores is filled up by the inhalation of breath through the mouth and nostrils. The explanation of this double phenomenon is as follows: — Elements move towards their natural places. Now as every animal has within him a fountain of fire, the air which is inhaled through the mouth and nostrils, on coming into contact with this, is heated; and when heated, in accordance with the law of attraction, it escapes by the way it entered toward the place of fire. On leaving the body it is cooled and drives round the air which it displaces through the pores into the empty lungs. This again is in turn heated by the internal fire and escapes, as it entered, through the pores.

The phenomena of medical cupping-glasses, of swallowing, and of the hurling of bodies, are to be explained on a similar principle; as also sounds, which are sometimes discordant on account of the inequality of them, and again harmonious by reason of equality. The slower sounds reaching the swifter, when they begin to pause, by degrees assimilate with them: whence arises a pleasure which even the unwise feel, and which to the wise becomes a higher sense of delight, being an imitation of divine harmony in mortal motions. Streams flow, lightnings play, amber and the magnet attract, not by reason of attraction, but because ‘nature abhors a vacuum,’ and because things, when compounded or dissolved, move different ways, each to its own place.

I will now return to the phenomena of respiration. The fire, entering the belly, minces the food, and as it escapes, fills the veins by drawing after it the divided portions, and thus the streams of nutriment are diffused through the body. The fruits or herbs which are our daily sustenance take all sorts of colours when intermixed, but the colour of red or fire predominates, and hence the liquid which we call blood is red, being the nurturing principle of the body, whence all parts are watered and empty places filled.

The process of repletion and depletion is produced by the attraction of like to like, after the manner of the universal motion.

The external elements by their attraction are always diminishing the substance of the body: the particles of blood, too, formed out of the newly digested food, are attracted towards kindred elements within the body and so fill up the void. When more is taken away than flows in, then we decay; and when less, we grow and increase.

The young of every animal has the triangles new and closely locked together, and yet the entire frame is soft and delicate, being newly made of marrow and nurtured on milk. These triangles are sharper than those which enter the body from without in the shape of food, and therefore they cut them up. But as life advances, the triangles wear out and are no longer able to assimilate food; and at length, when the bonds which unite the triangles of the marrow become undone, they in turn unloose the bonds of the soul; and if the release be according to nature, she then flies away with joy. For the death which is natural is pleasant, but that which is caused by violence is painful.

Every one may understand the origin of diseases. They may be occasioned by the disarrangement or disproportion of the elements out of which the body is framed. This is the origin of many of them, but the worst of all owe their severity to the following causes: There is a natural order in the human frame according to which the flesh and sinews are made of blood, the sinews out of the fibres, and the flesh out of the congealed substance which is formed by separation from the fibres. The glutinous matter which comes away from the sinews and the flesh, not only binds the flesh to the bones, but nourishes the bones and waters the marrow. When these processes take place in regular order the body is in health.

But when the flesh wastes and returns into the veins there is discoloured blood as well as air in the veins, having acid and salt qualities, from which is generated every sort of phlegm and bile. All things go the wrong way and cease to give nourishment to the body, no longer preserving their natural courses, but at war with themselves and destructive to the constitution of the body. The oldest part of the flesh which is hard to decompose blackens from long burning, and from being corroded grows bitter, and as the bitter element refines away, becomes acid. When tinged with blood the bitter substance has a red colour, and this when mixed with black takes the hue of grass;

or again, the bitter substance has an auburn colour, when new flesh is decomposed by the internal flame. To all which phenomena some physician or philosopher who was able to see the one in many has given the name of bile. The various kinds of bile have names answering to their colours. Lymph or serum is of two kinds: first, the whey of blood, which is gentle; secondly, the secretion of dark and bitter bile, which, when mingled under the influence of heat with salt, is malignant and is called acid phlegm. There is also white phlegm, formed by the decomposition of young and tender flesh, and covered with little bubbles, separately invisible, but becoming visible when collected. The water of tears and perspiration and similar substances is also the watery part of fresh phlegm. All these humours become sources of disease when the blood is replenished in irregular ways and not by food or drink. The danger, however, is not so great when the foundation remains, for then there is a possibility of recovery. But when the substance which unites the flesh and bones is diseased, and is no longer renewed from the muscles and sinews, and instead of being oily and smooth and glutinous becomes rough and salt and dry, then the fleshy parts fall away and leave the sinews bare and full of brine, and the flesh gets back again into the circulation of the blood, and makes the previously mentioned disorders still greater. There are other and worse diseases which are prior to these; as when the bone through the density of the flesh does not receive sufficient air, and becomes stagnant and gangrened, and crumbling away passes into the food, and the food into the flesh, and the flesh returns again into the blood. Worst of all and most fatal is the disease of the marrow, by which the whole course of the body is reversed. There is a third class of diseases which are produced, some by wind and some by phlegm and some by bile. When the lung, which is the steward of the air, is obstructed, by rheums, and in one part no air, and in another too much, enters in, then the parts which are unrefreshed by air corrode, and other parts are distorted by the excess of air; and in this manner painful diseases are produced. The most painful are caused by wind generated within the body, which gets about the great sinews of the shoulders — these are termed tetanus. The cure of them is difficult, and in most cases they are relieved only by fever. White phlegm, which is dangerous if kept in, by reason of the air bubbles, is

not equally dangerous if able to escape through the pores, although it variegates the body, generating diverse kinds of leprosy. If, when mingled with black bile, it disturbs the courses of the head in sleep, there is not so much danger; but if it assails those who are awake, then the attack is far more dangerous, and is called epilepsy or the sacred disease. Acid and salt phlegm is the source of catarrh.

Inflammations originate in bile, which is sometimes relieved by boils and swellings, but when detained, and above all when mingled with pure blood, generates many inflammatory disorders, disturbing the position of the fibres which are scattered about in the blood in order to maintain the balance of rare and dense which is necessary to its regular circulation. If the bile, which is only stale blood, or liquefied flesh, comes in little by little, it is congealed by the fibres and produces internal cold and shuddering. But when it enters with more of a flood it overcomes the fibres by its heat and reaches the spinal marrow, and burning up the cables of the soul sets her free from the body. When on the other hand the body, though wasted, still holds out, then the bile is expelled, like an exile from a factious state, causing associating diarrhoeas and dysenteries and similar disorders. The body which is diseased from the effects of fire is in a continual fever; when air is the agent, the fever is quotidian; when water, the fever intermits a day; when earth, which is the most sluggish element, the fever intermits three days and is with difficulty shaken off.

Of mental disorders there are two sorts, one madness, the other ignorance, and they may be justly attributed to disease. Excessive pleasures or pains are among the greatest diseases, and deprive men of their senses. When the seed about the spinal marrow is too abundant, the body has too great pleasures and pains; and during a great part of his life he who is the subject of them is more or less mad. He is often thought bad, but this is a mistake; for the truth is that the intemperance of lust is due to the fluidity of the marrow produced by the loose consistency of the bones. And this is true of vice in general, which is commonly regarded as disgraceful, whereas it is really involuntary and arises from a bad habit of the body and evil education. In like manner the soul is often made vicious by the influence of bodily pain; the briny phlegm and other bitter and

bilious humours wander over the body and find no exit, but are compressed within, and mingle their own vapours with the motions of the soul, and are carried to the three places of the soul, creating infinite varieties of trouble and melancholy, of rashness and cowardice, of forgetfulness and stupidity. When men are in this evil plight of body, and evil forms of government and evil discourses are superadded, and there is no education to save them, they are corrupted through two causes; but of neither of them are they really the authors. For the planters are to blame rather than the plants, the educators and not the educated. Still, we should endeavour to attain virtue and avoid vice; but this is part of another subject.

Enough of disease — I have now to speak of the means by which the mind and body are to be preserved, a higher theme than the other. The good is the beautiful, and the beautiful is the symmetrical, and there is no greater or fairer symmetry than that of body and soul, as the contrary is the greatest of deformities. A leg or an arm too long or too short is at once ugly and unserviceable, and the same is true if body and soul are disproportionate. For a strong and impassioned soul may ‘fret the pigmy body to decay,’ and so produce convulsions and other evils. The violence of controversy, or the earnestness of enquiry, will often generate inflammations and rheums which are not understood, or assigned to their true cause by the professors of medicine. And in like manner the body may be too much for the soul, darkening the reason, and quickening the animal desires. The only security is to preserve the balance of the two, and to this end the mathematician or philosopher must practise gymnastics, and the gymnast must cultivate music. The parts of the body too must be treated in the same way — they should receive their appropriate exercise. For the body is set in motion when it is heated and cooled by the elements which enter in, or is dried up and moistened by external things; and, if given up to these processes when at rest, it is liable to destruction. But the natural motion, as in the world, so also in the human frame, produces harmony and divides hostile powers. The best exercise is the spontaneous motion of the body, as in gymnastics, because most akin to the motion of mind; not so good is the motion of which the source is in another, as in sailing or riding; least good when the body is at rest and the motion is in parts only,

which is a species of motion imparted by physic. This should only be resorted to by men of sense in extreme cases; lesser diseases are not to be irritated by medicine. For every disease is akin to the living being and has an appointed term, just as life has, which depends on the form of the triangles, and cannot be protracted when they are worn out. And he who, instead of accepting his destiny, endeavours to prolong his life by medicine, is likely to multiply and magnify his diseases. Regimen and not medicine is the true cure, when a man has time at his disposal.

Enough of the nature of man and of the body, and of training and education. The subject is a great one and cannot be adequately treated as an appendage to another. To sum up all in a word: there are three kinds of soul located within us, and any one of them, if remaining inactive, becomes very weak; if exercised, very strong. Wherefore we should duly train and exercise all three kinds.

The divine soul God lodged in the head, to raise us, like plants which are not of earthly origin, to our kindred; for the head is nearest to heaven. He who is intent upon the gratification of his desires and cherishes the mortal soul, has all his ideas mortal, and is himself mortal in the truest sense. But he who seeks after knowledge and exercises the divine part of himself in godly and immortal thoughts, attains to truth and immortality, as far as is possible to man, and also to happiness, while he is training up within him the divine principle and indwelling power of order. There is only one way in which one person can benefit another; and that is by assigning to him his proper nurture and motion. To the motions of the soul answer the motions of the universe, and by the study of these the individual is restored to his original nature.

Thus we have finished the discussion of the universe, which, according to our original intention, has now been brought down to the creation of man. Completeness seems to require that something should be briefly said about other animals: first of women, who are probably degenerate and cowardly men. And when they degenerated, the gods implanted in men the desire of union with them, creating in man one animate substance and in woman another in the following manner: — The outlet for liquids they connected with the living principle of the spinal marrow, which the man has the desire to emit

into the fruitful womb of the woman; this is like a fertile field in which the seed is quickened and matured, and at last brought to light. When this desire is unsatisfied the man is over-mastered by the power of the generative organs, and the woman is subjected to disorders from the obstruction of the passages of the breath, until the two meet and pluck the fruit of the tree.

The race of birds was created out of innocent, light-minded men, who thought to pursue the study of the heavens by sight; these were transformed into birds, and grew feathers instead of hair. The race of wild animals were men who had no philosophy, and never looked up to heaven or used the courses of the head, but followed only the influences of passion. Naturally they turned to their kindred earth, and put their forelegs to the ground, and their heads were crushed into strange oblong forms. Some of them have four feet, and some of them more than four, — the latter, who are the more senseless, drawing closer to their native element; the most senseless of all have no limbs and trail their whole body on the ground. The fourth kind are the inhabitants of the waters; these are made out of the most senseless and ignorant and impure of men, whom God placed in the uttermost parts of the world in return for their utter ignorance, and caused them to respire water instead of the pure element of air. Such are the laws by which animals pass into one another.

And so the world received animals, mortal and immortal, and was fulfilled with them, and became a visible God, comprehending the visible, made in the image of the Intellectual, being the one perfect only-begotten heaven.

Section 2.

Nature in the aspect which she presented to a Greek philosopher of the fourth century before Christ is not easily reproduced to modern eyes. The associations of mythology and poetry have to be added, and the unconscious influence of science has to be subtracted, before we can behold the heavens or the earth as they appeared to the Greek. The philosopher himself was a child and also a man — a child in the range of his attainments, but also a great intelligence having an insight into nature, and often anticipations of the truth. He was full of original thoughts, and yet liable to be imposed upon by the most obvious fallacies. He occasionally confused numbers with ideas, and atoms with numbers; his a priori notions were out of all proportion to his experience. He was ready to explain the phenomena of the heavens by the most trivial analogies of earth. The experiments which nature worked for him he sometimes accepted, but he never tried experiments for himself which would either prove or disprove his theories. His knowledge was unequal; while in some branches, such as medicine and astronomy, he had made considerable proficiency, there were others, such as chemistry, electricity, mechanics, of which the very names were unknown to him. He was the natural enemy of mythology, and yet mythological ideas still retained their hold over him. He was endeavouring to form a conception of principles, but these principles or ideas were regarded by him as real powers or entities, to which the world had been subjected. He was always tending to argue from what was near to what was remote, from what was known to what was unknown, from man to the universe, and back again from the universe to man. While he was arranging the world, he was arranging the forms of thought in his own mind; and the light from within and the light from without often crossed and helped to confuse one another. He might be compared to a builder engaged in some great design, who could only dig with his hands because he was unprovided with common tools; or to some poet or musician, like Tynnichus (Ion), obliged to accommodate his lyric raptures to the limits of the tetrachord or of the flute.

The Hesiodic and Orphic cosmogonies were a phase of thought intermediate between mythology and philosophy and had a great

influence on the beginnings of knowledge. There was nothing behind them; they were to physical science what the poems of Homer were to early Greek history. They made men think of the world as a whole; they carried the mind back into the infinity of past time; they suggested the first observation of the effects of fire and water on the earth's surface. To the ancient physics they stood much in the same relation which geology does to modern science. But the Greek was not, like the enquirer of the last generation, confined to a period of six thousand years; he was able to speculate freely on the effects of infinite ages in the production of physical phenomena. He could imagine cities which had existed time out of mind (States.; Laws), laws or forms of art and music which had lasted, 'not in word only, but in very truth, for ten thousand years' (Laws); he was aware that natural phenomena like the Delta of the Nile might have slowly accumulated in long periods of time (Hdt.). But he seems to have supposed that the course of events was recurring rather than progressive. To this he was probably led by the fixedness of Egyptian customs and the general observation that there were other civilisations in the world more ancient than that of Hellas.

The ancient philosophers found in mythology many ideas which, if not originally derived from nature, were easily transferred to her — such, for example, as love or hate, corresponding to attraction or repulsion; or the conception of necessity allied both to the regularity and irregularity of nature; or of chance, the nameless or unknown cause; or of justice, symbolizing the law of compensation; are of the Fates and Furies, typifying the fixed order or the extraordinary convulsions of nature. Their own interpretations of Homer and the poets were supposed by them to be the original meaning. Musing in themselves on the phenomena of nature, they were relieved at being able to utter the thoughts of their hearts in figures of speech which to them were not figures, and were already consecrated by tradition. Hesiod and the Orphic poets moved in a region of half-personification in which the meaning or principle appeared through the person. In their vaster conceptions of Chaos, Erebus, Aether, Night, and the like, the first rude attempts at generalization are dimly seen. The Gods themselves, especially the greater Gods, such as Zeus, Poseidon, Apollo, Athene, are universals as well as

individuals. They were gradually becoming lost in a common conception of mind or God. They continued to exist for the purposes of ritual or of art; but from the sixth century onwards or even earlier there arose and gained strength in the minds of men the notion of 'one God, greatest among Gods and men, who was all sight, all hearing, all knowing' (Xenophanes).

Under the influence of such ideas, perhaps also deriving from the traditions of their own or of other nations scraps of medicine and astronomy, men came to the observation of nature. The Greek philosopher looked at the blue circle of the heavens and it flashed upon him that all things were one; the tumult of sense abated, and the mind found repose in the thought which former generations had been striving to realize. The first expression of this was some element, rarefied by degrees into a pure abstraction, and purged from any tincture of sense. Soon an inner world of ideas began to be unfolded, more absorbing, more overpowering, more abiding than the brightest of visible objects, which to the eye of the philosopher looking inward, seemed to pale before them, retaining only a faint and precarious existence. At the same time, the minds of men parted into the two great divisions of those who saw only a principle of motion, and of those who saw only a principle of rest, in nature and in themselves; there were born Heracliteans or Eleatics, as there have been in later ages born Aristotelians or Platonists. Like some philosophers in modern times, who are accused of making a theory first and finding their facts afterwards, the advocates of either opinion never thought of applying either to themselves or to their adversaries the criterion of fact. They were mastered by their ideas and not masters of them. Like the Heraclitean fanatics whom Plato has ridiculed in the Theaetetus, they were incapable of giving a reason of the faith that was in them, and had all the animosities of a religious sect. Yet, doubtless, there was some first impression derived from external nature, which, as in mythology, so also in philosophy, worked upon the minds of the first thinkers. Though incapable of induction or generalization in the modern sense, they caught an inspiration from the external world. The most general facts or appearances of nature, the circle of the universe, the nutritive power of water, the air which is the breath of life, the destructive force of

fire, the seeming regularity of the greater part of nature and the irregularity of a remnant, the recurrence of day and night and of the seasons, the solid earth and the impalpable aether, were always present to them.

The great source of error and also the beginning of truth to them was reasoning from analogy; they could see resemblances, but not differences; and they were incapable of distinguishing illustration from argument. Analogy in modern times only points the way, and is immediately verified by experiment. The dreams and visions, which pass through the philosopher's mind, of resemblances between different classes of substances, or between the animal and vegetable world, are put into the refiner's fire, and the dross and other elements which adhere to them are purged away. But the contemporary of Plato and Socrates was incapable of resisting the power of any analogy which occurred to him, and was drawn into any consequences which seemed to follow. He had no methods of difference or of concomitant variations, by the use of which he could distinguish the accidental from the essential. He could not isolate phenomena, and he was helpless against the influence of any word which had an equivocal or double sense.

Yet without this crude use of analogy the ancient physical philosopher would have stood still; he could not have made even 'one guess among many' without comparison. The course of natural phenomena would have passed unheeded before his eyes, like fair sights or musical sounds before the eyes and ears of an animal. Even the fetichism of the savage is the beginning of reasoning; the assumption of the most fanciful of causes indicates a higher mental state than the absence of all enquiry about them. The tendency to argue from the higher to the lower, from man to the world, has led to many errors, but has also had an elevating influence on philosophy. The conception of the world as a whole, a person, an animal, has been the source of hasty generalizations; yet this general grasp of nature led also to a spirit of comprehensiveness in early philosophy, which has not increased, but rather diminished, as the fields of knowledge have become more divided. The modern physicist confines himself to one or perhaps two branches of science. But he comparatively seldom rises above his own department, and often

falls under the narrowing influence which any single branch, when pursued to the exclusion of every other, has over the mind. Language, too, exercised a spell over the beginnings of physical philosophy, leading to error and sometimes to truth; for many thoughts were suggested by the double meanings of words (Greek), and the accidental distinctions of words sometimes led the ancient philosopher to make corresponding differences in things (Greek). 'If they are the same, why have they different names; or if they are different, why have they the same name?' — is an argument not easily answered in the infancy of knowledge. The modern philosopher has always been taught the lesson which he still imperfectly learns, that he must disengage himself from the influence of words. Nor are there wanting in Plato, who was himself too often the victim of them, impressive admonitions that we should regard not words but things (States.). But upon the whole, the ancients, though not entirely dominated by them, were much more subject to the influence of words than the moderns. They had no clear divisions of colours or substances; even the four elements were undefined; the fields of knowledge were not parted off. They were bringing order out of disorder, having a small grain of experience mingled in a confused heap of a priori notions. And yet, probably, their first impressions, the illusions and mirages of their fancy, created a greater intellectual activity and made a nearer approach to the truth than any patient investigation of isolated facts, for which the time had not yet come, could have accomplished.

There was one more illusion to which the ancient philosophers were subject, and against which Plato in his later dialogues seems to be struggling — the tendency to mere abstractions; not perceiving that pure abstraction is only negation, they thought that the greater the abstraction the greater the truth. Behind any pair of ideas a new idea which comprehended them — the (Greek), as it was technically termed — began at once to appear. Two are truer than three, one than two. The words 'being,' or 'unity,' or essence,' or 'good,' became sacred to them. They did not see that they had a word only, and in one sense the most unmeaning of words. They did not understand that the content of notions is in inverse proportion to their universality — the element which is the most widely diffused is also

the thinnest; or, in the language of the common logic, the greater the extension the less the comprehension. But this vacant idea of a whole without parts, of a subject without predicates, a rest without motion, has been also the most fruitful of all ideas. It is the beginning of a priori thought, and indeed of thinking at all. Men were led to conceive it, not by a love of hasty generalization, but by a divine instinct, a dialectical enthusiasm, in which the human faculties seemed to yearn for enlargement. We know that 'being' is only the verb of existence, the copula, the most general symbol of relation, the first and most meagre of abstractions; but to some of the ancient philosophers this little word appeared to attain divine proportions, and to comprehend all truth. Being or essence, and similar words, represented to them a supreme or divine being, in which they thought that they found the containing and continuing principle of the universe. In a few years the human mind was peopled with abstractions; a new world was called into existence to give law and order to the old. But between them there was still a gulf, and no one could pass from the one to the other.

Number and figure were the greatest instruments of thought which were possessed by the Greek philosopher; having the same power over the mind which was exerted by abstract ideas, they were also capable of practical application. Many curious and, to the early thinker, mysterious properties of them came to light when they were compared with one another. They admitted of infinite multiplication and construction; in Pythagorean triangles or in proportions of 1:2:4:8 and 1:3:9:27, or compounds of them, the laws of the world seemed to be more than half revealed. They were also capable of infinite subdivision — a wonder and also a puzzle to the ancient thinker (Rep.). They were not, like being or essence, mere vacant abstractions, but admitted of progress and growth, while at the same time they confirmed a higher sentiment of the mind, that there was order in the universe. And so there began to be a real sympathy between the world within and the world without. The numbers and figures which were present to the mind's eye became visible to the eye of sense; the truth of nature was mathematics; the other properties of objects seemed to reappear only in the light of number. Law and morality also found a natural expression in number and

figure. Instruments of such power and elasticity could not fail to be 'a most gracious assistance' to the first efforts of human intelligence.

There was another reason why numbers had so great an influence over the minds of early thinkers — they were verified by experience. Every use of them, even the most trivial, assured men of their truth; they were everywhere to be found, in the least things and the greatest alike. One, two, three, counted on the fingers was a 'trivial matter (Rep.)', a little instrument out of which to create a world; but from these and by the help of these all our knowledge of nature has been developed. They were the measure of all things, and seemed to give law to all things; nature was rescued from chaos and confusion by their power; the notes of music, the motions of the stars, the forms of atoms, the evolution and recurrence of days, months, years, the military divisions of an army, the civil divisions of a state, seemed to afford a 'present witness' of them — what would have become of man or of the world if deprived of number (Rep.)? The mystery of number and the mystery of music were akin. There was a music of rhythm and of harmonious motion everywhere; and to the real connexion which existed between music and number, a fanciful or imaginary relation was superadded. There was a music of the spheres as well as of the notes of the lyre. If in all things seen there was number and figure, why should they not also pervade the unseen world, with which by their wonderful and unchangeable nature they seemed to hold communion?

Two other points strike us in the use which the ancient philosophers made of numbers. First, they applied to external nature the relations of them which they found in their own minds; and where nature seemed to be at variance with number, as for example in the case of fractions, they protested against her (Rep.; Arist. Metaph.). Having long meditated on the properties of 1:2:4:8, or 1:3:9:27, or of 3, 4, 5, they discovered in them many curious correspondences and were disposed to find in them the secret of the universe. Secondly, they applied number and figure equally to those parts of physics, such as astronomy or mechanics, in which the modern philosopher expects to find them, and to those in which he would never think of looking for them, such as physiology and psychology. For the sciences were not yet divided, and there was

nothing really irrational in arguing that the same laws which regulated the heavenly bodies were partially applied to the erring limbs or brain of man. Astrology was the form which the lively fancy of ancient thinkers almost necessarily gave to astronomy. The observation that the lower principle, e.g. mechanics, is always seen in the higher, e.g. in the phenomena of life, further tended to perplex them. Plato's doctrine of the same and the other ruling the courses of the heavens and of the human body is not a mere vagary, but is a natural result of the state of knowledge and thought at which he had arrived.

When in modern times we contemplate the heavens, a certain amount of scientific truth imperceptibly blends, even with the cursory glance of an unscientific person. He knows that the earth is revolving round the sun, and not the sun around the earth. He does not imagine the earth to be the centre of the universe, and he has some conception of chemistry and the cognate sciences. A very different aspect of nature would have been present to the mind of the early Greek philosopher. He would have beheld the earth a surface only, not mirrored, however faintly, in the glass of science, but indissolubly connected with some theory of one, two, or more elements. He would have seen the world pervaded by number and figure, animated by a principle of motion, immanent in a principle of rest. He would have tried to construct the universe on a quantitative principle, seeming to find in endless combinations of geometrical figures or in the infinite variety of their sizes a sufficient account of the multiplicity of phenomena. To these a priori speculations he would add a rude conception of matter and his own immediate experience of health and disease. His cosmos would necessarily be imperfect and unequal, being the first attempt to impress form and order on the primaeval chaos of human knowledge. He would see all things as in a dream.

The ancient physical philosophers have been charged by Dr. Whewell and others with wasting their fine intelligences in wrong methods of enquiry; and their progress in moral and political philosophy has been sometimes contrasted with their supposed failure in physical investigations. 'They had plenty of ideas,' says Dr. Whewell, 'and plenty of facts; but their ideas did not accurately

represent the facts with which they were acquainted.' This is a very crude and misleading way of describing ancient science. It is the mistake of an uneducated person — uneducated, that is, in the higher sense of the word — who imagines every one else to be like himself and explains every other age by his own. No doubt the ancients often fell into strange and fanciful errors: the time had not yet arrived for the slower and surer path of the modern inductive philosophy. But it remains to be shown that they could have done more in their age and country; or that the contributions which they made to the sciences with which they were acquainted are not as great upon the whole as those made by their successors. There is no single step in astronomy as great as that of the nameless Pythagorean who first conceived the world to be a body moving round the sun in space: there is no truer or more comprehensive principle than the application of mathematics alike to the heavenly bodies, and to the particles of matter. The ancients had not the instruments which would have enabled them to correct or verify their anticipations, and their opportunities of observation were limited. Plato probably did more for physical science by asserting the supremacy of mathematics than Aristotle or his disciples by their collections of facts. When the thinkers of modern times, following Bacon, undervalue or disparage the speculations of ancient philosophers, they seem wholly to forget the conditions of the world and of the human mind, under which they carried on their investigations. When we accuse them of being under the influence of words, do we suppose that we are altogether free from this illusion? When we remark that Greek physics soon became stationary or extinct, may we not observe also that there have been and may be again periods in the history of modern philosophy which have been barren and unproductive? We might as well maintain that Greek art was not real or great, because it had nihil simile aut secundum, as say that Greek physics were a failure because they admire no subsequent progress.

The charge of premature generalization which is often urged against ancient philosophers is really an anachronism. For they can hardly be said to have generalized at all. They may be said more truly to have cleared up and defined by the help of experience ideas which they already possessed. The beginnings of thought about

nature must always have this character. A true method is the result of many ages of experiment and observation, and is ever going on and enlarging with the progress of science and knowledge. At first men personify nature, then they form impressions of nature, at last they conceive 'measure' or laws of nature. They pass out of mythology into philosophy. Early science is not a process of discovery in the modern sense; but rather a process of correcting by observation, and to a certain extent only, the first impressions of nature, which mankind, when they began to think, had received from poetry or language or unintelligent sense. Of all scientific truths the greatest and simplest is the uniformity of nature; this was expressed by the ancients in many ways, as fate, or necessity, or measure, or limit. Unexpected events, of which the cause was unknown to them, they attributed to chance (Thucyd.). But their conception of nature was never that of law interrupted by exceptions, — a somewhat unfortunate metaphysical invention of modern times, which is at variance with facts and has failed to satisfy the requirements of thought.

Section 3.

Plato's account of the soul is partly mythical or figurative, and partly literal. Not that either he or we can draw a line between them, or say, 'This is poetry, this is philosophy'; for the transition from the one to the other is imperceptible. Neither must we expect to find in him absolute consistency. He is apt to pass from one level or stage of thought to another without always making it apparent that he is changing his ground. In such passages we have to interpret his meaning by the general spirit of his writings. To reconcile his inconsistencies would be contrary to the first principles of criticism and fatal to any true understanding of him.

There is a further difficulty in explaining this part of the *Timaeus* — the natural order of thought is inverted. We begin with the most abstract, and proceed from the abstract to the concrete. We are searching into things which are upon the utmost limit of human intelligence, and then of a sudden we fall rather heavily to the earth.

There are no intermediate steps which lead from one to the other. But the abstract is a vacant form to us until brought into relation with man and nature. God and the world are mere names, like the Being of the Eleatics, unless some human qualities are added on to them. Yet the negation has a kind of unknown meaning to us. The priority of God and of the world, which he is imagined to have created, to all other existences, gives a solemn awe to them. And as in other systems of theology and philosophy, that of which we know least has the greatest interest to us.

There is no use in attempting to define or explain the first God in the Platonic system, who has sometimes been thought to answer to God the Father; or the world, in whom the Fathers of the Church seemed to recognize 'the firstborn of every creature.' Nor need we discuss at length how far Plato agrees in the later Jewish idea of creation, according to which God made the world out of nothing. For his original conception of matter as something which has no qualities is really a negation. Moreover in the Hebrew Scriptures the creation of the world is described, even more explicitly than in the *Timaeus*, not as a single act, but as a work or process which occupied six days. There is a chaos in both, and it would be untrue to say that the Greek, any more than the Hebrew, had any definite belief in the eternal existence of matter. The beginning of things vanished into the distance. The real creation began, not with matter, but with ideas. According to Plato in the *Timaeus*, God took of the same and the other, of the divided and undivided, of the finite and infinite, and made essence, and out of the three combined created the soul of the world. To the soul he added a body formed out of the four elements. The general meaning of these words is that God imparted determinations of thought, or, as we might say, gave law and variety to the material universe. The elements are moving in a disorderly manner before the work of creation begins; and there is an eternal pattern of the world, which, like the 'idea of good,' is not the Creator himself, but not separable from him. The pattern too, though eternal, is a creation, a world of thought prior to the world of sense, which may be compared to the wisdom of God in the book of Ecclesiasticus, or to the 'God in the form of a globe' of the old Eleatic philosophers. The visible, which already exists, is fashioned

in the likeness of this eternal pattern. On the other hand, there is no truth of which Plato is more firmly convinced than of the priority of the soul to the body, both in the universe and in man. So inconsistent are the forms in which he describes the works which no tongue can utter — his language, as he himself says, partaking of his own uncertainty about the things of which he is speaking.

We may remark in passing, that the Platonic compared with the Jewish description of the process of creation has less of freedom or spontaneity. The Creator in Plato is still subject to a remnant of necessity which he cannot wholly overcome. When his work is accomplished he remains in his own nature. Plato is more sensible than the Hebrew prophet of the existence of evil, which he seeks to put as far as possible out of the way of God. And he can only suppose this to be accomplished by God retiring into himself and committing the lesser works of creation to inferior powers. (Compare, however, Laws for another solution of the difficulty.)

Nor can we attach any intelligible meaning to his words when he speaks of the visible being in the image of the invisible. For how can that which is divided be like that which is undivided? Or that which is changing be the copy of that which is unchanging? All the old difficulties about the ideas come back upon us in an altered form. We can imagine two worlds, one of which is the mere double of the other, or one of which is an imperfect copy of the other, or one of which is the vanishing ideal of the other; but we cannot imagine an intellectual world which has no qualities— ‘a thing in itself’ — a point which has no parts or magnitude, which is nowhere, and nothing. This cannot be the archetype according to which God made the world, and is in reality, whether in Plato or in Kant, a mere negative residuum of human thought.

There is another aspect of the same difficulty which appears to have no satisfactory solution. In what relation does the archetype stand to the Creator himself? For the idea or pattern of the world is not the thought of God, but a separate, self-existent nature, of which creation is the copy. We can only reply, (1) that to the mind of Plato subject and object were not yet distinguished; (2) that he supposes the process of creation to take place in accordance with his own theory of ideas; and as we cannot give a consistent account of the

one, neither can we of the other. He means (3) to say that the creation of the world is not a material process of working with legs and arms, but ideal and intellectual; according to his own fine expression, 'the thought of God made the God that was to be.' He means (4) to draw an absolute distinction between the invisible or unchangeable which is or is the place of mind or being, and the world of sense or becoming which is visible and changing. He means (5) that the idea of the world is prior to the world, just as the other ideas are prior to sensible objects; and like them may be regarded as eternal and self-existent, and also, like the IDEA of good, may be viewed apart from the divine mind.

There are several other questions which we might ask and which can receive no answer, or at least only an answer of the same kind as the preceding. How can matter be conceived to exist without form? Or, how can the essences or forms of things be distinguished from the eternal ideas, or essence itself from the soul? Or, how could there have been motion in the chaos when as yet time was not? Or, how did chaos come into existence, if not by the will of the Creator? Or, how could there have been a time when the world was not, if time was not? Or, how could the Creator have taken portions of an indivisible same? Or, how could space or anything else have been eternal when time is only created? Or, how could the surfaces of geometrical figures have formed solids? We must reply again that we cannot follow Plato in all his inconsistencies, but that the gaps of thought are probably more apparent to us than to him. He would, perhaps, have said that 'the first things are known only to God and to him of men whom God loves.' How often have the gaps in Theology been concealed from the eye of faith! And we may say that only by an effort of metaphysical imagination can we hope to understand Plato from his own point of view; we must not ask for consistency. Everywhere we find traces of the Platonic theory of knowledge expressed in an objective form, which by us has to be translated into the subjective, before we can attach any meaning to it. And this theory is exhibited in so many different points of view, that we cannot with any certainty interpret one dialogue by another; e.g. the *Timaeus* by the *Parmenides* or *Phaedrus* or *Philebus*.

The soul of the world may also be conceived as the

personification of the numbers and figures in which the heavenly bodies move. Imagine these as in a Pythagorean dream, stripped of qualitative difference and reduced to mathematical abstractions. They too conform to the principle of the same, and may be compared with the modern conception of laws of nature. They are in space, but not in time, and they are the makers of time. They are represented as constantly thinking of the same; for thought in the view of Plato is equivalent to truth or law, and need not imply a human consciousness, a conception which is familiar enough to us, but has no place, hardly even a name, in ancient Greek philosophy. To this principle of the same is opposed the principle of the other — the principle of irregularity and disorder, of necessity and chance, which is only partially impressed by mathematical laws and figures. (We may observe by the way, that the principle of the other, which is the principle of plurality and variation in the *Timaeus*, has nothing in common with the ‘other’ of the Sophist, which is the principle of determination.) The element of the same dominates to a certain extent over the other — the fixed stars keep the ‘wanderers’ of the inner circle in their courses, and a similar principle of fixedness or order appears to regulate the bodily constitution of man. But there still remains a rebellious seed of evil derived from the original chaos, which is the source of disorder in the world, and of vice and disease in man.

But what did Plato mean by essence, (Greek), which is the intermediate nature compounded of the Same and the Other, and out of which, together with these two, the soul of the world is created? It is difficult to explain a process of thought so strange and unaccustomed to us, in which modern distinctions run into one another and are lost sight of. First, let us consider once more the meaning of the Same and the Other. The Same is the unchanging and indivisible, the heaven of the fixed stars, partaking of the divine nature, which, having law in itself, gives law to all besides and is the element of order and permanence in man and on the earth. It is the rational principle, mind regarded as a work, as creation — not as the creator. The old tradition of Parmenides and of the Eleatic Being, the foundation of so much in the philosophy of Greece and of the world, was lingering in Plato’s mind. The Other is the variable or changing

element, the residuum of disorder or chaos, which cannot be reduced to order, nor altogether banished, the source of evil, seen in the errors of man and also in the wanderings of the planets, a necessity which protrudes through nature. Of this too there was a shadow in the Eleatic philosophy in the realm of opinion, which, like a mist, seemed to darken the purity of truth in itself. — So far the words of Plato may perhaps find an intelligible meaning. But when he goes on to speak of the Essence which is compounded out of both, the track becomes fainter and we can only follow him with hesitating steps. But still we find a trace reappearing of the teaching of Anaxagoras: ‘All was confusion, and then mind came and arranged things.’ We have already remarked that Plato was not acquainted with the modern distinction of subject and object, and therefore he sometimes confuses mind and the things of mind — (Greek) and (Greek). By (Greek) he clearly means some conception of the intelligible and the intelligent; it belongs to the class of (Greek). Matter, being, the Same, the eternal, — for any of these terms, being almost vacant of meaning, is equally suitable to express indefinite existence, — are compared or united with the Other or Diverse, and out of the union or comparison is elicited the idea of intelligence, the ‘One in many,’ brighter than any Promethean fire (Phil.), which co-existing with them and so forming a new existence, is or becomes the intelligible world...So we may perhaps venture to paraphrase or interpret or put into other words the parable in which Plato has wrapped up his conception of the creation of the world. The explanation may help to fill up with figures of speech the void of knowledge.

The entire compound was divided by the Creator in certain proportions and reunited; it was then cut into two strips, which were bent into an inner circle and an outer, both moving with an uniform motion around a centre, the outer circle containing the fixed, the inner the wandering stars. The soul of the world was diffused everywhere from the centre to the circumference. To this God gave a body, consisting at first of fire and earth, and afterwards receiving an addition of air and water; because solid bodies, like the world, are always connected by two middle terms and not by one. The world was made in the form of a globe, and all the material elements were exhausted in the work of creation.

The proportions in which the soul of the world as well as the human soul is divided answer to a series of numbers 1, 2, 3, 4, 9, 8, 27, composed of the two Pythagorean progressions 1, 2, 4, 8 and 1, 3, 9, 27, of which the number 1 represents a point, 2 and 3 lines, 4 and 8, 9 and 27 the squares and cubes respectively of 2 and 3. This series, of which the intervals are afterwards filled up, probably represents (1) the diatonic scale according to the Pythagoreans and Plato; (2) the order and distances of the heavenly bodies; and (3) may possibly contain an allusion to the music of the spheres, which is referred to in the myth at the end of the Republic. The meaning of the words that 'solid bodies are always connected by two middle terms' or mean proportionals has been much disputed. The most received explanation is that of Martin, who supposes that Plato is only speaking of surfaces and solids compounded of prime numbers (i.e. of numbers not made up of two factors, or, in other words, only measurable by unity). The square of any such number represents a surface, the cube a solid. The squares of any two such numbers (e.g. 2 squared, 3 squared = 4, 9), have always a single mean proportional (e.g. 4 and 9 have the single mean 6), whereas the cubes of primes (e.g. 3 cubed and 5 cubed) have always two mean proportionals (e.g. 27:45:75:125). But to this explanation of Martin's it may be objected, (1) that Plato nowhere says that his proportion is to be limited to prime numbers; (2) that the limitation of surfaces to squares is also not to be found in his words; nor (3) is there any evidence to show that the distinction of prime from other numbers was known to him. What Plato chiefly intends to express is that a solid requires a stronger bond than a surface; and that the double bond which is given by two means is stronger than the single bond given by one. Having reflected on the singular numerical phenomena of the existence of one mean proportional between two square numbers are rather perhaps only between the two lowest squares; and of two mean proportionals between two cubes, perhaps again confining his attention to the two lowest cubes, he finds in the latter symbol an expression of the relation of the elements, as in the former an image of the combination of two surfaces. Between fire and earth, the two extremes, he remarks that there are introduced, not one, but two elements, air and water, which are compared to the two mean

proportionals between two cube numbers. The vagueness of his language does not allow us to determine whether anything more than this was intended by him.

Leaving the further explanation of details, which the reader will find discussed at length in Boeckh and Martin, we may now return to the main argument: Why did God make the world? Like man, he must have a purpose; and his purpose is the diffusion of that goodness or good which he himself is. The term 'goodness' is not to be understood in this passage as meaning benevolence or love, in the Christian sense of the term, but rather law, order, harmony, like the idea of good in the Republic. The ancient mythologers, and even the Hebrew prophets, had spoken of the jealousy of God; and the Greek had imagined that there was a Nemesis always attending the prosperity of mortals. But Plato delights to think of God as the author of order in his works, who, like a father, lives over again in his children, and can never have too much of good or friendship among his creatures. Only, as there is a certain remnant of evil inherent in matter which he cannot get rid of, he detaches himself from them and leaves them to themselves, that he may be guiltless of their faults and sufferings.

Between the ideal and the sensible Plato interposes the two natures of time and space. Time is conceived by him to be only the shadow or image of eternity which ever is and never has been or will be, but is described in a figure only as past or future. This is one of the great thoughts of early philosophy, which are still as difficult to our minds as they were to the early thinkers; or perhaps more difficult, because we more distinctly see the consequences which are involved in such an hypothesis. All the objections which may be urged against Kant's doctrine of the ideality of space and time at once press upon us. If time is unreal, then all which is contained in time is unreal — the succession of human thoughts as well as the flux of sensations; there is no connecting link between (Greek) and (Greek). Yet, on the other hand, we are conscious that knowledge is independent of time, that truth is not a thing of yesterday or tomorrow, but an 'eternal now.' To the 'spectator of all time and all existence' the universe remains at rest. The truths of geometry and arithmetic in all their combinations are always the same. The

generations of men, like the leaves of the forest, come and go, but the mathematical laws by which the world is governed remain, and seem as if they could never change. The ever-present image of space is transferred to time — succession is conceived as extension. (We remark that Plato does away with the above and below in space, as he has done away with the absolute existence of past and future.) The course of time, unless regularly marked by divisions of number, partakes of the indefiniteness of the Heraclitean flux. By such reflections we may conceive the Greek to have attained the metaphysical conception of eternity, which to the Hebrew was gained by meditation on the Divine Being. No one saw that this objective was really a subjective, and involved the subjectivity of all knowledge. ‘Non in tempore sed cum tempore finxit Deus mundum,’ says St. Augustine, repeating a thought derived from the Timaeus, but apparently unconscious of the results to which his doctrine would have led.

The contradictions involved in the conception of time or motion, like the infinitesimal in space, were a source of perplexity to the mind of the Greek, who was driven to find a point of view above or beyond them. They had sprung up in the decline of the Eleatic philosophy and were very familiar to Plato, as we gather from the Parmenides. The consciousness of them had led the great Eleatic philosopher to describe the nature of God or Being under negatives. He sings of ‘Being unbegotten and imperishable, unmoved and never-ending, which never was nor will be, but always is, one and continuous, which cannot spring from any other; for it cannot be said or imagined not to be.’ The idea of eternity was for a great part a negation. There are regions of speculation in which the negative is hardly separable from the positive, and even seems to pass into it. Not only Buddhism, but Greek as well as Christian philosophy, show that it is quite possible that the human mind should retain an enthusiasm for mere negations. In different ages and countries there have been forms of light in which nothing could be discerned and which have nevertheless exercised a life-giving and illumining power. For the higher intelligence of man seems to require, not only something above sense, but above knowledge, which can only be described as Mind or Being or Truth or God or the unchangeable and

eternal element, in the expression of which all predicates fail and fall short. Eternity or the eternal is not merely the unlimited in time but the truest of all Being, the most real of all realities, the most certain of all knowledge, which we nevertheless only see through a glass darkly. The passionate earnestness of Parmenides contrasts with the vacuity of the thought which he is revolving in his mind.

Space is said by Plato to be the 'containing vessel or nurse of generation.' Reflecting on the simplest kinds of external objects, which to the ancients were the four elements, he was led to a more general notion of a substance, more or less like themselves, out of which they were fashioned. He would not have them too precisely distinguished. Thus seems to have arisen the first dim perception of (Greek) or matter, which has played so great a part in the metaphysical philosophy of Aristotle and his followers. But besides the material out of which the elements are made, there is also a space in which they are contained. There arises thus a second nature which the senses are incapable of discerning and which can hardly be referred to the intelligible class. For it is and it is not, it is nowhere when filled, it is nothing when empty. Hence it is said to be discerned by a kind of spurious or analogous reason, partaking so feebly of existence as to be hardly perceivable, yet always reappearing as the containing mother or nurse of all things. It had not that sort of consistency to Plato which has been given to it in modern times by geometry and metaphysics. Neither of the Greek words by which it is described are so purely abstract as the English word 'space' or the Latin 'spatium.' Neither Plato nor any other Greek would have spoken of (Greek) or (Greek) in the same manner as we speak of 'time' and 'space.'

Yet space is also of a very permanent or even eternal nature; and Plato seems more willing to admit of the unreality of time than of the unreality of space; because, as he says, all things must necessarily exist in space. We, on the other hand, are disposed to fancy that even if space were annihilated time might still survive. He admits indeed that our knowledge of space is of a dreamy kind, and is given by a spurious reason without the help of sense. (Compare the hypotheses and images of Rep.) It is true that it does not attain to the clearness of ideas. But like them it seems to remain, even if all the objects

contained in it are supposed to have vanished away. Hence it was natural for Plato to conceive of it as eternal. We must remember further that in his attempt to realize either space or matter the two abstract ideas of weight and extension, which are familiar to us, had never passed before his mind.

Thus far God, working according to an eternal pattern, out of his goodness has created the same, the other, and the essence (compare the three principles of the *Philebus* — the finite, the infinite, and the union of the two), and out of them has formed the outer circle of the fixed stars and the inner circle of the planets, divided according to certain musical intervals; he has also created time, the moving image of eternity, and space, existing by a sort of necessity and hardly distinguishable from matter. The matter out of which the world is formed is not absolutely void, but retains in the chaos certain germs or traces of the elements. These Plato, like Empedocles, supposed to be four in number — fire, air, earth, and water. They were at first mixed together; but already in the chaos, before God fashioned them by form and number, the greater masses of the elements had an appointed place. Into the confusion (Greek) which preceded Plato does not attempt further to penetrate. They are called elements, but they are so far from being elements (Greek) or letters in the higher sense that they are not even syllables or first compounds. The real elements are two triangles, the rectangular isosceles which has but one form, and the most beautiful of the many forms of scalene, which is half of an equilateral triangle. By the combination of these triangles which exist in an infinite variety of sizes, the surfaces of the four elements are constructed.

That there were only five regular solids was already known to the ancients, and out of the surfaces which he has formed Plato proceeds to generate the four first of the five. He perhaps forgets that he is only putting together surfaces and has not provided for their transformation into solids. The first solid is a regular pyramid, of which the base and sides are formed by four equilateral or twenty-four scalene triangles. Each of the four solid angles in this figure is a little larger than the largest of obtuse angles. The second solid is composed of the same triangles, which unite as eight equilateral triangles, and make one solid angle out of four plane angles — six of

these angles form a regular octahedron. The third solid is a regular icosahedron, having twenty triangular equilateral bases, and therefore 120 rectangular scalene triangles. The fourth regular solid, or cube, is formed by the combination of four isosceles triangles into one square and of six squares into a cube. The fifth regular solid, or dodecahedron, cannot be formed by a combination of either of these triangles, but each of its faces may be regarded as composed of thirty triangles of another kind. Probably Plato notices this as the only remaining regular polyhedron, which from its approximation to a globe, and possibly because, as Plutarch remarks, it is composed of $12 \times 30 = 360$ scalene triangles (Platon. Quaest.), representing thus the signs and degrees of the Zodiac, as well as the months and days of the year, God may be said to have ‘used in the delineation of the universe.’ According to Plato earth was composed of cubes, fire of regular pyramids, air of regular octahedrons, water of regular icosahedrons. The stability of the last three increases with the number of their sides.

The elements are supposed to pass into one another, but we must remember that these transformations are not the transformations of real solids, but of imaginary geometrical figures; in other words, we are composing and decomposing the faces of substances and not the substances themselves — it is a house of cards which we are pulling to pieces and putting together again (compare however Laws). Yet perhaps Plato may regard these sides or faces as only the forms which are impressed on pre-existent matter. It is remarkable that he should speak of each of these solids as a possible world in itself, though upon the whole he inclines to the opinion that they form one world and not five. To suppose that there is an infinite number of worlds, as Democritus (Hippolyt. Ref. Haer. I.) had said, would be, as he satirically observes, ‘the characteristic of a very indefinite and ignorant mind.’

The twenty triangular faces of an icosahedron form the faces or sides of two regular octahedrons and of a regular pyramid ($20 = 8 \times 2 + 4$); and therefore, according to Plato, a particle of water when decomposed is supposed to give two particles of air and one of fire. So because an octahedron gives the sides of two pyramids ($8 = 4 \times 2$), a particle of air is resolved into two particles of fire.

The transformation is effected by the superior power or number of the conquering elements. The manner of the change is (1) a separation of portions of the elements from the masses in which they are collected; (2) a resolution of them into their original triangles; and (3) a reunion of them in new forms. Plato himself proposes the question, Why does motion continue at all when the elements are settled in their places? He answers that although the force of attraction is continually drawing similar elements to the same spot, still the revolution of the universe exercises a condensing power, and thrusts them again out of their natural places. Thus want of uniformity, the condition of motion, is produced. In all such disturbances of matter there is an alternative for the weaker element: it may escape to its kindred, or take the form of the stronger — becoming denser, if it be denser, or rarer if rarer. This is true of fire, air, and water, which, being composed of similar triangles, are interchangeable; earth, however, which has triangles peculiar to itself, is capable of dissolution, but not of change. Of the interchangeable elements, fire, the rarest, can only become a denser, and water, the densest, only a rarer: but air may become a denser or a rarer. No single particle of the elements is visible, but only the aggregates of them are seen. The subordinate species depend, not upon differences of form in the original triangles, but upon differences of size. The obvious physical phenomena from which Plato has gathered his views of the relations of the elements seem to be the effect of fire upon air, water, and earth, and the effect of water upon earth. The particles are supposed by him to be in a perpetual process of circulation caused by inequality. This process of circulation does not admit of a vacuum, as he tells us in his strange account of respiration.

Of the phenomena of light and heavy he speaks afterwards, when treating of sensation, but they may be more conveniently considered by us in this place. They are not, he says, to be explained by ‘above’ and ‘below,’ which in the universal globe have no existence, but by the attraction of similars towards the great masses of similar substances; fire to fire, air to air, water to water, earth to earth. Plato’s doctrine of attraction implies not only (1) the attraction of similar elements to one another, but also (2) of smaller bodies to

larger ones. Had he confined himself to the latter he would have arrived, though, perhaps, without any further result or any sense of the greatness of the discovery, at the modern doctrine of gravitation. He does not observe that water has an equal tendency towards both water and earth. So easily did the most obvious facts which were inconsistent with his theories escape him.

The general physical doctrines of the *Timaeus* may be summed up as follows: (1) Plato supposes the greater masses of the elements to have been already settled in their places at the creation: (2) they are four in number, and are formed of rectangular triangles variously combined into regular solid figures: (3) three of them, fire, air, and water, admit of transformation into one another; the fourth, earth, cannot be similarly transformed: (4) different sizes of the same triangles form the lesser species of each element: (5) there is an attraction of like to like — smaller masses of the same kind being drawn towards greater: (6) there is no void, but the particles of matter are ever pushing one another round and round (Greek). Like the atomists, Plato attributes the differences between the elements to differences in geometrical figures. But he does not explain the process by which surfaces become solids; and he characteristically ridicules Democritus for not seeing that the worlds are finite and not infinite.

Section 4.

The astronomy of Plato is based on the two principles of the same and the other, which God combined in the creation of the world. The soul, which is compounded of the same, the other, and the essence, is diffused from the centre to the circumference of the heavens. We speak of a soul of the universe; but more truly regarded, the universe of the *Timaeus* is a soul, governed by mind, and holding in solution a residuum of matter or evil, which the author of the world is unable to expel, and of which Plato cannot tell us the origin. The creation, in Plato's sense, is really the creation of order; and the first step in giving order is the division of the heavens into an inner and outer circle of the other and the same, of the divisible and the indivisible,

answering to the two spheres, of the planets and of the world beyond them, all together moving around the earth, which is their centre. To us there is a difficulty in apprehending how that which is at rest can also be in motion, or that which is indivisible exist in space. But the whole description is so ideal and imaginative, that we can hardly venture to attribute to many of Plato's words in the *Timaeus* any more meaning than to his mythical account of the heavens in the *Republic* and in the *Phaedrus*. (Compare his denial of the 'blasphemous opinion' that there are planets or wandering stars; all alike move in circles — *Laws*.) The stars are the habitations of the souls of men, from which they come and to which they return. In attributing to the fixed stars only the most perfect motion — that which is on the same spot or circulating around the same — he might perhaps have said that to 'the spectator of all time and all existence,' to borrow once more his own grand expression, or viewed, in the language of Spinoza, '*sub specie aeternitatis*,' they were still at rest, but appeared to move in order to teach men the periods of time. Although absolutely in motion, they are relatively at rest; or we may conceive of them as resting, while the space in which they are contained, or the whole *anima mundi*, revolves.

The universe revolves around a centre once in twenty-four hours, but the orbits of the fixed stars take a different direction from those of the planets. The outer and the inner sphere cross one another and meet again at a point opposite to that of their first contact; the first moving in a circle from left to right along the side of a parallelogram which is supposed to be inscribed in it, the second also moving in a circle along the diagonal of the same parallelogram from right to left; or, in other words, the first describing the path of the equator, the second, the path of the ecliptic. The motion of the second is controlled by the first, and hence the oblique line in which the planets are supposed to move becomes a spiral. The motion of the same is said to be undivided, whereas the inner motion is split into seven unequal orbits — the intervals between them being in the ratio of two and three, three of either: — the Sun, moving in the opposite direction to Mercury and Venus, but with equal swiftness; the remaining four, Moon, Saturn, Mars, Jupiter, with unequal swiftness to the former three and to one another. Thus arises the following

progression: — Moon 1, Sun 2, Venus 3, Mercury 4, Mars 8, Jupiter 9, Saturn 27. This series of numbers is the compound of the two Pythagorean ratios, having the same intervals, though not in the same order, as the mixture which was originally divided in forming the soul of the world.

Plato was struck by the phenomenon of Mercury, Venus, and the Sun appearing to overtake and be overtaken by one another. The true reason of this, namely, that they lie within the circle of the earth's orbit, was unknown to him, and the reason which he gives — that the two former move in an opposite direction to the latter — is far from explaining the appearance of them in the heavens. All the planets, including the sun, are carried round in the daily motion of the circle of the fixed stars, and they have a second or oblique motion which gives the explanation of the different lengths of the sun's course in different parts of the earth. The fixed stars have also two movements — a forward movement in their orbit which is common to the whole circle; and a movement on the same spot around an axis, which Plato calls the movement of thought about the same. In this latter respect they are more perfect than the wandering stars, as Plato himself terms them in the *Timaeus*, although in the *Laws* he condemns the appellation as blasphemous.

The revolution of the world around earth, which is accomplished in a single day and night, is described as being the most perfect or intelligent. Yet Plato also speaks of an 'annus magnus' or cyclical year, in which periods wonderful for their complexity are found to coincide in a perfect number, i.e. a number which equals the sum of its factors, as $6 = 1 + 2 + 3$. This, although not literally contradictory, is in spirit irreconcilable with the perfect revolution of twenty-four hours. The same remark may be applied to the complexity of the appearances and occultations of the stars, which, if the outer heaven is supposed to be moving around the centre once in twenty-four hours, must be confined to the effects produced by the seven planets. Plato seems to confuse the actual observation of the heavens with his desire to find in them mathematical perfection. The same spirit is carried yet further by him in the passage already quoted from the *Laws*, in which he affirms their wanderings to be an appearance only, which a little knowledge of mathematics would enable men to

correct.

We have now to consider the much discussed question of the rotation or immobility of the earth. Plato's doctrine on this subject is contained in the following words:— 'The earth, which is our nurse, compacted (OR revolving) around the pole which is extended through the universe, he made to be the guardian and artificer of night and day, first and eldest of gods that are in the interior of heaven'. There is an unfortunate doubt in this passage (1) about the meaning of the word (Greek), which is translated either 'compacted' or 'revolving,' and is equally capable of both explanations. A doubt (2) may also be raised as to whether the words 'artificer of day and night' are consistent with the mere passive causation of them, produced by the immobility of the earth in the midst of the circling universe. We must admit, further, (3) that Aristotle attributed to Plato the doctrine of the rotation of the earth on its axis. On the other hand it has been urged that if the earth goes round with the outer heaven and sun in twenty-four hours, there is no way of accounting for the alternation of day and night; since the equal motion of the earth and sun would have the effect of absolute immobility. To which it may be replied that Plato never says that the earth goes round with the outer heaven and sun; although the whole question depends on the relation of earth and sun, their movements are nowhere precisely described. But if we suppose, with Mr. Grote, that the diurnal rotation of the earth on its axis and the revolution of the sun and outer heaven precisely coincide, it would be difficult to imagine that Plato was unaware of the consequence. For though he was ignorant of many things which are familiar to us, and often confused in his ideas where we have become clear, we have no right to attribute to him a childish want of reasoning about very simple facts, or an inability to understand the necessary and obvious deductions from geometrical figures or movements. Of the causes of day and night the pre-Socratic philosophers, and especially the Pythagoreans, gave various accounts, and therefore the question can hardly be imagined to have escaped him. On the other hand it may be urged that the further step, however simple and obvious, is just what Plato often seems to be ignorant of, and that as there is no limit to his insight, there is also no limit to the blindness which sometimes obscures his intelligence

(compare the construction of solids out of surfaces in his account of the creation of the world, or the attraction of similars to similars). Further, Mr. Grote supposes, not that (Greek) means 'revolving,' or that this is the sense in which Aristotle understood the word, but that the rotation of the earth is necessarily implied in its adherence to the cosmical axis. But (a) if, as Mr Grote assumes, Plato did not see that the rotation of the earth on its axis and of the sun and outer heavens around the earth in equal times was inconsistent with the alternation of day and night, neither need we suppose that he would have seen the immobility of the earth to be inconsistent with the rotation of the axis. And (b) what proof is there that the axis of the world revolves at all? (c) The comparison of the two passages quoted by Mr Grote (see his pamphlet on 'The Rotation of the Earth') from Aristotle *De Coelo*, Book II (Greek) clearly shows, although this is a matter of minor importance, that Aristotle, as Proclus and Simplicius supposed, understood (Greek) in the *Timaeus* to mean 'revolving.' For the second passage, in which motion on an axis is expressly mentioned, refers to the first, but this would be unmeaning unless (Greek) in the first passage meant rotation on an axis. (4) The immobility of the earth is more in accordance with Plato's other writings than the opposite hypothesis. For in the *Phaedo* the earth is described as the centre of the world, and is not said to be in motion. In the *Republic* the pilgrims appear to be looking out from the earth upon the motions of the heavenly bodies; in the *Phaedrus*, Hestia, who remains immovable in the house of Zeus while the other gods go in procession, is called the first and eldest of the gods, and is probably the symbol of the earth. The silence of Plato in these and in some other passages (*Laws*) in which he might be expected to speak of the rotation of the earth, is more favourable to the doctrine of its immobility than to the opposite. If he had meant to say that the earth revolves on its axis, he would have said so in distinct words, and have explained the relation of its movements to those of the other heavenly bodies. (5) The meaning of the words 'artificer of day and night' is literally true according to Plato's view. For the alternation of day and night is not produced by the motion of the heavens alone, or by the immobility of the earth alone, but by both together; and that which has the inherent force or energy to remain at rest when all

other bodies are moving, may be truly said to act, equally with them. (6) We should not lay too much stress on Aristotle or the writer *De Caelo* having adopted the other interpretation of the words, although Alexander of Aphrodisias thinks that he could not have been ignorant either of the doctrine of Plato or of the sense which he intended to give to the word (Greek). For the citations of Plato in Aristotle are frequently misinterpreted by him; and he seems hardly ever to have had in his mind the connection in which they occur. In this instance the allusion is very slight, and there is no reason to suppose that the diurnal revolution of the heavens was present to his mind. Hence we need not attribute to him the error from which we are defending Plato.

After weighing one against the other all these complicated probabilities, the final conclusion at which we arrive is that there is nearly as much to be said on the one side of the question as on the other, and that we are not perfectly certain, whether, as Bockh and the majority of commentators, ancient as well as modern, are inclined to believe, Plato thought that the earth was at rest in the centre of the universe, or, as Aristotle and Mr. Grote suppose, that it revolved on its axis. Whether we assume the earth to be stationary in the centre of the universe, or to revolve with the heavens, no explanation is given of the variation in the length of days and nights at different times of the year. The relations of the earth and heavens are so indistinct in the *Timaeus* and so figurative in the *Phaedo*, *Phaedrus* and *Republic*, that we must give up the hope of ascertaining how they were imagined by Plato, if he had any fixed or scientific conception of them at all.

Section 5.

The soul of the world is framed on the analogy of the soul of man, and many traces of anthropomorphism blend with Plato's highest flights of idealism. The heavenly bodies are endowed with thought; the principles of the same and other exist in the universe as well as in the human mind. The soul of man is made out of the remains of the elements which had been used in creating the soul of the world; these

remains, however, are diluted to the third degree; by this Plato expresses the measure of the difference between the soul human and divine. The human soul, like the cosmical, is framed before the body, as the mind is before the soul of either — this is the order of the divine work — and the finer parts of the body, which are more akin to the soul, such as the spinal marrow, are prior to the bones and flesh. The brain, the containing vessel of the divine part of the soul, is (nearly) in the form of a globe, which is the image of the gods, who are the stars, and of the universe.

There is, however, an inconsistency in Plato's manner of conceiving the soul of man; he cannot get rid of the element of necessity which is allowed to enter. He does not, like Kant, attempt to vindicate for men a freedom out of space and time; but he acknowledges him to be subject to the influence of external causes, and leaves hardly any place for freedom of the will. The lusts of men are caused by their bodily constitution, though they may be increased by bad education and bad laws, which implies that they may be decreased by good education and good laws. He appears to have an inkling of the truth that to the higher nature of man evil is involuntary. This is mixed up with the view which, while apparently agreeing with it, is in reality the opposite of it, that vice is due to physical causes. In the *Timæus*, as well as in the *Laws*, he also regards vices and crimes as simply involuntary; they are diseases analogous to the diseases of the body, and arising out of the same causes. If we draw together the opposite poles of Plato's system, we find that, like Spinoza, he combines idealism with fatalism.

The soul of man is divided by him into three parts, answering roughly to the charioteer and steeds of the *Phædrus*, and to the (Greek) of the *Republic* and *Nicomachean Ethics*. First, there is the immortal nature of which the brain is the seat, and which is akin to the soul of the universe. This alone thinks and knows and is the ruler of the whole. Secondly, there is the higher mortal soul which, though liable to perturbations of her own, takes the side of reason against the lower appetites. The seat of this is the heart, in which courage, anger, and all the nobler affections are supposed to reside. There the veins all meet; it is their centre or house of guard whence they carry the orders of the thinking being to the extremities of his kingdom. There

is also a third or appetitive soul, which receives the commands of the immortal part, not immediately but mediately, through the liver, which reflects on its surface the admonitions and threats of the reason.

The liver is imagined by Plato to be a smooth and bright substance, having a store of sweetness and also of bitterness, which reason freely uses in the execution of her mandates. In this region, as ancient superstition told, were to be found intimations of the future. But Plato is careful to observe that although such knowledge is given to the inferior parts of man, it requires to be interpreted by the superior. Reason, and not enthusiasm, is the true guide of man; he is only inspired when he is demented by some distemper or possession. The ancient saying, that ‘only a man in his senses can judge of his own actions,’ is approved by modern philosophy too. The same irony which appears in Plato’s remark, that ‘the men of old time must surely have known the gods who were their ancestors, and we should believe them as custom requires,’ is also manifest in his account of divination.

The appetitive soul is seated in the belly, and there imprisoned like a wild beast, far away from the council chamber, as Plato graphically calls the head, in order that the animal passions may not interfere with the deliberations of reason. Though the soul is said by him to be prior to the body, yet we cannot help seeing that it is constructed on the model of the body — the threefold division into the rational, passionate, and appetitive corresponding to the head, heart and belly. The human soul differs from the soul of the world in this respect, that it is enveloped and finds its expression in matter, whereas the soul of the world is not only enveloped or diffused in matter, but is the element in which matter moves. The breath of man is within him, but the air or aether of heaven is the element which surrounds him and all things.

Pleasure and pain are attributed in the *Timaeus* to the suddenness of our sensations — the first being a sudden restoration, the second a sudden violation, of nature (*Phileb.*). The sensations become conscious to us when they are exceptional. Sight is not attended either by pleasure or pain, but hunger and the appeasing of hunger are pleasant and painful because they are extraordinary.

Section 6.

I shall not attempt to connect the physiological speculations of Plato either with ancient or modern medicine. What light I can throw upon them will be derived from the comparison of them with his general system.

There is no principle so apparent in the physics of the *Timaeus*, or in ancient physics generally, as that of continuity. The world is conceived of as a whole, and the elements are formed into and out of one another; the varieties of substances and processes are hardly known or noticed. And in a similar manner the human body is conceived of as a whole, and the different substances of which, to a superficial observer, it appears to be composed — the blood, flesh, sinews — like the elements out of which they are formed, are supposed to pass into one another in regular order, while the infinite complexity of the human frame remains unobserved. And diseases arise from the opposite process — when the natural proportions of the four elements are disturbed, and the secondary substances which are formed out of them, namely, blood, flesh, sinews, are generated in an inverse order.

Plato found heat and air within the human frame, and the blood circulating in every part. He assumes in language almost unintelligible to us that a network of fire and air envelopes the greater part of the body. This outer net contains two lesser nets, one corresponding to the stomach, the other to the lungs; and the entrance to the latter is forked or divided into two passages which lead to the nostrils and to the mouth. In the process of respiration the external net is said to find a way in and out of the pores of the skin: while the interior of it and the lesser nets move alternately into each other. The whole description is figurative, as Plato himself implies when he speaks of a ‘fountain of fire which we compare to the network of a creel.’ He really means by this what we should describe as a state of heat or temperature in the interior of the body. The ‘fountain of fire’ or heat is also in a figure the circulation of the blood. The passage is partly imagination, partly fact.

He has a singular theory of respiration for which he accounts solely by the movement of the air in and out of the body; he does not attribute any part of the process to the action of the body itself. The air has a double ingress and a double exit, through the mouth or nostrils, and through the skin. When exhaled through the mouth or nostrils, it leaves a vacuum which is filled up by other air finding a way in through the pores, this air being thrust out of its place by the exhalation from the mouth and nostrils. There is also a corresponding process of inhalation through the mouth or nostrils, and of exhalation through the pores. The inhalation through the pores appears to take place nearly at the same time as the exhalation through the mouth; and conversely. The internal fire is in either case the propelling cause outwards — the inhaled air, when heated by it, having a natural tendency to move out of the body to the place of fire; while the impossibility of a vacuum is the propelling cause inwards.

Thus we see that this singular theory is dependent on two principles largely employed by Plato in explaining the operations of nature, the impossibility of a vacuum and the attraction of like to like. To these there has to be added a third principle, which is the condition of the action of the other two, — the interpenetration of particles in proportion to their density or rarity. It is this which enables fire and air to permeate the flesh.

Plato's account of digestion and the circulation of the blood is closely connected with his theory of respiration. Digestion is supposed to be effected by the action of the internal fire, which in the process of respiration moves into the stomach and minces the food. As the fire returns to its place, it takes with it the minced food or blood; and in this way the veins are replenished. Plato does not enquire how the blood is separated from the faeces.

Of the anatomy and functions of the body he knew very little, — e.g. of the uses of the nerves in conveying motion and sensation, which he supposed to be communicated by the bones and veins; he was also ignorant of the distinction between veins and arteries; — the latter term he applies to the vessels which conduct air from the mouth to the lungs; — he supposes the lung to be hollow and bloodless; the spinal marrow he conceives to be the seed of generation; he confuses the parts of the body with the states of the

body — the network of fire and air is spoken of as a bodily organ; he has absolutely no idea of the phenomena of respiration, which he attributes to a law of equalization in nature, the air which is breathed out displacing other air which finds a way in; he is wholly unacquainted with the process of digestion. Except the general divisions into the spleen, the liver, the belly, and the lungs, and the obvious distinctions of flesh, bones, and the limbs of the body, we find nothing that reminds us of anatomical facts. But we find much which is derived from his theory of the universe, and transferred to man, as there is much also in his theory of the universe which is suggested by man. The microcosm of the human body is the lesser image of the macrocosm. The courses of the same and the other affect both; they are made of the same elements and therefore in the same proportions. Both are intelligent natures endued with the power of self-motion, and the same equipoise is maintained in both. The animal is a sort of ‘world’ to the particles of the blood which circulate in it. All the four elements entered into the original composition of the human frame; the bone was formed out of smooth earth; liquids of various kinds pass to and fro; the network of fire and air irrigates the veins. Infancy and childhood is the chaos or first turbid flux of sense prior to the establishment of order; the intervals of time which may be observed in some intermittent fevers correspond to the density of the elements. The spinal marrow, including the brain, is formed out of the finest sorts of triangles, and is the connecting link between body and mind. Health is only to be preserved by imitating the motions of the world in space, which is the mother and nurse of generation. The work of digestion is carried on by the superior sharpness of the triangles forming the substances of the human body to those which are introduced into it in the shape of food. The freshest and acutest forms of triangles are those that are found in children, but they become more obtuse with advancing years; and when they finally wear out and fall to pieces, old age and death supervene.

As in the Republic, Plato is still the enemy of the purgative treatment of physicians, which, except in extreme cases, no man of sense will ever adopt. For, as he adds, with an insight into the truth, ‘every disease is akin to the nature of the living being and is only

irritated by stimulants.' He is of opinion that nature should be left to herself, and is inclined to think that physicians are in vain (*Laws* — where he says that warm baths would be more beneficial to the limbs of the aged rustic than the prescriptions of a not over-wise doctor). If he seems to be extreme in his condemnation of medicine and to rely too much on diet and exercise, he might appeal to nearly all the best physicians of our own age in support of his opinions, who often speak to their patients of the worthlessness of drugs. For we ourselves are sceptical about medicine, and very unwilling to submit to the purgative treatment of physicians. May we not claim for Plato an anticipation of modern ideas as about some questions of astronomy and physics, so also about medicine? As in the *Charmides* he tells us that the body cannot be cured without the soul, so in the *Timaeus* he strongly asserts the sympathy of soul and body; any defect of either is the occasion of the greatest discord and disproportion in the other. Here too may be a presentiment that in the medicine of the future the interdependence of mind and body will be more fully recognized, and that the influence of the one over the other may be exerted in a manner which is not now thought possible.

Section 7.

In Plato's explanation of sensation we are struck by the fact that he has not the same distinct conception of organs of sense which is familiar to ourselves. The senses are not instruments, but rather passages, through which external objects strike upon the mind. The eye is the aperture through which the stream of vision passes, the ear is the aperture through which the vibrations of sound pass. But that the complex structure of the eye or the ear is in any sense the cause of sight and hearing he seems hardly to be aware.

The process of sight is the most complicated (*Rep.*), and consists of three elements — the light which is supposed to reside within the eye, the light of the sun, and the light emitted from external objects. When the light of the eye meets the light of the sun, and both together meet the light issuing from an external object, this is the simple act of sight. When the particles of light which proceed from

the object are exactly equal to the particles of the visual ray which meet them from within, then the body is transparent. If they are larger and contract the visual ray, a black colour is produced; if they are smaller and dilate it, a white. Other phenomena are produced by the variety and motion of light. A sudden flash of fire at once elicits light and moisture from the eye, and causes a bright colour. A more subdued light, on mingling with the moisture of the eye, produces a red colour. Out of these elements all other colours are derived. All of them are combinations of bright and red with white and black. Plato himself tells us that he does not know in what proportions they combine, and he is of opinion that such knowledge is granted to the gods only. To have seen the affinity of them to each other and their connection with light, is not a bad basis for a theory of colours. We must remember that they were not distinctly defined to his, as they are to our eyes; he saw them, not as they are divided in the prism, or artificially manufactured for the painter's use, but as they exist in nature, blended and confused with one another.

We can hardly agree with him when he tells us that smells do not admit of kinds. He seems to think that no definite qualities can attach to bodies which are in a state of transition or evaporation; he also makes the subtle observation that smells must be denser than air, though thinner than water, because when there is an obstruction to the breathing, air can penetrate, but not smell.

The affections peculiar to the tongue are of various kinds, and, like many other affections, are caused by contraction and dilation. Some of them are produced by rough, others by abstergent, others by inflammatory substances, — these act upon the testing instruments of the tongue, and produce a more or less disagreeable sensation, while other particles congenial to the tongue soften and harmonize them. The instruments of taste reach from the tongue to the heart. Plato has a lively sense of the manner in which sensation and motion are communicated from one part of the body to the other, though he confuses the affections with the organs. Hearing is a blow which passes through the ear and ends in the region of the liver, being transmitted by means of the air, the brain, and the blood to the soul. The swifter sound is acute, the sound which moves slowly is grave. A great body of sound is loud, the opposite is low. Discord is

produced by the swifter and slower motions of two sounds, and is converted into harmony when the swifter motions begin to pause and are overtaken by the slower.

The general phenomena of sensation are partly internal, but the more violent are caused by conflict with external objects. Proceeding by a method of superficial observation, Plato remarks that the more sensitive parts of the human frame are those which are least covered by flesh, as is the case with the head and the elbows. Man, if his head had been covered with a thicker pulp of flesh, might have been a longer-lived animal than he is, but could not have had as quick perceptions. On the other hand, the tongue is one of the most sensitive of organs; but then this is made, not to be a covering to the bones which contain the marrow or source of life, but with an express purpose, and in a separate mass.

Section 8.

We have now to consider how far in any of these speculations Plato approximated to the discoveries of modern science. The modern physical philosopher is apt to dwell exclusively on the absurdities of ancient ideas about science, on the haphazard fancies and a priori assumptions of ancient teachers, on their confusion of facts and ideas, on their inconsistency and blindness to the most obvious phenomena. He measures them not by what preceded them, but by what has followed them. He does not consider that ancient physical philosophy was not a free enquiry, but a growth, in which the mind was passive rather than active, and was incapable of resisting the impressions which flowed in upon it. He hardly allows to the notions of the ancients the merit of being the stepping-stones by which he has himself risen to a higher knowledge. He never reflects, how great a thing it was to have formed a conception, however imperfect, either of the human frame as a whole, or of the world as a whole. According to the view taken in these volumes the errors of ancient physicists were not separable from the intellectual conditions under which they lived. Their genius was their own; and they were not the rash and hasty generalizers which, since the days of

Bacon, we have been apt to suppose them. The thoughts of men widened to receive experience; at first they seemed to know all things as in a dream: after a while they look at them closely and hold them in their hands. They begin to arrange them in classes and to connect causes with effects. General notions are necessary to the apprehension of particular facts, the metaphysical to the physical. Before men can observe the world, they must be able to conceive it.

To do justice to the subject, we should consider the physical philosophy of the ancients as a whole; we should remember, (1) that the nebular theory was the received belief of several of the early physicists; (2) that the development of animals out of fishes who came to land, and of man out of the animals, was held by Anaximander in the sixth century before Christ (Plut. Symp. Quaest; Plac. Phil.); (3) that even by Philolaus and the early Pythagoreans, the earth was held to be a body like the other stars revolving in space around the sun or a central fire; (4) that the beginnings of chemistry are discernible in the 'similar particles' of Anaxagoras. Also they knew or thought (5) that there was a sex in plants as well as in animals; (6) they were aware that musical notes depended on the relative length or tension of the strings from which they were emitted, and were measured by ratios of number; (7) that mathematical laws pervaded the world; and even qualitative differences were supposed to have their origin in number and figure; (8) the annihilation of matter was denied by several of them, and the seeming disappearance of it held to be a transformation only. For, although one of these discoveries might have been supposed to be a happy guess, taken together they seem to imply a great advance and almost maturity of natural knowledge.

We should also remember, when we attribute to the ancients hasty generalizations and delusions of language, that physical philosophy and metaphysical too have been guilty of similar fallacies in quite recent times. We by no means distinguish clearly between mind and body, between ideas and facts. Have not many discussions arisen about the Atomic theory in which a point has been confused with a material atom? Have not the natures of things been explained by imaginary entities, such as life or phlogiston, which exist in the mind only? Has not disease been regarded, like sin, sometimes as a

negative and necessary, sometimes as a positive or malignant principle? The 'idols' of Bacon are nearly as common now as ever; they are inherent in the human mind, and when they have the most complete dominion over us, we are least able to perceive them. We recognize them in the ancients, but we fail to see them in ourselves.

Such reflections, although this is not the place in which to dwell upon them at length, lead us to take a favourable view of the speculations of the *Timaeus*. We should consider not how much Plato actually knew, but how far he has contributed to the general ideas of physics, or supplied the notions which, whether true or false, have stimulated the minds of later generations in the path of discovery. Some of them may seem old-fashioned, but may nevertheless have had a great influence in promoting system and assisting enquiry, while in others we hear the latest word of physical or metaphysical philosophy. There is also an intermediate class, in which Plato falls short of the truths of modern science, though he is not wholly unacquainted with them. (1) To the first class belongs the teleological theory of creation. Whether all things in the world can be explained as the result of natural laws, or whether we must not admit of tendencies and marks of design also, has been a question much disputed of late years. Even if all phenomena are the result of natural forces, we must admit that there are many things in heaven and earth which are as well expressed under the image of mind or design as under any other. At any rate, the language of Plato has been the language of natural theology down to our own time, nor can any description of the world wholly dispense with it. The notion of first and second or co-operative causes, which originally appears in the *Timaeus*, has likewise survived to our own day, and has been a great peace-maker between theology and science. Plato also approaches very near to our doctrine of the primary and secondary qualities of matter. (2) Another popular notion which is found in the *Timaeus*, is the feebleness of the human intellect— 'God knows the original qualities of things; man can only hope to attain to probability.' We speak in almost the same words of human intelligence, but not in the same manner of the uncertainty of our knowledge of nature. The reason is that the latter is assured to us by experiment, and is not contrasted with the certainty of ideal or mathematical knowledge.

But the ancient philosopher never experimented: in the *Timaeus* Plato seems to have thought that there would be impiety in making the attempt; he, for example, who tried experiments in colours would ‘forget the difference of the human and divine natures.’ Their indefiniteness is probably the reason why he singles them out, as especially incapable of being tested by experiment. (Compare the saying of Anaxagoras — Sext. Pyrrh. — that since snow is made of water and water is black, snow ought to be black.)

The greatest ‘divination’ of the ancients was the supremacy which they assigned to mathematics in all the realms of nature; for in all of them there is a foundation of mechanics. Even physiology partakes of figure and number; and Plato is not wrong in attributing them to the human frame, but in the omission to observe how little could be explained by them. Thus we may remark in passing that the most fanciful of ancient philosophies is also the most nearly verified in fact. The fortunate guess that the world is a sum of numbers and figures has been the most fruitful of anticipations. The ‘diatonic’ scale of the Pythagoreans and Plato suggested to Kepler that the secret of the distances of the planets from one another was to be found in mathematical proportions. The doctrine that the heavenly bodies all move in a circle is known by us to be erroneous; but without such an error how could the human mind have comprehended the heavens? Astronomy, even in modern times, has made far greater progress by the high *a priori* road than could have been attained by any other. Yet, strictly speaking — and the remark applies to ancient physics generally — this high *a priori* road was based upon *a posteriori* grounds. For there were no facts of which the ancients were so well assured by experience as facts of number. Having observed that they held good in a few instances, they applied them everywhere; and in the complexity, of which they were capable, found the explanation of the equally complex phenomena of the universe. They seemed to see them in the least things as well as in the greatest; in atoms, as well as in suns and stars; in the human body as well as in external nature. And now a favourite speculation of modern chemistry is the explanation of qualitative difference by quantitative, which is at present verified to a certain extent and may hereafter be of far more universal application. What is this but the

atoms of Democritus and the triangles of Plato? The ancients should not be wholly deprived of the credit of their guesses because they were unable to prove them. May they not have had, like the animals, an instinct of something more than they knew?

Besides general notions we seem to find in the *Timaeus* some more precise approximations to the discoveries of modern physical science. First, the doctrine of equipoise. Plato affirms, almost in so many words, that nature abhors a vacuum. Whenever a particle is displaced, the rest push and thrust one another until equality is restored. We must remember that these ideas were not derived from any definite experiment, but were the original reflections of man, fresh from the first observation of nature. The latest word of modern philosophy is continuity and development, but to Plato this is the beginning and foundation of science; there is nothing that he is so strongly persuaded of as that the world is one, and that all the various existences which are contained in it are only the transformations of the same soul of the world acting on the same matter. He would have readily admitted that out of the protoplasm all things were formed by the gradual process of creation; but he would have insisted that mind and intelligence — not meaning by this, however, a conscious mind or person — were prior to them, and could alone have created them. Into the workings of this eternal mind or intelligence he does not enter further; nor would there have been any use in attempting to investigate the things which no eye has seen nor any human language can express.

Lastly, there remain two points in which he seems to touch great discoveries of modern times — the law of gravitation, and the circulation of the blood.

(1) The law of gravitation, according to Plato, is a law, not only of the attraction of lesser bodies to larger ones, but of similar bodies to similar, having a magnetic power as well as a principle of gravitation. He observed that earth, water, and air had settled down to their places, and he imagined fire or the exterior aether to have a place beyond air. When air seemed to go upwards and fire to pierce through air — when water and earth fell downward, they were seeking their native elements. He did not remark that his own explanation did not suit all phenomena; and the simpler explanation, which assigns to bodies degrees of heaviness and lightness proportioned to the mass and distance of the bodies which attract them, never occurred to him. Yet the affinities of similar substances

have some effect upon the composition of the world, and of this Plato may be thought to have had an anticipation. He may be described as confusing the attraction of gravitation with the attraction of cohesion. The influence of such affinities and the chemical action of one body upon another in long periods of time have become a recognized principle of geology.

(2) Plato is perfectly aware — and he could hardly be ignorant — that blood is a fluid in constant motion. He also knew that blood is partly a solid substance consisting of several elements, which, as he might have observed in the use of ‘cupping-glasses’, decompose and die, when no longer in motion. But the specific discovery that the blood flows out on one side of the heart through the arteries and returns through the veins on the other, which is commonly called the circulation of the blood, was absolutely unknown to him.

A further study of the *Timaeus* suggests some after-thoughts which may be conveniently brought together in this place. The topics which I propose briefly to reconsider are (a) the relation of the *Timaeus* to the other dialogues of Plato and to the previous philosophy; (b) the nature of God and of creation (c) the morality of the *Timaeus*: —

(a) The *Timaeus* is more imaginative and less scientific than any other of the Platonic dialogues. It is conjectural astronomy, conjectural natural philosophy, conjectural medicine. The writer himself is constantly repeating that he is speaking what is probable only. The dialogue is put into the mouth of Timaeus, a Pythagorean philosopher, and therefore here, as in the *Parmenides*, we are in doubt how far Plato is expressing his own sentiments. Hence the connexion with the other dialogues is comparatively slight. We may fill up the lacunae of the *Timaeus* by the help of the *Republic* or *Phaedrus*: we may identify the same and other with the (Greek) of the *Philebus*. We may find in the *Laws* or in the *Statesman* parallels with the account of creation and of the first origin of man. It would be possible to frame a scheme in which all these various elements might have a place. But such a mode of proceeding would be unsatisfactory, because we have no reason to suppose that Plato intended his scattered thoughts to be collected in a system. There is a common spirit in his writings, and there are certain general

principles, such as the opposition of the sensible and intellectual, and the priority of mind, which run through all of them; but he has no definite forms of words in which he consistently expresses himself. While the determinations of human thought are in process of creation he is necessarily tentative and uncertain. And there is least of definiteness, whenever either in describing the beginning or the end of the world, he has recourse to myths. These are not the fixed modes in which spiritual truths are revealed to him, but the efforts of imagination, by which at different times and in various manners he seeks to embody his conceptions. The clouds of mythology are still resting upon him, and he has not yet pierced 'to the heaven of the fixed stars' which is beyond them. It is safer then to admit the inconsistencies of the *Timaeus*, or to endeavour to fill up what is wanting from our own imagination, inspired by a study of the dialogue, than to refer to other Platonic writings, — and still less should we refer to the successors of Plato, — for the elucidation of it.

More light is thrown upon the *Timaeus* by a comparison of the previous philosophies. For the physical science of the ancients was traditional, descending through many generations of Ionian and Pythagorean philosophers. Plato does not look out upon the heavens and describe what he sees in them, but he builds upon the foundations of others, adding something out of the 'depths of his own self-consciousness.' Socrates had already spoken of God the creator, who made all things for the best. While he ridiculed the superficial explanations of phenomena which were current in his age, he recognised the marks both of benevolence and of design in the frame of man and in the world. The apparatus of winds and waters is contemptuously rejected by him in the *Phaedo*, but he thinks that there is a power greater than that of any Atlas in the 'Best' (*Phaedo*; *Arist. Met.*). Plato, following his master, affirms this principle of the best, but he acknowledges that the best is limited by the conditions of matter. In the generation before Socrates, Anaxagoras had brought together 'Chaos' and 'Mind'; and these are connected by Plato in the *Timaeus*, but in accordance with his own mode of thinking he has interposed between them the idea or pattern according to which mind worked. The circular impulse (Greek) of the one philosopher answers to the circular movement (Greek) of the other. But unlike

Anaxagoras, Plato made the sun and stars living beings and not masses of earth or metal. The Pythagoreans again had framed a world out of numbers, which they constructed into figures. Plato adopted their speculations and improved upon them by a more exact knowledge of geometry. The Atomists too made the world, if not out of geometrical figures, at least out of different forms of atoms, and these atoms resembled the triangles of Plato in being too small to be visible. But though the physiology of the *Timaeus* is partly borrowed from them, they are either ignored by Plato or referred to with a secret contempt and dislike. He looks with more favour on the Pythagoreans, whose intervals of number applied to the distances of the planets reappear in the *Timaeus*. It is probable that among the Pythagoreans living in the fourth century B.C., there were already some who, like Plato, made the earth their centre. Whether he obtained his circles of the Same and Other from any previous thinker is uncertain. The four elements are taken from Empedocles; the interstices of the *Timaeus* may also be compared with his (Greek). The passage of one element into another is common to Heracleitus and several of the Ionian philosophers. So much of a syncretist is Plato, though not after the manner of the Neoplatonists. For the elements which he borrows from others are fused and transformed by his own genius. On the other hand we find fewer traces in Plato of early Ionic or Eleatic speculation. He does not imagine the world of sense to be made up of opposites or to be in a perpetual flux, but to vary within certain limits which are controlled by what he calls the principle of the same. Unlike the Eleatics, who relegated the world to the sphere of not-being, he admits creation to have an existence which is real and even eternal, although dependent on the will of the creator. Instead of maintaining the doctrine that the void has a necessary place in the existence of the world, he rather affirms the modern thesis that nature abhors a vacuum, as in the *Sophist* he also denies the reality of not-being (Aristot. *Metaph.*). But though in these respects he differs from them, he is deeply penetrated by the spirit of their philosophy; he differs from them with reluctance, and gladly recognizes the 'generous depth' of Parmenides (*Theaet.*).

There is a similarity between the *Timaeus* and the fragments of Philolaus, which by some has been thought to be so great as to create

a suspicion that they are derived from it. Philolaus is known to us from the *Phaedo* of Plato as a Pythagorean philosopher residing at Thebes in the latter half of the fifth century B.C., after the dispersion of the original Pythagorean society. He was the teacher of Simmias and Cebes, who became disciples of Socrates. We have hardly any other information about him. The story that Plato had purchased three books of his writings from a relation is not worth repeating; it is only a fanciful way in which an ancient biographer dresses up the fact that there was supposed to be a resemblance between the two writers. Similar gossiping stories are told about the sources of the *Republic* and the *Phaedo*. That there really existed in antiquity a work passing under the name of Philolaus there can be no doubt. Fragments of this work are preserved to us, chiefly in Stobaeus, a few in Boethius and other writers. They remind us of the *Timaeus*, as well as of the *Phaedrus* and *Philebus*. When the writer says (Stob. *Eclog.*) that all things are either finite (definite) or infinite (indefinite), or a union of the two, and that this antithesis and synthesis pervades all art and nature, we are reminded of the *Philebus*. When he calls the centre of the world (Greek), we have a parallel to the *Phaedrus*. His distinction between the world of order, to which the sun and moon and the stars belong, and the world of disorder, which lies in the region between the moon and the earth, approximates to Plato's sphere of the Same and of the Other. Like Plato (*Tim.*), he denied the above and below in space, and said that all things were the same in relation to a centre. He speaks also of the world as one and indestructible: 'for neither from within nor from without does it admit of destruction' (*Tim.*). He mentions ten heavenly bodies, including the sun and moon, the earth and the counter-earth (Greek), and in the midst of them all he places the central fire, around which they are moving — this is hidden from the earth by the counter-earth. Of neither is there any trace in Plato, who makes the earth the centre of his system. Philolaus magnifies the virtues of particular numbers, especially of the number 10 (Stob. *Eclog.*), and descants upon odd and even numbers, after the manner of the later Pythagoreans. It is worthy of remark that these mystical fancies are nowhere to be found in the writings of Plato, although the importance of number as a form and also an instrument of thought is

ever present to his mind. Both Philolaus and Plato agree in making the world move in certain numerical ratios according to a musical scale: though Bockh is of opinion that the two scales, of Philolaus and of the Timaeus, do not correspond...We appear not to be sufficiently acquainted with the early Pythagoreans to know how far the statements contained in these fragments corresponded with their doctrines; and we therefore cannot pronounce, either in favour of the genuineness of the fragments, with Bockh and Zeller, or, with Valentine Rose and Schaarschmidt, against them. But it is clear that they throw but little light upon the Timaeus, and that their resemblance to it has been exaggerated.

That there is a degree of confusion and indistinctness in Plato's account both of man and of the universe has been already acknowledged. We cannot tell (nor could Plato himself have told) where the figure or myth ends and the philosophical truth begins; we cannot explain (nor could Plato himself have explained to us) the relation of the ideas to appearance, of which one is the copy of the other, and yet of all things in the world they are the most opposed and unlike. This opposition is presented to us in many forms, as the antithesis of the one and many, of the finite and infinite, of the intelligible and sensible, of the unchangeable and the changing, of the indivisible and the divisible, of the fixed stars and the planets, of the creative mind and the primeval chaos. These pairs of opposites are so many aspects of the great opposition between ideas and phenomena — they easily pass into one another; and sometimes the two members of the relation differ in kind, sometimes only in degree. As in Aristotle's matter and form the connexion between them is really inseparable; for if we attempt to separate them they become devoid of content and therefore indistinguishable; there is no difference between the idea of which nothing can be predicated, and the chaos or matter which has no perceptible qualities — between Being in the abstract and Nothing. Yet we are frequently told that the one class of them is the reality and the other appearance; and one is often spoken of as the double or reflection of the other. For Plato never clearly saw that both elements had an equal place in mind and in nature; and hence, especially when we argue from isolated passages in his writings, or attempt to draw what appear to us to be

the natural inferences from them, we are full of perplexity. There is a similar confusion about necessity and free-will, and about the state of the soul after death. Also he sometimes supposes that God is immanent in the world, sometimes that he is transcendent. And having no distinction of objective and subjective, he passes imperceptibly from one to the other; from intelligence to soul, from eternity to time. These contradictions may be softened or concealed by a judicious use of language, but they cannot be wholly got rid of. That an age of intellectual transition must also be one of inconsistency; that the creative is opposed to the critical or defining habit of mind or time, has been often repeated by us. But, as Plato would say, 'there is no harm in repeating twice or thrice' (*Laws*) what is important for the understanding of a great author.

It has not, however, been observed, that the confusion partly arises out of the elements of opposing philosophies which are preserved in him. He holds these in solution, he brings them into relation with one another, but he does not perfectly harmonize them. They are part of his own mind, and he is incapable of placing himself outside of them and criticizing them. They grow as he grows; they are a kind of composition with which his own philosophy is overlaid. In early life he fancies that he has mastered them: but he is also mastered by them; and in language (*Sophist*) which may be compared with the hesitating tone of the *Timaeus*, he confesses in his later years that they are full of obscurity to him. He attributes new meanings to the words of Parmenides and Heracleitus; but at times the old Eleatic philosophy appears to go beyond him; then the world of phenomena disappears, but the doctrine of ideas is also reduced to nothingness. All of them are nearer to one another than they themselves supposed, and nearer to him than he supposed. All of them are antagonistic to sense and have an affinity to number and measure and a presentiment of ideas. Even in Plato they still retain their contentious or controversial character, which was developed by the growth of dialectic. He is never able to reconcile the first causes of the pre-Socratic philosophers with the final causes of Socrates himself. There is no intelligible account of the relation of numbers to the universal ideas, or of universals to the idea of good. He found them all three, in the Pythagorean philosophy and in the teaching of

Socrates and of the Megarians respectively; and, because they all furnished modes of explaining and arranging phenomena, he is unwilling to give up any of them, though he is unable to unite them in a consistent whole.

Lastly, Plato, though an idealist philosopher, is Greek and not Oriental in spirit and feeling. He is no mystic or ascetic; he is not seeking in vain to get rid of matter or to find absorption in the divine nature, or in the Soul of the universe. And therefore we are not surprised to find that his philosophy in the *Timaeus* returns at last to a worship of the heavens, and that to him, as to other Greeks, nature, though containing a remnant of evil, is still glorious and divine. He takes away or drops the veil of mythology, and presents her to us in what appears to him to be the form-fairer and truer far — of mathematical figures. It is this element in the *Timaeus*, no less than its affinity to certain Pythagorean speculations, which gives it a character not wholly in accordance with the other dialogues of Plato.

(b) The *Timaeus* contains an assertion perhaps more distinct than is found in any of the other dialogues (*Rep.*; *Laws*) of the goodness of God. 'He was good himself, and he fashioned the good everywhere.' He was not 'a jealous God,' and therefore he desired that all other things should be equally good. He is the IDEA of good who has now become a person, and speaks and is spoken of as God. Yet his personality seems to appear only in the act of creation. In so far as he works with his eye fixed upon an eternal pattern he is like the human artificer in the *Republic*. Here the theory of Platonic ideas intrudes upon us. God, like man, is supposed to have an ideal of which Plato is unable to tell us the origin. He may be said, in the language of modern philosophy, to resolve the divine mind into subject and object.

The first work of creation is perfected, the second begins under the direction of inferior ministers. The supreme God is withdrawn from the world and returns to his own accustomed nature (*Tim.*). As in the *Statesman*, he retires to his place of view. So early did the Epicurean doctrine take possession of the Greek mind, and so natural is it to the heart of man, when he has once passed out of the stage of mythology into that of rational religion. For he sees the marks of design in the world; but he no longer sees or fancies that he sees God

walking in the garden or haunting stream or mountain. He feels also that he must put God as far as possible out of the way of evil, and therefore he banishes him from an evil world. Plato is sensible of the difficulty; and he often shows that he is desirous of justifying the ways of God to man. Yet on the other hand, in the Tenth Book of the *Laws* he passes a censure on those who say that the Gods have no care of human things.

The creation of the world is the impression of order on a previously existing chaos. The formula of Anaxagoras— ‘all things were in chaos or confusion, and then mind came and disposed them’ — is a summary of the first part of the *Timaeus*. It is true that of a chaos without differences no idea could be formed. All was not mixed but one; and therefore it was not difficult for the later Platonists to draw inferences by which they were enabled to reconcile the narrative of the *Timaeus* with the Mosaic account of the creation. Neither when we speak of mind or intelligence, do we seem to get much further in our conception than circular motion, which was deemed to be the most perfect. Plato, like Anaxagoras, while commencing his theory of the universe with ideas of mind and of the best, is compelled in the execution of his design to condescend to the crudest physics.

(c) The morality of the *Timaeus* is singular, and it is difficult to adjust the balance between the two elements of it. The difficulty which Plato feels, is that which all of us feel, and which is increased in our own day by the progress of physical science, how the responsibility of man is to be reconciled with his dependence on natural causes. And sometimes, like other men, he is more impressed by one aspect of human life, sometimes by the other. In the *Republic* he represents man as freely choosing his own lot in a state prior to birth — a conception which, if taken literally, would still leave him subject to the dominion of necessity in his after life; in the *Statesman* he supposes the human race to be preserved in the world only by a divine interposition; while in the *Timaeus* the supreme God commissions the inferior deities to avert from him all but self-inflicted evils — words which imply that all the evils of men are really self-inflicted. And here, like Plato (the insertion of a note in the text of an ancient writer is a literary curiosity worthy of remark),

we may take occasion to correct an error. For we too hastily said that Plato in the *Timaeus* regarded all 'vices and crimes as involuntary.' But the fact is that he is inconsistent with himself; in one and the same passage vice is attributed to the relaxation of the bodily frame, and yet we are exhorted to avoid it and pursue virtue. It is also admitted that good and evil conduct are to be attributed respectively to good and evil laws and institutions. These cannot be given by individuals to themselves; and therefore human actions, in so far as they are dependent upon them, are regarded by Plato as involuntary rather than voluntary. Like other writers on this subject, he is unable to escape from some degree of self-contradiction. He had learned from Socrates that vice is ignorance, and suddenly the doctrine seems to him to be confirmed by observing how much of the good and bad in human character depends on the bodily constitution. So in modern times the speculative doctrine of necessity has often been supported by physical facts.

The *Timaeus* also contains an anticipation of the stoical life according to nature. Man contemplating the heavens is to regulate his erring life according to them. He is to partake of the repose of nature and of the order of nature, to bring the variable principle in himself into harmony with the principle of the same. The ethics of the *Timaeus* may be summed up in the single idea of 'law.' To feel habitually that he is part of the order of the universe, is one of the highest ethical motives of which man is capable. Something like this is what Plato means when he speaks of the soul 'moving about the same in unchanging thought of the same.' He does not explain how man is acted upon by the lesser influences of custom or of opinion; or how the commands of the soul watching in the citadel are conveyed to the bodily organs. But this perhaps, to use once more expressions of his own, 'is part of another subject' or 'may be more suitably discussed on some other occasion.'

There is no difficulty, by the help of Aristotle and later writers, in criticizing the *Timaeus* of Plato, in pointing out the inconsistencies of the work, in dwelling on the ignorance of anatomy displayed by the author, in showing the fancifulness or unmeaningness of some of his reasons. But the *Timaeus* still remains the greatest effort of the human mind to conceive the world as a whole which the genius of

antiquity has bequeathed to us.

One more aspect of the *Timaeus* remains to be considered — the mythological or geographical. Is it not a wonderful thing that a few pages of one of Plato's dialogues have grown into a great legend, not confined to Greece only, but spreading far and wide over the nations of Europe and reaching even to Egypt and Asia? Like the tale of Troy, or the legend of the Ten Tribes (Ewald, *Hist. of Isr.*), which perhaps originated in a few verses of II Esdras, it has become famous, because it has coincided with a great historical fact. Like the romance of King Arthur, which has had so great a charm, it has found a way over the seas from one country and language to another. It inspired the navigators of the fifteenth and sixteenth centuries; it foreshadowed the discovery of America. It realized the fiction so natural to the human mind, because it answered the enquiry about the origin of the arts, that there had somewhere existed an ancient primitive civilization. It might find a place wherever men chose to look for it; in North, South, East, or West; in the Islands of the Blest; before the entrance of the Straits of Gibraltar, in Sweden or in Palestine. It mattered little whether the description in Plato agreed with the locality assigned to it or not. It was a legend so adapted to the human mind that it made a habitation for itself in any country. It was an island in the clouds, which might be seen anywhere by the eye of faith. It was a subject especially congenial to the ponderous industry of certain French and Swedish writers, who delighted in heaping up learning of all sorts but were incapable of using it.

M. Martin has written a valuable dissertation on the opinions entertained respecting the Island of Atlantis in ancient and modern times. It is a curious chapter in the history of the human mind. The tale of Atlantis is the fabric of a vision, but it has never ceased to interest mankind. It was variously regarded by the ancients themselves. The stronger heads among them, like Strabo and Longinus, were as little disposed to believe in the truth of it as the modern reader in Gulliver or Robinson Crusoe. On the other hand

there is no kind or degree of absurdity or fancy in which the more foolish writers, both of antiquity and of modern times, have not indulged respecting it. The Neo-Platonists, loyal to their master, like some commentators on the Christian Scriptures, sought to give an allegorical meaning to what they also believed to be an historical fact. It was as if some one in our own day were to convert the poems of Homer into an allegory of the Christian religion, at the same time maintaining them to be an exact and veritable history. In the Middle Ages the legend seems to have been half-forgotten until revived by the discovery of America. It helped to form the Utopia of Sir Thomas More and the New Atlantis of Bacon, although probably neither of those great men were at all imposed upon by the fiction. It was most prolific in the seventeenth or in the early part of the eighteenth century, when the human mind, seeking for Utopias or inventing them, was glad to escape out of the dulness of the present into the romance of the past or some ideal of the future. The later forms of such narratives contained features taken from the Edda, as well as from the Old and New Testament; also from the tales of missionaries and the experiences of travellers and of colonists.

The various opinions respecting the Island of Atlantis have no interest for us except in so far as they illustrate the extravagances of which men are capable. But this is a real interest and a serious lesson, if we remember that now as formerly the human mind is liable to be imposed upon by the illusions of the past, which are ever assuming some new form.

When we have shaken off the rubbish of ages, there remain one or two questions of which the investigation has a permanent value: —

1. Did Plato derive the legend of Atlantis from an Egyptian source? It may be replied that there is no such legend in any writer previous to Plato; neither in Homer, nor in Pindar, nor in Herodotus is there any mention of an Island of Atlantis, nor any reference to it in Aristotle, nor any citation of an earlier writer by a later one in which it is to be found. Nor have any traces been discovered hitherto in Egyptian monuments of a connexion between Greece and Egypt older than the eighth or ninth century B.C. It is true that Proclus, writing in the fifth century after Christ, tells us of stones and columns in Egypt on which the history of the Island of Atlantis was engraved.

The statement may be false — there are similar tales about columns set up ‘by the Canaanites whom Joshua drove out’ (Procop.); but even if true, it would only show that the legend, 800 years after the time of Plato, had been transferred to Egypt, and inscribed, not, like other forgeries, in books, but on stone. Probably in the Alexandrian age, when Egypt had ceased to have a history and began to appropriate the legends of other nations, many such monuments were to be found of events which had become famous in that or other countries. The oldest witness to the story is said to be Crantor, a Stoic philosopher who lived a generation later than Plato, and therefore may have borrowed it from him. The statement is found in Proclus; but we require better assurance than Proclus can give us before we accept this or any other statement which he makes.

Secondly, passing from the external to the internal evidence, we may remark that the story is far more likely to have been invented by Plato than to have been brought by Solon from Egypt. That is another part of his legend which Plato also seeks to impose upon us. The verisimilitude which he has given to the tale is a further reason for suspecting it; for he could easily ‘invent Egyptian or any other tales’ (Phaedrus). Are not the words, ‘The truth of the story is a great advantage,’ if we read between the lines, an indication of the fiction? It is only a legend that Solon went to Egypt, and if he did he could not have conversed with Egyptian priests or have read records in their temples. The truth is that the introduction is a mosaic work of small touches which, partly by their minuteness, and also by their seeming probability, win the confidence of the reader. Who would desire better evidence than that of Critias, who had heard the narrative in youth when the memory is strongest at the age of ten from his grandfather Critias, an old man of ninety, who in turn had heard it from Solon himself? Is not the famous expression— ‘You Hellenes are ever children and there is no knowledge among you hoary with age,’ really a compliment to the Athenians who are described in these words as ‘ever young’? And is the thought expressed in them to be attributed to the learning of the Egyptian priest, and not rather to the genius of Plato? Or when the Egyptian says— ‘Hereafter at our leisure we will take up the written documents and examine in detail the exact truth about these things’

— what is this but a literary trick by which Plato sets off his narrative? Could any war between Athens and the Island of Atlantis have really coincided with the struggle between the Greeks and Persians, as is sufficiently hinted though not expressly stated in the narrative of Plato? And whence came the tradition to Egypt? or in what does the story consist except in the war between the two rival powers and the submersion of both of them? And how was the tale transferred to the poem of Solon? ‘It is not improbable,’ says Mr. Grote, ‘that Solon did leave an unfinished Egyptian poem’ (Plato). But are probabilities for which there is not a tittle of evidence, and which are without any parallel, to be deemed worthy of attention by the critic? How came the poem of Solon to disappear in antiquity? or why did Plato, if the whole narrative was known to him, break off almost at the beginning of it?

While therefore admiring the diligence and erudition of M. Martin, we cannot for a moment suppose that the tale was told to Solon by an Egyptian priest, nor can we believe that Solon wrote a poem upon the theme which was thus suggested to him — a poem which disappeared in antiquity; or that the Island of Atlantis or the antediluvian Athens ever had any existence except in the imagination of Plato. Martin is of opinion that Plato would have been terrified if he could have foreseen the endless fancies to which his Island of Atlantis has given occasion. Rather he would have been infinitely amused if he could have known that his gift of invention would have deceived M. Martin himself into the belief that the tradition was brought from Egypt by Solon and made the subject of a poem by him. M. Martin may also be gently censured for citing without sufficient discrimination ancient authors having very different degrees of authority and value.

2. It is an interesting and not unimportant question which is touched upon by Martin, whether the Atlantis of Plato in any degree held out a guiding light to the early navigators. He is inclined to think that there is no real connexion between them. But surely the discovery of the New World was preceded by a prophetic anticipation of it, which, like the hope of a Messiah, was entering into the hearts of men? And this hope was nursed by ancient tradition, which had found expression from time to time in the

celebrated lines of Seneca and in many other places. This tradition was sustained by the great authority of Plato, and therefore the legend of the Island of Atlantis, though not closely connected with the voyages of the early navigators, may be truly said to have contributed indirectly to the great discovery.

The *Timaeus* of Plato, like the *Protagoras* and several portions of the *Phaedrus* and *Republic*, was translated by Cicero into Latin. About a fourth, comprehending with lacunae the first portion of the dialogue, is preserved in several MSS. These generally agree, and therefore may be supposed to be derived from a single original. The version is very faithful, and is a remarkable monument of Cicero's skill in managing the difficult and intractable Greek. In his treatise *De Natura Deorum*, he also refers to the *Timaeus*, which, speaking in the person of Velleius the Epicurean, he severely criticises.

The commentary of Proclus on the *Timaeus* is a wonderful monument of the silliness and prolixity of the Alexandrian Age. It extends to about thirty pages of the book, and is thirty times the length of the original. It is surprising that this voluminous work should have found a translator (Thomas Taylor, a kindred spirit, who was himself a Neo-Platonist, after the fashion, not of the fifth or sixteenth, but of the nineteenth century A.D.). The commentary is of little or no value, either in a philosophical or philological point of view. The writer is unable to explain particular passages in any precise manner, and he is equally incapable of grasping the whole. He does not take words in their simple meaning or sentences in their natural connexion. He is thinking, not of the context in Plato, but of the contemporary Pythagorean philosophers and their wordy strife. He finds nothing in the text which he does not bring to it. He is full of Porphyry, Iamblichus and Plotinus, of misapplied logic, of misunderstood grammar, and of the Orphic theology.

Although such a work can contribute little or nothing to the understanding of Plato, it throws an interesting light on the Alexandrian times; it realizes how a philosophy made up of words only may create a deep and widespread enthusiasm, how the forms of logic and rhetoric may usurp the place of reason and truth, how all philosophies grow faded and discoloured, and are patched and made up again like worn-out garments, and retain only a second-hand

existence. He who would study this degeneracy of philosophy and of the Greek mind in the original cannot do better than devote a few of his days and nights to the commentary of Proclus on the *Timaeus*.

A very different account must be given of the short work entitled ‘*Timaeus Locrus*,’ which is a brief but clear analysis of the *Timaeus* of Plato, omitting the introduction or dialogue and making a few small additions. It does not allude to the original from which it is taken; it is quite free from mysticism and Neo-Platonism. In length it does not exceed a fifth part of the *Timaeus*. It is written in the Doric dialect, and contains several words which do not occur in classical Greek. No other indication of its date, except this uncertain one of language, appears in it. In several places the writer has simplified the language of Plato, in a few others he has embellished and exaggerated it. He generally preserves the thought of the original, but does not copy the words. On the whole this little tract faithfully reflects the meaning and spirit of the *Timaeus*.

From the garden of the *Timaeus*, as from the other dialogues of Plato, we may still gather a few flowers and present them at parting to the reader. There is nothing in Plato grander and simpler than the conversation between Solon and the Egyptian priest, in which the youthfulness of Hellas is contrasted with the antiquity of Egypt. Here are to be found the famous words, ‘O Solon, Solon, you Hellenes are ever young, and there is not an old man among you’ — which may be compared to the lively saying of Hegel, that ‘Greek history began with the youth Achilles and left off with the youth Alexander.’ The numerous arts of verisimilitude by which Plato insinuates into the mind of the reader the truth of his narrative have been already referred to. Here occur a sentence or two not wanting in Platonic irony (Greek — a word to the wise). ‘To know or tell the origin of the other divinities is beyond us, and we must accept the traditions of the men of old time who affirm themselves to be the offspring of the Gods — that is what they say — and they must surely have known their own ancestors. How can we doubt the word of the children of the Gods? Although they give no probable or certain proofs, still, as they declare that they are speaking of what took place in their own family, we must conform to custom and believe them.’ ‘Our creators well knew that women and other animals would some day be framed

out of men, and they further knew that many animals would require the use of nails for many purposes; wherefore they fashioned in men at their first creation the rudiments of nails.' Or once more, let us reflect on two serious passages in which the order of the world is supposed to find a place in the human soul and to infuse harmony into it. 'The soul, when touching anything that has essence, whether dispersed in parts or undivided, is stirred through all her powers to declare the sameness or difference of that thing and some other; and to what individuals are related, and by what affected, and in what way and how and when, both in the world of generation and in the world of immutable being. And when reason, which works with equal truth, whether she be in the circle of the diverse or of the same, — in voiceless silence holding her onward course in the sphere of the self-moved, — when reason, I say, is hovering around the sensible world, and when the circle of the diverse also moving truly imparts the intimations of sense to the whole soul, then arise opinions and beliefs sure and certain. But when reason is concerned with the rational, and the circle of the same moving smoothly declares it, then intelligence and knowledge are necessarily perfected;' where, proceeding in a similar path of contemplation, he supposes the inward and the outer world mutually to imply each other. 'God invented and gave us sight to the end that we might behold the courses of intelligence in the heaven, and apply them to the courses of our own intelligence which are akin to them, the unperturbed to the perturbed; and that we, learning them and partaking of the natural truth of reason, might imitate the absolutely unerring courses of God and regulate our own vagaries.' Or let us weigh carefully some other profound thoughts, such as the following. 'He who neglects education walks lame to the end of his life, and returns imperfect and good for nothing to the world below.' 'The father and maker of all this universe is past finding out; and even if we found him, to tell of him to all men would be impossible.' 'Let me tell you then why the Creator made this world of generation. He was good, and the good can never have jealousy of anything. And being free from jealousy, he desired that all things should be as like himself as they could be. This is in the truest sense the origin of creation and of the world, as we shall do well in believing on the testimony of wise men: God

desired that all things should be good and nothing bad, so far as this was attainable.' This is the leading thought in the *Timaeus*, just as the IDEA of Good is the leading thought of the *Republic*, the one expression describing the personal, the other the impersonal Good or God, differing in form rather than in substance, and both equally implying to the mind of Plato a divine reality. The slight touch, perhaps ironical, contained in the words, 'as we shall do well in believing on the testimony of wise men,' is very characteristic of Plato.

TIMAEUS.

PERSONS OF THE DIALOGUE:

Socrates, Critias, Timaeus, Hermocrates.

SOCRATES: One, two, three; but where, my dear Timaeus, is the fourth of those who were yesterday my guests and are to be my entertainers to-day?

TIMAEUS: He has been taken ill, Socrates; for he would not willingly have been absent from this gathering.

SOCRATES: Then, if he is not coming, you and the two others must supply his place.

TIMAEUS: Certainly, and we will do all that we can; having been handsomely entertained by you yesterday, those of us who remain should be only too glad to return your hospitality.

SOCRATES: Do you remember what were the points of which I required you to speak?

TIMAEUS: We remember some of them, and you will be here to remind us of anything which we have forgotten: or rather, if we are not troubling you, will you briefly recapitulate the whole, and then the particulars will be more firmly fixed in our memories?

SOCRATES: To be sure I will: the chief theme of my yesterday's discourse was the State — how constituted and of what citizens composed it would seem likely to be most perfect.

TIMAEUS: Yes, Socrates; and what you said of it was very much to our mind.

SOCRATES: Did we not begin by separating the husbandmen and the artisans from the class of defenders of the State?

TIMAEUS: Yes.

SOCRATES: And when we had given to each one that single employment and particular art which was suited to his nature, we spoke of those who were intended to be our warriors, and said that they were to be guardians of the city against attacks from within as well as from without, and to have no other employment; they were to be merciful in judging their subjects, of whom they were by nature friends, but fierce to their enemies, when they came across them in battle.

TIMAEUS: Exactly.

SOCRATES: We said, if I am not mistaken, that the guardians should be gifted with a temperament in a high degree both passionate and philosophical; and that then they would be as they ought to be, gentle to their friends and fierce with their enemies.

TIMAEUS: Certainly.

SOCRATES: And what did we say of their education? Were they not to be trained in gymnastic, and music, and all other sorts of knowledge which were proper for them?

TIMAEUS: Very true.

SOCRATES: And being thus trained they were not to consider gold or silver or anything else to be their own private property; they were to be like hired troops, receiving pay for keeping guard from those who were protected by them — the pay was to be no more than would suffice for men of simple life; and they were to spend in common, and to live together in the continual practice of virtue, which was to be their sole pursuit.

TIMAEUS: That was also said.

SOCRATES: Neither did we forget the women; of whom we declared, that their natures should be assimilated and brought into harmony with those of the men, and that common pursuits should be assigned to them both in time of war and in their ordinary life.

TIMAEUS: That, again, was as you say.

SOCRATES: And what about the procreation of children? Or rather was not the proposal too singular to be forgotten? for all wives and children were to be in common, to the intent that no one should ever know his own child, but they were to imagine that they were all one family; those who were within a suitable limit of age were to be brothers and sisters, those who were of an elder generation parents and grandparents, and those of a younger, children and grandchildren.

TIMAEUS: Yes, and the proposal is easy to remember, as you say.

SOCRATES: And do you also remember how, with a view of securing as far as we could the best breed, we said that the chief magistrates, male and female, should contrive secretly, by the use of certain lots, so to arrange the nuptial meeting, that the bad of either sex and the good of either sex might pair with their like; and there was to be no quarrelling on this account, for they would imagine that the union was a mere accident, and was to be attributed to the lot?

TIMAEUS: I remember.

SOCRATES: And you remember how we said that the children of the good parents were to be educated, and the children of the bad secretly dispersed among the inferior citizens; and while they were all growing up the rulers were to be on the look-out, and to bring up from below in their turn those who were worthy, and those among themselves who were unworthy were to take the places of those who came up?

TIMAEUS: True.

SOCRATES: Then have I now given you all the heads of our yesterday's discussion? Or is there anything more, my dear Timaeus, which has been omitted?

TIMAEUS: Nothing, Socrates; it was just as you have said.

SOCRATES: I should like, before proceeding further, to tell you how I feel about the State which we have described. I might compare myself to a person who, on beholding beautiful animals either

created by the painter's art, or, better still, alive but at rest, is seized with a desire of seeing them in motion or engaged in some struggle or conflict to which their forms appear suited; this is my feeling about the State which we have been describing. There are conflicts which all cities undergo, and I should like to hear some one tell of our own city carrying on a struggle against her neighbours, and how she went out to war in a becoming manner, and when at war showed by the greatness of her actions and the magnanimity of her words in dealing with other cities a result worthy of her training and education. Now I, Critias and Hermocrates, am conscious that I myself should never be able to celebrate the city and her citizens in a befitting manner, and I am not surprised at my own incapacity; to me the wonder is rather that the poets present as well as past are no better — not that I mean to depreciate them; but every one can see that they are a tribe of imitators, and will imitate best and most easily the life in which they have been brought up; while that which is beyond the range of a man's education he finds hard to carry out in action, and still harder adequately to represent in language. I am aware that the Sophists have plenty of brave words and fair conceits, but I am afraid that being only wanderers from one city to another, and having never had habitations of their own, they may fail in their conception of philosophers and statesmen, and may not know what they do and say in time of war, when they are fighting or holding parley with their enemies. And thus people of your class are the only ones remaining who are fitted by nature and education to take part at once both in politics and philosophy. Here is Timaeus, of Locris in Italy, a city which has admirable laws, and who is himself in wealth and rank the equal of any of his fellow-citizens; he has held the most important and honourable offices in his own state, and, as I believe, has scaled the heights of all philosophy; and here is Critias, whom every Athenian knows to be no novice in the matters of which we are speaking; and as to Hermocrates, I am assured by many witnesses that his genius and education qualify him to take part in any speculation of the kind. And therefore yesterday when I saw that you wanted me to describe the formation of the State, I readily assented, being very well aware, that, if you only would, none were better qualified to carry the discussion further, and that when you had

engaged our city in a suitable war, you of all men living could best exhibit her playing a fitting part. When I had completed my task, I in return imposed this other task upon you. You conferred together and agreed to entertain me to-day, as I had entertained you, with a feast of discourse. Here am I in festive array, and no man can be more ready for the promised banquet.

HERMOCRATES: And we too, Socrates, as Timaeus says, will not be wanting in enthusiasm; and there is no excuse for not complying with your request. As soon as we arrived yesterday at the guest-chamber of Critias, with whom we are staying, or rather on our way thither, we talked the matter over, and he told us an ancient tradition, which I wish, Critias, that you would repeat to Socrates, so that he may help us to judge whether it will satisfy his requirements or not.

CRITIAS: I will, if Timaeus, who is our other partner, approves.

TIMAEUS: I quite approve.

CRITIAS: Then listen, Socrates, to a tale which, though strange, is certainly true, having been attested by Solon, who was the wisest of the seven sages. He was a relative and a dear friend of my great-grandfather, Dropides, as he himself says in many passages of his poems; and he told the story to Critias, my grandfather, who remembered and repeated it to us. There were of old, he said, great and marvellous actions of the Athenian city, which have passed into oblivion through lapse of time and the destruction of mankind, and one in particular, greater than all the rest. This we will now rehearse. It will be a fitting monument of our gratitude to you, and a hymn of praise true and worthy of the goddess, on this her day of festival.

SOCRATES: Very good. And what is this ancient famous action of the Athenians, which Critias declared, on the authority of Solon, to be not a mere legend, but an actual fact?

CRITIAS: I will tell an old-world story which I heard from an aged man; for Critias, at the time of telling it, was, as he said, nearly ninety years of age, and I was about ten. Now the day was that day of the Apaturia which is called the Registration of Youth, at which,

according to custom, our parents gave prizes for recitations, and the poems of several poets were recited by us boys, and many of us sang the poems of Solon, which at that time had not gone out of fashion. One of our tribe, either because he thought so or to please Critias, said that in his judgment Solon was not only the wisest of men, but also the noblest of poets. The old man, as I very well remember, brightened up at hearing this and said, smiling: Yes, Amynder, if Solon had only, like other poets, made poetry the business of his life, and had completed the tale which he brought with him from Egypt, and had not been compelled, by reason of the factions and troubles which he found stirring in his own country when he came home, to attend to other matters, in my opinion he would have been as famous as Homer or Hesiod, or any poet.

And what was the tale about, Critias? said Amynder.

About the greatest action which the Athenians ever did, and which ought to have been the most famous, but, through the lapse of time and the destruction of the actors, it has not come down to us.

Tell us, said the other, the whole story, and how and from whom Solon heard this veritable tradition.

He replied: — In the Egyptian Delta, at the head of which the river Nile divides, there is a certain district which is called the district of Sais, and the great city of the district is also called Sais, and is the city from which King Amasis came. The citizens have a deity for their foundress; she is called in the Egyptian tongue Neith, and is asserted by them to be the same whom the Hellenes call Athene; they are great lovers of the Athenians, and say that they are in some way related to them. To this city came Solon, and was received there with great honour; he asked the priests who were most skilful in such matters, about antiquity, and made the discovery that neither he nor any other Hellene knew anything worth mentioning about the times of old. On one occasion, wishing to draw them on to speak of antiquity, he began to tell about the most ancient things in our part of the world — about Phoroneus, who is called ‘the first man,’ and about Niobe; and after the Deluge, of the survival of Deucalion and Pyrrha; and he traced the genealogy of their descendants, and reckoning up the dates, tried to compute how many years ago the

events of which he was speaking happened. Thereupon one of the priests, who was of a very great age, said: O Solon, Solon, you Hellenes are never anything but children, and there is not an old man among you. Solon in return asked him what he meant. I mean to say, he replied, that in mind you are all young; there is no old opinion handed down among you by ancient tradition, nor any science which is hoary with age. And I will tell you why. There have been, and will be again, many destructions of mankind arising out of many causes; the greatest have been brought about by the agencies of fire and water, and other lesser ones by innumerable other causes. There is a story, which even you have preserved, that once upon a time Paethon, the son of Helios, having yoked the steeds in his father's chariot, because he was not able to drive them in the path of his father, burnt up all that was upon the earth, and was himself destroyed by a thunderbolt. Now this has the form of a myth, but really signifies a declination of the bodies moving in the heavens around the earth, and a great conflagration of things upon the earth, which recurs after long intervals; at such times those who live upon the mountains and in dry and lofty places are more liable to destruction than those who dwell by rivers or on the seashore. And from this calamity the Nile, who is our never-failing saviour, delivers and preserves us. When, on the other hand, the gods purge the earth with a deluge of water, the survivors in your country are herdsmen and shepherds who dwell on the mountains, but those who, like you, live in cities are carried by the rivers into the sea. Whereas in this land, neither then nor at any other time, does the water come down from above on the fields, having always a tendency to come up from below; for which reason the traditions preserved here are the most ancient. The fact is, that wherever the extremity of winter frost or of summer sun does not prevent, mankind exist, sometimes in greater, sometimes in lesser numbers. And whatever happened either in your country or in ours, or in any other region of which we are informed — if there were any actions noble or great or in any other way remarkable, they have all been written down by us of old, and are preserved in our temples. Whereas just when you and other nations are beginning to be provided with letters and the other requisites of civilized life, after the usual interval, the stream from heaven, like a

pestilence, comes pouring down, and leaves only those of you who are destitute of letters and education; and so you have to begin all over again like children, and know nothing of what happened in ancient times, either among us or among yourselves. As for those genealogies of yours which you just now recounted to us, Solon, they are no better than the tales of children. In the first place you remember a single deluge only, but there were many previous ones; in the next place, you do not know that there formerly dwelt in your land the fairest and noblest race of men which ever lived, and that you and your whole city are descended from a small seed or remnant of them which survived. And this was unknown to you, because, for many generations, the survivors of that destruction died, leaving no written word. For there was a time, Solon, before the great deluge of all, when the city which now is Athens was first in war and in every way the best governed of all cities, is said to have performed the noblest deeds and to have had the fairest constitution of any of which tradition tells, under the face of heaven. Solon marvelled at his words, and earnestly requested the priests to inform him exactly and in order about these former citizens. You are welcome to hear about them, Solon, said the priest, both for your own sake and for that of your city, and above all, for the sake of the goddess who is the common patron and parent and educator of both our cities. She founded your city a thousand years before ours (Observe that Plato gives the same date (9000 years ago) for the foundation of Athens and for the repulse of the invasion from Atlantis (Crit.).), receiving from the Earth and Hephaestus the seed of your race, and afterwards she founded ours, of which the constitution is recorded in our sacred registers to be 8000 years old. As touching your citizens of 9000 years ago, I will briefly inform you of their laws and of their most famous action; the exact particulars of the whole we will hereafter go through at our leisure in the sacred registers themselves. If you compare these very laws with ours you will find that many of ours are the counterpart of yours as they were in the olden time. In the first place, there is the caste of priests, which is separated from all the others; next, there are the artificers, who ply their several crafts by themselves and do not intermix; and also there is the class of shepherds and of hunters, as well as that of husbandmen; and you

will observe, too, that the warriors in Egypt are distinct from all the other classes, and are commanded by the law to devote themselves solely to military pursuits; moreover, the weapons which they carry are shields and spears, a style of equipment which the goddess taught of Asiatics first to us, as in your part of the world first to you. Then as to wisdom, do you observe how our law from the very first made a study of the whole order of things, extending even to prophecy and medicine which gives health, out of these divine elements deriving what was needful for human life, and adding every sort of knowledge which was akin to them. All this order and arrangement the goddess first imparted to you when establishing your city; and she chose the spot of earth in which you were born, because she saw that the happy temperament of the seasons in that land would produce the wisest of men. Wherefore the goddess, who was a lover both of war and of wisdom, selected and first of all settled that spot which was the most likely to produce men likest herself. And there you dwelt, having such laws as these and still better ones, and excelled all mankind in all virtue, as became the children and disciples of the gods.

Many great and wonderful deeds are recorded of your state in our histories. But one of them exceeds all the rest in greatness and valour. For these histories tell of a mighty power which unprovoked made an expedition against the whole of Europe and Asia, and to which your city put an end. This power came forth out of the Atlantic Ocean, for in those days the Atlantic was navigable; and there was an island situated in front of the straits which are by you called the Pillars of Heracles; the island was larger than Libya and Asia put together, and was the way to other islands, and from these you might pass to the whole of the opposite continent which surrounded the true ocean; for this sea which is within the Straits of Heracles is only a harbour, having a narrow entrance, but that other is a real sea, and the surrounding land may be most truly called a boundless continent. Now in this island of Atlantis there was a great and wonderful empire which had rule over the whole island and several others, and over parts of the continent, and, furthermore, the men of Atlantis had subjected the parts of Libya within the columns of Heracles as far as Egypt, and of Europe as far as Tyrrhenia. This vast power, gathered into one, endeavoured to subdue at a blow our country and yours and

the whole of the region within the straits; and then, Solon, your country shone forth, in the excellence of her virtue and strength, among all mankind. She was pre-eminent in courage and military skill, and was the leader of the Hellenes. And when the rest fell off from her, being compelled to stand alone, after having undergone the very extremity of danger, she defeated and triumphed over the invaders, and preserved from slavery those who were not yet subjugated, and generously liberated all the rest of us who dwell within the pillars. But afterwards there occurred violent earthquakes and floods; and in a single day and night of misfortune all your warlike men in a body sank into the earth, and the island of Atlantis in like manner disappeared in the depths of the sea. For which reason the sea in those parts is impassable and impenetrable, because there is a shoal of mud in the way; and this was caused by the subsidence of the island.

I have told you briefly, Socrates, what the aged Critias heard from Solon and related to us. And when you were speaking yesterday about your city and citizens, the tale which I have just been repeating to you came into my mind, and I remarked with astonishment how, by some mysterious coincidence, you agreed in almost every particular with the narrative of Solon; but I did not like to speak at the moment. For a long time had elapsed, and I had forgotten too much; I thought that I must first of all run over the narrative in my own mind, and then I would speak. And so I readily assented to your request yesterday, considering that in all such cases the chief difficulty is to find a tale suitable to our purpose, and that with such a tale we should be fairly well provided.

And therefore, as Hermocrates has told you, on my way home yesterday I at once communicated the tale to my companions as I remembered it; and after I left them, during the night by thinking I recovered nearly the whole of it. Truly, as is often said, the lessons of our childhood make a wonderful impression on our memories; for I am not sure that I could remember all the discourse of yesterday, but I should be much surprised if I forgot any of these things which I have heard very long ago. I listened at the time with childlike interest to the old man's narrative; he was very ready to teach me, and I asked him again and again to repeat his words, so that like an

indelible picture they were branded into my mind. As soon as the day broke, I rehearsed them as he spoke them to my companions, that they, as well as myself, might have something to say. And now, Socrates, to make an end of my preface, I am ready to tell you the whole tale. I will give you not only the general heads, but the particulars, as they were told to me. The city and citizens, which you yesterday described to us in fiction, we will now transfer to the world of reality. It shall be the ancient city of Athens, and we will suppose that the citizens whom you imagined, were our veritable ancestors, of whom the priest spoke; they will perfectly harmonize, and there will be no inconsistency in saying that the citizens of your republic are these ancient Athenians. Let us divide the subject among us, and all endeavour according to our ability gracefully to execute the task which you have imposed upon us. Consider then, Socrates, if this narrative is suited to the purpose, or whether we should seek for some other instead.

SOCRATES: And what other, Critias, can we find that will be better than this, which is natural and suitable to the festival of the goddess, and has the very great advantage of being a fact and not a fiction? How or where shall we find another if we abandon this? We cannot, and therefore you must tell the tale, and good luck to you; and I in return for my yesterday's discourse will now rest and be a listener.

CRITIAS: Let me proceed to explain to you, Socrates, the order in which we have arranged our entertainment. Our intention is, that Timaeus, who is the most of an astronomer amongst us, and has made the nature of the universe his special study, should speak first, beginning with the generation of the world and going down to the creation of man; next, I am to receive the men whom he has created, and of whom some will have profited by the excellent education which you have given them; and then, in accordance with the tale of Solon, and equally with his law, we will bring them into court and make them citizens, as if they were those very Athenians whom the sacred Egyptian record has recovered from oblivion, and thenceforward we will speak of them as Athenians and fellow-citizens.

SOCRATES: I see that I shall receive in my turn a perfect and splendid feast of reason. And now, Timaeus, you, I suppose, should speak next, after duly calling upon the Gods.

TIMAEUS: All men, Socrates, who have any degree of right feeling, at the beginning of every enterprise, whether small or great, always call upon God. And we, too, who are going to discourse of the nature of the universe, how created or how existing without creation, if we be not altogether out of our wits, must invoke the aid of Gods and Goddesses and pray that our words may be acceptable to them and consistent with themselves. Let this, then, be our invocation of the Gods, to which I add an exhortation of myself to speak in such manner as will be most intelligible to you, and will most accord with my own intent.

First then, in my judgment, we must make a distinction and ask, What is that which always is and has no becoming; and what is that which is always becoming and never is? That which is apprehended by intelligence and reason is always in the same state; but that which is conceived by opinion with the help of sensation and without reason, is always in a process of becoming and perishing and never really is. Now everything that becomes or is created must of necessity be created by some cause, for without a cause nothing can be created. The work of the creator, whenever he looks to the unchangeable and fashions the form and nature of his work after an unchangeable pattern, must necessarily be made fair and perfect; but when he looks to the created only, and uses a created pattern, it is not fair or perfect. Was the heaven then or the world, whether called by this or by any other more appropriate name — assuming the name, I am asking a question which has to be asked at the beginning of an enquiry about anything — was the world, I say, always in existence and without beginning? or created, and had it a beginning? Created, I reply, being visible and tangible and having a body, and therefore sensible; and all sensible things are apprehended by opinion and sense and are in a process of creation and created. Now that which is created must, as we affirm, of necessity be created by a cause. But the father and maker of all this universe is past finding out; and even

if we found him, to tell of him to all men would be impossible. And there is still a question to be asked about him: Which of the patterns had the artificer in view when he made the world — the pattern of the unchangeable, or of that which is created? If the world be indeed fair and the artificer good, it is manifest that he must have looked to that which is eternal; but if what cannot be said without blasphemy is true, then to the created pattern. Every one will see that he must have looked to the eternal; for the world is the fairest of creations and he is the best of causes. And having been created in this way, the world has been framed in the likeness of that which is apprehended by reason and mind and is unchangeable, and must therefore of necessity, if this is admitted, be a copy of something. Now it is all-important that the beginning of everything should be according to nature. And in speaking of the copy and the original we may assume that words are akin to the matter which they describe; when they relate to the lasting and permanent and intelligible, they ought to be lasting and unalterable, and, as far as their nature allows, irrefutable and immovable — nothing less. But when they express only the copy or likeness and not the eternal things themselves, they need only be likely and analogous to the real words. As being is to becoming, so is truth to belief. If then, Socrates, amid the many opinions about the gods and the generation of the universe, we are not able to give notions which are altogether and in every respect exact and consistent with one another, do not be surprised. Enough, if we adduce probabilities as likely as any others; for we must remember that I who am the speaker, and you who are the judges, are only mortal men, and we ought to accept the tale which is probable and enquire no further.

SOCRATES: Excellent, Timaeus; and we will do precisely as you bid us. The prelude is charming, and is already accepted by us — may we beg of you to proceed to the strain?

TIMAEUS: Let me tell you then why the creator made this world of generation. He was good, and the good can never have any jealousy of anything. And being free from jealousy, he desired that all things should be as like himself as they could be. This is in the truest sense

the origin of creation and of the world, as we shall do well in believing on the testimony of wise men: God desired that all things should be good and nothing bad, so far as this was attainable. Wherefore also finding the whole visible sphere not at rest, but moving in an irregular and disorderly fashion, out of disorder he brought order, considering that this was in every way better than the other. Now the deeds of the best could never be or have been other than the fairest; and the creator, reflecting on the things which are by nature visible, found that no unintelligent creature taken as a whole was fairer than the intelligent taken as a whole; and that intelligence could not be present in anything which was devoid of soul. For which reason, when he was framing the universe, he put intelligence in soul, and soul in body, that he might be the creator of a work which was by nature fairest and best. Wherefore, using the language of probability, we may say that the world became a living creature truly endowed with soul and intelligence by the providence of God.

This being supposed, let us proceed to the next stage: In the likeness of what animal did the Creator make the world? It would be an unworthy thing to liken it to any nature which exists as a part only; for nothing can be beautiful which is like any imperfect thing; but let us suppose the world to be the very image of that whole of which all other animals both individually and in their tribes are portions. For the original of the universe contains in itself all intelligible beings, just as this world comprehends us and all other visible creatures. For the Deity, intending to make this world like the fairest and most perfect of intelligible beings, framed one visible animal comprehending within itself all other animals of a kindred nature. Are we right in saying that there is one world, or that they are many and infinite? There must be one only, if the created copy is to accord with the original. For that which includes all other intelligible creatures cannot have a second or companion; in that case there would be need of another living being which would include both, and of which they would be parts, and the likeness would be more truly said to resemble not them, but that other which included them. In order then that the world might be solitary, like the perfect animal, the creator made not two worlds or an infinite number of them; but

there is and ever will be one only-begotten and created heaven.

Now that which is created is of necessity corporeal, and also visible and tangible. And nothing is visible where there is no fire, or tangible which has no solidity, and nothing is solid without earth. Wherefore also God in the beginning of creation made the body of the universe to consist of fire and earth. But two things cannot be rightly put together without a third; there must be some bond of union between them. And the fairest bond is that which makes the most complete fusion of itself and the things which it combines; and proportion is best adapted to effect such a union. For whenever in any three numbers, whether cube or square, there is a mean, which is to the last term what the first term is to it; and again, when the mean is to the first term as the last term is to the mean — then the mean becoming first and last, and the first and last both becoming means, they will all of them of necessity come to be the same, and having become the same with one another will be all one. If the universal frame had been created a surface only and having no depth, a single mean would have sufficed to bind together itself and the other terms; but now, as the world must be solid, and solid bodies are always compacted not by one mean but by two, God placed water and air in the mean between fire and earth, and made them to have the same proportion so far as was possible (as fire is to air so is air to water, and as air is to water so is water to earth); and thus he bound and put together a visible and tangible heaven. And for these reasons, and out of such elements which are in number four, the body of the world was created, and it was harmonized by proportion, and therefore has the spirit of friendship; and having been reconciled to itself, it was indissoluble by the hand of any other than the framer.

Now the creation took up the whole of each of the four elements; for the Creator compounded the world out of all the fire and all the water and all the air and all the earth, leaving no part of any of them nor any power of them outside. His intention was, in the first place, that the animal should be as far as possible a perfect whole and of perfect parts: secondly, that it should be one, leaving no remnants out of which another such world might be created: and also that it should be free from old age and unaffected by disease. Considering that if heat and cold and other powerful forces which unite bodies surround

and attack them from without when they are unprepared, they decompose them, and by bringing diseases and old age upon them, make them waste away — for this cause and on these grounds he made the world one whole, having every part entire, and being therefore perfect and not liable to old age and disease. And he gave to the world the figure which was suitable and also natural. Now to the animal which was to comprehend all animals, that figure was suitable which comprehends within itself all other figures. Wherefore he made the world in the form of a globe, round as from a lathe, having its extremes in every direction equidistant from the centre, the most perfect and the most like itself of all figures; for he considered that the like is infinitely fairer than the unlike. This he finished off, making the surface smooth all round for many reasons; in the first place, because the living being had no need of eyes when there was nothing remaining outside him to be seen; nor of ears when there was nothing to be heard; and there was no surrounding atmosphere to be breathed; nor would there have been any use of organs by the help of which he might receive his food or get rid of what he had already digested, since there was nothing which went from him or came into him: for there was nothing beside him. Of design he was created thus, his own waste providing his own food, and all that he did or suffered taking place in and by himself. For the Creator conceived that a being which was self-sufficient would be far more excellent than one which lacked anything; and, as he had no need to take anything or defend himself against any one, the Creator did not think it necessary to bestow upon him hands: nor had he any need of feet, nor of the whole apparatus of walking; but the movement suited to his spherical form was assigned to him, being of all the seven that which is most appropriate to mind and intelligence; and he was made to move in the same manner and on the same spot, within his own limits revolving in a circle. All the other six motions were taken away from him, and he was made not to partake of their deviations. And as this circular movement required no feet, the universe was created without legs and without feet.

Such was the whole plan of the eternal God about the god that was to be, to whom for this reason he gave a body, smooth and even, having a surface in every direction equidistant from the centre, a

body entire and perfect, and formed out of perfect bodies. And in the centre he put the soul, which he diffused throughout the body, making it also to be the exterior environment of it; and he made the universe a circle moving in a circle, one and solitary, yet by reason of its excellence able to converse with itself, and needing no other friendship or acquaintance. Having these purposes in view he created the world a blessed god.

Now God did not make the soul after the body, although we are speaking of them in this order; for having brought them together he would never have allowed that the elder should be ruled by the younger; but this is a random manner of speaking which we have, because somehow we ourselves too are very much under the dominion of chance. Whereas he made the soul in origin and excellence prior to and older than the body, to be the ruler and mistress, of whom the body was to be the subject. And he made her out of the following elements and on this wise: Out of the indivisible and unchangeable, and also out of that which is divisible and has to do with material bodies, he compounded a third and intermediate kind of essence, partaking of the nature of the same and of the other, and this compound he placed accordingly in a mean between the indivisible, and the divisible and material. He took the three elements of the same, the other, and the essence, and mingled them into one form, compressing by force the reluctant and unsociable nature of the other into the same. When he had mingled them with the essence and out of three made one, he again divided this whole into as many portions as was fitting, each portion being a compound of the same, the other, and the essence. And he proceeded to divide after this manner: — First of all, he took away one part of the whole (1), and then he separated a second part which was double the first (2), and then he took away a third part which was half as much again as the second and three times as much as the first (3), and then he took a fourth part which was twice as much as the second (4), and a fifth part which was three times the third (9), and a sixth part which was eight times the first (8), and a seventh part which was twenty-seven times the first (27). After this he filled up the double intervals (i.e. between 1, 2, 4, 8) and the triple (i.e. between 1, 3, 9, 27) cutting off yet other portions from the mixture and placing them in the intervals,

so that in each interval there were two kinds of means, the one exceeding and exceeded by equal parts of its extremes (as for example 1, $\frac{4}{3}$, 2, in which the mean $\frac{4}{3}$ is one-third of 1 more than 1, and one-third of 2 less than 2), the other being that kind of mean which exceeds and is exceeded by an equal number (e.g.

- over 1, $\frac{4}{3}$, $\frac{3}{2}$, - over 2, $\frac{8}{3}$, 3, - over 4, $\frac{16}{3}$, 6, - over 8: and
 - over 1, $\frac{3}{2}$, 2, - over 3, $\frac{9}{2}$, 6, - over 9, $\frac{27}{2}$, 18, - over 27.

Where there were intervals of $\frac{3}{2}$ and of $\frac{4}{3}$ and of $\frac{9}{8}$, made by the connecting terms in the former intervals, he filled up all the intervals of $\frac{4}{3}$ with the interval of $\frac{9}{8}$, leaving a fraction over; and the interval which this fraction expressed was in the ratio of 256 to 243 (e.g.

$243:256::81/64:\frac{4}{3}::243/128:2::81/32:\frac{8}{3}::243/64:4::81/16:16/3::242/32:$

And thus the whole mixture out of which he cut these portions was all exhausted by him. This entire compound he divided lengthways into two parts, which he joined to one another at the centre like the letter X, and bent them into a circular form, connecting them with themselves and each other at the point opposite to their original meeting-point; and, comprehending them in a uniform revolution upon the same axis, he made the one the outer and the other the inner circle. Now the motion of the outer circle he called the motion of the same, and the motion of the inner circle the motion of the other or diverse. The motion of the same he carried round by the side (i.e. of the rectangular figure supposed to be inscribed in the circle of the Same) to the right, and the motion of the diverse diagonally (i.e. across the rectangular figure from corner to corner) to the left. And he gave dominion to the motion of the same and like, for that he left single and undivided; but the inner motion he divided in six places and made seven unequal circles having their intervals in ratios of two and three, three of each, and bade the orbits proceed in a direction opposite to one another; and three (Sun, Mercury, Venus) he made to move with equal swiftness, and the remaining four (Moon, Saturn, Mars, Jupiter) to move with unequal swiftness to the three and to one another, but in due proportion.

Now when the Creator had framed the soul according to his will, he formed within her the corporeal universe, and brought the two together, and united them centre to centre. The soul, interfused

everywhere from the centre to the circumference of heaven, of which also she is the external envelopment, herself turning in herself, began a divine beginning of never-ceasing and rational life enduring throughout all time. The body of heaven is visible, but the soul is invisible, and partakes of reason and harmony, and being made by the best of intellectual and everlasting natures, is the best of things created. And because she is composed of the same and of the other and of the essence, these three, and is divided and united in due proportion, and in her revolutions returns upon herself, the soul, when touching anything which has essence, whether dispersed in parts or undivided, is stirred through all her powers, to declare the sameness or difference of that thing and some other; and to what individuals are related, and by what affected, and in what way and how and when, both in the world of generation and in the world of immutable being. And when reason, which works with equal truth, whether she be in the circle of the diverse or of the same — in voiceless silence holding her onward course in the sphere of the self-moved — when reason, I say, is hovering around the sensible world and when the circle of the diverse also moving truly imparts the intimations of sense to the whole soul, then arise opinions and beliefs sure and certain. But when reason is concerned with the rational, and the circle of the same moving smoothly declares it, then intelligence and knowledge are necessarily perfected. And if any one affirms that in which these two are found to be other than the soul, he will say the very opposite of the truth.

When the father and creator saw the creature which he had made moving and living, the created image of the eternal gods, he rejoiced, and in his joy determined to make the copy still more like the original; and as this was eternal, he sought to make the universe eternal, so far as might be. Now the nature of the ideal being was everlasting, but to bestow this attribute in its fulness upon a creature was impossible. Wherefore he resolved to have a moving image of eternity, and when he set in order the heaven, he made this image eternal but moving according to number, while eternity itself rests in unity; and this image we call time. For there were no days and nights and months and years before the heaven was created, but when he constructed the heaven he created them also. They are all parts of

time, and the past and future are created species of time, which we unconsciously but wrongly transfer to the eternal essence; for we say that he 'was,' he 'is,' he 'will be,' but the truth is that 'is' alone is properly attributed to him, and that 'was' and 'will be' are only to be spoken of becoming in time, for they are motions, but that which is immovably the same cannot become older or younger by time, nor ever did or has become, or hereafter will be, older or younger, nor is subject at all to any of those states which affect moving and sensible things and of which generation is the cause. These are the forms of time, which imitates eternity and revolves according to a law of number. Moreover, when we say that what has become IS become and what becomes IS becoming, and that what will become IS about to become and that the non-existent IS non-existent — all these are inaccurate modes of expression (compare Parmen.). But perhaps this whole subject will be more suitably discussed on some other occasion.

Time, then, and the heaven came into being at the same instant in order that, having been created together, if ever there was to be a dissolution of them, they might be dissolved together. It was framed after the pattern of the eternal nature, that it might resemble this as far as was possible; for the pattern exists from eternity, and the created heaven has been, and is, and will be, in all time. Such was the mind and thought of God in the creation of time. The sun and moon and five other stars, which are called the planets, were created by him in order to distinguish and preserve the numbers of time; and when he had made their several bodies, he placed them in the orbits in which the circle of the other was revolving, — in seven orbits seven stars. First, there was the moon in the orbit nearest the earth, and next the sun, in the second orbit above the earth; then came the morning star and the star sacred to Hermes, moving in orbits which have an equal swiftness with the sun, but in an opposite direction; and this is the reason why the sun and Hermes and Lucifer overtake and are overtaken by each other. To enumerate the places which he assigned to the other stars, and to give all the reasons why he assigned them, although a secondary matter, would give more trouble than the primary. These things at some future time, when we are at leisure, may have the consideration which they deserve, but not at

present.

Now, when all the stars which were necessary to the creation of time had attained a motion suitable to them, and had become living creatures having bodies fastened by vital chains, and learnt their appointed task, moving in the motion of the diverse, which is diagonal, and passes through and is governed by the motion of the same, they revolved, some in a larger and some in a lesser orbit — those which had the lesser orbit revolving faster, and those which had the larger more slowly. Now by reason of the motion of the same, those which revolved fastest appeared to be overtaken by those which moved slower although they really overtook them; for the motion of the same made them all turn in a spiral, and, because some went one way and some another, that which receded most slowly from the sphere of the same, which was the swiftest, appeared to follow it most nearly. That there might be some visible measure of their relative swiftness and slowness as they proceeded in their eight courses, God lighted a fire, which we now call the sun, in the second from the earth of these orbits, that it might give light to the whole of heaven, and that the animals, as many as nature intended, might participate in number, learning arithmetic from the revolution of the same and the like. Thus then, and for this reason the night and the day were created, being the period of the one most intelligent revolution. And the month is accomplished when the moon has completed her orbit and overtaken the sun, and the year when the sun has completed his own orbit. Mankind, with hardly an exception, have not remarked the periods of the other stars, and they have no name for them, and do not measure them against one another by the help of number, and hence they can scarcely be said to know that their wanderings, being infinite in number and admirable for their variety, make up time. And yet there is no difficulty in seeing that the perfect number of time fulfils the perfect year when all the eight revolutions, having their relative degrees of swiftness, are accomplished together and attain their completion at the same time, measured by the rotation of the same and equally moving. After this manner, and for these reasons, came into being such of the stars as in their heavenly progress received reversals of motion, to the end that the created heaven might imitate the eternal nature, and be as like as

possible to the perfect and intelligible animal.

Thus far and until the birth of time the created universe was made in the likeness of the original, but inasmuch as all animals were not yet comprehended therein, it was still unlike. What remained, the creator then proceeded to fashion after the nature of the pattern. Now as in the ideal animal the mind perceives ideas or species of a certain nature and number, he thought that this created animal ought to have species of a like nature and number. There are four such; one of them is the heavenly race of the gods; another, the race of birds whose way is in the air; the third, the watery species; and the fourth, the pedestrian and land creatures. Of the heavenly and divine, he created the greater part out of fire, that they might be the brightest of all things and fairest to behold, and he fashioned them after the likeness of the universe in the figure of a circle, and made them follow the intelligent motion of the supreme, distributing them over the whole circumference of heaven, which was to be a true cosmos or glorious world spangled with them all over. And he gave to each of them two movements: the first, a movement on the same spot after the same manner, whereby they ever continue to think consistently the same thoughts about the same things; the second, a forward movement, in which they are controlled by the revolution of the same and the like; but by the other five motions they were unaffected, in order that each of them might attain the highest perfection. And for this reason the fixed stars were created, to be divine and eternal animals, ever-abiding and revolving after the same manner and on the same spot; and the other stars which reverse their motion and are subject to deviations of this kind, were created in the manner already described. The earth, which is our nurse, clinging (or ‘circling’) around the pole which is extended through the universe, he framed to be the guardian and artificer of night and day, first and eldest of gods that are in the interior of heaven. Vain would be the attempt to tell all the figures of them circling as in dance, and their juxtapositions, and the return of them in their revolutions upon themselves, and their approximations, and to say which of these deities in their conjunctions meet, and which of them are in opposition, and in what order they get behind and before one another, and when they are severally eclipsed to our sight and again reappear, sending terrors and intimations of the future

to those who cannot calculate their movements — to attempt to tell of all this without a visible representation of the heavenly system would be labour in vain. Enough on this head; and now let what we have said about the nature of the created and visible gods have an end.

To know or tell the origin of the other divinities is beyond us, and we must accept the traditions of the men of old time who affirm themselves to be the offspring of the gods — that is what they say — and they must surely have known their own ancestors. How can we doubt the word of the children of the gods? Although they give no probable or certain proofs, still, as they declare that they are speaking of what took place in their own family, we must conform to custom and believe them. In this manner, then, according to them, the genealogy of these gods is to be received and set forth.

Oceanus and Tethys were the children of Earth and Heaven, and from these sprang Phorcys and Cronos and Rhea, and all that generation; and from Cronos and Rhea sprang Zeus and Here, and all those who are said to be their brethren, and others who were the children of these.

Now, when all of them, both those who visibly appear in their revolutions as well as those other gods who are of a more retiring nature, had come into being, the creator of the universe addressed them in these words: ‘Gods, children of gods, who are my works, and of whom I am the artificer and father, my creations are indissoluble, if so I will. All that is bound may be undone, but only an evil being would wish to undo that which is harmonious and happy. Wherefore, since ye are but creatures, ye are not altogether immortal and indissoluble, but ye shall certainly not be dissolved, nor be liable to the fate of death, having in my will a greater and mightier bond than those with which ye were bound at the time of your birth. And now listen to my instructions: — Three tribes of mortal beings remain to be created — without them the universe will be incomplete, for it will not contain every kind of animal which it ought to contain, if it is to be perfect. On the other hand, if they were created by me and received life at my hands, they would be on an equality with the gods. In order then that they may be mortal, and that this universe may be truly universal, do ye, according to your natures, betake

yourselves to the formation of animals, imitating the power which was shown by me in creating you. The part of them worthy of the name immortal, which is called divine and is the guiding principle of those who are willing to follow justice and you — of that divine part I will myself sow the seed, and having made a beginning, I will hand the work over to you. And do ye then interweave the mortal with the immortal, and make and beget living creatures, and give them food, and make them to grow, and receive them again in death.’

Thus he spake, and once more into the cup in which he had previously mingled the soul of the universe he poured the remains of the elements, and mingled them in much the same manner; they were not, however, pure as before, but diluted to the second and third degree. And having made it he divided the whole mixture into souls equal in number to the stars, and assigned each soul to a star; and having there placed them as in a chariot, he showed them the nature of the universe, and declared to them the laws of destiny, according to which their first birth would be one and the same for all, — no one should suffer a disadvantage at his hands; they were to be sown in the instruments of time severally adapted to them, and to come forth the most religious of animals; and as human nature was of two kinds, the superior race would hereafter be called man. Now, when they should be implanted in bodies by necessity, and be always gaining or losing some part of their bodily substance, then in the first place it would be necessary that they should all have in them one and the same faculty of sensation, arising out of irresistible impressions; in the second place, they must have love, in which pleasure and pain mingle; also fear and anger, and the feelings which are akin or opposite to them; if they conquered these they would live righteously, and if they were conquered by them, unrighteously. He who lived well during his appointed time was to return and dwell in his native star, and there he would have a blessed and congenial existence. But if he failed in attaining this, at the second birth he would pass into a woman, and if, when in that state of being, he did not desist from evil, he would continually be changed into some brute who resembled him in the evil nature which he had acquired, and would not cease from his toils and transformations until he followed the revolution of the same and the like within him, and

overcame by the help of reason the turbulent and irrational mob of later accretions, made up of fire and air and water and earth, and returned to the form of his first and better state. Having given all these laws to his creatures, that he might be guiltless of future evil in any of them, the creator sowed some of them in the earth, and some in the moon, and some in the other instruments of time; and when he had sown them he committed to the younger gods the fashioning of their mortal bodies, and desired them to furnish what was still lacking to the human soul, and having made all the suitable additions, to rule over them, and to pilot the mortal animal in the best and wisest manner which they could, and avert from him all but self-inflicted evils.

When the creator had made all these ordinances he remained in his own accustomed nature, and his children heard and were obedient to their father's word, and receiving from him the immortal principle of a mortal creature, in imitation of their own creator they borrowed portions of fire, and earth, and water, and air from the world, which were hereafter to be restored — these they took and welded them together, not with the indissoluble chains by which they were themselves bound, but with little pegs too small to be visible, making up out of all the four elements each separate body, and fastening the courses of the immortal soul in a body which was in a state of perpetual influx and efflux. Now these courses, detained as in a vast river, neither overcame nor were overcome; but were hurrying and hurried to and fro, so that the whole animal was moved and progressed, irregularly however and irrationally and anyhow, in all the six directions of motion, wandering backwards and forwards, and right and left, and up and down, and in all the six directions. For great as was the advancing and retiring flood which provided nourishment, the affections produced by external contact caused still greater tumult — when the body of any one met and came into collision with some external fire, or with the solid earth or the gliding waters, or was caught in the tempest borne on the air, and the motions produced by any of these impulses were carried through the body to the soul. All such motions have consequently received the general name of 'sensations,' which they still retain. And they did in fact at that time create a very great and mighty movement; uniting

with the ever-flowing stream in stirring up and violently shaking the courses of the soul, they completely stopped the revolution of the same by their opposing current, and hindered it from predominating and advancing; and they so disturbed the nature of the other or diverse, that the three double intervals (i.e. between 1, 2, 4, 8), and the three triple intervals (i.e. between 1, 3, 9, 27), together with the mean terms and connecting links which are expressed by the ratios of 3:2, and 4:3, and of 9:8 — these, although they cannot be wholly undone except by him who united them, were twisted by them in all sorts of ways, and the circles were broken and disordered in every possible manner, so that when they moved they were tumbling to pieces, and moved irrationally, at one time in a reverse direction, and then again obliquely, and then upside down, as you might imagine a person who is upside down and has his head leaning upon the ground and his feet up against something in the air; and when he is in such a position, both he and the spectator fancy that the right of either is his left, and the left right. If, when powerfully experiencing these and similar effects, the revolutions of the soul come in contact with some external thing, either of the class of the same or of the other, they speak of the same or of the other in a manner the very opposite of the truth; and they become false and foolish, and there is no course or revolution in them which has a guiding or directing power; and if again any sensations enter in violently from without and drag after them the whole vessel of the soul, then the courses of the soul, though they seem to conquer, are really conquered.

And by reason of all these affections, the soul, when encased in a mortal body, now, as in the beginning, is at first without intelligence; but when the flood of growth and nutriment abates, and the courses of the soul, calming down, go their own way and become steadier as time goes on, then the several circles return to their natural form, and their revolutions are corrected, and they call the same and the other by their right names, and make the possessor of them to become a rational being. And if these combine in him with any true nurture or education, he attains the fulness and health of the perfect man, and escapes the worst disease of all; but if he neglects education he walks lame to the end of his life, and returns imperfect and good for nothing to the world below. This, however, is a later stage; at present

we must treat more exactly the subject before us, which involves a preliminary enquiry into the generation of the body and its members, and as to how the soul was created — for what reason and by what providence of the gods; and holding fast to probability, we must pursue our way.

First, then, the gods, imitating the spherical shape of the universe, enclosed the two divine courses in a spherical body, that, namely, which we now term the head, being the most divine part of us and the lord of all that is in us: to this the gods, when they put together the body, gave all the other members to be servants, considering that it partook of every sort of motion. In order then that it might not tumble about among the high and deep places of the earth, but might be able to get over the one and out of the other, they provided the body to be its vehicle and means of locomotion; which consequently had length and was furnished with four limbs extended and flexible; these God contrived to be instruments of locomotion with which it might take hold and find support, and so be able to pass through all places, carrying on high the dwelling-place of the most sacred and divine part of us. Such was the origin of legs and hands, which for this reason were attached to every man; and the gods, deeming the front part of man to be more honourable and more fit to command than the hinder part, made us to move mostly in a forward direction. Wherefore man must needs have his front part unlike and distinguished from the rest of his body.

And so in the vessel of the head, they first of all put a face in which they inserted organs to minister in all things to the providence of the soul, and they appointed this part, which has authority, to be by nature the part which is in front. And of the organs they first contrived the eyes to give light, and the principle according to which they were inserted was as follows: So much of fire as would not burn, but gave a gentle light, they formed into a substance akin to the light of every-day life; and the pure fire which is within us and related thereto they made to flow through the eyes in a stream smooth and dense, compressing the whole eye, and especially the centre part, so that it kept out everything of a coarser nature, and allowed to pass only this pure element. When the light of day surrounds the stream of vision, then like falls upon like, and they

coalesce, and one body is formed by natural affinity in the line of vision, wherever the light that falls from within meets with an external object. And the whole stream of vision, being similarly affected in virtue of similarity, diffuses the motions of what it touches or what touches it over the whole body, until they reach the soul, causing that perception which we call sight. But when night comes on and the external and kindred fire departs, then the stream of vision is cut off; for going forth to an unlike element it is changed and extinguished, being no longer of one nature with the surrounding atmosphere which is now deprived of fire: and so the eye no longer sees, and we feel disposed to sleep. For when the eyelids, which the gods invented for the preservation of sight, are closed, they keep in the internal fire; and the power of the fire diffuses and equalizes the inward motions; when they are equalized, there is rest, and when the rest is profound, sleep comes over us scarce disturbed by dreams; but where the greater motions still remain, of whatever nature and in whatever locality, they engender corresponding visions in dreams, which are remembered by us when we are awake and in the external world. And now there is no longer any difficulty in understanding the creation of images in mirrors and all smooth and bright surfaces. For from the communion of the internal and external fires, and again from the union of them and their numerous transformations when they meet in the mirror, all these appearances of necessity arise, when the fire from the face coalesces with the fire from the eye on the bright and smooth surface. And right appears left and left right, because the visual rays come into contact with the rays emitted by the object in a manner contrary to the usual mode of meeting; but the right appears right, and the left left, when the position of one of the two concurring lights is reversed; and this happens when the mirror is concave and its smooth surface repels the right stream of vision to the left side, and the left to the right (He is speaking of two kinds of mirrors, first the plane, secondly the concave; and the latter is supposed to be placed, first horizontally, and then vertically.). Or if the mirror be turned vertically, then the concavity makes the countenance appear to be all upside down, and the lower rays are driven upwards and the upper downwards.

All these are to be reckoned among the second and co-operative

causes which God, carrying into execution the idea of the best as far as possible, uses as his ministers. They are thought by most men not to be the second, but the prime causes of all things, because they freeze and heat, and contract and dilate, and the like. But they are not so, for they are incapable of reason or intellect; the only being which can properly have mind is the invisible soul, whereas fire and water, and earth and air, are all of them visible bodies. The lover of intellect and knowledge ought to explore causes of intelligent nature first of all, and, secondly, of those things which, being moved by others, are compelled to move others. And this is what we too must do. Both kinds of causes should be acknowledged by us, but a distinction should be made between those which are endowed with mind and are the workers of things fair and good, and those which are deprived of intelligence and always produce chance effects without order or design. Of the second or co-operative causes of sight, which help to give to the eyes the power which they now possess, enough has been said. I will therefore now proceed to speak of the higher use and purpose for which God has given them to us. The sight in my opinion is the source of the greatest benefit to us, for had we never seen the stars, and the sun, and the heaven, none of the words which we have spoken about the universe would ever have been uttered. But now the sight of day and night, and the months and the revolutions of the years, have created number, and have given us a conception of time, and the power of enquiring about the nature of the universe; and from this source we have derived philosophy, than which no greater good ever was or will be given by the gods to mortal man. This is the greatest boon of sight: and of the lesser benefits why should I speak? even the ordinary man if he were deprived of them would bewail his loss, but in vain. Thus much let me say however: God invented and gave us sight to the end that we might behold the courses of intelligence in the heaven, and apply them to the courses of our own intelligence which are akin to them, the unperturbed to the perturbed; and that we, learning them and partaking of the natural truth of reason, might imitate the absolutely unerring courses of God and regulate our own vagaries. The same may be affirmed of speech and hearing: they have been given by the gods to the same end and for a like reason. For this is the principal end of speech, whereto it most

contributes. Moreover, so much of music as is adapted to the sound of the voice and to the sense of hearing is granted to us for the sake of harmony; and harmony, which has motions akin to the revolutions of our souls, is not regarded by the intelligent votary of the Muses as given by them with a view to irrational pleasure, which is deemed to be the purpose of it in our day, but as meant to correct any discord which may have arisen in the courses of the soul, and to be our ally in bringing her into harmony and agreement with herself; and rhythm too was given by them for the same reason, on account of the irregular and graceless ways which prevail among mankind generally, and to help us against them.

Thus far in what we have been saying, with small exception, the works of intelligence have been set forth; and now we must place by the side of them in our discourse the things which come into being through necessity — for the creation is mixed, being made up of necessity and mind. Mind, the ruling power, persuaded necessity to bring the greater part of created things to perfection, and thus and after this manner in the beginning, when the influence of reason got the better of necessity, the universe was created. But if a person will truly tell of the way in which the work was accomplished, he must include the other influence of the variable cause as well. Wherefore, we must return again and find another suitable beginning, as about the former matters, so also about these. To which end we must consider the nature of fire, and water, and air, and earth, such as they were prior to the creation of the heaven, and what was happening to them in this previous state; for no one has as yet explained the manner of their generation, but we speak of fire and the rest of them, whatever they mean, as though men knew their natures, and we maintain them to be the first principles and letters or elements of the whole, when they cannot reasonably be compared by a man of any sense even to syllables or first compounds. And let me say thus much: I will not now speak of the first principle or principles of all things, or by whatever name they are to be called, for this reason — because it is difficult to set forth my opinion according to the method of discussion which we are at present employing. Do not imagine, any more than I can bring myself to imagine, that I should be right in undertaking so great and difficult a task. Remembering what I said at

first about probability, I will do my best to give as probable an explanation as any other — or rather, more probable; and I will first go back to the beginning and try to speak of each thing and of all. Once more, then, at the commencement of my discourse, I call upon God, and beg him to be our saviour out of a strange and unwonted enquiry, and to bring us to the haven of probability. So now let us begin again.

This new beginning of our discussion of the universe requires a fuller division than the former; for then we made two classes, now a third must be revealed. The two sufficed for the former discussion: one, which we assumed, was a pattern intelligible and always the same; and the second was only the imitation of the pattern, generated and visible. There is also a third kind which we did not distinguish at the time, conceiving that the two would be enough. But now the argument seems to require that we should set forth in words another kind, which is difficult of explanation and dimly seen. What nature are we to attribute to this new kind of being? We reply, that it is the receptacle, and in a manner the nurse, of all generation. I have spoken the truth; but I must express myself in clearer language, and this will be an arduous task for many reasons, and in particular because I must first raise questions concerning fire and the other elements, and determine what each of them is; for to say, with any probability or certitude, which of them should be called water rather than fire, and which should be called any of them rather than all or some one of them, is a difficult matter. How, then, shall we settle this point, and what questions about the elements may be fairly raised?

In the first place, we see that what we just now called water, by condensation, I suppose, becomes stone and earth; and this same element, when melted and dispersed, passes into vapour and air. Air, again, when inflamed, becomes fire; and again fire, when condensed and extinguished, passes once more into the form of air; and once more, air, when collected and condensed, produces cloud and mist; and from these, when still more compressed, comes flowing water, and from water comes earth and stones once more; and thus generation appears to be transmitted from one to the other in a circle. Thus, then, as the several elements never present themselves in the same form, how can any one have the assurance to assert positively

that any of them, whatever it may be, is one thing rather than another? No one can. But much the safest plan is to speak of them as follows: — Anything which we see to be continually changing, as, for example, fire, we must not call ‘this’ or ‘that,’ but rather say that it is ‘of such a nature’; nor let us speak of water as ‘this’; but always as ‘such’; nor must we imply that there is any stability in any of those things which we indicate by the use of the words ‘this’ and ‘that,’ supposing ourselves to signify something thereby; for they are too volatile to be detained in any such expressions as ‘this,’ or ‘that,’ or ‘relative to this,’ or any other mode of speaking which represents them as permanent. We ought not to apply ‘this’ to any of them, but rather the word ‘such’; which expresses the similar principle circulating in each and all of them; for example, that should be called ‘fire’ which is of such a nature always, and so of everything that has generation. That in which the elements severally grow up, and appear, and decay, is alone to be called by the name ‘this’ or ‘that’; but that which is of a certain nature, hot or white, or anything which admits of opposite qualities, and all things that are compounded of them, ought not to be so denominated. Let me make another attempt to explain my meaning more clearly. Suppose a person to make all kinds of figures of gold and to be always transmuting one form into all the rest; — somebody points to one of them and asks what it is. By far the safest and truest answer is, That is gold; and not to call the triangle or any other figures which are formed in the gold ‘these,’ as though they had existence, since they are in process of change while he is making the assertion; but if the questioner be willing to take the safe and indefinite expression, ‘such,’ we should be satisfied. And the same argument applies to the universal nature which receives all bodies — that must be always called the same; for, while receiving all things, she never departs at all from her own nature, and never in any way, or at any time, assumes a form like that of any of the things which enter into her; she is the natural recipient of all impressions, and is stirred and informed by them, and appears different from time to time by reason of them. But the forms which enter into and go out of her are the likenesses of real existences modelled after their patterns in a wonderful and inexplicable manner, which we will hereafter investigate. For the present we have only to conceive of

three natures: first, that which is in process of generation; secondly, that in which the generation takes place; and thirdly, that of which the thing generated is a resemblance. And we may liken the receiving principle to a mother, and the source or spring to a father, and the intermediate nature to a child; and may remark further, that if the model is to take every variety of form, then the matter in which the model is fashioned will not be duly prepared, unless it is formless, and free from the impress of any of those shapes which it is hereafter to receive from without. For if the matter were like any of the supervening forms, then whenever any opposite or entirely different nature was stamped upon its surface, it would take the impression badly, because it would intrude its own shape. Wherefore, that which is to receive all forms should have no form; as in making perfumes they first contrive that the liquid substance which is to receive the scent shall be as inodorous as possible; or as those who wish to impress figures on soft substances do not allow any previous impression to remain, but begin by making the surface as even and smooth as possible. In the same way that which is to receive perpetually and through its whole extent the resemblances of all eternal beings ought to be devoid of any particular form. Wherefore, the mother and receptacle of all created and visible and in any way sensible things, is not to be termed earth, or air, or fire, or water, or any of their compounds or any of the elements from which these are derived, but is an invisible and formless being which receives all things and in some mysterious way partakes of the intelligible, and is most incomprehensible. In saying this we shall not be far wrong; as far, however, as we can attain to a knowledge of her from the previous considerations, we may truly say that fire is that part of her nature which from time to time is inflamed, and water that which is moistened, and that the mother substance becomes earth and air, in so far as she receives the impressions of them.

Let us consider this question more precisely. Is there any self-existent fire? and do all those things which we call self-existent exist? or are only those things which we see, or in some way perceive through the bodily organs, truly existent, and nothing whatever besides them? And is all that which we call an intelligible essence nothing at all, and only a name? Here is a question which we

must not leave unexamined or undetermined, nor must we affirm too confidently that there can be no decision; neither must we interpolate in our present long discourse a digression equally long, but if it is possible to set forth a great principle in a few words, that is just what we want.

Thus I state my view: — If mind and true opinion are two distinct classes, then I say that there certainly are these self-existent ideas unperceived by sense, and apprehended only by the mind; if, however, as some say, true opinion differs in no respect from mind, then everything that we perceive through the body is to be regarded as most real and certain. But we must affirm them to be distinct, for they have a distinct origin and are of a different nature; the one is implanted in us by instruction, the other by persuasion; the one is always accompanied by true reason, the other is without reason; the one cannot be overcome by persuasion, but the other can: and lastly, every man may be said to share in true opinion, but mind is the attribute of the gods and of very few men. Wherefore also we must acknowledge that there is one kind of being which is always the same, uncreated and indestructible, never receiving anything into itself from without, nor itself going out to any other, but invisible and imperceptible by any sense, and of which the contemplation is granted to intelligence only. And there is another nature of the same name with it, and like to it, perceived by sense, created, always in motion, becoming in place and again vanishing out of place, which is apprehended by opinion and sense. And there is a third nature, which is space, and is eternal, and admits not of destruction and provides a home for all created things, and is apprehended without the help of sense, by a kind of spurious reason, and is hardly real; which we behold as in a dream, say of all existence that it must of necessity be in some place and occupy a space, but that what is neither in heaven nor in earth has no existence. Of these and other things of the same kind, relating to the true and waking reality of nature, we have only this dreamlike sense, and we are unable to cast off sleep and determine the truth about them. For an image, since the reality, after which it is modelled, does not belong to it, and it exists ever as the fleeting shadow of some other, must be inferred to be in another (i.e. in space), grasping existence in some way or other, or it could not be

at all. But true and exact reason, vindicating the nature of true being, maintains that while two things (i.e. the image and space) are different they cannot exist one of them in the other and so be one and also two at the same time.

Thus have I concisely given the result of my thoughts; and my verdict is that being and space and generation, these three, existed in their three ways before the heaven; and that the nurse of generation, moistened by water and inflamed by fire, and receiving the forms of earth and air, and experiencing all the affections which accompany these, presented a strange variety of appearances; and being full of powers which were neither similar nor equally balanced, was never in any part in a state of equipoise, but swaying unevenly hither and thither, was shaken by them, and by its motion again shook them; and the elements when moved were separated and carried continually, some one way, some another; as, when grain is shaken and winnowed by fans and other instruments used in the threshing of corn, the close and heavy particles are borne away and settle in one direction, and the loose and light particles in another. In this manner, the four kinds or elements were then shaken by the receiving vessel, which, moving like a winnowing machine, scattered far away from one another the elements most unlike, and forced the most similar elements into close contact. Wherefore also the various elements had different places before they were arranged so as to form the universe. At first, they were all without reason and measure. But when the world began to get into order, fire and water and earth and air had only certain faint traces of themselves, and were altogether such as everything might be expected to be in the absence of God; this, I say, was their nature at that time, and God fashioned them by form and number. Let it be consistently maintained by us in all that we say that God made them as far as possible the fairest and best, out of things which were not fair and good. And now I will endeavour to show you the disposition and generation of them by an unaccustomed argument, which I am compelled to use; but I believe that you will be able to follow me, for your education has made you familiar with the methods of science.

In the first place, then, as is evident to all, fire and earth and water and air are bodies. And every sort of body possesses solidity, and

every solid must necessarily be contained in planes; and every plane rectilinear figure is composed of triangles; and all triangles are originally of two kinds, both of which are made up of one right and two acute angles; one of them has at either end of the base the half of a divided right angle, having equal sides, while in the other the right angle is divided into unequal parts, having unequal sides. These, then, proceeding by a combination of probability with demonstration, we assume to be the original elements of fire and the other bodies; but the principles which are prior to these God only knows, and he of men who is the friend of God. And next we have to determine what are the four most beautiful bodies which are unlike one another, and of which some are capable of resolution into one another; for having discovered thus much, we shall know the true origin of earth and fire and of the proportionate and intermediate elements. And then we shall not be willing to allow that there are any distinct kinds of visible bodies fairer than these. Wherefore we must endeavour to construct the four forms of bodies which excel in beauty, and then we shall be able to say that we have sufficiently apprehended their nature. Now of the two triangles, the isosceles has one form only; the scalene or unequal-sided has an infinite number. Of the infinite forms we must select the most beautiful, if we are to proceed in due order, and any one who can point out a more beautiful form than ours for the construction of these bodies, shall carry off the palm, not as an enemy, but as a friend. Now, the one which we maintain to be the most beautiful of all the many triangles (and we need not speak of the others) is that of which the double forms a third triangle which is equilateral; the reason of this would be long to tell; he who disproves what we are saying, and shows that we are mistaken, may claim a friendly victory. Then let us choose two triangles, out of which fire and the other elements have been constructed, one isosceles, the other having the square of the longer side equal to three times the square of the lesser side.

Now is the time to explain what was before obscurely said: there was an error in imagining that all the four elements might be generated by and into one another; this, I say, was an erroneous supposition, for there are generated from the triangles which we have selected four kinds — three from the one which has the sides

unequal; the fourth alone is framed out of the isosceles triangle. Hence they cannot all be resolved into one another, a great number of small bodies being combined into a few large ones, or the converse. But three of them can be thus resolved and compounded, for they all spring from one, and when the greater bodies are broken up, many small bodies will spring up out of them and take their own proper figures; or, again, when many small bodies are dissolved into their triangles, if they become one, they will form one large mass of another kind. So much for their passage into one another. I have now to speak of their several kinds, and show out of what combinations of numbers each of them was formed. The first will be the simplest and smallest construction, and its element is that triangle which has its hypotenuse twice the lesser side. When two such triangles are joined at the diagonal, and this is repeated three times, and the triangles rest their diagonals and shorter sides on the same point as a centre, a single equilateral triangle is formed out of six triangles; and four equilateral triangles, if put together, make out of every three plane angles one solid angle, being that which is nearest to the most obtuse of plane angles; and out of the combination of these four angles arises the first solid form which distributes into equal and similar parts the whole circle in which it is inscribed. The second species of solid is formed out of the same triangles, which unite as eight equilateral triangles and form one solid angle out of four plane angles, and out of six such angles the second body is completed. And the third body is made up of 120 triangular elements, forming twelve solid angles, each of them included in five plane equilateral triangles, having altogether twenty bases, each of which is an equilateral triangle. The one element (that is, the triangle which has its hypotenuse twice the lesser side) having generated these figures, generated no more; but the isosceles triangle produced the fourth elementary figure, which is compounded of four such triangles, joining their right angles in a centre, and forming one equilateral quadrangle. Six of these united form eight solid angles, each of which is made by the combination of three plane right angles; the figure of the body thus composed is a cube, having six plane quadrangular equilateral bases. There was yet a fifth combination which God used in the delineation of the universe.

Now, he who, duly reflecting on all this, enquires whether the worlds are to be regarded as indefinite or definite in number, will be of opinion that the notion of their indefiniteness is characteristic of a sadly indefinite and ignorant mind. He, however, who raises the question whether they are to be truly regarded as one or five, takes up a more reasonable position. Arguing from probabilities, I am of opinion that they are one; another, regarding the question from another point of view, will be of another mind. But, leaving this enquiry, let us proceed to distribute the elementary forms, which have now been created in idea, among the four elements.

To earth, then, let us assign the cubical form; for earth is the most immoveable of the four and the most plastic of all bodies, and that which has the most stable bases must of necessity be of such a nature. Now, of the triangles which we assumed at first, that which has two equal sides is by nature more firmly based than that which has unequal sides; and of the compound figures which are formed out of either, the plane equilateral quadrangle has necessarily a more stable basis than the equilateral triangle, both in the whole and in the parts. Wherefore, in assigning this figure to earth, we adhere to probability; and to water we assign that one of the remaining forms which is the least moveable; and the most moveable of them to fire; and to air that which is intermediate. Also we assign the smallest body to fire, and the greatest to water, and the intermediate in size to air; and, again, the acutest body to fire, and the next in acuteness to air, and the third to water. Of all these elements, that which has the fewest bases must necessarily be the most moveable, for it must be the acutest and most penetrating in every way, and also the lightest as being composed of the smallest number of similar particles: and the second body has similar properties in a second degree, and the third body in the third degree. Let it be agreed, then, both according to strict reason and according to probability, that the pyramid is the solid which is the original element and seed of fire; and let us assign the element which was next in the order of generation to air, and the third to water. We must imagine all these to be so small that no single particle of any of the four kinds is seen by us on account of their smallness: but when many of them are collected together their aggregates are seen. And the ratios of their numbers, motions, and

other properties, everywhere God, as far as necessity allowed or gave consent, has exactly perfected, and harmonized in due proportion.

From all that we have just been saying about the elements or kinds, the most probable conclusion is as follows: — earth, when meeting with fire and dissolved by its sharpness, whether the dissolution take place in the fire itself or perhaps in some mass of air or water, is borne hither and thither, until its parts, meeting together and mutually harmonising, again become earth; for they can never take any other form. But water, when divided by fire or by air, on reforming, may become one part fire and two parts air; and a single volume of air divided becomes two of fire. Again, when a small body of fire is contained in a larger body of air or water or earth, and both are moving, and the fire struggling is overcome and broken up, then two volumes of fire form one volume of air; and when air is overcome and cut up into small pieces, two and a half parts of air are condensed into one part of water. Let us consider the matter in another way. When one of the other elements is fastened upon by fire, and is cut by the sharpness of its angles and sides, it coalesces with the fire, and then ceases to be cut by them any longer. For no element which is one and the same with itself can be changed by or change another of the same kind and in the same state. But so long as in the process of transition the weaker is fighting against the stronger, the dissolution continues. Again, when a few small particles, enclosed in many larger ones, are in process of decomposition and extinction, they only cease from their tendency to extinction when they consent to pass into the conquering nature, and fire becomes air and air water. But if bodies of another kind go and attack them (i.e. the small particles), the latter continue to be dissolved until, being completely forced back and dispersed, they make their escape to their own kindred, or else, being overcome and assimilated to the conquering power, they remain where they are and dwell with their victors, and from being many become one. And owing to these affections, all things are changing their place, for by the motion of the receiving vessel the bulk of each class is distributed into its proper place; but those things which become unlike themselves and like other things, are hurried by the shaking into the place of the things to which they grow like.

Now all unmixed and primary bodies are produced by such causes as these. As to the subordinate species which are included in the greater kinds, they are to be attributed to the varieties in the structure of the two original triangles. For either structure did not originally produce the triangle of one size only, but some larger and some smaller, and there are as many sizes as there are species of the four elements. Hence when they are mingled with themselves and with one another there is an endless variety of them, which those who would arrive at the probable truth of nature ought duly to consider.

Unless a person comes to an understanding about the nature and conditions of rest and motion, he will meet with many difficulties in the discussion which follows. Something has been said of this matter already, and something more remains to be said, which is, that motion never exists in what is uniform. For to conceive that anything can be moved without a mover is hard or indeed impossible, and equally impossible to conceive that there can be a mover unless there be something which can be moved — motion cannot exist where either of these are wanting, and for these to be uniform is impossible; wherefore we must assign rest to uniformity and motion to the want of uniformity. Now inequality is the cause of the nature which is wanting in uniformity; and of this we have already described the origin. But there still remains the further point — why things when divided after their kinds do not cease to pass through one another and to change their place — which we will now proceed to explain. In the revolution of the universe are comprehended all the four elements, and this being circular and having a tendency to come together, compresses everything and will not allow any place to be left void. Wherefore, also, fire above all things penetrates everywhere, and air next, as being next in rarity of the elements; and the two other elements in like manner penetrate according to their degrees of rarity. For those things which are composed of the largest particles have the largest void left in their compositions, and those which are composed of the smallest particles have the least. And the contraction caused by the compression thrusts the smaller particles into the interstices of the larger. And thus, when the small parts are placed side by side with the larger, and the lesser divide the greater and the greater unite the lesser, all the elements are borne up and down and hither and thither towards their own places; for the change in the size of each changes its position in space. And these causes generate an inequality which is always maintained, and is continually creating a perpetual motion of the elements in all time.

In the next place we have to consider that there are divers kinds of fire. There are, for example, first, flame; and secondly, those emanations of flame which do not burn but only give light to the eyes; thirdly, the remains of fire, which are seen in red-hot embers

after the flame has been extinguished. There are similar differences in the air; of which the brightest part is called the aether, and the most turbid sort mist and darkness; and there are various other nameless kinds which arise from the inequality of the triangles. Water, again, admits in the first place of a division into two kinds; the one liquid and the other fusile. The liquid kind is composed of the small and unequal particles of water; and moves itself and is moved by other bodies owing to the want of uniformity and the shape of its particles; whereas the fusile kind, being formed of large and uniform particles, is more stable than the other, and is heavy and compact by reason of its uniformity. But when fire gets in and dissolves the particles and destroys the uniformity, it has greater mobility, and becoming fluid is thrust forth by the neighbouring air and spreads upon the earth; and this dissolution of the solid masses is called melting, and their spreading out upon the earth flowing. Again, when the fire goes out of the fusile substance, it does not pass into a vacuum, but into the neighbouring air; and the air which is displaced forces together the liquid and still moveable mass into the place which was occupied by the fire, and unites it with itself. Thus compressed the mass resumes its equability, and is again at unity with itself, because the fire which was the author of the inequality has retreated; and this departure of the fire is called cooling, and the coming together which follows upon it is termed congealment. Of all the kinds termed fusile, that which is the densest and is formed out of the finest and most uniform parts is that most precious possession called gold, which is hardened by filtration through rock; this is unique in kind, and has both a glittering and a yellow colour. A shoot of gold, which is so dense as to be very hard, and takes a black colour, is termed adamant. There is also another kind which has parts nearly like gold, and of which there are several species; it is denser than gold, and it contains a small and fine portion of earth, and is therefore harder, yet also lighter because of the great interstices which it has within itself; and this substance, which is one of the bright and denser kinds of water, when solidified is called copper. There is an alloy of earth mingled with it, which, when the two parts grow old and are disunited, shows itself separately and is called rust. The remaining phenomena of the same kind there will be no

difficulty in reasoning out by the method of probabilities. A man may sometimes set aside meditations about eternal things, and for recreation turn to consider the truths of generation which are probable only; he will thus gain a pleasure not to be repented of, and secure for himself while he lives a wise and moderate pastime. Let us grant ourselves this indulgence, and go through the probabilities relating to the same subjects which follow next in order.

Water which is mingled with fire, so much as is fine and liquid (being so called by reason of its motion and the way in which it rolls along the ground), and soft, because its bases give way and are less stable than those of earth, when separated from fire and air and isolated, becomes more uniform, and by their retirement is compressed into itself; and if the condensation be very great, the water above the earth becomes hail, but on the earth, ice; and that which is congealed in a less degree and is only half solid, when above the earth is called snow, and when upon the earth, and condensed from dew, hoar-frost. Then, again, there are the numerous kinds of water which have been mingled with one another, and are distilled through plants which grow in the earth; and this whole class is called by the name of juices or saps. The unequal admixture of these fluids creates a variety of species; most of them are nameless, but four which are of a fiery nature are clearly distinguished and have names. First, there is wine, which warms the soul as well as the body: secondly, there is the oily nature, which is smooth and divides the visual ray, and for this reason is bright and shining and of a glistening appearance, including pitch, the juice of the castor berry, oil itself, and other things of a like kind: thirdly, there is the class of substances which expand the contracted parts of the mouth, until they return to their natural state, and by reason of this property create sweetness; — these are included under the general name of honey: and, lastly, there is a frothy nature, which differs from all juices, having a burning quality which dissolves the flesh; it is called opos (a vegetable acid).

As to the kinds of earth, that which is filtered through water passes into stone in the following manner: — The water which mixes with the earth and is broken up in the process changes into air, and taking this form mounts into its own place. But as there is no

surrounding vacuum it thrusts away the neighbouring air, and this being rendered heavy, and, when it is displaced, having been poured around the mass of earth, forcibly compresses it and drives it into the vacant space whence the new air had come up; and the earth when compressed by the air into an indissoluble union with water becomes rock. The fairer sort is that which is made up of equal and similar parts and is transparent; that which has the opposite qualities is inferior. But when all the watery part is suddenly drawn out by fire, a more brittle substance is formed, to which we give the name of pottery. Sometimes also moisture may remain, and the earth which has been fused by fire becomes, when cool, a certain stone of a black colour. A like separation of the water which had been copiously mingled with them may occur in two substances composed of finer particles of earth and of a briny nature; out of either of them a half-solid-body is then formed, soluble in water — the one, soda, which is used for purging away oil and earth, the other, salt, which harmonizes so well in combinations pleasing to the palate, and is, as the law testifies, a substance dear to the gods. The compounds of earth and water are not soluble by water, but by fire only, and for this reason: — Neither fire nor air melt masses of earth; for their particles, being smaller than the interstices in its structure, have plenty of room to move without forcing their way, and so they leave the earth unmelted and undissolved; but particles of water, which are larger, force a passage, and dissolve and melt the earth. Wherefore earth when not consolidated by force is dissolved by water only; when consolidated, by nothing but fire; for this is the only body which can find an entrance. The cohesion of water again, when very strong, is dissolved by fire only — when weaker, then either by air or fire — the former entering the interstices, and the latter penetrating even the triangles. But nothing can dissolve air, when strongly condensed, which does not reach the elements or triangles; or if not strongly condensed, then only fire can dissolve it. As to bodies composed of earth and water, while the water occupies the vacant interstices of the earth in them which are compressed by force, the particles of water which approach them from without, finding no entrance, flow around the entire mass and leave it undissolved; but the particles of fire, entering into the interstices of the water, do to

the water what water does to earth and fire to air (The text seems to be corrupt.), and are the sole causes of the compound body of earth and water liquefying and becoming fluid. Now these bodies are of two kinds; some of them, such as glass and the fusible sort of stones, have less water than they have earth; on the other hand, substances of the nature of wax and incense have more of water entering into their composition.

I have thus shown the various classes of bodies as they are diversified by their forms and combinations and changes into one another, and now I must endeavour to set forth their affections and the causes of them. In the first place, the bodies which I have been describing are necessarily objects of sense. But we have not yet considered the origin of flesh, or what belongs to flesh, or of that part of the soul which is mortal. And these things cannot be adequately explained without also explaining the affections which are concerned with sensation, nor the latter without the former: and yet to explain them together is hardly possible; for which reason we must assume first one or the other and afterwards examine the nature of our hypothesis. In order, then, that the affections may follow regularly after the elements, let us presuppose the existence of body and soul.

First, let us enquire what we mean by saying that fire is hot; and about this we may reason from the dividing or cutting power which it exercises on our bodies. We all of us feel that fire is sharp; and we may further consider the fineness of the sides, and the sharpness of the angles, and the smallness of the particles, and the swiftness of the motion — all this makes the action of fire violent and sharp, so that it cuts whatever it meets. And we must not forget that the original figure of fire (i.e. the pyramid), more than any other form, has a dividing power which cuts our bodies into small pieces (*Kepmatizei*), and thus naturally produces that affection which we call heat; and hence the origin of the name (*thepmos*, *Kepma*). Now, the opposite of this is sufficiently manifest; nevertheless we will not fail to describe it. For the larger particles of moisture which surround the body, entering in and driving out the lesser, but not being able to take their places, compress the moist principle in us; and this from being unequal and disturbed, is forced by them into a state of rest, which is due to equability and compression. But things which are contracted

contrary to nature are by nature at war, and force themselves apart; and to this war and convulsion the name of shivering and trembling is given; and the whole affection and the cause of the affection are both termed cold. That is called hard to which our flesh yields, and soft which yields to our flesh; and things are also termed hard and soft relatively to one another. That which yields has a small base; but that which rests on quadrangular bases is firmly posed and belongs to the class which offers the greatest resistance; so too does that which is the most compact and therefore most repellent. The nature of the light and the heavy will be best understood when examined in connexion with our notions of above and below; for it is quite a mistake to suppose that the universe is parted into two regions, separate from and opposite to each other, the one a lower to which all things tend which have any bulk, and an upper to which things only ascend against their will. For as the universe is in the form of a sphere, all the extremities, being equidistant from the centre, are equally extremities, and the centre, which is equidistant from them, is equally to be regarded as the opposite of them all. Such being the nature of the world, when a person says that any of these points is above or below, may he not be justly charged with using an improper expression? For the centre of the world cannot be rightly called either above or below, but is the centre and nothing else; and the circumference is not the centre, and has in no one part of itself a different relation to the centre from what it has in any of the opposite parts. Indeed, when it is in every direction similar, how can one rightly give to it names which imply opposition? For if there were any solid body in equipoise at the centre of the universe, there would be nothing to draw it to this extreme rather than to that, for they are all perfectly similar; and if a person were to go round the world in a circle, he would often, when standing at the antipodes of his former position, speak of the same point as above and below; for, as I was saying just now, to speak of the whole which is in the form of a globe as having one part above and another below is not like a sensible man. The reason why these names are used, and the circumstances under which they are ordinarily applied by us to the division of the heavens, may be elucidated by the following supposition: — if a person were to stand in that part of the universe which is the

appointed place of fire, and where there is the great mass of fire to which fiery bodies gather — if, I say, he were to ascend thither, and, having the power to do this, were to abstract particles of fire and put them in scales and weigh them, and then, raising the balance, were to draw the fire by force towards the uncongenial element of the air, it would be very evident that he could compel the smaller mass more readily than the larger; for when two things are simultaneously raised by one and the same power, the smaller body must necessarily yield to the superior power with less reluctance than the larger; and the larger body is called heavy and said to tend downwards, and the smaller body is called light and said to tend upwards. And we may detect ourselves who are upon the earth doing precisely the same thing. For we often separate earthy natures, and sometimes earth itself, and draw them into the uncongenial element of air by force and contrary to nature, both clinging to their kindred elements. But that which is smaller yields to the impulse given by us towards the dissimilar element more easily than the larger; and so we call the former light, and the place towards which it is impelled we call above, and the contrary state and place we call heavy and below respectively. Now the relations of these must necessarily vary, because the principal masses of the different elements hold opposite positions; for that which is light, heavy, below or above in one place will be found to be and become contrary and transverse and every way diverse in relation to that which is light, heavy, below or above in an opposite place. And about all of them this has to be considered: — that the tendency of each towards its kindred element makes the body which is moved heavy, and the place towards which the motion tends below, but things which have an opposite tendency we call by an opposite name. Such are the causes which we assign to these phenomena. As to the smooth and the rough, any one who sees them can explain the reason of them to another. For roughness is hardness mingled with irregularity, and smoothness is produced by the joint effect of uniformity and density.

The most important of the affections which concern the whole body remains to be considered — that is, the cause of pleasure and pain in the perceptions of which I have been speaking, and in all other things which are perceived by sense through the parts of the

body, and have both pains and pleasures attendant on them. Let us imagine the causes of every affection, whether of sense or not, to be of the following nature, remembering that we have already distinguished between the nature which is easy and which is hard to move; for this is the direction in which we must hunt the prey which we mean to take. A body which is of a nature to be easily moved, on receiving an impression however slight, spreads abroad the motion in a circle, the parts communicating with each other, until at last, reaching the principle of mind, they announce the quality of the agent. But a body of the opposite kind, being immobile, and not extending to the surrounding region, merely receives the impression, and does not stir any of the neighbouring parts; and since the parts do not distribute the original impression to other parts, it has no effect of motion on the whole animal, and therefore produces no effect on the patient. This is true of the bones and hair and other more earthy parts of the human body; whereas what was said above relates mainly to sight and hearing, because they have in them the greatest amount of fire and air. Now we must conceive of pleasure and pain in this way. An impression produced in us contrary to nature and violent, if sudden, is painful; and, again, the sudden return to nature is pleasant; but a gentle and gradual return is imperceptible and vice versa. On the other hand the impression of sense which is most easily produced is most readily felt, but is not accompanied by pleasure or pain; such, for example, are the affections of the sight, which, as we said above, is a body naturally uniting with our body in the day-time; for cuttings and burnings and other affections which happen to the sight do not give pain, nor is there pleasure when the sight returns to its natural state; but the sensations are clearest and strongest according to the manner in which the eye is affected by the object, and itself strikes and touches it; there is no violence either in the contraction or dilation of the eye. But bodies formed of larger particles yield to the agent only with a struggle; and then they impart their motions to the whole and cause pleasure and pain — pain when alienated from their natural conditions, and pleasure when restored to them. Things which experience gradual withdrawals and emptyings of their nature, and great and sudden replenishments, fail to perceive the emptying, but are sensible of the replenishment; and so they occasion no pain, but

the greatest pleasure, to the mortal part of the soul, as is manifest in the case of perfumes. But things which are changed all of a sudden, and only gradually and with difficulty return to their own nature, have effects in every way opposite to the former, as is evident in the case of burnings and cuttings of the body.

Thus have we discussed the general affections of the whole body, and the names of the agents which produce them. And now I will endeavour to speak of the affections of particular parts, and the causes and agents of them, as far as I am able. In the first place let us set forth what was omitted when we were speaking of juices, concerning the affections peculiar to the tongue. These too, like most of the other affections, appear to be caused by certain contractions and dilations, but they have besides more of roughness and smoothness than is found in other affections; for whenever earthy particles enter into the small veins which are the testing instruments of the tongue, reaching to the heart, and fall upon the moist, delicate portions of flesh — when, as they are dissolved, they contract and dry up the little veins, they are astringent if they are rougher, but if not so rough, then only harsh. Those of them which are of an abstergent nature, and purge the whole surface of the tongue, if they do it in excess, and so encroach as to consume some part of the flesh itself, like potash and soda, are all termed bitter. But the particles which are deficient in the alkaline quality, and which cleanse only moderately, are called salt, and having no bitterness or roughness, are regarded as rather agreeable than otherwise. Bodies which share in and are made smooth by the heat of the mouth, and which are inflamed, and again in turn inflame that which heats them, and which are so light that they are carried upwards to the sensations of the head, and cut all that comes in their way, by reason of these qualities in them, are all termed pungent. But when these same particles, refined by putrefaction, enter into the narrow veins, and are duly proportioned to the particles of earth and air which are there, they set them whirling about one another, and while they are in a whirl cause them to dash against and enter into one another, and so form hollows surrounding the particles that enter — which watery vessels of air (for a film of moisture, sometimes earthy, sometimes pure, is spread around the air) are hollow spheres of water; and those of them which

are pure, are transparent, and are called bubbles, while those composed of the earthy liquid, which is in a state of general agitation and effervescence, are said to boil or ferment — of all these affections the cause is termed acid. And there is the opposite affection arising from an opposite cause, when the mass of entering particles, immersed in the moisture of the mouth, is congenial to the tongue, and smooths and oils over the roughness, and relaxes the parts which are unnaturally contracted, and contracts the parts which are relaxed, and disposes them all according to their nature; — that sort of remedy of violent affections is pleasant and agreeable to every man, and has the name sweet. But enough of this.

The faculty of smell does not admit of differences of kind; for all smells are of a half-formed nature, and no element is so proportioned as to have any smell. The veins about the nose are too narrow to admit earth and water, and too wide to detain fire and air; and for this reason no one ever perceives the smell of any of them; but smells always proceed from bodies that are damp, or putrefying, or liquefying, or evaporating, and are perceptible only in the intermediate state, when water is changing into air and air into water; and all of them are either vapour or mist. That which is passing out of air into water is mist, and that which is passing from water into air is vapour; and hence all smells are thinner than water and thicker than air. The proof of this is, that when there is any obstruction to the respiration, and a man draws in his breath by force, then no smell filters through, but the air without the smell alone penetrates. Wherefore the varieties of smell have no name, and they have not many, or definite and simple kinds; but they are distinguished only as painful and pleasant, the one sort irritating and disturbing the whole cavity which is situated between the head and the navel, the other having a soothing influence, and restoring this same region to an agreeable and natural condition.

In considering the third kind of sense, hearing, we must speak of the causes in which it originates. We may in general assume sound to be a blow which passes through the ears, and is transmitted by means of the air, the brain, and the blood, to the soul, and that hearing is the vibration of this blow, which begins in the head and ends in the region of the liver. The sound which moves swiftly is acute, and the

sound which moves slowly is grave, and that which is regular is equable and smooth, and the reverse is harsh. A great body of sound is loud, and a small body of sound the reverse. Respecting the harmonies of sound I must hereafter speak.

There is a fourth class of sensible things, having many intricate varieties, which must now be distinguished. They are called by the general name of colours, and are a flame which emanates from every sort of body, and has particles corresponding to the sense of sight. I have spoken already, in what has preceded, of the causes which generate sight, and in this place it will be natural and suitable to give a rational theory of colours.

Of the particles coming from other bodies which fall upon the sight, some are smaller and some are larger, and some are equal to the parts of the sight itself. Those which are equal are imperceptible, and we call them transparent. The larger produce contraction, the smaller dilation, in the sight, exercising a power akin to that of hot and cold bodies on the flesh, or of astringent bodies on the tongue, or of those heating bodies which we termed pungent. White and black are similar effects of contraction and dilation in another sphere, and for this reason have a different appearance. Wherefore, we ought to term white that which dilates the visual ray, and the opposite of this is black. There is also a swifter motion of a different sort of fire which strikes and dilates the ray of sight until it reaches the eyes, forcing a way through their passages and melting them, and eliciting from them a union of fire and water which we call tears, being itself an opposite fire which comes to them from an opposite direction — the inner fire flashes forth like lightning, and the outer finds a way in and is extinguished in the moisture, and all sorts of colours are generated by the mixture. This affection is termed dazzling, and the object which produces it is called bright and flashing. There is another sort of fire which is intermediate, and which reaches and mingles with the moisture of the eye without flashing; and in this, the fire mingling with the ray of the moisture, produces a colour like blood, to which we give the name of red. A bright hue mingled with red and white gives the colour called auburn (Greek). The law of proportion, however, according to which the several colours are formed, even if a man knew he would be foolish in telling, for he

could not give any necessary reason, nor indeed any tolerable or probable explanation of them. Again, red, when mingled with black and white, becomes purple, but it becomes umber (Greek) when the colours are burnt as well as mingled and the black is more thoroughly mixed with them. Flame-colour (Greek) is produced by a union of auburn and dun (Greek), and dun by an admixture of black and white; pale yellow (Greek), by an admixture of white and auburn. White and bright meeting, and falling upon a full black, become dark blue (Greek), and when dark blue mingles with white, a light blue (Greek) colour is formed, as flame-colour with black makes leek green (Greek). There will be no difficulty in seeing how and by what mixtures the colours derived from these are made according to the rules of probability. He, however, who should attempt to verify all this by experiment, would forget the difference of the human and divine nature. For God only has the knowledge and also the power which are able to combine many things into one and again resolve the one into many. But no man either is or ever will be able to accomplish either the one or the other operation.

These are the elements, thus of necessity then subsisting, which the creator of the fairest and best of created things associated with himself, when he made the self-sufficing and most perfect God, using the necessary causes as his ministers in the accomplishment of his work, but himself contriving the good in all his creations. Wherefore we may distinguish two sorts of causes, the one divine and the other necessary, and may seek for the divine in all things, as far as our nature admits, with a view to the blessed life; but the necessary kind only for the sake of the divine, considering that without them and when isolated from them, these higher things for which we look cannot be apprehended or received or in any way shared by us.

Seeing, then, that we have now prepared for our use the various classes of causes which are the material out of which the remainder of our discourse must be woven, just as wood is the material of the carpenter, let us revert in a few words to the point at which we began, and then endeavour to add on a suitable ending to the beginning of our tale.

As I said at first, when all things were in disorder God created in

each thing in relation to itself, and in all things in relation to each other, all the measures and harmonies which they could possibly receive. For in those days nothing had any proportion except by accident; nor did any of the things which now have names deserve to be named at all — as, for example, fire, water, and the rest of the elements. All these the creator first set in order, and out of them he constructed the universe, which was a single animal comprehending in itself all other animals, mortal and immortal. Now of the divine, he himself was the creator, but the creation of the mortal he committed to his offspring. And they, imitating him, received from him the immortal principle of the soul; and around this they proceeded to fashion a mortal body, and made it to be the vehicle of the soul, and constructed within the body a soul of another nature which was mortal, subject to terrible and irresistible affections, — first of all, pleasure, the greatest incitement to evil; then, pain, which deters from good; also rashness and fear, two foolish counsellors, anger hard to be appeased, and hope easily led astray; — these they mingled with irrational sense and with all-daring love according to necessary laws, and so framed man. Wherefore, fearing to pollute the divine any more than was absolutely unavoidable, they gave to the mortal nature a separate habitation in another part of the body, placing the neck between them to be the isthmus and boundary, which they constructed between the head and breast, to keep them apart. And in the breast, and in what is termed the thorax, they encased the mortal soul; and as the one part of this was superior and the other inferior they divided the cavity of the thorax into two parts, as the women's and men's apartments are divided in houses, and placed the midriff to be a wall of partition between them. That part of the inferior soul which is endowed with courage and passion and loves contention they settled nearer the head, midway between the midriff and the neck, in order that it might be under the rule of reason and might join with it in controlling and restraining the desires when they are no longer willing of their own accord to obey the word of command issuing from the citadel.

The heart, the knot of the veins and the fountain of the blood which races through all the limbs, was set in the place of guard, that when the might of passion was roused by reason making

proclamation of any wrong assailing them from without or being perpetrated by the desires within, quickly the whole power of feeling in the body, perceiving these commands and threats, might obey and follow through every turn and alley, and thus allow the principle of the best to have the command in all of them. But the gods, foreknowing that the palpitation of the heart in the expectation of danger and the swelling and excitement of passion was caused by fire, formed and implanted as a supporter to the heart the lung, which was, in the first place, soft and bloodless, and also had within hollows like the pores of a sponge, in order that by receiving the breath and the drink, it might give coolness and the power of respiration and alleviate the heat. Wherefore they cut the air-channels leading to the lung, and placed the lung about the heart as a soft spring, that, when passion was rife within, the heart, beating against a yielding body, might be cooled and suffer less, and might thus become more ready to join with passion in the service of reason.

The part of the soul which desires meats and drinks and the other things of which it has need by reason of the bodily nature, they placed between the midriff and the boundary of the navel, contriving in all this region a sort of manger for the food of the body; and there they bound it down like a wild animal which was chained up with man, and must be nourished if man was to exist. They appointed this lower creation his place here in order that he might be always feeding at the manger, and have his dwelling as far as might be from the council-chamber, making as little noise and disturbance as possible, and permitting the best part to advise quietly for the good of the whole. And knowing that this lower principle in man would not comprehend reason, and even if attaining to some degree of perception would never naturally care for rational notions, but that it would be led away by phantoms and visions night and day, — to be a remedy for this, God combined with it the liver, and placed it in the house of the lower nature, contriving that it should be solid and smooth, and bright and sweet, and should also have a bitter quality, in order that the power of thought, which proceeds from the mind, might be reflected as in a mirror which receives likenesses of objects and gives back images of them to the sight; and so might strike terror into the desires, when, making use of the bitter part of the liver, to

which it is akin, it comes threatening and invading, and diffusing this bitter element swiftly through the whole liver produces colours like bile, and contracting every part makes it wrinkled and rough; and twisting out of its right place and contorting the lobe and closing and shutting up the vessels and gates, causes pain and loathing. And the converse happens when some gentle inspiration of the understanding pictures images of an opposite character, and allays the bile and bitterness by refusing to stir or touch the nature opposed to itself, but by making use of the natural sweetness of the liver, corrects all things and makes them to be right and smooth and free, and renders the portion of the soul which resides about the liver happy and joyful, enabling it to pass the night in peace, and to practise divination in sleep, inasmuch as it has no share in mind and reason. For the authors of our being, remembering the command of their father when he bade them create the human race as good as they could, that they might correct our inferior parts and make them to attain a measure of truth, placed in the liver the seat of divination. And herein is a proof that God has given the art of divination not to the wisdom, but to the foolishness of man. No man, when in his wits, attains prophetic truth and inspiration; but when he receives the inspired word, either his intelligence is enthralled in sleep, or he is demented by some distemper or possession. And he who would understand what he remembers to have been said, whether in a dream or when he was awake, by the prophetic and inspired nature, or would determine by reason the meaning of the apparitions which he has seen, and what indications they afford to this man or that, of past, present or future good and evil, must first recover his wits. But, while he continues demented, he cannot judge of the visions which he sees or the words which he utters; the ancient saying is very true, that 'only a man who has his wits can act or judge about himself and his own affairs.' And for this reason it is customary to appoint interpreters to be judges of the true inspiration. Some persons call them prophets; they are quite unaware that they are only the expositors of dark sayings and visions, and are not to be called prophets at all, but only interpreters of prophecy.

Such is the nature of the liver, which is placed as we have described in order that it may give prophetic intimations. During the

life of each individual these intimations are plainer, but after his death the liver becomes blind, and delivers oracles too obscure to be intelligible. The neighbouring organ (the spleen) is situated on the left-hand side, and is constructed with a view of keeping the liver bright and pure, — like a napkin, always ready prepared and at hand to clean the mirror. And hence, when any impurities arise in the region of the liver by reason of disorders of the body, the loose nature of the spleen, which is composed of a hollow and bloodless tissue, receives them all and clears them away, and when filled with the unclean matter, swells and festers, but, again, when the body is purged, settles down into the same place as before, and is humbled.

Concerning the soul, as to which part is mortal and which divine, and how and why they are separated, and where located, if God acknowledges that we have spoken the truth, then, and then only, can we be confident; still, we may venture to assert that what has been said by us is probable, and will be rendered more probable by investigation. Let us assume thus much.

The creation of the rest of the body follows next in order, and this we may investigate in a similar manner. And it appears to be very meet that the body should be framed on the following principles: —

The authors of our race were aware that we should be intemperate in eating and drinking, and take a good deal more than was necessary or proper, by reason of gluttony. In order then that disease might not quickly destroy us, and lest our mortal race should perish without fulfilling its end — intending to provide against this, the gods made what is called the lower belly, to be a receptacle for the superfluous meat and drink, and formed the convolution of the bowels, so that the food might be prevented from passing quickly through and compelling the body to require more food, thus producing insatiable gluttony, and making the whole race an enemy to philosophy and music, and rebellious against the divinest element within us.

The bones and flesh, and other similar parts of us, were made as follows. The first principle of all of them was the generation of the marrow. For the bonds of life which unite the soul with the body are made fast there, and they are the root and foundation of the human race. The marrow itself is created out of other materials: God took such of the primary triangles as were straight and smooth, and were

adapted by their perfection to produce fire and water, and air and earth — these, I say, he separated from their kinds, and mingling them in due proportions with one another, made the marrow out of them to be a universal seed of the whole race of mankind; and in this seed he then planted and enclosed the souls, and in the original distribution gave to the marrow as many and various forms as the different kinds of souls were hereafter to receive. That which, like a field, was to receive the divine seed, he made round every way, and called that portion of the marrow, brain, intending that, when an animal was perfected, the vessel containing this substance should be the head; but that which was intended to contain the remaining and mortal part of the soul he distributed into figures at once round and elongated, and he called them all by the name ‘marrow’; and to these, as to anchors, fastening the bonds of the whole soul, he proceeded to fashion around them the entire framework of our body, constructing for the marrow, first of all a complete covering of bone.

Bone was composed by him in the following manner. Having sifted pure and smooth earth he kneaded it and wetted it with marrow, and after that he put it into fire and then into water, and once more into fire and again into water — in this way by frequent transfers from one to the other he made it insoluble by either. Out of this he fashioned, as in a lathe, a globe made of bone, which he placed around the brain, and in this he left a narrow opening; and around the marrow of the neck and back he formed vertebrae which he placed under one another like pivots, beginning at the head and extending through the whole of the trunk. Thus wishing to preserve the entire seed, he enclosed it in a stone-like casing, inserting joints, and using in the formation of them the power of the other or diverse as an intermediate nature, that they might have motion and flexure. Then again, considering that the bone would be too brittle and inflexible, and when heated and again cooled would soon mortify and destroy the seed within — having this in view, he contrived the sinews and the flesh, that so binding all the members together by the sinews, which admitted of being stretched and relaxed about the vertebrae, he might thus make the body capable of flexion and extension, while the flesh would serve as a protection against the summer heat and against the winter cold, and also against falls, softly

and easily yielding to external bodies, like articles made of felt; and containing in itself a warm moisture which in summer exudes and makes the surface damp, would impart a natural coolness to the whole body; and again in winter by the help of this internal warmth would form a very tolerable defence against the frost which surrounds it and attacks it from without. He who modelled us, considering these things, mixed earth with fire and water and blended them; and making a ferment of acid and salt, he mingled it with them and formed soft and succulent flesh. As for the sinews, he made them of a mixture of bone and unfermented flesh, attempered so as to be in a mean, and gave them a yellow colour; wherefore the sinews have a firmer and more glutinous nature than flesh, but a softer and moister nature than the bones. With these God covered the bones and marrow, binding them together by sinews, and then enshrouded them all in an upper covering of flesh. The more living and sensitive of the bones he enclosed in the thinnest film of flesh, and those which had the least life within them in the thickest and most solid flesh. So again on the joints of the bones, where reason indicated that no more was required, he placed only a thin covering of flesh, that it might not interfere with the flexion of our bodies and make them unwieldy because difficult to move; and also that it might not, by being crowded and pressed and matted together, destroy sensation by reason of its hardness, and impair the memory and dull the edge of intelligence. Wherefore also the thighs and the shanks and the hips, and the bones of the arms and the forearms, and other parts which have no joints, and the inner bones, which on account of the rarity of the soul in the marrow are destitute of reason — all these are abundantly provided with flesh; but such as have mind in them are in general less fleshy, except where the creator has made some part solely of flesh in order to give sensation, — as, for example, the tongue. But commonly this is not the case. For the nature which comes into being and grows up in us by a law of necessity, does not admit of the combination of solid bone and much flesh with acute perceptions. More than any other part the framework of the head would have had them, if they could have co-existed, and the human race, having a strong and fleshy and sinewy head, would have had a life twice or many times as long as it now has, and also more healthy

and free from pain. But our creators, considering whether they should make a longer-lived race which was worse, or a shorter-lived race which was better, came to the conclusion that every one ought to prefer a shorter span of life, which was better, to a longer one, which was worse; and therefore they covered the head with thin bone, but not with flesh and sinews, since it had no joints; and thus the head was added, having more wisdom and sensation than the rest of the body, but also being in every man far weaker. For these reasons and after this manner God placed the sinews at the extremity of the head, in a circle round the neck, and glued them together by the principle of likeness and fastened the extremities of the jawbones to them below the face, and the other sinews he dispersed throughout the body, fastening limb to limb. The framers of us framed the mouth, as now arranged, having teeth and tongue and lips, with a view to the necessary and the good contriving the way in for necessary purposes, the way out for the best purposes; for that is necessary which enters in and gives food to the body; but the river of speech, which flows out of a man and ministers to the intelligence, is the fairest and noblest of all streams. Still the head could neither be left a bare frame of bones, on account of the extremes of heat and cold in the different seasons, nor yet be allowed to be wholly covered, and so become dull and senseless by reason of an overgrowth of flesh. The fleshy nature was not therefore wholly dried up, but a large sort of peel was parted off and remained over, which is now called the skin. This met and grew by the help of the cerebral moisture, and became the circular envelopment of the head. And the moisture, rising up under the sutures, watered and closed in the skin upon the crown, forming a sort of knot. The diversity of the sutures was caused by the power of the courses of the soul and of the food, and the more these struggled against one another the more numerous they became, and fewer if the struggle were less violent. This skin the divine power pierced all round with fire, and out of the punctures which were thus made the moisture issued forth, and the liquid and heat which was pure came away, and a mixed part which was composed of the same material as the skin, and had a fineness equal to the punctures, was borne up by its own impulse and extended far outside the head, but being too slow to escape, was thrust back by the external air, and rolled up

underneath the skin, where it took root. Thus the hair sprang up in the skin, being akin to it because it is like threads of leather, but rendered harder and closer through the pressure of the cold, by which each hair, while in process of separation from the skin, is compressed and cooled. Wherefore the creator formed the head hairy, making use of the causes which I have mentioned, and reflecting also that instead of flesh the brain needed the hair to be a light covering or guard, which would give shade in summer and shelter in winter, and at the same time would not impede our quickness of perception. From the combination of sinew, skin, and bone, in the structure of the finger, there arises a triple compound, which, when dried up, takes the form of one hard skin partaking of all three natures, and was fabricated by these second causes, but designed by mind which is the principal cause with an eye to the future. For our creators well knew that women and other animals would some day be framed out of men, and they further knew that many animals would require the use of nails for many purposes; wherefore they fashioned in men at their first creation the rudiments of nails. For this purpose and for these reasons they caused skin, hair, and nails to grow at the extremities of the limbs.

And now that all the parts and members of the mortal animal had come together, since its life of necessity consisted of fire and breath, and it therefore wasted away by dissolution and depletion, the gods contrived the following remedy: They mingled a nature akin to that of man with other forms and perceptions, and thus created another kind of animal. These are the trees and plants and seeds which have been improved by cultivation and are now domesticated among us; anciently there were only the wild kinds, which are older than the cultivated. For everything that partakes of life may be truly called a living being, and the animal of which we are now speaking partakes of the third kind of soul, which is said to be seated between the midriff and the navel, having no part in opinion or reason or mind, but only in feelings of pleasure and pain and the desires which accompany them. For this nature is always in a passive state, revolving in and about itself, repelling the motion from without and using its own, and accordingly is not endowed by nature with the power of observing or reflecting on its own concerns. Wherefore it

lives and does not differ from a living being, but is fixed and rooted in the same spot, having no power of self-motion.

Now after the superior powers had created all these natures to be food for us who are of the inferior nature, they cut various channels through the body as through a garden, that it might be watered as from a running stream. In the first place, they cut two hidden channels or veins down the back where the skin and the flesh join, which answered severally to the right and left side of the body. These they let down along the backbone, so as to have the marrow of generation between them, where it was most likely to flourish, and in order that the stream coming down from above might flow freely to the other parts, and equalize the irrigation. In the next place, they divided the veins about the head, and interlacing them, they sent them in opposite directions; those coming from the right side they sent to the left of the body, and those from the left they diverted towards the right, so that they and the skin might together form a bond which should fasten the head to the body, since the crown of the head was not encircled by sinews; and also in order that the sensations from both sides might be distributed over the whole body. And next, they ordered the water-courses of the body in a manner which I will describe, and which will be more easily understood if we begin by admitting that all things which have lesser parts retain the greater, but the greater cannot retain the lesser. Now of all natures fire has the smallest parts, and therefore penetrates through earth and water and air and their compounds, nor can anything hold it. And a similar principle applies to the human belly; for when meats and drinks enter it, it holds them, but it cannot hold air and fire, because the particles of which they consist are smaller than its own structure.

These elements, therefore, God employed for the sake of distributing moisture from the belly into the veins, weaving together a network of fire and air like a weel, having at the entrance two lesser weels; further he constructed one of these with two openings, and from the lesser weels he extended cords reaching all round to the extremities of the network. All the interior of the net he made of fire, but the lesser weels and their cavity, of air. The network he took and spread over the newly-formed animal in the following manner: — He let the lesser weels pass into the mouth; there were two of them, and

one he let down by the air-pipes into the lungs, the other by the side of the air-pipes into the belly. The former he divided into two branches, both of which he made to meet at the channels of the nose, so that when the way through the mouth did not act, the streams of the mouth as well were replenished through the nose. With the other cavity (i.e. of the greater weel) he enveloped the hollow parts of the body, and at one time he made all this to flow into the lesser weels, quite gently, for they are composed of air, and at another time he caused the lesser weels to flow back again; and the net he made to find a way in and out through the pores of the body, and the rays of fire which are bound fast within followed the passage of the air either way, never at any time ceasing so long as the mortal being holds together. This process, as we affirm, the name-giver named inspiration and expiration. And all this movement, active as well as passive, takes place in order that the body, being watered and cooled, may receive nourishment and life; for when the respiration is going in and out, and the fire, which is fast bound within, follows it, and ever and anon moving to and fro, enters through the belly and reaches the meat and drink, it dissolves them, and dividing them into small portions and guiding them through the passages where it goes, pumps them as from a fountain into the channels of the veins, and makes the stream of the veins flow through the body as through a conduit.

Let us once more consider the phenomena of respiration, and enquire into the causes which have made it what it is. They are as follows: — Seeing that there is no such thing as a vacuum into which any of those things which are moved can enter, and the breath is carried from us into the external air, the next point is, as will be clear to every one, that it does not go into a vacant space, but pushes its neighbour out of its place, and that which is thrust out in turn drives out its neighbour; and in this way everything of necessity at last comes round to that place from whence the breath came forth, and enters in there, and following the breath, fills up the vacant space; and this goes on like the rotation of a wheel, because there can be no such thing as a vacuum. Wherefore also the breast and the lungs, when they emit the breath, are replenished by the air which surrounds the body and which enters in through the pores of the flesh

and is driven round in a circle; and again, the air which is sent away and passes out through the body forces the breath inwards through the passage of the mouth and the nostrils. Now the origin of this movement may be supposed to be as follows. In the interior of every animal the hottest part is that which is around the blood and veins; it is in a manner an internal fountain of fire, which we compare to the network of a creel, being woven all of fire and extended through the centre of the body, while the outer parts are composed of air. Now we must admit that heat naturally proceeds outward to its own place and to its kindred element; and as there are two exits for the heat, the one out through the body, and the other through the mouth and nostrils, when it moves towards the one, it drives round the air at the other, and that which is driven round falls into the fire and becomes warm, and that which goes forth is cooled. But when the heat changes its place, and the particles at the other exit grow warmer, the hotter air inclining in that direction and carried towards its native element, fire, pushes round the air at the other; and this being affected in the same way and communicating the same impulse, a circular motion swaying to and fro is produced by the double process, which we call inspiration and expiration.

The phenomena of medical cupping-glasses and of the swallowing of drink and of the projection of bodies, whether discharged in the air or bowled along the ground, are to be investigated on a similar principle; and swift and slow sounds, which appear to be high and low, and are sometimes discordant on account of their inequality, and then again harmonical on account of the equality of the motion which they excite in us. For when the motions of the antecedent swifter sounds begin to pause and the two are equalized, the slower sounds overtake the swifter and then propel them. When they overtake them they do not intrude a new and discordant motion, but introduce the beginnings of a slower, which answers to the swifter as it dies away, thus producing a single mixed expression out of high and low, whence arises a pleasure which even the unwise feel, and which to the wise becomes a higher sort of delight, being an imitation of divine harmony in mortal motions. Moreover, as to the flowing of water, the fall of the thunderbolt, and the marvels that are observed about the attraction of amber and the

Heracleean stones, — in none of these cases is there any attraction; but he who investigates rightly, will find that such wonderful phenomena are attributable to the combination of certain conditions — the non-existence of a vacuum, the fact that objects push one another round, and that they change places, passing severally into their proper positions as they are divided or combined.

Such as we have seen, is the nature and such are the causes of respiration, — the subject in which this discussion originated. For the fire cuts the food and following the breath surges up within, fire and breath rising together and filling the veins by drawing up out of the belly and pouring into them the cut portions of the food; and so the streams of food are kept flowing through the whole body in all animals. And fresh cuttings from kindred substances, whether the fruits of the earth or herb of the field, which God planted to be our daily food, acquire all sorts of colours by their inter-mixture; but red is the most pervading of them, being created by the cutting action of fire and by the impression which it makes on a moist substance; and hence the liquid which circulates in the body has a colour such as we have described. The liquid itself we call blood, which nourishes the flesh and the whole body, whence all parts are watered and empty places filled.

Now the process of repletion and evacuation is effected after the manner of the universal motion by which all kindred substances are drawn towards one another. For the external elements which surround us are always causing us to consume away, and distributing and sending off like to like; the particles of blood, too, which are divided and contained within the frame of the animal as in a sort of heaven, are compelled to imitate the motion of the universe. Each, therefore, of the divided parts within us, being carried to its kindred nature, replenishes the void. When more is taken away than flows in, then we decay, and when less, we grow and increase.

The frame of the entire creature when young has the triangles of each kind new, and may be compared to the keel of a vessel which is just off the stocks; they are locked firmly together and yet the whole mass is soft and delicate, being freshly formed of marrow and nurtured on milk. Now when the triangles out of which meats and drinks are composed come in from without, and are comprehended in

the body, being older and weaker than the triangles already there, the frame of the body gets the better of them and its newer triangles cut them up, and so the animal grows great, being nourished by a multitude of similar particles. But when the roots of the triangles are loosened by having undergone many conflicts with many things in the course of time, they are no longer able to cut or assimilate the food which enters, but are themselves easily divided by the bodies which come in from without. In this way every animal is overcome and decays, and this affection is called old age. And at last, when the bonds by which the triangles of the marrow are united no longer hold, and are parted by the strain of existence, they in turn loosen the bonds of the soul, and she, obtaining a natural release, flies away with joy. For that which takes place according to nature is pleasant, but that which is contrary to nature is painful. And thus death, if caused by disease or produced by wounds, is painful and violent; but that sort of death which comes with old age and fulfils the debt of nature is the easiest of deaths, and is accompanied with pleasure rather than with pain.

Now every one can see whence diseases arise. There are four natures out of which the body is compacted, earth and fire and water and air, and the unnatural excess or defect of these, or the change of any of them from its own natural place into another, or — since there are more kinds than one of fire and of the other elements — the assumption by any of these of a wrong kind, or any similar irregularity, produces disorders and diseases; for when any of them is produced or changed in a manner contrary to nature, the parts which were previously cool grow warm, and those which were dry become moist, and the light become heavy, and the heavy light; all sorts of changes occur. For, as we affirm, a thing can only remain the same with itself, whole and sound, when the same is added to it, or subtracted from it, in the same respect and in the same manner and in due proportion; and whatever comes or goes away in violation of these laws causes all manner of changes and infinite diseases and corruptions. Now there is a second class of structures which are also natural, and this affords a second opportunity of observing diseases to him who would understand them. For whereas marrow and bone and flesh and sinews are composed of the four elements, and the

blood, though after another manner, is likewise formed out of them, most diseases originate in the way which I have described; but the worst of all owe their severity to the fact that the generation of these substances proceeds in a wrong order; they are then destroyed. For the natural order is that the flesh and sinews should be made of blood, the sinews out of the fibres to which they are akin, and the flesh out of the clots which are formed when the fibres are separated. And the glutinous and rich matter which comes away from the sinews and the flesh, not only glues the flesh to the bones, but nourishes and imparts growth to the bone which surrounds the marrow; and by reason of the solidity of the bones, that which filters through consists of the purest and smoothest and oiliest sort of triangles, dropping like dew from the bones and watering the marrow. Now when each process takes place in this order, health commonly results; when in the opposite order, disease. For when the flesh becomes decomposed and sends back the wasting substance into the veins, then an over-supply of blood of diverse kinds, mingling with air in the veins, having variegated colours and bitter properties, as well as acid and saline qualities, contains all sorts of bile and serum and phlegm. For all things go the wrong way, and having become corrupted, first they taint the blood itself, and then ceasing to give nourishment to the body they are carried along the veins in all directions, no longer preserving the order of their natural courses, but at war with themselves, because they receive no good from one another, and are hostile to the abiding constitution of the body, which they corrupt and dissolve. The oldest part of the flesh which is corrupted, being hard to decompose, from long burning grows black, and from being everywhere corroded becomes bitter, and is injurious to every part of the body which is still uncorrupted. Sometimes, when the bitter element is refined away, the black part assumes an acidity which takes the place of the bitterness; at other times the bitterness being tinged with blood has a redder colour; and this, when mixed with black, takes the hue of grass; and again, an auburn colour mingles with the bitter matter when new flesh is decomposed by the fire which surrounds the internal flame; — to all which symptoms some physician perhaps, or rather some philosopher, who had the power of seeing in many dissimilar things

one nature deserving of a name, has assigned the common name of bile. But the other kinds of bile are variously distinguished by their colours. As for serum, that sort which is the watery part of blood is innocent, but that which is a secretion of black and acid bile is malignant when mingled by the power of heat with any salt substance, and is then called acid phlegm. Again, the substance which is formed by the liquefaction of new and tender flesh when air is present, if inflated and encased in liquid so as to form bubbles, which separately are invisible owing to their small size, but when collected are of a bulk which is visible, and have a white colour arising out of the generation of foam — all this decomposition of tender flesh when intermingled with air is termed by us white phlegm. And the whey or sediment of newly-formed phlegm is sweat and tears, and includes the various daily discharges by which the body is purified. Now all these become causes of disease when the blood is not replenished in a natural manner by food and drink but gains bulk from opposite sources in violation of the laws of nature. When the several parts of the flesh are separated by disease, if the foundation remains, the power of the disorder is only half as great, and there is still a prospect of an easy recovery; but when that which binds the flesh to the bones is diseased, and no longer being separated from the muscles and sinews, ceases to give nourishment to the bone and to unite flesh and bone, and from being oily and smooth and glutinous becomes rough and salt and dry, owing to bad regimen, then all the substance thus corrupted crumbles away under the flesh and the sinews, and separates from the bone, and the fleshy parts fall away from their foundation and leave the sinews bare and full of brine, and the flesh again gets into the circulation of the blood and makes the previously-mentioned disorders still greater. And if these bodily affections be severe, still worse are the prior disorders; as when the bone itself, by reason of the density of the flesh, does not obtain sufficient air, but becomes mouldy and hot and gangrened and receives no nutriment, and the natural process is inverted, and the bone crumbling passes into the food, and the food into the flesh, and the flesh again falling into the blood makes all maladies that may occur more virulent than those already mentioned. But the worst case of all is when the marrow is diseased, either from excess or defect;

and this is the cause of the very greatest and most fatal disorders, in which the whole course of the body is reversed.

There is a third class of diseases which may be conceived of as arising in three ways; for they are produced sometimes by wind, and sometimes by phlegm, and sometimes by bile. When the lung, which is the dispenser of the air to the body, is obstructed by rheums and its passages are not free, some of them not acting, while through others too much air enters, then the parts which are unrefreshed by air corrode, while in other parts the excess of air forcing its way through the veins distorts them and decomposing the body is enclosed in the midst of it and occupies the midriff; thus numberless painful diseases are produced, accompanied by copious sweats. And oftentimes when the flesh is dissolved in the body, wind, generated within and unable to escape, is the source of quite as much pain as the air coming in from without; but the greatest pain is felt when the wind gets about the sinews and the veins of the shoulders, and swells them up, and so twists back the great tendons and the sinews which are connected with them. These disorders are called tetanus and opisthotonus, by reason of the tension which accompanies them. The cure of them is difficult; relief is in most cases given by fever supervening. The white phlegm, though dangerous when detained within by reason of the air-bubbles, yet if it can communicate with the outside air, is less severe, and only discolours the body, generating leprous eruptions and similar diseases. When it is mingled with black bile and dispersed about the courses of the head, which are the divinest part of us, the attack if coming on in sleep, is not so severe; but when assailing those who are awake it is hard to be got rid of, and being an affection of a sacred part, is most justly called sacred. An acid and salt phlegm, again, is the source of all those diseases which take the form of catarrh, but they have many names because the places into which they flow are manifold.

Inflammations of the body come from burnings and inflamings, and all of them originate in bile. When bile finds a means of discharge, it boils up and sends forth all sorts of tumours; but when imprisoned within, it generates many inflammatory diseases, above all when mingled with pure blood; since it then displaces the fibres which are scattered about in the blood and are designed to maintain

the balance of rare and dense, in order that the blood may not be so liquefied by heat as to exude from the pores of the body, nor again become too dense and thus find a difficulty in circulating through the veins. The fibres are so constituted as to maintain this balance; and if any one brings them all together when the blood is dead and in process of cooling, then the blood which remains becomes fluid, but if they are left alone, they soon congeal by reason of the surrounding cold. The fibres having this power over the blood, bile, which is only stale blood, and which from being flesh is dissolved again into blood, at the first influx coming in little by little, hot and liquid, is congealed by the power of the fibres; and so congealing and made to cool, it produces internal cold and shuddering. When it enters with more of a flood and overcomes the fibres by its heat, and boiling up throws them into disorder, if it have power enough to maintain its supremacy, it penetrates the marrow and burns up what may be termed the cables of the soul, and sets her free; but when there is not so much of it, and the body though wasted still holds out, the bile is itself mastered, and is either utterly banished, or is thrust through the veins into the lower or upper belly, and is driven out of the body like an exile from a state in which there has been civil war; whence arise diarrhoeas and dysenteries, and all such disorders. When the constitution is disordered by excess of fire, continuous heat and fever are the result; when excess of air is the cause, then the fever is quotidian; when of water, which is a more sluggish element than either fire or air, then the fever is a tertian; when of earth, which is the most sluggish of the four, and is only purged away in a four-fold period, the result is a quartan fever, which can with difficulty be shaken off.

Such is the manner in which diseases of the body arise; the disorders of the soul, which depend upon the body, originate as follows. We must acknowledge disease of the mind to be a want of intelligence; and of this there are two kinds; to wit, madness and ignorance. In whatever state a man experiences either of them, that state may be called disease; and excessive pains and pleasures are justly to be regarded as the greatest diseases to which the soul is liable. For a man who is in great joy or in great pain, in his unreasonable eagerness to attain the one and to avoid the other, is not

able to see or to hear anything rightly; but he is mad, and is at the time utterly incapable of any participation in reason. He who has the seed about the spinal marrow too plentiful and overflowing, like a tree overladen with fruit, has many throes, and also obtains many pleasures in his desires and their offspring, and is for the most part of his life deranged, because his pleasures and pains are so very great; his soul is rendered foolish and disordered by his body; yet he is regarded not as one diseased, but as one who is voluntarily bad, which is a mistake. The truth is that the intemperance of love is a disease of the soul due chiefly to the moisture and fluidity which is produced in one of the elements by the loose consistency of the bones. And in general, all that which is termed the incontinence of pleasure and is deemed a reproach under the idea that the wicked voluntarily do wrong is not justly a matter for reproach. For no man is voluntarily bad; but the bad become bad by reason of an ill disposition of the body and bad education, things which are hateful to every man and happen to him against his will. And in the case of pain too in like manner the soul suffers much evil from the body. For where the acid and briny phlegm and other bitter and bilious humours wander about in the body, and find no exit or escape, but are pent up within and mingle their own vapours with the motions of the soul, and are blended with them, they produce all sorts of diseases, more or fewer, and in every degree of intensity; and being carried to the three places of the soul, whichever they may severally assail, they create infinite varieties of ill-temper and melancholy, of rashness and cowardice, and also of forgetfulness and stupidity. Further, when to this evil constitution of body evil forms of government are added and evil discourses are uttered in private as well as in public, and no sort of instruction is given in youth to cure these evils, then all of us who are bad become bad from two causes which are entirely beyond our control. In such cases the planters are to blame rather than the plants, the educators rather than the educated. But however that may be, we should endeavour as far as we can by education, and studies, and learning, to avoid vice and attain virtue; this, however, is part of another subject.

There is a corresponding enquiry concerning the mode of treatment by which the mind and the body are to be preserved, about

which it is meet and right that I should say a word in turn; for it is more our duty to speak of the good than of the evil. Everything that is good is fair, and the fair is not without proportion, and the animal which is to be fair must have due proportion. Now we perceive lesser symmetries or proportions and reason about them, but of the highest and greatest we take no heed; for there is no proportion or disproportion more productive of health and disease, and virtue and vice, than that between soul and body. This however we do not perceive, nor do we reflect that when a weak or small frame is the vehicle of a great and mighty soul, or conversely, when a little soul is encased in a large body, then the whole animal is not fair, for it lacks the most important of all symmetries; but the due proportion of mind and body is the fairest and loveliest of all sights to him who has the seeing eye. Just as a body which has a leg too long, or which is unsymmetrical in some other respect, is an unpleasant sight, and also, when doing its share of work, is much distressed and makes convulsive efforts, and often stumbles through awkwardness, and is the cause of infinite evil to its own self — in like manner we should conceive of the double nature which we call the living being; and when in this compound there is an impassioned soul more powerful than the body, that soul, I say, convulses and fills with disorders the whole inner nature of man; and when eager in the pursuit of some sort of learning or study, causes wasting; or again, when teaching or disputing in private or in public, and strifes and controversies arise, inflames and dissolves the composite frame of man and introduces rheums; and the nature of this phenomenon is not understood by most professors of medicine, who ascribe it to the opposite of the real cause. And once more, when a body large and too strong for the soul is united to a small and weak intelligence, then inasmuch as there are two desires natural to man, — one of food for the sake of the body, and one of wisdom for the sake of the diviner part of us — then, I say, the motions of the stronger, getting the better and increasing their own power, but making the soul dull, and stupid, and forgetful, engender ignorance, which is the greatest of diseases. There is one protection against both kinds of disproportion: — that we should not move the body without the soul or the soul without the body, and thus they will be on their guard against each other, and be healthy

and well balanced. And therefore the mathematician or any one else whose thoughts are much absorbed in some intellectual pursuit, must allow his body also to have due exercise, and practise gymnastic; and he who is careful to fashion the body, should in turn impart to the soul its proper motions, and should cultivate music and all philosophy, if he would deserve to be called truly fair and truly good. And the separate parts should be treated in the same manner, in imitation of the pattern of the universe; for as the body is heated and also cooled within by the elements which enter into it, and is again dried up and moistened by external things, and experiences these and the like affections from both kinds of motions, the result is that the body if given up to motion when in a state of quiescence is overmastered and perishes; but if any one, in imitation of that which we call the foster-mother and nurse of the universe, will not allow the body ever to be inactive, but is always producing motions and agitations through its whole extent, which form the natural defence against other motions both internal and external, and by moderate exercise reduces to order according to their affinities the particles and affections which are wandering about the body, as we have already said when speaking of the universe, he will not allow enemy placed by the side of enemy to stir up wars and disorders in the body, but he will place friend by the side of friend, so as to create health. Now of all motions that is the best which is produced in a thing by itself, for it is most akin to the motion of thought and of the universe; but that motion which is caused by others is not so good, and worst of all is that which moves the body, when at rest, in parts only and by some external agency. Wherefore of all modes of purifying and reuniting the body the best is gymnastic; the next best is a surging motion, as in sailing or any other mode of conveyance which is not fatiguing; the third sort of motion may be of use in a case of extreme necessity, but in any other will be adopted by no man of sense: I mean the purgative treatment of physicians; for diseases unless they are very dangerous should not be irritated by medicines, since every form of disease is in a manner akin to the living being, whose complex frame has an appointed term of life. For not the whole race only, but each individual — barring inevitable accidents — comes into the world having a fixed span, and the triangles in us are

originally framed with power to last for a certain time, beyond which no man can prolong his life. And this holds also of the constitution of diseases; if any one regardless of the appointed time tries to subdue them by medicine, he only aggravates and multiplies them. Wherefore we ought always to manage them by regimen, as far as a man can spare the time, and not provoke a disagreeable enemy by medicines.

Enough of the composite animal, and of the body which is a part of him, and of the manner in which a man may train and be trained by himself so as to live most according to reason: and we must above and before all provide that the element which is to train him shall be the fairest and best adapted to that purpose. A minute discussion of this subject would be a serious task; but if, as before, I am to give only an outline, the subject may not unfitly be summed up as follows.

I have often remarked that there are three kinds of soul located within us, having each of them motions, and I must now repeat in the fewest words possible, that one part, if remaining inactive and ceasing from its natural motion, must necessarily become very weak, but that which is trained and exercised, very strong. Wherefore we should take care that the movements of the different parts of the soul should be in due proportion.

And we should consider that God gave the sovereign part of the human soul to be the divinity of each one, being that part which, as we say, dwells at the top of the body, and inasmuch as we are a plant not of an earthly but of a heavenly growth, raises us from earth to our kindred who are in heaven. And in this we say truly; for the divine power suspended the head and root of us from that place where the generation of the soul first began, and thus made the whole body upright. When a man is always occupied with the cravings of desire and ambition, and is eagerly striving to satisfy them, all his thoughts must be mortal, and, as far as it is possible altogether to become such, he must be mortal every whit, because he has cherished his mortal part. But he who has been earnest in the love of knowledge and of true wisdom, and has exercised his intellect more than any other part of him, must have thoughts immortal and divine, if he attain truth, and in so far as human nature is capable of sharing in

immortality, he must altogether be immortal; and since he is ever cherishing the divine power, and has the divinity within him in perfect order, he will be perfectly happy. Now there is only one way of taking care of things, and this is to give to each the food and motion which are natural to it. And the motions which are naturally akin to the divine principle within us are the thoughts and revolutions of the universe. These each man should follow, and correct the courses of the head which were corrupted at our birth, and by learning the harmonies and revolutions of the universe, should assimilate the thinking being to the thought, renewing his original nature, and having assimilated them should attain to that perfect life which the gods have set before mankind, both for the present and the future.

Thus our original design of discoursing about the universe down to the creation of man is nearly completed. A brief mention may be made of the generation of other animals, so far as the subject admits of brevity; in this manner our argument will best attain a due proportion. On the subject of animals, then, the following remarks may be offered. Of the men who came into the world, those who were cowards or led unrighteous lives may with reason be supposed to have changed into the nature of women in the second generation. And this was the reason why at that time the gods created in us the desire of sexual intercourse, contriving in man one animated substance, and in woman another, which they formed respectively in the following manner. The outlet for drink by which liquids pass through the lung under the kidneys and into the bladder, which receives and then by the pressure of the air emits them, was so fashioned by them as to penetrate also into the body of the marrow, which passes from the head along the neck and through the back, and which in the preceding discourse we have named the seed. And the seed having life, and becoming endowed with respiration, produces in that part in which it respire a lively desire of emission, and thus creates in us the love of procreation. Wherefore also in men the organ of generation becoming rebellious and masterful, like an animal disobedient to reason, and maddened with the sting of lust, seeks to gain absolute sway; and the same is the case with the so-called womb or matrix of women; the animal within them is desirous

of procreating children, and when remaining unfruitful long beyond its proper time, gets discontented and angry, and wandering in every direction through the body, closes up the passages of the breath, and, by obstructing respiration, drives them to extremity, causing all varieties of disease, until at length the desire and love of the man and the woman, bringing them together and as it were plucking the fruit from the tree, sow in the womb, as in a field, animals unseen by reason of their smallness and without form; these again are separated and matured within; they are then finally brought out into the light, and thus the generation of animals is completed.

Thus were created women and the female sex in general. But the race of birds was created out of innocent light-minded men, who, although their minds were directed toward heaven, imagined, in their simplicity, that the clearest demonstration of the things above was to be obtained by sight; these were remodelled and transformed into birds, and they grew feathers instead of hair. The race of wild pedestrian animals, again, came from those who had no philosophy in any of their thoughts, and never considered at all about the nature of the heavens, because they had ceased to use the courses of the head, but followed the guidance of those parts of the soul which are in the breast. In consequence of these habits of theirs they had their front-legs and their heads resting upon the earth to which they were drawn by natural affinity; and the crowns of their heads were elongated and of all sorts of shapes, into which the courses of the soul were crushed by reason of disuse. And this was the reason why they were created quadrupeds and polypods: God gave the more senseless of them the more support that they might be more attracted to the earth. And the most foolish of them, who trail their bodies entirely upon the ground and have no longer any need of feet, he made without feet to crawl upon the earth. The fourth class were the inhabitants of the water: these were made out of the most entirely senseless and ignorant of all, whom the transformers did not think any longer worthy of pure respiration, because they possessed a soul which was made impure by all sorts of transgression; and instead of the subtle and pure medium of air, they gave them the deep and muddy sea to be their element of respiration; and hence arose the race of fishes and oysters, and other aquatic animals, which have

received the most remote habitations as a punishment of their outlandish ignorance. These are the laws by which animals pass into one another, now, as ever, changing as they lose or gain wisdom and folly.

We may now say that our discourse about the nature of the universe has an end. The world has received animals, mortal and immortal, and is fulfilled with them, and has become a visible animal containing the visible — the sensible God who is the image of the intellectual, the greatest, best, fairest, most perfect — the one only-begotten heaven.

CRITIAS

Translated by Benjamin Jowett

Following on from *Timaeus*, this late dialogue is famous for containing the story of the island kingdom Atlantis and its failure to conquer Athens. It is believed that *Critias* was intended to be the second of a projected trilogy of dialogues, preceded by *Timaeus* and followed by *Hermocrates*, though the latter was possibly never written and *Critias* was left incomplete.

The identity of the real-life person of Critias is fiercely disputed among scholars. One group of classicists still claims him to be the famous oligarch Critias, member of the Thirty Tyrants, whilst others suggest that Critias was actually the grandfather of the oligarch.

Plato's Atlantis as described in 'Critias'

INTRODUCTION AND ANALYSIS.

The Critias is a fragment which breaks off in the middle of a sentence. It was designed to be the second part of a trilogy, which, like the other great Platonic trilogy of the Sophist, Statesman, Philosopher, was never completed. Timaeus had brought down the origin of the world to the creation of man, and the dawn of history was now to succeed the philosophy of nature. The Critias is also connected with the Republic. Plato, as he has already told us (Tim.), intended to represent the ideal state engaged in a patriotic conflict. This mythical conflict is prophetic or symbolical of the struggle of Athens and Persia, perhaps in some degree also of the wars of the Greeks and Carthaginians, in the same way that the Persian is prefigured by the Trojan war to the mind of Herodotus, or as the narrative of the first part of the Aeneid is intended by Virgil to foreshadow the wars of Carthage and Rome. The small number of the primitive Athenian citizens (20,000), 'which is about their present number' (Crit.), is evidently designed to contrast with the myriads and barbaric array of the Atlantic hosts. The passing remark in the Timaeus that Athens was left alone in the struggle, in which she conquered and became the liberator of Greece, is also an allusion to the later history. Hence we may safely conclude that the entire narrative is due to the imagination of Plato, who has used the name of Solon and introduced the Egyptian priests to give verisimilitude to his story. To the Greek such a tale, like that of the earth-born men, would have seemed perfectly accordant with the character of his mythology, and not more marvellous than the wonders of the East narrated by Herodotus and others: he might have been deceived into believing it. But it appears strange that later ages should have been imposed upon by the fiction. As many attempts have been made to find the great island of Atlantis, as to discover the country of the lost tribes. Without regard to the description of Plato, and without a suspicion that the whole narrative is a fabrication, interpreters have looked for the spot in every part of the globe, America, Arabia Felix, Ceylon, Palestine, Sardinia, Sweden.

Timaeus concludes with a prayer that his words may be

acceptable to the God whom he has revealed, and Critias, whose turn follows, begs that a larger measure of indulgence may be conceded to him, because he has to speak of men whom we know and not of gods whom we do not know. Socrates readily grants his request, and anticipating that Hermocrates will make a similar petition, extends by anticipation a like indulgence to him.

Critias returns to his story, professing only to repeat what Solon was told by the priests. The war of which he was about to speak had occurred 9000 years ago. One of the combatants was the city of Athens, the other was the great island of Atlantis. Critias proposes to speak of these rival powers first of all, giving to Athens the precedence; the various tribes of Greeks and barbarians who took part in the war will be dealt with as they successively appear on the scene.

In the beginning the gods agreed to divide the earth by lot in a friendly manner, and when they had made the allotment they settled their several countries, and were the shepherds or rather the pilots of mankind, whom they guided by persuasion, and not by force. Hephaestus and Athena, brother and sister deities, in mind and art united, obtained as their lot the land of Attica, a land suited to the growth of virtue and wisdom; and there they settled a brave race of children of the soil, and taught them how to order the state. Some of their names, such as Cecrops, Erechtheus, Erichthonius, and Erysichthon, were preserved and adopted in later times, but the memory of their deeds has passed away; for there have since been many deluges, and the remnant who survived in the mountains were ignorant of the art of writing, and during many generations were wholly devoted to acquiring the means of life...And the armed image of the goddess which was dedicated by the ancient Athenians is an evidence to other ages that men and women had in those days, as they ought always to have, common virtues and pursuits. There were various classes of citizens, including handicraftsmen and husbandmen and a superior class of warriors who dwelt apart, and were educated, and had all things in common, like our guardians. Attica in those days extended southwards to the Isthmus, and inland to the heights of Parnes and Cithaeron, and between them and the sea included the district of Oropus. The country was then, as what

remains of it still is, the most fertile in the world, and abounded in rich plains and pastures. But in the course of ages much of the soil was washed away and disappeared in the deep sea. And the inhabitants of this fair land were endowed with intelligence and the love of beauty.

The Acropolis of the ancient Athens extended to the Ilissus and Eridanus, and included the Pnyx, and the Lycabettus on the opposite side to the Pnyx, having a level surface and deep soil. The side of the hill was inhabited by craftsmen and husbandmen; and the warriors dwelt by themselves on the summit, around the temples of Hephaestus and Athene, in an enclosure which was like the garden of a single house. In winter they retired into houses on the north of the hill, in which they held their syssitia. These were modest dwellings, which they bequeathed unaltered to their children's children. In summer time the south side was inhabited by them, and then they left their gardens and dining-halls. In the midst of the Acropolis was a fountain, which gave an abundant supply of cool water in summer and warm in winter; of this there are still some traces. They were careful to preserve the number of fighting men and women at 20,000, which is equal to that of the present military force. And so they passed their lives as guardians of the citizens and leaders of the Hellenes. They were a just and famous race, celebrated for their beauty and virtue all over Europe and Asia.

And now I will speak to you of their adversaries, but first I ought to explain that the Greek names were given to Solon in an Egyptian form, and he enquired their meaning and translated them. His manuscript was left with my grandfather Dropides, and is now in my possession...In the division of the earth Poseidon obtained as his portion the island of Atlantis, and there he begat children whose mother was a mortal. Towards the sea and in the centre of the island there was a very fair and fertile plain, and near the centre, about fifty stadia from the plain, there was a low mountain in which dwelt a man named Evenor and his wife Leucippe, and their daughter Cleito, of whom Poseidon became enamoured. He to secure his love enclosed the mountain with rings or zones varying in size, two of land and three of sea, which his divine power readily enabled him to excavate and fashion, and, as there was no shipping in those days, no

man could get into the place. To the interior island he conveyed under the earth springs of water hot and cold, and supplied the land with all things needed for the life of man. Here he begat a family consisting of five pairs of twin male children. The eldest was Atlas, and him he made king of the centre island, while to his twin brother, Eumelus, or Gadeirus, he assigned that part of the country which was nearest the Straits. The other brothers he made chiefs over the rest of the island. And their kingdom extended as far as Egypt and Tyrrhenia. Now Atlas had a fair posterity, and great treasures derived from mines — among them that precious metal orichalcum; and there was abundance of wood, and herds of elephants, and pastures for animals of all kinds, and fragrant herbs, and grasses, and trees bearing fruit. These they used, and employed themselves in constructing their temples, and palaces, and harbours, and docks, in the following manner: — First, they bridged over the zones of sea, and made a way to and from the royal palace which they built in the centre island. This ancient palace was ornamented by successive generations; and they dug a canal which passed through the zones of land from the island to the sea. The zones of earth were surrounded by walls made of stone of divers colours, black and white and red, which they sometimes intermingled for the sake of ornament; and as they quarried they hollowed out beneath the edges of the zones double docks having roofs of rock. The outermost of the walls was coated with brass, the second with tin, and the third, which was the wall of the citadel, flashed with the red light of orichalcum. In the interior of the citadel was a holy temple, dedicated to Cleito and Poseidon, and surrounded by an enclosure of gold, and there was Poseidon's own temple, which was covered with silver, and the pinnacles with gold. The roof was of ivory, adorned with gold and silver and orichalcum, and the rest of the interior was lined with orichalcum. Within was an image of the god standing in a chariot drawn by six winged horses, and touching the roof with his head; around him were a hundred Nereids, riding on dolphins. Outside the temple were placed golden statues of all the descendants of the ten kings and of their wives; there was an altar too, and there were palaces, corresponding to the greatness and glory both of the kingdom and of the temple.

Also there were fountains of hot and cold water, and suitable buildings surrounding them, and trees, and there were baths both of the kings and of private individuals, and separate baths for women, and also for cattle. The water from the baths was carried to the grove of Poseidon, and by aqueducts over the bridges to the outer circles. And there were temples in the zones, and in the larger of the two there was a racecourse for horses, which ran all round the island. The guards were distributed in the zones according to the trust reposed in them; the most trusted of them were stationed in the citadel. The docks were full of triremes and stores. The land between the harbour and the sea was surrounded by a wall, and was crowded with dwellings, and the harbour and canal resounded with the din of human voices.

The plain around the city was highly cultivated and sheltered from the north by mountains; it was oblong, and where falling out of the straight line followed the circular ditch, which was of an incredible depth. This depth received the streams which came down from the mountains, as well as the canals of the interior, and found a way to the sea. The entire country was divided into sixty thousand lots, each of which was a square of ten stadia; and the owner of a lot was bound to furnish the sixth part of a war-chariot, so as to make up ten thousand chariots, two horses and riders upon them, a pair of chariot-horses without a seat, and an attendant and charioteer, two hoplites, two archers, two slingers, three stone-shooters, three javelin-men, and four sailors to make up the complement of twelve hundred ships.

Each of the ten kings was absolute in his own city and kingdom. The relations of the different governments to one another were determined by the injunctions of Poseidon, which had been inscribed by the first kings on a column of orichalcum in the temple of Poseidon, at which the kings and princes gathered together and held a festival every fifth and every sixth year alternately. Around the temple ranged the bulls of Poseidon, one of which the ten kings caught and sacrificed, shedding the blood of the victim over the inscription, and vowing not to transgress the laws of their father Poseidon. When night came, they put on azure robes and gave judgment against offenders. The most important of their laws related to their dealings with one another. They were not to take up arms

against one another, and were to come to the rescue if any of their brethren were attacked. They were to deliberate in common about war, and the king was not to have the power of life and death over his kinsmen, unless he had the assent of the majority.

For many generations, as tradition tells, the people of Atlantis were obedient to the laws and to the gods, and practised gentleness and wisdom in their intercourse with one another. They knew that they could only have the true use of riches by not caring about them. But gradually the divine portion of their souls became diluted with too much of the mortal admixture, and they began to degenerate, though to the outward eye they appeared glorious as ever at the very time when they were filled with all iniquity. The all-seeing Zeus, wanting to punish them, held a council of the gods, and when he had called them together, he spoke as follows: —

No one knew better than Plato how to invent ‘a noble lie.’ Observe (1) the innocent declaration of Socrates, that the truth of the story is a great advantage: (2) the manner in which traditional names and indications of geography are intermingled (‘Why, here be truths!’): (3) the extreme minuteness with which the numbers are given, as in the Old Epic poetry: (4) the ingenious reason assigned for the Greek names occurring in the Egyptian tale: (5) the remark that the armed statue of Athena indicated the common warrior life of men and women: (6) the particularity with which the third deluge before that of Deucalion is affirmed to have been the great destruction: (7) the happy guess that great geological changes have been effected by water: (8) the indulgence of the prejudice against sailing beyond the Columns, and the popular belief of the shallowness of the ocean in that part: (9) the confession that the depth of the ditch in the Island of Atlantis was not to be believed, and ‘yet he could only repeat what he had heard’, compared with the statement made in an earlier passage that Poseidon, being a God, found no difficulty in contriving the water-supply of the centre island: (10) the mention of the old rivalry of Poseidon and Athene, and the creation of the first inhabitants out of the soil. Plato here, as elsewhere, ingeniously gives the impression that he is telling the truth which mythology had corrupted.

The world, like a child, has readily, and for the most part

unhesitatingly, accepted the tale of the Island of Atlantis. In modern times we hardly seek for traces of the submerged continent; but even Mr. Grote is inclined to believe in the Egyptian poem of Solon of which there is no evidence in antiquity; while others, like Martin, discuss the Egyptian origin of the legend, or like M. de Humboldt, whom he quotes, are disposed to find in it a vestige of a widely-spread tradition. Others, adopting a different vein of reflection, regard the Island of Atlantis as the anticipation of a still greater island — the Continent of America. ‘The tale,’ says M. Martin, ‘rests upon the authority of the Egyptian priests; and the Egyptian priests took a pleasure in deceiving the Greeks.’ He never appears to suspect that there is a greater deceiver or magician than the Egyptian priests, that is to say, Plato himself, from the dominion of whose genius the critic and natural philosopher of modern times are not wholly emancipated. Although worthless in respect of any result which can be attained by them, discussions like those of M. Martin (Timee) have an interest of their own, and may be compared to the similar discussions regarding the Lost Tribes (2 Esdras), as showing how the chance word of some poet or philosopher has given birth to endless religious or historical enquiries. (See Introduction to the Timaeus.)

In contrasting the small Greek city numbering about twenty thousand inhabitants with the barbaric greatness of the island of Atlantis, Plato probably intended to show that a state, such as the ideal Athens, was invincible, though matched against any number of opponents (cp. Rep.). Even in a great empire there might be a degree of virtue and justice, such as the Greeks believed to have existed under the sway of the first Persian kings. But all such empires were liable to degenerate, and soon incurred the anger of the gods. Their Oriental wealth, and splendour of gold and silver, and variety of colours, seemed also to be at variance with the simplicity of Greek notions. In the island of Atlantis, Plato is describing a sort of Babylonian or Egyptian city, to which he opposes the frugal life of the true Hellenic citizen. It is remarkable that in his brief sketch of them, he idealizes the husbandmen ‘who are lovers of honour and true husbandmen,’ as well as the warriors who are his sole concern in the Republic; and that though he speaks of the common pursuits of men and women, he says nothing of the community of wives and

children.

It is singular that Plato should have prefixed the most detested of Athenian names to this dialogue, and even more singular that he should have put into the mouth of Socrates a panegyric on him (Tim.). Yet we know that his character was accounted infamous by Xenophon, and that the mere acquaintance with him was made a subject of accusation against Socrates. We can only infer that in this, and perhaps in some other cases, Plato's characters have no reference to the actual facts. The desire to do honour to his own family, and the connection with Solon, may have suggested the introduction of his name. Why the Critias was never completed, whether from accident, or from advancing age, or from a sense of the artistic difficulty of the design, cannot be determined.

CRITIAS.

PERSONS OF THE DIALOGUE:

Critias, Hermocrates, Timaeus, Socrates.

TIMAEUS: How thankful I am, Socrates, that I have arrived at last, and, like a weary traveller after a long journey, may be at rest! And I pray the being who always was of old, and has now been by me revealed, to grant that my words may endure in so far as they have been spoken truly and acceptably to him; but if unintentionally I have said anything wrong, I pray that he will impose upon me a just retribution, and the just retribution of him who errs is that he should be set right. Wishing, then, to speak truly in future concerning the generation of the gods, I pray him to give me knowledge, which of all medicines is the most perfect and best. And now having offered my prayer I deliver up the argument to Critias, who is to speak next according to our agreement. (Tim.)

CRITIAS: And I, Timaeus, accept the trust, and as you at first said that you were going to speak of high matters, and begged that some forbearance might be shown to you, I too ask the same or greater forbearance for what I am about to say. And although I very well know that my request may appear to be somewhat ambitious and discourteous, I must make it nevertheless. For will any man of sense deny that you have spoken well? I can only attempt to show that I ought to have more indulgence than you, because my theme is more difficult; and I shall argue that to seem to speak well of the gods to men is far easier than to speak well of men to men: for the inexperience and utter ignorance of his hearers about any subject is a great assistance to him who has to speak of it, and we know how ignorant we are concerning the gods. But I should like to make my meaning clearer, if you will follow me. All that is said by any of us can only be imitation and representation. For if we consider the likenesses which painters make of bodies divine and heavenly, and the different degrees of gratification with which the eye of the

spectator receives them, we shall see that we are satisfied with the artist who is able in any degree to imitate the earth and its mountains, and the rivers, and the woods, and the universe, and the things that are and move therein, and further, that knowing nothing precise about such matters, we do not examine or analyze the painting; all that is required is a sort of indistinct and deceptive mode of shadowing them forth. But when a person endeavours to paint the human form we are quick at finding out defects, and our familiar knowledge makes us severe judges of any one who does not render every point of similarity. And we may observe the same thing to happen in discourse; we are satisfied with a picture of divine and heavenly things which has very little likeness to them; but we are more precise in our criticism of mortal and human things. Wherefore if at the moment of speaking I cannot suitably express my meaning, you must excuse me, considering that to form approved likenesses of human things is the reverse of easy. This is what I want to suggest to you, and at the same time to beg, Socrates, that I may have not less, but more indulgence conceded to me in what I am about to say. Which favour, if I am right in asking, I hope that you will be ready to grant.

SOCRATES: Certainly, Critias, we will grant your request, and we will grant the same by anticipation to Hermocrates, as well as to you and Timaeus; for I have no doubt that when his turn comes a little while hence, he will make the same request which you have made. In order, then, that he may provide himself with a fresh beginning, and not be compelled to say the same things over again, let him understand that the indulgence is already extended by anticipation to him. And now, friend Critias, I will announce to you the judgment of the theatre. They are of opinion that the last performer was wonderfully successful, and that you will need a great deal of indulgence before you will be able to take his place.

HERMOCRATES: The warning, Socrates, which you have addressed to him, I must also take to myself. But remember, Critias, that faint heart never yet raised a trophy; and therefore you must go and attack the argument like a man. First invoke Apollo and the

Muses, and then let us hear you sound the praises and show forth the virtues of your ancient citizens.

CRITIAS: Friend Hermocrates, you, who are stationed last and have another in front of you, have not lost heart as yet; the gravity of the situation will soon be revealed to you; meanwhile I accept your exhortations and encouragements. But besides the gods and goddesses whom you have mentioned, I would specially invoke Mnemosyne; for all the important part of my discourse is dependent on her favour, and if I can recollect and recite enough of what was said by the priests and brought hither by Solon, I doubt not that I shall satisfy the requirements of this theatre. And now, making no more excuses, I will proceed.

Let me begin by observing first of all, that nine thousand was the sum of years which had elapsed since the war which was said to have taken place between those who dwelt outside the pillars of Heracles and all who dwelt within them; this war I am going to describe. Of the combatants on the one side, the city of Athens was reported to have been the leader and to have fought out the war; the combatants on the other side were commanded by the kings of Atlantis, which, as I was saying, was an island greater in extent than Libya and Asia, and when afterwards sunk by an earthquake, became an impassable barrier of mud to voyagers sailing from hence to any part of the ocean. The progress of the history will unfold the various nations of barbarians and families of Hellenes which then existed, as they successively appear on the scene; but I must describe first of all the Athenians of that day, and their enemies who fought with them, and then the respective powers and governments of the two kingdoms. Let us give the precedence to Athens.

In the days of old, the gods had the whole earth distributed among them by allotment (Cp. Polit.) There was no quarrelling; for you cannot rightly suppose that the gods did not know what was proper for each of them to have, or, knowing this, that they would seek to procure for themselves by contention that which more properly belonged to others. They all of them by just apportionment obtained what they wanted, and peopled their own districts; and when they

had peopled them they tended us, their nurselings and possessions, as shepherds tend their flocks, excepting only that they did not use blows or bodily force, as shepherds do, but governed us like pilots from the stern of the vessel, which is an easy way of guiding animals, holding our souls by the rudder of persuasion according to their own pleasure; — thus did they guide all mortal creatures. Now different gods had their allotments in different places which they set in order. Hephaestus and Athene, who were brother and sister, and sprang from the same father, having a common nature, and being united also in the love of philosophy and art, both obtained as their common portion this land, which was naturally adapted for wisdom and virtue; and there they implanted brave children of the soil, and put into their minds the order of government; their names are preserved, but their actions have disappeared by reason of the destruction of those who received the tradition, and the lapse of ages. For when there were any survivors, as I have already said, they were men who dwelt in the mountains; and they were ignorant of the art of writing, and had heard only the names of the chiefs of the land, but very little about their actions. The names they were willing enough to give to their children; but the virtues and the laws of their predecessors, they knew only by obscure traditions; and as they themselves and their children lacked for many generations the necessities of life, they directed their attention to the supply of their wants, and of them they conversed, to the neglect of events that had happened in times long past; for mythology and the enquiry into antiquity are first introduced into cities when they begin to have leisure (Cp. Arist. *Metaphys.*), and when they see that the necessities of life have already been provided, but not before. And this is the reason why the names of the ancients have been preserved to us and not their actions. This I infer because Solon said that the priests in their narrative of that war mentioned most of the names which are recorded prior to the time of Theseus, such as Cecrops, and Erechtheus, and Erichthonius, and Erysichthon, and the names of the women in like manner. Moreover, since military pursuits were then common to men and women, the men of those days in accordance with the custom of the time set up a figure and image of the goddess in full armour, to be a testimony that all animals which associate together, male as well as female, may, if

they please, practise in common the virtue which belongs to them without distinction of sex.

Now the country was inhabited in those days by various classes of citizens; — there were artisans, and there were husbandmen, and there was also a warrior class originally set apart by divine men. The latter dwelt by themselves, and had all things suitable for nurture and education; neither had any of them anything of their own, but they regarded all that they had as common property; nor did they claim to receive of the other citizens anything more than their necessary food. And they practised all the pursuits which we yesterday described as those of our imaginary guardians. Concerning the country the Egyptian priests said what is not only probable but manifestly true, that the boundaries were in those days fixed by the Isthmus, and that in the direction of the continent they extended as far as the heights of Cithaeron and Parnes; the boundary line came down in the direction of the sea, having the district of Oropus on the right, and with the river Asopus as the limit on the left. The land was the best in the world, and was therefore able in those days to support a vast army, raised from the surrounding people. Even the remnant of Attica which now exists may compare with any region in the world for the variety and excellence of its fruits and the suitableness of its pastures to every sort of animal, which proves what I am saying; but in those days the country was fair as now and yielded far more abundant produce. How shall I establish my words? And what part of it can be truly called a remnant of the land that then was? The whole country is only a long promontory extending far into the sea away from the rest of the continent, while the surrounding basin of the sea is everywhere deep in the neighbourhood of the shore. Many great deluges have taken place during the nine thousand years, for that is the number of years which have elapsed since the time of which I am speaking; and during all this time and through so many changes, there has never been any considerable accumulation of the soil coming down from the mountains, as in other places, but the earth has fallen away all round and sunk out of sight. The consequence is, that in comparison of what then was, there are remaining only the bones of the wasted body, as they may be called, as in the case of small islands, all the richer and softer parts of the soil having fallen

away, and the mere skeleton of the land being left. But in the primitive state of the country, its mountains were high hills covered with soil, and the plains, as they are termed by us, of Phelleus were full of rich earth, and there was abundance of wood in the mountains. Of this last the traces still remain, for although some of the mountains now only afford sustenance to bees, not so very long ago there were still to be seen roofs of timber cut from trees growing there, which were of a size sufficient to cover the largest houses; and there were many other high trees, cultivated by man and bearing abundance of food for cattle. Moreover, the land reaped the benefit of the annual rainfall, not as now losing the water which flows off the bare earth into the sea, but, having an abundant supply in all places, and receiving it into herself and treasuring it up in the close clay soil, it let off into the hollows the streams which it absorbed from the heights, providing everywhere abundant fountains and rivers, of which there may still be observed sacred memorials in places where fountains once existed; and this proves the truth of what I am saying.

Such was the natural state of the country, which was cultivated, as we may well believe, by true husbandmen, who made husbandry their business, and were lovers of honour, and of a noble nature, and had a soil the best in the world, and abundance of water, and in the heaven above an excellently attempered climate. Now the city in those days was arranged on this wise. In the first place the Acropolis was not as now. For the fact is that a single night of excessive rain washed away the earth and laid bare the rock; at the same time there were earthquakes, and then occurred the extraordinary inundation, which was the third before the great destruction of Deucalion. But in primitive times the hill of the Acropolis extended to the Eridanus and Ilissus, and included the Pnyx on one side, and the Lycabettus as a boundary on the opposite side to the Pnyx, and was all well covered with soil, and level at the top, except in one or two places. Outside the Acropolis and under the sides of the hill there dwelt artisans, and such of the husbandmen as were tilling the ground near; the warrior class dwelt by themselves around the temples of Athene and Hephaestus at the summit, which moreover they had enclosed with a single fence like the garden of a single house. On the north side they

had dwellings in common and had erected halls for dining in winter, and had all the buildings which they needed for their common life, besides temples, but there was no adorning of them with gold and silver, for they made no use of these for any purpose; they took a middle course between meanness and ostentation, and built modest houses in which they and their children's children grew old, and they handed them down to others who were like themselves, always the same. But in summer-time they left their gardens and gymnasia and dining halls, and then the southern side of the hill was made use of by them for the same purpose. Where the Acropolis now is there was a fountain, which was choked by the earthquake, and has left only the few small streams which still exist in the vicinity, but in those days the fountain gave an abundant supply of water for all and of suitable temperature in summer and in winter. This is how they dwelt, being the guardians of their own citizens and the leaders of the Hellenes, who were their willing followers. And they took care to preserve the same number of men and women through all time, being so many as were required for warlike purposes, then as now — that is to say, about twenty thousand. Such were the ancient Athenians, and after this manner they righteously administered their own land and the rest of Hellas; they were renowned all over Europe and Asia for the beauty of their persons and for the many virtues of their souls, and of all men who lived in those days they were the most illustrious. And next, if I have not forgotten what I heard when I was a child, I will impart to you the character and origin of their adversaries. For friends should not keep their stories to themselves, but have them in common.

Yet, before proceeding further in the narrative, I ought to warn you, that you must not be surprised if you should perhaps hear Hellenic names given to foreigners. I will tell you the reason of this: Solon, who was intending to use the tale for his poem, enquired into the meaning of the names, and found that the early Egyptians in writing them down had translated them into their own language, and he recovered the meaning of the several names and when copying them out again translated them into our language. My great-grandfather, Dropides, had the original writing, which is still in my possession, and was carefully studied by me when I was a child.

Therefore if you hear names such as are used in this country, you must not be surprised, for I have told how they came to be introduced. The tale, which was of great length, began as follows: —

I have before remarked in speaking of the allotments of the gods, that they distributed the whole earth into portions differing in extent, and made for themselves temples and instituted sacrifices. And Poseidon, receiving for his lot the island of Atlantis, begat children by a mortal woman, and settled them in a part of the island, which I will describe. Looking towards the sea, but in the centre of the whole island, there was a plain which is said to have been the fairest of all plains and very fertile. Near the plain again, and also in the centre of the island at a distance of about fifty stadia, there was a mountain not very high on any side. In this mountain there dwelt one of the earth-born primeval men of that country, whose name was Evenor, and he had a wife named Leucippe, and they had an only daughter who was called Cleito. The maiden had already reached womanhood, when her father and mother died; Poseidon fell in love with her and had intercourse with her, and breaking the ground, inclosed the hill in which she dwelt all round, making alternate zones of sea and land larger and smaller, encircling one another; there were two of land and three of water, which he turned as with a lathe, each having its circumference equidistant every way from the centre, so that no man could get to the island, for ships and voyages were not as yet. He himself, being a god, found no difficulty in making special arrangements for the centre island, bringing up two springs of water from beneath the earth, one of warm water and the other of cold, and making every variety of food to spring up abundantly from the soil. He also begat and brought up five pairs of twin male children; and dividing the island of Atlantis into ten portions, he gave to the first-born of the eldest pair his mother's dwelling and the surrounding allotment, which was the largest and best, and made him king over the rest; the others he made princes, and gave them rule over many men, and a large territory. And he named them all; the eldest, who was the first king, he named Atlas, and after him the whole island and the ocean were called Atlantic. To his twin brother, who was born after him, and obtained as his lot the extremity of the island towards the pillars of Heracles, facing the country which is now

called the region of Gades in that part of the world, he gave the name which in the Hellenic language is Eumelus, in the language of the country which is named after him, Gadeirus. Of the second pair of twins he called one Ampheres, and the other Evaemon. To the elder of the third pair of twins he gave the name Mneseus, and Autochthon to the one who followed him. Of the fourth pair of twins he called the elder Elasippus, and the younger Mestor. And of the fifth pair he gave to the elder the name of Azaes, and to the younger that of Diaprepes. All these and their descendants for many generations were the inhabitants and rulers of divers islands in the open sea; and also, as has been already said, they held sway in our direction over the country within the pillars as far as Egypt and Tyrrhenia. Now Atlas had a numerous and honourable family, and they retained the kingdom, the eldest son handing it on to his eldest for many generations; and they had such an amount of wealth as was never before possessed by kings and potentates, and is not likely ever to be again, and they were furnished with everything which they needed, both in the city and country. For because of the greatness of their empire many things were brought to them from foreign countries, and the island itself provided most of what was required by them for the uses of life. In the first place, they dug out of the earth whatever was to be found there, solid as well as fusile, and that which is now only a name and was then something more than a name, orichalcum, was dug out of the earth in many parts of the island, being more precious in those days than anything except gold. There was an abundance of wood for carpenter's work, and sufficient maintenance for tame and wild animals. Moreover, there were a great number of elephants in the island; for as there was provision for all other sorts of animals, both for those which live in lakes and marshes and rivers, and also for those which live in mountains and on plains, so there was for the animal which is the largest and most voracious of all. Also whatever fragrant things there now are in the earth, whether roots, or herbage, or woods, or essences which distil from fruit and flower, grew and thrived in that land; also the fruit which admits of cultivation, both the dry sort, which is given us for nourishment and any other which we use for food — we call them all by the common name of pulse, and the fruits having a hard rind, affording drinks and

meats and ointments, and good store of chestnuts and the like, which furnish pleasure and amusement, and are fruits which spoil with keeping, and the pleasant kinds of dessert, with which we console ourselves after dinner, when we are tired of eating — all these that sacred island which then beheld the light of the sun, brought forth fair and wondrous and in infinite abundance. With such blessings the earth freely furnished them; meanwhile they went on constructing their temples and palaces and harbours and docks. And they arranged the whole country in the following manner: —

First of all they bridged over the zones of sea which surrounded the ancient metropolis, making a road to and from the royal palace. And at the very beginning they built the palace in the habitation of the god and of their ancestors, which they continued to ornament in successive generations, every king surpassing the one who went before him to the utmost of his power, until they made the building a marvel to behold for size and for beauty. And beginning from the sea they bored a canal of three hundred feet in width and one hundred feet in depth and fifty stadia in length, which they carried through to the outermost zone, making a passage from the sea up to this, which became a harbour, and leaving an opening sufficient to enable the largest vessels to find ingress. Moreover, they divided at the bridges the zones of land which parted the zones of sea, leaving room for a single trireme to pass out of one zone into another, and they covered over the channels so as to leave a way underneath for the ships; for the banks were raised considerably above the water. Now the largest of the zones into which a passage was cut from the sea was three stadia in breadth, and the zone of land which came next of equal breadth; but the next two zones, the one of water, the other of land, were two stadia, and the one which surrounded the central island was a stadium only in width. The island in which the palace was situated had a diameter of five stadia. All this including the zones and the bridge, which was the sixth part of a stadium in width, they surrounded by a stone wall on every side, placing towers and gates on the bridges where the sea passed in. The stone which was used in the work they quarried from underneath the centre island, and from underneath the zones, on the outer as well as the inner side. One kind was white, another black, and a third red, and as they quarried, they

at the same time hollowed out double docks, having roofs formed out of the native rock. Some of their buildings were simple, but in others they put together different stones, varying the colour to please the eye, and to be a natural source of delight. The entire circuit of the wall, which went round the outermost zone, they covered with a coating of brass, and the circuit of the next wall they coated with tin, and the third, which encompassed the citadel, flashed with the red light of orichalcum. The palaces in the interior of the citadel were constructed on this wise: — In the centre was a holy temple dedicated to Cleito and Poseidon, which remained inaccessible, and was surrounded by an enclosure of gold; this was the spot where the family of the ten princes first saw the light, and thither the people annually brought the fruits of the earth in their season from all the ten portions, to be an offering to each of the ten. Here was Poseidon's own temple which was a stadium in length, and half a stadium in width, and of a proportionate height, having a strange barbaric appearance. All the outside of the temple, with the exception of the pinnacles, they covered with silver, and the pinnacles with gold. In the interior of the temple the roof was of ivory, curiously wrought everywhere with gold and silver and orichalcum; and all the other parts, the walls and pillars and floor, they coated with orichalcum. In the temple they placed statues of gold: there was the god himself standing in a chariot — the charioteer of six winged horses — and of such a size that he touched the roof of the building with his head; around him there were a hundred Nereids riding on dolphins, for such was thought to be the number of them by the men of those days. There were also in the interior of the temple other images which had been dedicated by private persons. And around the temple on the outside were placed statues of gold of all the descendants of the ten kings and of their wives, and there were many other great offerings of kings and of private persons, coming both from the city itself and from the foreign cities over which they held sway. There was an altar too, which in size and workmanship corresponded to this magnificence, and the palaces, in like manner, answered to the greatness of the kingdom and the glory of the temple.

In the next place, they had fountains, one of cold and another of hot water, in gracious plenty flowing; and they were wonderfully

adapted for use by reason of the pleasantness and excellence of their waters. They constructed buildings about them and planted suitable trees, also they made cisterns, some open to the heaven, others roofed over, to be used in winter as warm baths; there were the kings' baths, and the baths of private persons, which were kept apart; and there were separate baths for women, and for horses and cattle, and to each of them they gave as much adornment as was suitable. Of the water which ran off they carried some to the grove of Poseidon, where were growing all manner of trees of wonderful height and beauty, owing to the excellence of the soil, while the remainder was conveyed by aqueducts along the bridges to the outer circles; and there were many temples built and dedicated to many gods; also gardens and places of exercise, some for men, and others for horses in both of the two islands formed by the zones; and in the centre of the larger of the two there was set apart a race-course of a stadium in width, and in length allowed to extend all round the island, for horses to race in. Also there were guard-houses at intervals for the guards, the more trusted of whom were appointed to keep watch in the lesser zone, which was nearer the Acropolis; while the most trusted of all had houses given them within the citadel, near the persons of the kings. The docks were full of triremes and naval stores, and all things were quite ready for use. Enough of the plan of the royal palace.

Leaving the palace and passing out across the three harbours, you came to a wall which began at the sea and went all round: this was everywhere distant fifty stadia from the largest zone or harbour, and enclosed the whole, the ends meeting at the mouth of the channel which led to the sea. The entire area was densely crowded with habitations; and the canal and the largest of the harbours were full of vessels and merchants coming from all parts, who, from their numbers, kept up a multitudinous sound of human voices, and din and clatter of all sorts night and day.

I have described the city and the environs of the ancient palace nearly in the words of Solon, and now I must endeavour to represent to you the nature and arrangement of the rest of the land. The whole country was said by him to be very lofty and precipitous on the side of the sea, but the country immediately about and surrounding the

city was a level plain, itself surrounded by mountains which descended towards the sea; it was smooth and even, and of an oblong shape, extending in one direction three thousand stadia, but across the centre inland it was two thousand stadia. This part of the island looked towards the south, and was sheltered from the north. The surrounding mountains were celebrated for their number and size and beauty, far beyond any which still exist, having in them also many wealthy villages of country folk, and rivers, and lakes, and meadows supplying food enough for every animal, wild or tame, and much wood of various sorts, abundant for each and every kind of work.

I will now describe the plain, as it was fashioned by nature and by the labours of many generations of kings through long ages. It was for the most part rectangular and oblong, and where falling out of the straight line followed the circular ditch. The depth, and width, and length of this ditch were incredible, and gave the impression that a work of such extent, in addition to so many others, could never have been artificial. Nevertheless I must say what I was told. It was excavated to the depth of a hundred feet, and its breadth was a stadium everywhere; it was carried round the whole of the plain, and was ten thousand stadia in length. It received the streams which came down from the mountains, and winding round the plain and meeting at the city, was there let off into the sea. Further inland, likewise, straight canals of a hundred feet in width were cut from it through the plain, and again let off into the ditch leading to the sea: these canals were at intervals of a hundred stadia, and by them they brought down the wood from the mountains to the city, and conveyed the fruits of the earth in ships, cutting transverse passages from one canal into another, and to the city. Twice in the year they gathered the fruits of the earth — in winter having the benefit of the rains of heaven, and in summer the water which the land supplied by introducing streams from the canals.

As to the population, each of the lots in the plain had to find a leader for the men who were fit for military service, and the size of a lot was a square of ten stadia each way, and the total number of all the lots was sixty thousand. And of the inhabitants of the mountains and of the rest of the country there was also a vast multitude, which was distributed among the lots and had leaders assigned to them

according to their districts and villages. The leader was required to furnish for the war the sixth portion of a war-chariot, so as to make up a total of ten thousand chariots; also two horses and riders for them, and a pair of chariot-horses without a seat, accompanied by a horseman who could fight on foot carrying a small shield, and having a charioteer who stood behind the man-at-arms to guide the two horses; also, he was bound to furnish two heavy-armed soldiers, two archers, two slingers, three stone-shooters and three javelin-men, who were light-armed, and four sailors to make up the complement of twelve hundred ships. Such was the military order of the royal city — the order of the other nine governments varied, and it would be wearisome to recount their several differences.

As to offices and honours, the following was the arrangement from the first. Each of the ten kings in his own division and in his own city had the absolute control of the citizens, and, in most cases, of the laws, punishing and slaying whomsoever he would. Now the order of precedence among them and their mutual relations were regulated by the commands of Poseidon which the law had handed down. These were inscribed by the first kings on a pillar of orichalcum, which was situated in the middle of the island, at the temple of Poseidon, whither the kings were gathered together every fifth and every sixth year alternately, thus giving equal honour to the odd and to the even number. And when they were gathered together they consulted about their common interests, and enquired if any one had transgressed in anything, and passed judgment, and before they passed judgment they gave their pledges to one another on this wise: — There were bulls who had the range of the temple of Poseidon; and the ten kings, being left alone in the temple, after they had offered prayers to the god that they might capture the victim which was acceptable to him, hunted the bulls, without weapons, but with staves and nooses; and the bull which they caught they led up to the pillar and cut its throat over the top of it so that the blood fell upon the sacred inscription. Now on the pillar, besides the laws, there was inscribed an oath invoking mighty curses on the disobedient. When therefore, after slaying the bull in the accustomed manner, they had burnt its limbs, they filled a bowl of wine and cast in a clot of blood for each of them; the rest of the victim they put in the fire, after

having purified the column all round. Then they drew from the bowl in golden cups, and pouring a libation on the fire, they swore that they would judge according to the laws on the pillar, and would punish him who in any point had already transgressed them, and that for the future they would not, if they could help, offend against the writing on the pillar, and would neither command others, nor obey any ruler who commanded them, to act otherwise than according to the laws of their father Poseidon. This was the prayer which each of them offered up for himself and for his descendants, at the same time drinking and dedicating the cup out of which he drank in the temple of the god; and after they had supped and satisfied their needs, when darkness came on, and the fire about the sacrifice was cool, all of them put on most beautiful azure robes, and, sitting on the ground, at night, over the embers of the sacrifices by which they had sworn, and extinguishing all the fire about the temple, they received and gave judgment, if any of them had an accusation to bring against any one; and when they had given judgment, at daybreak they wrote down their sentences on a golden tablet, and dedicated it together with their robes to be a memorial.

There were many special laws affecting the several kings inscribed about the temples, but the most important was the following: They were not to take up arms against one another, and they were all to come to the rescue if any one in any of their cities attempted to overthrow the royal house; like their ancestors, they were to deliberate in common about war and other matters, giving the supremacy to the descendants of Atlas. And the king was not to have the power of life and death over any of his kinsmen unless he had the assent of the majority of the ten.

Such was the vast power which the god settled in the lost island of Atlantis; and this he afterwards directed against our land for the following reasons, as tradition tells: For many generations, as long as the divine nature lasted in them, they were obedient to the laws, and well-affectioned towards the god, whose seed they were; for they possessed true and in every way great spirits, uniting gentleness with wisdom in the various chances of life, and in their intercourse with one another. They despised everything but virtue, caring little for their present state of life, and thinking lightly of the possession of

gold and other property, which seemed only a burden to them; neither were they intoxicated by luxury; nor did wealth deprive them of their self-control; but they were sober, and saw clearly that all these goods are increased by virtue and friendship with one another, whereas by too great regard and respect for them, they are lost and friendship with them. By such reflections and by the continuance in them of a divine nature, the qualities which we have described grew and increased among them; but when the divine portion began to fade away, and became diluted too often and too much with the mortal admixture, and the human nature got the upper hand, they then, being unable to bear their fortune, behaved unseemly, and to him who had an eye to see grew visibly debased, for they were losing the fairest of their precious gifts; but to those who had no eye to see the true happiness, they appeared glorious and blessed at the very time when they were full of avarice and unrighteous power. Zeus, the god of gods, who rules according to law, and is able to see into such things, perceiving that an honourable race was in a woeful plight, and wanting to inflict punishment on them, that they might be chastened and improve, collected all the gods into their most holy habitation, which, being placed in the centre of the world, beholds all created things. And when he had called them together, he spake as follows

Here the incomplete text breaks off

SOPHIST

Translated by Benjamin Jowett

Written circa 360 BC, this work follows on from the *Parmenides*. In this later dialogue, Plato presents a new conception of forms, which is more mundane and less pretentious than its predecessor. The dialogue clarifies the epistemological and metaphysical puzzles of the *Parmenides*; thus, Plato refers to that text - a dialogue between Parmenides and young Socrates, which was written probably much earlier than the *Sophist*. Furthermore, he shows his expertise in dialectic, as he applies it in this dialogue in order to define the sophist. Moreover, he solves the puzzle of the false and the right opinion, as well as of the justified true belief that had been inquired in the *Theaetetus*.

This dialogue takes place a day after Plato's *Theaetetus*, and aims at defining the role of a sophist. The participants are Socrates, who plays a minor role, the highly promising young student Theaetetus, and a visitor from Elea, the hometown of Parmenides, who plays the major role in the conversation. Plato probably replaces Socrates with the visitor from Elea, because he plans to criticise Parmenides' notion that 'we cannot speak or think of what is not'. Here Plato's strategy is to distinguish the negation of the being from the not-being, and to define the right and the false opinion by the use of dialectic. The visitor sets out to define the Sophist, the Statesman and the Philosopher, claiming that they are three distinct human types. The definition of the sophist aims at verbal explanation and requires knowledge of the nature of the kinds, as well as of their ability of blending.

An artist's impression of Athens in Plato's time

INTRODUCTION AND ANALYSIS.

The dramatic power of the dialogues of Plato appears to diminish as the metaphysical interest of them increases (compare *Introd.* to the *Philebus*). There are no descriptions of time, place or persons, in the *Sophist* and *Statesman*, but we are plunged at once into philosophical discussions; the poetical charm has disappeared, and those who have no taste for abstruse metaphysics will greatly prefer the earlier dialogues to the later ones. Plato is conscious of the change, and in the *Statesman* expressly accuses himself of a tediousness in the two dialogues, which he ascribes to his desire of developing the dialectical method. On the other hand, the kindred spirit of Hegel seemed to find in the *Sophist* the crown and summit of the Platonic philosophy — here is the place at which Plato most nearly approaches to the Hegelian identity of Being and Not-being. Nor will the great importance of the two dialogues be doubted by any one who forms a conception of the state of mind and opinion which they are intended to meet. The sophisms of the day were undermining philosophy; the denial of the existence of Not-being, and of the connexion of ideas, was making truth and falsehood equally impossible. It has been said that Plato would have written differently, if he had been acquainted with the *Organon* of Aristotle. But could the *Organon* of Aristotle ever have been written unless the *Sophist* and *Statesman* had preceded? The swarm of fallacies which arose in the infancy of mental science, and which was born and bred in the decay of the pre-Socratic philosophies, was not dispelled by Aristotle, but by Socrates and Plato. The *summa genera* of thought, the nature of the proposition, of definition, of generalization, of synthesis and analysis, of division and cross-division, are clearly described, and the processes of induction and deduction are constantly employed in the dialogues of Plato. The ‘slippery’ nature of comparison, the danger of putting words in the place of things, the fallacy of arguing ‘*a dicto secundum*,’ and in a circle, are frequently indicated by him. To all these processes of truth and error, Aristotle, in the next generation, gave distinctness; he brought them together in a separate science. But he is not to be regarded as the original

inventor of any of the great logical forms, with the exception of the syllogism.

There is little worthy of remark in the characters of the Sophist. The most noticeable point is the final retirement of Socrates from the field of argument, and the substitution for him of an Eleatic stranger, who is described as a pupil of Parmenides and Zeno, and is supposed to have descended from a higher world in order to convict the Socratic circle of error. As in the *Timaeus*, Plato seems to intimate by the withdrawal of Socrates that he is passing beyond the limits of his teaching; and in the *Sophist* and *Statesman*, as well as in the *Parmenides*, he probably means to imply that he is making a closer approach to the schools of Elea and Megara. He had much in common with them, but he must first submit their ideas to criticism and revision. He had once thought as he says, speaking by the mouth of the Eleatic, that he understood their doctrine of Not-being; but now he does not even comprehend the nature of Being. The friends of ideas (*Soph.*) are alluded to by him as distant acquaintances, whom he criticizes *ab extra*; we do not recognize at first sight that he is criticizing himself. The character of the Eleatic stranger is colourless; he is to a certain extent the reflection of his father and master, Parmenides, who is the protagonist in the dialogue which is called by his name. Theaetetus himself is not distinguished by the remarkable traits which are attributed to him in the preceding dialogue. He is no longer under the spell of Socrates, or subject to the operation of his midwifery, though the fiction of question and answer is still maintained, and the necessity of taking Theaetetus along with him is several times insisted upon by his partner in the discussion. There is a reminiscence of the old Theaetetus in his remark that he will not tire of the argument, and in his conviction, which the Eleatic thinks likely to be permanent, that the course of events is governed by the will of God. Throughout the two dialogues Socrates continues a silent auditor, in the *Statesman* just reminding us of his presence, at the commencement, by a characteristic jest about the statesman and the philosopher, and by an allusion to his namesake, with whom on that ground he claims relationship, as he had already claimed an affinity with Theaetetus, grounded on the likeness of his ugly face. But in neither dialogue, any more than in the *Timaeus*, does he offer

any criticism on the views which are propounded by another.

The style, though wanting in dramatic power, — in this respect resembling the *Philebus* and the *Laws*, — is very clear and accurate, and has several touches of humour and satire. The language is less fanciful and imaginative than that of the earlier dialogues; and there is more of bitterness, as in the *Laws*, though traces of a similar temper may also be observed in the description of the ‘great brute’ in the *Republic*, and in the contrast of the lawyer and philosopher in the *Theaetetus*. The following are characteristic passages: ‘The ancient philosophers, of whom we may say, without offence, that they went on their way rather regardless of whether we understood them or not;’ the picture of the materialists, or earth-born giants, ‘who grasped oaks and rocks in their hands,’ and who must be improved before they can be reasoned with; and the equally humorous delineation of the friends of ideas, who defend themselves from a fastness in the invisible world; or the comparison of the Sophist to a painter or maker (compare *Republic*), and the hunt after him in the rich meadow-lands of youth and wealth; or, again, the light and graceful touch with which the older philosophies are painted (‘*Ionian and Sicilian muses*’), the comparison of them to mythological tales, and the fear of the Eleatic that he will be counted a parricide if he ventures to lay hands on his father *Parmenides*; or, once more, the likening of the Eleatic stranger to a god from heaven. — All these passages, notwithstanding the decline of the style, retain the impress of the great master of language. But the equably diffused grace is gone; instead of the endless variety of the early dialogues, traces of the rhythmical monotonous cadence of the *Laws* begin to appear; and already an approach is made to the technical language of *Aristotle*, in the frequent use of the words ‘essence,’ ‘power,’ ‘generation,’ ‘motion,’ ‘rest,’ ‘action,’ ‘passion,’ and the like.

The Sophist, like the *Phaedrus*, has a double character, and unites two enquirers, which are only in a somewhat forced manner connected with each other. The first is the search after the Sophist, the second is the enquiry into the nature of Not-being, which occupies the middle part of the work. For ‘Not-being’ is the hole or division of the dialectical net in which the Sophist has hidden himself. He is the imaginary impersonation of false opinion. Yet he

denies the possibility of false opinion; for falsehood is that which is not, and therefore has no existence. At length the difficulty is solved; the answer, in the language of the Republic, appears 'tumbling out at our feet.' Acknowledging that there is a communion of kinds with kinds, and not merely one Being or Good having different names, or several isolated ideas or classes incapable of communion, we discover 'Not-being' to be the other of 'Being.' Transferring this to language and thought, we have no difficulty in apprehending that a proposition may be false as well as true. The Sophist, drawn out of the shelter which Cynic and Megarian paradoxes have temporarily afforded him, is proved to be a dissembler and juggler with words.

The chief points of interest in the dialogue are: (I) the character attributed to the Sophist: (II) the dialectical method: (III) the nature of the puzzle about 'Not-being:' (IV) the battle of the philosophers: (V) the relation of the Sophist to other dialogues.

I. The Sophist in Plato is the master of the art of illusion; the charlatan, the foreigner, the prince of esprits-faux, the hireling who is not a teacher, and who, from whatever point of view he is regarded, is the opposite of the true teacher. He is the 'evil one,' the ideal representative of all that Plato most disliked in the moral and intellectual tendencies of his own age; the adversary of the almost equally ideal Socrates. He seems to be always growing in the fancy of Plato, now boastful, now eristic, now clothing himself in rags of philosophy, now more akin to the rhetorician or lawyer, now haranguing, now questioning, until the final appearance in the Politicus of his departing shadow in the disguise of a statesman. We are not to suppose that Plato intended by such a description to depict Protagoras or Gorgias, or even Thrasymachus, who all turn out to be 'very good sort of people when we know them,' and all of them part on good terms with Socrates. But he is speaking of a being as imaginary as the wise man of the Stoics, and whose character varies in different dialogues. Like mythology, Greek philosophy has a tendency to personify ideas. And the Sophist is not merely a teacher of rhetoric for a fee of one or fifty drachmae (Crat.), but an ideal of Plato's in which the falsehood of all mankind is reflected.

A milder tone is adopted towards the Sophists in a well-known passage of the Republic, where they are described as the followers

rather than the leaders of the rest of mankind. Plato ridicules the notion that any individuals can corrupt youth to a degree worth speaking of in comparison with the greater influence of public opinion. But there is no real inconsistency between this and other descriptions of the Sophist which occur in the Platonic writings. For Plato is not justifying the Sophists in the passage just quoted, but only representing their power to be contemptible; they are to be despised rather than feared, and are no worse than the rest of mankind. But a teacher or statesman may be justly condemned, who is on a level with mankind when he ought to be above them. There is another point of view in which this passage should also be considered. The great enemy of Plato is the world, not exactly in the theological sense, yet in one not wholly different — the world as the hater of truth and lover of appearance, occupied in the pursuit of gain and pleasure rather than of knowledge, banded together against the few good and wise men, and devoid of true education. This creature has many heads: rhetoricians, lawyers, statesmen, poets, sophists. But the Sophist is the Proteus who takes the likeness of all of them; all other deceivers have a piece of him in them. And sometimes he is represented as the corrupter of the world; and sometimes the world as the corrupter of him and of itself.

Of late years the Sophists have found an enthusiastic defender in the distinguished historian of Greece. He appears to maintain (1) that the term ‘Sophist’ is not the name of a particular class, and would have been applied indifferently to Socrates and Plato, as well as to Gorgias and Protagoras; (2) that the bad sense was imprinted on the word by the genius of Plato; (3) that the principal Sophists were not the corrupters of youth (for the Athenian youth were no more corrupted in the age of Demosthenes than in the age of Pericles), but honourable and estimable persons, who supplied a training in literature which was generally wanted at the time. We will briefly consider how far these statements appear to be justified by facts: and, 1, about the meaning of the word there arises an interesting question:

Many words are used both in a general and a specific sense, and the two senses are not always clearly distinguished. Sometimes the generic meaning has been narrowed to the specific, while in other

cases the specific meaning has been enlarged or altered. Examples of the former class are furnished by some ecclesiastical terms: apostles, prophets, bishops, elders, catholics. Examples of the latter class may also be found in a similar field: jesuits, puritans, methodists, and the like. Sometimes the meaning is both narrowed and enlarged; and a good or bad sense will subsist side by side with a neutral one. A curious effect is produced on the meaning of a word when the very term which is stigmatized by the world (e.g. Methodists) is adopted by the obnoxious or derided class; this tends to define the meaning. Or, again, the opposite result is produced, when the world refuses to allow some sect or body of men the possession of an honourable name which they have assumed, or applies it to them only in mockery or irony.

The term 'Sophist' is one of those words of which the meaning has been both contracted and enlarged. Passages may be quoted from Herodotus and the tragedians, in which the word is used in a neutral sense for a contriver or deviser or inventor, without including any ethical idea of goodness or badness. Poets as well as philosophers were called Sophists in the fifth century before Christ. In Plato himself the term is applied in the sense of a 'master in art,' without any bad meaning attaching to it (Symp.; Meno). In the later Greek, again, 'sophist' and 'philosopher' became almost indistinguishable. There was no reproach conveyed by the word; the additional association, if any, was only that of rhetorician or teacher. Philosophy had become eclecticism and imitation: in the decline of Greek thought there was no original voice lifted up 'which reached to a thousand years because of the god.' Hence the two words, like the characters represented by them, tended to pass into one another. Yet even here some differences appeared; for the term 'Sophist' would hardly have been applied to the greater names, such as Plotinus, and would have been more often used of a professor of philosophy in general than of a maintainer of particular tenets.

But the real question is, not whether the word 'Sophist' has all these senses, but whether there is not also a specific bad sense in which the term is applied to certain contemporaries of Socrates. Would an Athenian, as Mr. Grote supposes, in the fifth century before Christ, have included Socrates and Plato, as well as Gorgias and Protagoras,

under the specific class of Sophists? To this question we must answer, No: if ever the term is applied to Socrates and Plato, either the application is made by an enemy out of mere spite, or the sense in which it is used is neutral. Plato, Xenophon, Isocrates, Aristotle, all give a bad import to the word; and the Sophists are regarded as a separate class in all of them. And in later Greek literature, the distinction is quite marked between the succession of philosophers from Thales to Aristotle, and the Sophists of the age of Socrates, who appeared like meteors for a short time in different parts of Greece. For the purposes of comedy, Socrates may have been identified with the Sophists, and he seems to complain of this in the *Apology*. But there is no reason to suppose that Socrates, differing by so many outward marks, would really have been confounded in the mind of Anytus, or Callicles, or of any intelligent Athenian, with the splendid foreigners who from time to time visited Athens, or appeared at the Olympic games. The man of genius, the great original thinker, the disinterested seeker after truth, the master of repartee whom no one ever defeated in an argument, was separated, even in the mind of the vulgar Athenian, by an 'interval which no geometry can express,' from the balancer of sentences, the interpreter and reciter of the poets, the divider of the meanings of words, the teacher of rhetoric, the professor of morals and manners.

2. The use of the term 'Sophist' in the dialogues of Plato also shows that the bad sense was not affixed by his genius, but already current. When Protagoras says, 'I confess that I am a Sophist,' he implies that the art which he professes has already a bad name; and the words of the young Hippocrates, when with a blush upon his face which is just seen by the light of dawn he admits that he is going to be made 'a Sophist,' would lose their point, unless the term had been discredited. There is nothing surprising in the Sophists having an evil name; that, whether deserved or not, was a natural consequence of their vocation. That they were foreigners, that they made fortunes, that they taught novelties, that they excited the minds of youth, are quite sufficient reasons to account for the opprobrium which attached to them. The genius of Plato could not have stamped the word anew, or have imparted the associations which occur in contemporary writers, such as Xenophon and Isocrates. Changes in the meaning of words

can only be made with great difficulty, and not unless they are supported by a strong current of popular feeling. There is nothing improbable in supposing that Plato may have extended and envenomed the meaning, or that he may have done the Sophists the same kind of disservice with posterity which Pascal did to the Jesuits. But the bad sense of the word was not and could not have been invented by him, and is found in his earlier dialogues, e.g. the *Protagoras*, as well as in the later.

3. There is no ground for disbelieving that the principal Sophists, Gorgias, Protagoras, Prodicus, Hippias, were good and honourable men. The notion that they were corrupters of the Athenian youth has no real foundation, and partly arises out of the use of the term 'Sophist' in modern times. The truth is, that we know little about them; and the witness of Plato in their favour is probably not much more historical than his witness against them. Of that national decline of genius, unity, political force, which has been sometimes described as the corruption of youth, the Sophists were one among many signs; — in these respects Athens may have degenerated; but, as Mr. Grote remarks, there is no reason to suspect any greater moral corruption in the age of Demosthenes than in the age of Pericles. The Athenian youth were not corrupted in this sense, and therefore the Sophists could not have corrupted them. It is remarkable, and may be fairly set down to their credit, that Plato nowhere attributes to them that peculiar Greek sympathy with youth, which he ascribes to Parmenides, and which was evidently common in the Socratic circle. Plato delights to exhibit them in a ludicrous point of view, and to show them always rather at a disadvantage in the company of Socrates. But he has no quarrel with their characters, and does not deny that they are respectable men.

The Sophist, in the dialogue which is called after him, is exhibited in many different lights, and appears and reappears in a variety of forms. There is some want of the higher Platonic art in the Eleatic Stranger eliciting his true character by a labourious process of enquiry, when he had already admitted that he knew quite well the difference between the Sophist and the Philosopher, and had often heard the question discussed; — such an anticipation would hardly have occurred in the earlier dialogues. But Plato could not altogether

give up his Socratic method, of which another trace may be thought to be discerned in his adoption of a common instance before he proceeds to the greater matter in hand. Yet the example is also chosen in order to damage the 'hooker of men' as much as possible; each step in the pedigree of the angler suggests some injurious reflection about the Sophist. They are both hunters after a living prey, nearly related to tyrants and thieves, and the Sophist is the cousin of the parasite and flatterer. The effect of this is heightened by the accidental manner in which the discovery is made, as the result of a scientific division. His descent in another branch affords the opportunity of more 'unsavoury comparisons.' For he is a retail trader, and his wares are either imported or home-made, like those of other retail traders; his art is thus deprived of the character of a liberal profession. But the most distinguishing characteristic of him is, that he is a disputant, and higgles over an argument. A feature of the Eristic here seems to blend with Plato's usual description of the Sophists, who in the early dialogues, and in the Republic, are frequently depicted as endeavouring to save themselves from disputing with Socrates by making long orations. In this character he parts company from the vain and impertinent talker in private life, who is a loser of money, while he is a maker of it.

But there is another general division under which his art may be also supposed to fall, and that is purification; and from purification is descended education, and the new principle of education is to interrogate men after the manner of Socrates, and make them teach themselves. Here again we catch a glimpse rather of a Socratic or Eristic than of a Sophist in the ordinary sense of the term. And Plato does not on this ground reject the claim of the Sophist to be the true philosopher. One more feature of the Eristic rather than of the Sophist is the tendency of the troublesome animal to run away into the darkness of Not-being. Upon the whole, we detect in him a sort of hybrid or double nature, of which, except perhaps in the Euthydemus of Plato, we find no other trace in Greek philosophy; he combines the teacher of virtue with the Eristic; while in his omniscience, in his ignorance of himself, in his arts of deception, and in his lawyer-like habit of writing and speaking about all things, he is still the antithesis of Socrates and of the true teacher.

II. The question has been asked, whether the method of 'abscissio infinti,' by which the Sophist is taken, is a real and valuable logical process. Modern science feels that this, like other processes of formal logic, presents a very inadequate conception of the actual complex procedure of the mind by which scientific truth is detected and verified. Plato himself seems to be aware that mere division is an unsafe and uncertain weapon, first, in the *Statesman*, when he says that we should divide in the middle, for in that way we are more likely to attain species; secondly, in the parallel precept of the *Philebus*, that we should not pass from the most general notions to infinity, but include all the intervening middle principles, until, as he also says in the *Statesman*, we arrive at the infima species; thirdly, in the *Phaedrus*, when he says that the dialectician will carve the limbs of truth without mangling them; and once more in the *Statesman*, if we cannot bisect species, we must carve them as well as we can. No better image of nature or truth, as an organic whole, can be conceived than this. So far is Plato from supposing that mere division and subdivision of general notions will guide men into all truth.

Plato does not really mean to say that the Sophist or the Statesman can be caught in this way. But these divisions and subdivisions were favourite logical exercises of the age in which he lived; and while indulging his dialectical fancy, and making a contribution to logical method, he delights also to transfix the Eristic Sophist with weapons borrowed from his own armoury. As we have already seen, the division gives him the opportunity of making the most damaging reflections on the Sophist and all his kith and kin, and to exhibit him in the most discreditable light.

Nor need we seriously consider whether Plato was right in assuming that an animal so various could not be confined within the limits of a single definition. In the infancy of logic, men sought only to obtain a definition of an unknown or uncertain term; the after reflection scarcely occurred to them that the word might have several senses, which shaded off into one another, and were not capable of being comprehended in a single notion. There is no trace of this reflection in Plato. But neither is there any reason to think, even if the reflection had occurred to him, that he would have been deterred from carrying on the war with weapons fair or unfair against the

outlaw Sophist.

III. The puzzle about 'Not-being' appears to us to be one of the most unreal difficulties of ancient philosophy. We cannot understand the attitude of mind which could imagine that falsehood had no existence, if reality was denied to Not-being: How could such a question arise at all, much less become of serious importance? The answer to this, and to nearly all other difficulties of early Greek philosophy, is to be sought for in the history of ideas, and the answer is only unsatisfactory because our knowledge is defective. In the passage from the world of sense and imagination and common language to that of opinion and reflection the human mind was exposed to many dangers, and often

'Found no end in wandering mazes lost.'

On the other hand, the discovery of abstractions was the great source of all mental improvement in after ages. It was the pushing aside of the old, the revelation of the new. But each one of the company of abstractions, if we may speak in the metaphorical language of Plato, became in turn the tyrant of the mind, the dominant idea, which would allow no other to have a share in the throne. This is especially true of the Eleatic philosophy: while the absoluteness of Being was asserted in every form of language, the sensible world and all the phenomena of experience were comprehended under Not-being. Nor was any difficulty or perplexity thus created, so long as the mind, lost in the contemplation of Being, asked no more questions, and never thought of applying the categories of Being or Not-being to mind or opinion or practical life.

But the negative as well as the positive idea had sunk deep into the intellect of man. The effect of the paradoxes of Zeno extended far beyond the Eleatic circle. And now an unforeseen consequence began to arise. If the Many were not, if all things were names of the One, and nothing could be predicated of any other thing, how could truth be distinguished from falsehood? The Eleatic philosopher would have replied that Being is alone true. But mankind had got beyond his barren abstractions: they were beginning to analyze, to classify, to define, to ask what is the nature of knowledge, opinion, sensation. Still less could they be content with the description which Achilles gives in Homer of the man whom his soul hates —

os chi eteron men keuthe eni phresin, allo de eipe.

For their difficulty was not a practical but a metaphysical one; and their conception of falsehood was really impaired and weakened by a metaphysical illusion.

The strength of the illusion seems to lie in the alternative: If we once admit the existence of Being and Not-being, as two spheres which exclude each other, no Being or reality can be ascribed to Not-being, and therefore not to falsehood, which is the image or expression of Not-being. Falsehood is wholly false; and to speak of true falsehood, as Theaetetus does (Theaet.), is a contradiction in terms. The fallacy to us is ridiculous and transparent, — no better than those which Plato satirizes in the Euthydemus. It is a confusion of falsehood and negation, from which Plato himself is not entirely free. Instead of saying, 'This is not in accordance with facts,' 'This is proved by experience to be false,' and from such examples forming a general notion of falsehood, the mind of the Greek thinker was lost in the mazes of the Eleatic philosophy. And the greater importance which Plato attributes to this fallacy, compared with others, is due to the influence which the Eleatic philosophy exerted over him. He sees clearly to a certain extent; but he has not yet attained a complete mastery over the ideas of his predecessors — they are still ends to him, and not mere instruments of thought. They are too rough-hewn to be harmonized in a single structure, and may be compared to rocks which project or overhang in some ancient city's walls. There are many such imperfect syncretisms or eclecticismisms in the history of philosophy. A modern philosopher, though emancipated from scholastic notions of essence or substance, might still be seriously affected by the abstract idea of necessity; or though accustomed, like Bacon, to criticize abstract notions, might not extend his criticism to the syllogism.

The saying or thinking the thing that is not, would be the popular definition of falsehood or error. If we were met by the Sophist's objection, the reply would probably be an appeal to experience. Ten thousands, as Homer would say (*mala murioi*), tell falsehoods and fall into errors. And this is Plato's reply, both in the Cratylus and Sophist. 'Theaetetus is flying,' is a sentence in form quite as grammatical as 'Theaetetus is sitting'; the difference between the two

sentences is, that the one is true and the other false. But, before making this appeal to common sense, Plato propounds for our consideration a theory of the nature of the negative.

The theory is, that Not-being is relation. Not-being is the other of Being, and has as many kinds as there are differences in Being. This doctrine is the simple converse of the famous proposition of Spinoza, — not ‘*Omnis determinatio est negatio*,’ but ‘*Omnis negatio est determinatio*’; — not, All distinction is negation, but, All negation is distinction. Not-being is the unfolding or determining of Being, and is a necessary element in all other things that are. We should be careful to observe, first, that Plato does not identify Being with Not-being; he has no idea of progression by antagonism, or of the Hegelian vibration of moments: he would not have said with Heracleitus, ‘All things are and are not, and become and become not.’ Secondly, he has lost sight altogether of the other sense of Not-being, as the negative of Being; although he again and again recognizes the validity of the law of contradiction. Thirdly, he seems to confuse falsehood with negation. Nor is he quite consistent in regarding Not-being as one class of Being, and yet as coextensive with Being in general. Before analyzing further the topics thus suggested, we will endeavour to trace the manner in which Plato arrived at his conception of Not-being.

In all the later dialogues of Plato, the idea of mind or intelligence becomes more and more prominent. That idea which Anaxagoras employed inconsistently in the construction of the world, Plato, in the *Philebus*, the *Sophist*, and the *Laws*, extends to all things, attributing to Providence a care, infinitesimal as well as infinite, of all creation. The divine mind is the leading religious thought of the later works of Plato. The human mind is a sort of reflection of this, having ideas of Being, Sameness, and the like. At times they seem to be parted by a great gulf (*Parmenides*); at other times they have a common nature, and the light of a common intelligence.

But this ever-growing idea of mind is really irreconcilable with the abstract Pantheism of the Eleatics. To the passionate language of *Parmenides*, Plato replies in a strain equally passionate: — What! has not Being mind? and is not Being capable of being known? and, if this is admitted, then capable of being affected or acted upon? — in

motion, then, and yet not wholly incapable of rest. Already we have been compelled to attribute opposite determinations to Being. And the answer to the difficulty about Being may be equally the answer to the difficulty about Not-being.

The answer is, that in these and all other determinations of any notion we are attributing to it 'Not-being.' We went in search of Not-being and seemed to lose Being, and now in the hunt after Being we recover both. Not-being is a kind of Being, and in a sense co-extensive with Being. And there are as many divisions of Not-being as of Being. To every positive idea—'just,' 'beautiful,' and the like, there is a corresponding negative idea—'not-just,' 'not-beautiful,' and the like.

A doubt may be raised whether this account of the negative is really the true one. The common logicians would say that the 'not-just,' 'not-beautiful,' are not really classes at all, but are merged in one great class of the infinite or negative. The conception of Plato, in the days before logic, seems to be more correct than this. For the word 'not' does not altogether annihilate the positive meaning of the word 'just': at least, it does not prevent our looking for the 'not-just' in or about the same class in which we might expect to find the 'just.' 'Not-just is not-honourable' is neither a false nor an unmeaning proposition. The reason is that the negative proposition has really passed into an undefined positive. To say that 'not-just' has no more meaning than 'not-honourable' — that is to say, that the two cannot in any degree be distinguished, is clearly repugnant to the common use of language.

The ordinary logic is also jealous of the explanation of negation as relation, because seeming to take away the principle of contradiction. Plato, as far as we know, is the first philosopher who distinctly enunciated this principle; and though we need not suppose him to have been always consistent with himself, there is no real inconsistency between his explanation of the negative and the principle of contradiction. Neither the Platonic notion of the negative as the principle of difference, nor the Hegelian identity of Being and Not-being, at all touch the principle of contradiction. For what is asserted about Being and Not-Being only relates to our most abstract notions, and in no way interferes with the principle of contradiction

employed in the concrete. Because Not-being is identified with Other, or Being with Not-being, this does not make the proposition 'Some have not eaten' any the less a contradiction of 'All have eaten.'

The explanation of the negative given by Plato in the Sophist is a true but partial one; for the word 'not,' besides the meaning of 'other,' may also imply 'opposition.' And difference or opposition may be either total or partial: the not-beautiful may be other than the beautiful, or in no relation to the beautiful, or a specific class in various degrees opposed to the beautiful. And the negative may be a negation of fact or of thought (ou and me). Lastly, there are certain ideas, such as 'beginning,' 'becoming,' 'the finite,' 'the abstract,' in which the negative cannot be separated from the positive, and 'Being' and 'Not-being' are inextricably blended.

Plato restricts the conception of Not-being to difference. Man is a rational animal, and is not — as many other things as are not included under this definition. He is and is not, and is because he is not. Besides the positive class to which he belongs, there are endless negative classes to which he may be referred. This is certainly intelligible, but useless. To refer a subject to a negative class is unmeaning, unless the 'not' is a mere modification of the positive, as in the example of 'not honourable' and 'dishonourable'; or unless the class is characterized by the absence rather than the presence of a particular quality.

Nor is it easy to see how Not-being any more than Sameness or Otherness is one of the classes of Being. They are aspects rather than classes of Being. Not-being can only be included in Being, as the denial of some particular class of Being. If we attempt to pursue such airy phantoms at all, the Hegelian identity of Being and Not-being is a more apt and intelligible expression of the same mental phenomenon. For Plato has not distinguished between the Being which is prior to Not-being, and the Being which is the negation of Not-being (compare Parm.).

But he is not thinking of this when he says that Being comprehends Not-being. Again, we should probably go back for the true explanation to the influence which the Eleatic philosophy exercised over him. Under 'Not-being' the Eleatic had included all the realities

of the sensible world. Led by this association and by the common use of language, which has been already noticed, we cannot be much surprised that Plato should have made classes of Not-being. It is observable that he does not absolutely deny that there is an opposite of Being. He is inclined to leave the question, merely remarking that the opposition, if admissible at all, is not expressed by the term 'Not-being.'

On the whole, we must allow that the great service rendered by Plato to metaphysics in the Sophist, is not his explanation of 'Not-being' as difference. With this he certainly laid the ghost of 'Not-being'; and we may attribute to him in a measure the credit of anticipating Spinoza and Hegel. But his conception is not clear or consistent; he does not recognize the different senses of the negative, and he confuses the different classes of Not-being with the abstract notion. As the Pre-Socratic philosopher failed to distinguish between the universal and the true, while he placed the particulars of sense under the false and apparent, so Plato appears to identify negation with falsehood, or is unable to distinguish them. The greatest service rendered by him to mental science is the recognition of the communion of classes, which, although based by him on his account of 'Not-being,' is independent of it. He clearly saw that the isolation of ideas or classes is the annihilation of reasoning. Thus, after wandering in many diverging paths, we return to common sense. And for this reason we may be inclined to do less than justice to Plato, — because the truth which he attains by a real effort of thought is to us a familiar and unconscious truism, which no one would any longer think either of doubting or examining.

IV. The later dialogues of Plato contain many references to contemporary philosophy. Both in the Theaetetus and in the Sophist he recognizes that he is in the midst of a fray; a huge irregular battle everywhere surrounds him (Theaet.). First, there are the two great philosophies going back into cosmogony and poetry: the philosophy of Heracleitus, supposed to have a poetical origin in Homer, and that of the Eleatics, which in a similar spirit he conceives to be even older than Xenophanes (compare Protag.). Still older were theories of two and three principles, hot and cold, moist and dry, which were ever marrying and being given in marriage: in speaking of these, he is

probably referring to Pherecydes and the early Ionians. In the philosophy of motion there were different accounts of the relation of plurality and unity, which were supposed to be joined and severed by love and hate, some maintaining that this process was perpetually going on (e.g. Heracleitus); others (e.g. Empedocles) that there was an alternation of them. Of the Pythagoreans or of Anaxagoras he makes no distinct mention. His chief opponents are, first, Eristics or Megarians; secondly, the Materialists.

The picture which he gives of both these latter schools is indistinct; and he appears reluctant to mention the names of their teachers. Nor can we easily determine how much is to be assigned to the Cynics, how much to the Megarians, or whether the 'repellent Materialists' (Theaet.) are Cynics or Atomists, or represent some unknown phase of opinion at Athens. To the Cynics and Antisthenes is commonly attributed, on the authority of Aristotle, the denial of predication, while the Megarians are said to have been Nominalists, asserting the One Good under many names to be the true Being of Zeno and the Eleatics, and, like Zeno, employing their negative dialectic in the refutation of opponents. But the later Megarians also denied predication; and this tenet, which is attributed to all of them by Simplicius, is certainly in accordance with their over-refining philosophy. The 'tyros young and old,' of whom Plato speaks, probably include both. At any rate, we shall be safer in accepting the general description of them which he has given, and in not attempting to draw a precise line between them.

Of these Eristics, whether Cynics or Megarians, several characteristics are found in Plato: —

1. They pursue verbal oppositions;
2. they make reasoning impossible by their over-accuracy in the use of language;
3. they deny predication;
4. they go from unity to plurality, without passing through the intermediate stages;
5. they refuse to attribute motion or power to Being;
6. they are the enemies of sense; — whether they are the 'friends of ideas,' who carry on the polemic against sense, is uncertain; probably under this remarkable expression Plato designates those who more nearly approached himself, and may be criticizing an earlier form of his own doctrines. We may observe (1) that he professes only to give us a few opinions out of many which

were at that time current in Greece; (2) that he nowhere alludes to the ethical teaching of the Cynics — unless the argument in the Protagoras, that the virtues are one and not many, may be supposed to contain a reference to their views, as well as to those of Socrates; and unless they are the school alluded to in the Philebus, which is described as ‘being very skilful in physics, and as maintaining pleasure to be the absence of pain.’ That Antisthenes wrote a book called ‘Physicus,’ is hardly a sufficient reason for describing them as skilful in physics, which appear to have been very alien to the tendency of the Cynics.

The Idealism of the fourth century before Christ in Greece, as in other ages and countries, seems to have provoked a reaction towards Materialism. The maintainers of this doctrine are described in the Theaetetus as obstinate persons who will believe in nothing which they cannot hold in their hands, and in the Sophist as incapable of argument. They are probably the same who are said in the Tenth Book of the Laws to attribute the course of events to nature, art, and chance. Who they were, we have no means of determining except from Plato’s description of them. His silence respecting the Atomists might lead us to suppose that here we have a trace of them. But the Atomists were not Materialists in the grosser sense of the term, nor were they incapable of reasoning; and Plato would hardly have described a great genius like Democritus in the disdainful terms which he uses of the Materialists. Upon the whole, we must infer that the persons here spoken of are unknown to us, like the many other writers and talkers at Athens and elsewhere, of whose endless activity of mind Aristotle in his Metaphysics has preserved an anonymous memorial.

V. The Sophist is the sequel of the Theaetetus, and is connected with the Parmenides by a direct allusion (compare Introductions to Theaetetus and Parmenides). In the Theaetetus we sought to discover the nature of knowledge and false opinion. But the nature of false opinion seemed impenetrable; for we were unable to understand how there could be any reality in Not-being. In the Sophist the question is taken up again; the nature of Not-being is detected, and there is no longer any metaphysical impediment in the way of admitting the possibility of falsehood. To the Parmenides, the Sophist stands in a

less defined and more remote relation. There human thought is in process of disorganization; no absurdity or inconsistency is too great to be elicited from the analysis of the simple ideas of Unity or Being. In the Sophist the same contradictions are pursued to a certain extent, but only with a view to their resolution. The aim of the dialogue is to show how the few elemental conceptions of the human mind admit of a natural connexion in thought and speech, which Megarian or other sophistry vainly attempts to deny.

...

True to the appointment of the previous day, Theodorus and Theaetetus meet Socrates at the same spot, bringing with them an Eleatic Stranger, whom Theodorus introduces as a true philosopher. Socrates, half in jest, half in earnest, declares that he must be a god in disguise, who, as Homer would say, has come to earth that he may visit the good and evil among men, and detect the foolishness of Athenian wisdom. At any rate he is a divine person, one of a class who are hardly recognized on earth; who appear in divers forms — now as statesmen, now as sophists, and are often deemed madmen. ‘Philosopher, statesman, sophist,’ says Socrates, repeating the words — ‘I should like to ask our Eleatic friend what his countrymen think of them; do they regard them as one, or three?’

The Stranger has been already asked the same question by Theodorus and Theaetetus; and he at once replies that they are thought to be three; but to explain the difference fully would take time. He is pressed to give this fuller explanation, either in the form of a speech or of question and answer. He prefers the latter, and chooses as his respondent Theaetetus, whom he already knows, and who is recommended to him by Socrates.

We are agreed, he says, about the name Sophist, but we may not be equally agreed about his nature. Great subjects should be approached through familiar examples, and, considering that he is a creature not easily caught, I think that, before approaching him, we should try our hand upon some more obvious animal, who may be made the subject of logical experiment; shall we say an angler? ‘Very good.’

In the first place, the angler is an artist; and there are two kinds of art, — productive art, which includes husbandry, manufactures, imitations; and acquisitive art, which includes learning, trading,

fighting, hunting. The angler's is an acquisitive art, and acquisition may be effected either by exchange or by conquest; in the latter case, either by force or craft. Conquest by craft is called hunting, and of hunting there is one kind which pursues inanimate, and another which pursues animate objects; and animate objects may be either land animals or water animals, and water animals either fly over the water or live in the water. The hunting of the last is called fishing; and of fishing, one kind uses enclosures, catching the fish in nets and baskets, and another kind strikes them either with spears by night or with barbed spears or barbed hooks by day; the barbed spears are impelled from above, the barbed hooks are jerked into the head and lips of the fish, which are then drawn from below upwards. Thus, by a series of divisions, we have arrived at the definition of the angler's art.

And now by the help of this example we may proceed to bring to light the nature of the Sophist. Like the angler, he is an artist, and the resemblance does not end here. For they are both hunters, and hunters of animals; the one of water, and the other of land animals. But at this point they diverge, the one going to the sea and the rivers, and the other to the rivers of wealth and rich meadow-lands, in which generous youth abide. On land you may hunt tame animals, or you may hunt wild animals. And man is a tame animal, and he may be hunted either by force or persuasion; — either by the pirate, man-stealer, soldier, or by the lawyer, orator, talker. The latter use persuasion, and persuasion is either private or public. Of the private practitioners of the art, some bring gifts to those whom they hunt: these are lovers. And others take hire; and some of these flatter, and in return are fed; others profess to teach virtue and receive a round sum. And who are these last? Tell me who? Have we not unearthed the Sophist?

But he is a many-sided creature, and may still be traced in another line of descent. The acquisitive art had a branch of exchange as well as of hunting, and exchange is either giving or selling; and the seller is either a manufacturer or a merchant; and the merchant either retails or exports; and the exporter may export either food for the body or food for the mind. And of this trading in food for the mind, one kind may be termed the art of display, and another the art of selling

learning; and learning may be a learning of the arts or of virtue. The seller of the arts may be called an art-seller; the seller of virtue, a Sophist.

Again, there is a third line, in which a Sophist may be traced. For is he less a Sophist when, instead of exporting his wares to another country, he stays at home, and retails goods, which he not only buys of others, but manufactures himself?

Or he may be descended from the acquisitive art in the combative line, through the pugnacious, the controversial, the disputatious arts; and he will be found at last in the eristic section of the latter, and in that division of it which disputes in private for gain about the general principles of right and wrong.

And still there is a track of him which has not yet been followed out by us. Do not our household servants talk of sifting, straining, winnowing? And they also speak of carding, spinning, and the like. All these are processes of division; and of division there are two kinds, — one in which like is divided from like, and another in which the good is separated from the bad. The latter of the two is termed purification; and again, of purification, there are two sorts, — of animate bodies (which may be internal or external), and of inanimate. Medicine and gymnastic are the internal purifications of the animate, and bathing the external; and of the inanimate, fulling and cleaning and other humble processes, some of which have ludicrous names. Not that dialectic is a respecter of names or persons, or a despiser of humble occupations; nor does she think much of the greater or less benefits conferred by them. For her aim is knowledge; she wants to know how the arts are related to one another, and would quite as soon learn the nature of hunting from the vermin-destroyer as from the general. And she only desires to have a general name, which shall distinguish purifications of the soul from purifications of the body.

Now purification is the taking away of evil; and there are two kinds of evil in the soul, — the one answering to disease in the body, and the other to deformity. Disease is the discord or war of opposite principles in the soul; and deformity is the want of symmetry, or failure in the attainment of a mark or measure. The latter arises from ignorance, and no one is voluntarily ignorant; ignorance is only the

aberration of the soul moving towards knowledge. And as medicine cures the diseases and gymnastic the deformity of the body, so correction cures the injustice, and education (which differs among the Hellenes from mere instruction in the arts) cures the ignorance of the soul. Again, ignorance is twofold, simple ignorance, and ignorance having the conceit of knowledge. And education is also twofold: there is the old-fashioned moral training of our forefathers, which was very troublesome and not very successful; and another, of a more subtle nature, which proceeds upon a notion that all ignorance is involuntary. The latter convicts a man out of his own mouth, by pointing out to him his inconsistencies and contradictions; and the consequence is that he quarrels with himself, instead of quarrelling with his neighbours, and is cured of prejudices and obstructions by a mode of treatment which is equally entertaining and effectual. The physician of the soul is aware that his patient will receive no nourishment unless he has been cleaned out; and the soul of the Great King himself, if he has not undergone this purification, is unclean and impure.

And who are the ministers of the purification? Sophists I may not call them. Yet they bear about the same likeness to Sophists as the dog, who is the gentlest of animals, does to the wolf, who is the fiercest. Comparisons are slippery things; but for the present let us assume the resemblance of the two, which may probably be disallowed hereafter. And so, from division comes purification; and from this, mental purification; and from mental purification, instruction; and from instruction, education; and from education, the nobly-descended art of Sophistry, which is engaged in the detection of conceit. I do not however think that we have yet found the Sophist, or that his will ultimately prove to be the desired art of education; but neither do I think that he can long escape me, for every way is blocked. Before we make the final assault, let us take breath, and reckon up the many forms which he has assumed: (1) he was the paid hunter of wealth and birth; (2) he was the trader in the goods of the soul; (3) he was the retailer of them; (4) he was the manufacturer of his own learned wares; (5) he was the disputant; and (6) he was the purger away of prejudices — although this latter point is admitted to be doubtful.

Now, there must surely be something wrong in the professor of any art having so many names and kinds of knowledge. Does not the very number of them imply that the nature of his art is not understood? And that we may not be involved in the misunderstanding, let us observe which of his characteristics is the most prominent. Above all things he is a disputant. He will dispute and teach others to dispute about things visible and invisible — about man, about the gods, about politics, about law, about wrestling, about all things. But can he know all things? 'He cannot.' How then can he dispute satisfactorily with any one who knows? 'Impossible.' Then what is the trick of his art, and why does he receive money from his admirers? 'Because he is believed by them to know all things.' You mean to say that he seems to have a knowledge of them? 'Yes.'

Suppose a person were to say, not that he would dispute about all things, but that he would make all things, you and me, and all other creatures, the earth and the heavens and the gods, and would sell them all for a few pence — this would be a great jest; but not greater than if he said that he knew all things, and could teach them in a short time, and at a small cost. For all imitation is a jest, and the most graceful form of jest. Now the painter is a man who professes to make all things, and children, who see his pictures at a distance, sometimes take them for realities: and the Sophist pretends to know all things, and he, too, can deceive young men, who are still at a distance from the truth, not through their eyes, but through their ears, by the mummery of words, and induce them to believe him. But as they grow older, and come into contact with realities, they learn by experience the futility of his pretensions. The Sophist, then, has not real knowledge; he is only an imitator, or image-maker.

And now, having got him in a corner of the dialectical net, let us divide and subdivide until we catch him. Of image-making there are two kinds, — the art of making likenesses, and the art of making appearances. The latter may be illustrated by sculpture and painting, which often use illusions, and alter the proportions of figures, in order to adapt their works to the eye. And the Sophist also uses illusions, and his imitations are apparent and not real. But how can anything be an appearance only? Here arises a difficulty which has always beset the subject of appearances. For the argument is

asserting the existence of not-being. And this is what the great Parmenides was all his life denying in prose and also in verse. 'You will never find,' he says, 'that not-being is.' And the words prove themselves! Not-being cannot be attributed to any being; for how can any being be wholly abstracted from being? Again, in every predication there is an attribution of singular or plural. But number is the most real of all things, and cannot be attributed to not-being. Therefore not-being cannot be predicated or expressed; for how can we say 'is,' 'are not,' without number?

And now arises the greatest difficulty of all. If not-being is inconceivable, how can not-being be refuted? And am I not contradicting myself at this moment, in speaking either in the singular or the plural of that to which I deny both plurality and unity? You, Theaetetus, have the might of youth, and I conjure you to exert yourself, and, if you can, to find an expression for not-being which does not imply being and number. 'But I cannot.' Then the Sophist must be left in his hole. We may call him an image-maker if we please, but he will only say, 'And pray, what is an image?' And we shall reply, 'A reflection in the water, or in a mirror'; and he will say, 'Let us shut our eyes and open our minds; what is the common notion of all images?' 'I should answer, Such another, made in the likeness of the true.' Real or not real? 'Not real; at least, not in a true sense.' And the real 'is,' and the not-real 'is not'? 'Yes.' Then a likeness is really unreal, and essentially not. Here is a pretty complication of being and not-being, in which the many-headed Sophist has entangled us. He will at once point out that he is compelling us to contradict ourselves, by affirming being of not-being. I think that we must cease to look for him in the class of imitators.

But ought we to give him up? 'I should say, certainly not.' Then I fear that I must lay hands on my father Parmenides; but do not call me a parricide; for there is no way out of the difficulty except to show that in some sense not-being is; and if this is not admitted, no one can speak of falsehood, or false opinion, or imitation, without falling into a contradiction. You observe how unwilling I am to undertake the task; for I know that I am exposing myself to the charge of inconsistency in asserting the being of not-being. But if I

am to make the attempt, I think that I had better begin at the beginning.

Lightly in the days of our youth, Parmenides and others told us tales about the origin of the universe: one spoke of three principles warring and at peace again, marrying and begetting children; another of two principles, hot and cold, dry and moist, which also formed relationships. There were the Eleatics in our part of the world, saying that all things are one; whose doctrine begins with Xenophanes, and is even older. Ionian, and, more recently, Sicilian muses speak of a one and many which are held together by enmity and friendship, ever parting, ever meeting. Some of them do not insist on the perpetual strife, but adopt a gentler strain, and speak of alternation only. Whether they are right or not, who can say? But one thing we can say — that they went on their way without much caring whether we understood them or not. For tell me, Theaetetus, do you understand what they mean by their assertion of unity, or by their combinations and separations of two or more principles? I used to think, when I was young, that I knew all about not-being, and now I am in great difficulties even about being.

Let us proceed first to the examination of being. Turning to the dualist philosophers, we say to them: Is being a third element besides hot and cold? or do you identify one or both of the two elements with being? At any rate, you can hardly avoid resolving them into one. Let us next interrogate the patrons of the one. To them we say: Are being and one two different names for the same thing? But how can there be two names when there is nothing but one? Or you may identify them; but then the name will be either the name of nothing or of itself, i.e. of a name. Again, the notion of being is conceived of as a whole — in the words of Parmenides, ‘like every way unto a rounded sphere.’ And a whole has parts; but that which has parts is not one, for unity has no parts. Is being, then, one, because the parts of being are one, or shall we say that being is not a whole? In the former case, one is made up of parts; and in the latter there is still plurality, viz. being, and a whole which is apart from being. And being, if not all things, lacks something of the nature of being, and becomes not-being. Nor can being ever have come into existence, for nothing comes into existence except as a whole; nor can being have number,

for that which has number is a whole or sum of number. These are a few of the difficulties which are accumulating one upon another in the consideration of being.

We may proceed now to the less exact sort of philosophers. Some of them drag down everything to earth, and carry on a war like that of the giants, grasping rocks and oaks in their hands. Their adversaries defend themselves warily from an invisible world, and reduce the substances of their opponents to the minutest fractions, until they are lost in generation and flux. The latter sort are civil people enough; but the materialists are rude and ignorant of dialectics; they must be taught how to argue before they can answer. Yet, for the sake of the argument, we may assume them to be better than they are, and able to give an account of themselves. They admit the existence of a mortal living creature, which is a body containing a soul, and to this they would not refuse to attribute qualities — wisdom, folly, justice and injustice. The soul, as they say, has a kind of body, but they do not like to assert of these qualities of the soul, either that they are corporeal, or that they have no existence; at this point they begin to make distinctions. ‘Sons of earth,’ we say to them, ‘if both visible and invisible qualities exist, what is the common nature which is attributed to them by the term “being” or “existence”?’ And, as they are incapable of answering this question, we may as well reply for them, that being is the power of doing or suffering. Then we turn to the friends of ideas: to them we say, ‘You distinguish becoming from being?’ ‘Yes,’ they will reply. ‘And in becoming you participate through the bodily senses, and in being, by thought and the mind?’ ‘Yes.’ And you mean by the word ‘participation’ a power of doing or suffering? To this they answer — I am acquainted with them, Theaetetus, and know their ways better than you do — that being can neither do nor suffer, though becoming may. And we rejoin: Does not the soul know? And is not ‘being’ known? And are not ‘knowing’ and ‘being known’ active and passive? That which is known is affected by knowledge, and therefore is in motion. And, indeed, how can we imagine that perfect being is a mere everlasting form, devoid of motion and soul? for there can be no thought without soul, nor can soul be devoid of motion. But neither can thought or mind be devoid of some principle of rest or stability. And as children say

entreatingly, 'Give us both,' so the philosopher must include both the moveable and immoveable in his idea of being. And yet, alas! he and we are in the same difficulty with which we reproached the dualists; for motion and rest are contradictions — how then can they both exist? Does he who affirms this mean to say that motion is rest, or rest motion? 'No; he means to assert the existence of some third thing, different from them both, which neither rests nor moves.' But how can there be anything which neither rests nor moves? Here is a second difficulty about being, quite as great as that about not-being. And we may hope that any light which is thrown upon the one may extend to the other.

Leaving them for the present, let us enquire what we mean by giving many names to the same thing, e.g. white, good, tall, to man; out of which tyros old and young derive such a feast of amusement. Their meagre minds refuse to predicate anything of anything; they say that good is good, and man is man; and that to affirm one of the other would be making the many one and the one many. Let us place them in a class with our previous opponents, and interrogate both of them at once. Shall we assume (1) that being and rest and motion, and all other things, are incommunicable with one another? or (2) that they all have indiscriminate communion? or (3) that there is communion of some and not of others? And we will consider the first hypothesis first of all.

(1) If we suppose the universal separation of kinds, all theories alike are swept away; the patrons of a single principle of rest or of motion, or of a plurality of immutable ideas — all alike have the ground cut from under them; and all creators of the universe by theories of composition and division, whether out of or into a finite or infinite number of elemental forms, in alternation or continuance, share the same fate. Most ridiculous is the discomfiture which attends the opponents of predication, who, like the ventriloquist Eurycles, have the voice that answers them in their own breast. For they cannot help using the words 'is,' 'apart,' 'from others,' and the like; and their adversaries are thus saved the trouble of refuting them. But (2) if all things have communion with all things, motion will rest, and rest will move; here is a *reductio ad absurdum*. Two out of the three hypotheses are thus seen to be false. The third (3) remains, which

affirms that only certain things communicate with certain other things. In the alphabet and the scale there are some letters and notes which combine with others, and some which do not; and the laws according to which they combine or are separated are known to the grammarian and musician. And there is a science which teaches not only what notes and letters, but what classes admit of combination with one another, and what not. This is a noble science, on which we have stumbled unawares; in seeking after the Sophist we have found the philosopher. He is the master who discerns one whole or form pervading a scattered multitude, and many such wholes combined under a higher one, and many entirely apart — he is the true dialectician. Like the Sophist, he is hard to recognize, though for the opposite reasons; the Sophist runs away into the obscurity of not-being, the philosopher is dark from excess of light. And now, leaving him, we will return to our pursuit of the Sophist.

Agreeing in the truth of the third hypothesis, that some things have communion and others not, and that some may have communion with all, let us examine the most important kinds which are capable of admixture; and in this way we may perhaps find out a sense in which not-being may be affirmed to have being. Now the highest kinds are being, rest, motion; and of these, rest and motion exclude each other, but both of them are included in being; and again, they are the same with themselves and the other of each other. What is the meaning of these words, 'same' and 'other'? Are there two more kinds to be added to the three others? For sameness cannot be either rest or motion, because predicated both of rest and motion; nor yet being; because if being were attributed to both of them we should attribute sameness to both of them. Nor can other be identified with being; for then other, which is relative, would have the absoluteness of being. Therefore we must assume a fifth principle, which is universal, and runs through all things, for each thing is other than all other things. Thus there are five principles: (1) being, (2) motion, which is not (3) rest, and because participating both in the same and other, is and is not (4) the same with itself, and is and is not (5) other than the other. And motion is not being, but partakes of being, and therefore is and is not in the most absolute sense. Thus we have discovered that not-being is the principle of the other which runs

through all things, being not excepted. And 'being' is one thing, and 'not-being' includes and is all other things. And not-being is not the opposite of being, but only the other. Knowledge has many branches, and the other or difference has as many, each of which is described by prefixing the word 'not' to some kind of knowledge. The not-beautiful is as real as the beautiful, the not-just as the just. And the essence of the not-beautiful is to be separated from and opposed to a certain kind of existence which is termed beautiful. And this opposition and negation is the not-being of which we are in search, and is one kind of being. Thus, in spite of Parmenides, we have not only discovered the existence, but also the nature of not-being — that nature we have found to be relation. In the communion of different kinds, being and other mutually interpenetrate; other is, but is other than being, and other than each and all of the remaining kinds, and therefore in an infinity of ways 'is not.' And the argument has shown that the pursuit of contradictions is childish and useless, and the very opposite of that higher spirit which criticizes the words of another according to the natural meaning of them. Nothing can be more unphilosophical than the denial of all communion of kinds. And we are fortunate in having established such a communion for another reason, because in continuing the hunt after the Sophist we have to examine the nature of discourse, and there could be no discourse if there were no communion. For the Sophist, although he can no longer deny the existence of not-being, may still affirm that not-being cannot enter into discourse, and as he was arguing before that there could be no such thing as falsehood, because there was no such thing as not-being, he may continue to argue that there is no such thing as the art of image-making and phantastic, because not-being has no place in language. Hence arises the necessity of examining speech, opinion, and imagination.

And first concerning speech; let us ask the same question about words which we have already answered about the kinds of being and the letters of the alphabet: To what extent do they admit of combination? Some words have a meaning when combined, and others have no meaning. One class of words describes action, another class agents: 'walks,' 'runs,' 'sleeps' are examples of the first; 'stag,' 'horse,' 'lion' of the second. But no combination of words can be

formed without a verb and a noun, e.g. 'A man learns'; the simplest sentence is composed of two words, and one of these must be a subject. For example, in the sentence, 'Theaetetus sits,' which is not very long, 'Theaetetus' is the subject, and in the sentence 'Theaetetus flies,' 'Theaetetus' is again the subject. But the two sentences differ in quality, for the first says of you that which is true, and the second says of you that which is not true, or, in other words, attributes to you things which are not as though they were. Here is false discourse in the shortest form. And thus not only speech, but thought and opinion and imagination are proved to be both true and false. For thought is only the process of silent speech, and opinion is only the silent assent or denial which follows this, and imagination is only the expression of this in some form of sense. All of them are akin to speech, and therefore, like speech, admit of true and false. And we have discovered false opinion, which is an encouraging sign of our probable success in the rest of the enquiry.

Then now let us return to our old division of likeness-making and phantastic. When we were going to place the Sophist in one of them, a doubt arose whether there could be such a thing as an appearance, because there was no such thing as falsehood. At length falsehood has been discovered by us to exist, and we have acknowledged that the Sophist is to be found in the class of imitators. All art was divided originally by us into two branches — productive and acquisitive. And now we may divide both on a different principle into the creations or imitations which are of human, and those which are of divine, origin. For we must admit that the world and ourselves and the animals did not come into existence by chance, or the spontaneous working of nature, but by divine reason and knowledge. And there are not only divine creations but divine imitations, such as apparitions and shadows and reflections, which are equally the work of a divine mind. And there are human creations and human imitations too, — there is the actual house and the drawing of it. Nor must we forget that image-making may be an imitation of realities or an imitation of appearances, which last has been called by us phantastic. And this phantastic may be again divided into imitation by the help of instruments and impersonations. And the latter may be either dissembling or unconscious, either with or without knowledge.

A man cannot imitate you, Theaetetus, without knowing you, but he can imitate the form of justice or virtue if he have a sentiment or opinion about them. Not being well provided with names, the former I will venture to call the imitation of science, and the latter the imitation of opinion.

The latter is our present concern, for the Sophist has no claims to science or knowledge. Now the imitator, who has only opinion, may be

either the simple imitator, who thinks that he knows, or the dissembler,

who is conscious that he does not know, but disguises his ignorance.

And

the last may be either a maker of long speeches, or of shorter speeches

which compel the person conversing to contradict himself. The maker of

longer speeches is the popular orator; the maker of the shorter is the Sophist, whose art may be traced as being the

/ contradictory

/ dissembling

/ without knowledge

/ human and not divine

/ juggling with words

/ phantastic or unreal

/ art of image-making.

...

In commenting on the dialogue in which Plato most nearly approaches the great modern master of metaphysics there are several points which it will be useful to consider, such as the unity of opposites, the conception of the ideas as causes, and the relation of the Platonic and Hegelian dialectic.

The unity of opposites was the crux of ancient thinkers in the age of Plato: How could one thing be or become another? That substances have attributes was implied in common language; that heat and cold, day and night, pass into one another was a matter of experience 'on a level with the cobbler's understanding' (Theat.). But how could

philosophy explain the connexion of ideas, how justify the passing of them into one another? The abstractions of one, other, being, not-being, rest, motion, individual, universal, which successive generations of philosophers had recently discovered, seemed to be beyond the reach of human thought, like stars shining in a distant heaven. They were the symbols of different schools of philosophy: but in what relation did they stand to one another and to the world of sense? It was hardly conceivable that one could be other, or the same different. Yet without some reconciliation of these elementary ideas thought was impossible. There was no distinction between truth and falsehood, between the Sophist and the philosopher. Everything could be predicated of everything, or nothing of anything. To these difficulties Plato finds what to us appears to be the answer of common sense — that Not-being is the relative or other of Being, the defining and distinguishing principle, and that some ideas combine with others, but not all with all. It is remarkable however that he offers this obvious reply only as the result of a long and tedious enquiry; by a great effort he is able to look down as ‘from a height’ on the ‘friends of the ideas’ as well as on the pre-Socratic philosophies. Yet he is merely asserting principles which no one who could be made to understand them would deny.

The Platonic unity of differences or opposites is the beginning of the modern view that all knowledge is of relations; it also anticipates the doctrine of Spinoza that all determination is negation. Plato takes or gives so much of either of these theories as was necessary or possible in the age in which he lived. In the Sophist, as in the Cratylus, he is opposed to the Heracleitean flux and equally to the Megarian and Cynic denial of predication, because he regards both of them as making knowledge impossible. He does not assert that everything is and is not, or that the same thing can be affected in the same and in opposite ways at the same time and in respect of the same part of itself. The law of contradiction is as clearly laid down by him in the Republic, as by Aristotle in his Organon. Yet he is aware that in the negative there is also a positive element, and that oppositions may be only differences. And in the Parmenides he deduces the many from the one and Not-being from Being, and yet shows that the many are included in the one, and that Not-being returns to Being.

In several of the later dialogues Plato is occupied with the connexion of the sciences, which in the *Philebus* he divides into two classes of pure and applied, adding to them there as elsewhere (*Phaedr.*, *Crat.*, *Republic*, *States.*) a superintending science of dialectic. This is the origin of Aristotle's *Architectonic*, which seems, however, to have passed into an imaginary science of essence, and no longer to retain any relation to other branches of knowledge. Of such a science, whether described as '*philosophia prima*,' the science of *ousia*, logic or metaphysics, philosophers have often dreamed. But even now the time has not arrived when the anticipation of Plato can be realized. Though many a thinker has framed a '*hierarchy of the sciences*,' no one has as yet found the higher science which arrays them in harmonious order, giving to the organic and inorganic, to the physical and moral, their respective limits, and showing how they all work together in the world and in man.

Plato arranges in order the stages of knowledge and of existence. They are the steps or grades by which he rises from sense and the shadows of sense to the idea of beauty and good. Mind is in motion as well as at rest (*Soph.*); and may be described as a dialectical progress which passes from one limit or determination of thought to another and back again to the first. This is the account of dialectic given by Plato in the Sixth Book of the *Republic*, which regarded under another aspect is the mysticism of the *Symposium*. He does not deny the existence of objects of sense, but according to him they only receive their true meaning when they are incorporated in a principle which is above them (*Republic*). In modern language they might be said to come first in the order of experience, last in the order of nature and reason. They are assumed, as he is fond of repeating, upon the condition that they shall give an account of themselves and that the truth of their existence shall be hereafter proved. For philosophy must begin somewhere and may begin anywhere, — with outward objects, with statements of opinion, with abstract principles. But objects of sense must lead us onward to the ideas or universals which are contained in them; the statements of opinion must be verified; the abstract principles must be filled up and connected with one another. In Plato we find, as we might expect, the germs of many thoughts which have been further developed by the

genius of Spinoza and Hegel. But there is a difficulty in separating the germ from the flower, or in drawing the line which divides ancient from modern philosophy. Many coincidences which occur in them are unconscious, seeming to show a natural tendency in the human mind towards certain ideas and forms of thought. And there are many speculations of Plato which would have passed away unheeded, and their meaning, like that of some hieroglyphic, would have remained undeciphered, unless two thousand years and more afterwards an interpreter had arisen of a kindred spirit and of the same intellectual family. For example, in the Sophist Plato begins with the abstract and goes on to the concrete, not in the lower sense of returning to outward objects, but to the Hegelian concrete or unity of abstractions. In the intervening period hardly any importance would have been attached to the question which is so full of meaning to Plato and Hegel.

They differ however in their manner of regarding the question. For Plato is answering a difficulty; he is seeking to justify the use of common language and of ordinary thought into which philosophy had introduced a principle of doubt and dissolution. Whereas Hegel tries to go beyond common thought, and to combine abstractions in a higher unity: the ordinary mechanism of language and logic is carried by him into another region in which all oppositions are absorbed and all contradictions affirmed, only that they may be done away with. But Plato, unlike Hegel, nowhere bases his system on the unity of opposites, although in the Parmenides he shows an Hegelian subtlety in the analysis of one and Being.

It is difficult within the compass of a few pages to give even a faint outline of the Hegelian dialectic. No philosophy which is worth understanding can be understood in a moment; common sense will not teach us metaphysics any more than mathematics. If all sciences demand of us protracted study and attention, the highest of all can hardly be matter of immediate intuition. Neither can we appreciate a great system without yielding a half assent to it — like flies we are caught in the spider's web; and we can only judge of it truly when we place ourselves at a distance from it. Of all philosophies Hegelianism is the most obscure: and the difficulty inherent in the subject is increased by the use of a technical language. The saying of

Socrates respecting the writings of Heracleitus— ‘Noble is that which I understand, and that which I do not understand may be as noble; but the strength of a Delian diver is needed to swim through it’ — expresses the feeling with which the reader rises from the perusal of Hegel. We may truly apply to him the words in which Plato describes the Pre-Socratic philosophers: ‘He went on his way rather regardless of whether we understood him or not’; or, as he is reported himself to have said of his own pupils: ‘There is only one of you who understands me, and he does NOT understand me.’

Nevertheless the consideration of a few general aspects of the Hegelian philosophy may help to dispel some errors and to awaken an interest about it. (i) It is an ideal philosophy which, in popular phraseology, maintains not matter but mind to be the truth of things, and this not by a mere crude substitution of one word for another, but by showing either of them to be the complement of the other. Both are creations of thought, and the difference in kind which seems to divide them may also be regarded as a difference of degree. One is to the other as the real to the ideal, and both may be conceived together under the higher form of the notion. (ii) Under another aspect it views all the forms of sense and knowledge as stages of thought which have always existed implicitly and unconsciously, and to which the mind of the world, gradually disengaged from sense, has become awakened. The present has been the past. The succession in time of human ideas is also the eternal ‘now’; it is historical and also a divine ideal. The history of philosophy stripped of personality and of the other accidents of time and place is gathered up into philosophy, and again philosophy clothed in circumstance expands into history. (iii) Whether regarded as present or past, under the form of time or of eternity, the spirit of dialectic is always moving onwards from one determination of thought to another, receiving each successive system of philosophy and subordinating it to that which follows — impelled by an irresistible necessity from one idea to another until the cycle of human thought and existence is complete. It follows from this that all previous philosophies which are worthy of the name are not mere opinions or speculations, but stages or moments of thought which have a necessary place in the world of mind. They are no longer the last word of philosophy, for

another and another has succeeded them, but they still live and are mighty; in the language of the Greek poet, 'There is a great God in them, and he grows not old.' (iv) This vast ideal system is supposed to be based upon experience. At each step it professes to carry with it the 'witness of eyes and ears' and of common sense, as well as the internal evidence of its own consistency; it has a place for every science, and affirms that no philosophy of a narrower type is capable of comprehending all true facts.

The Hegelian dialectic may be also described as a movement from the simple to the complex. Beginning with the generalizations of sense, (1) passing through ideas of quality, quantity, measure, number, and the like, (2) ascending from presentations, that is pictorial forms of sense, to representations in which the picture vanishes and the essence is detached in thought from the outward form, (3) combining the I and the not-I, or the subject and object, the natural order of thought is at last found to include the leading ideas of the sciences and to arrange them in relation to one another. Abstractions grow together and again become concrete in a new and higher sense. They also admit of development from within their own spheres. Everywhere there is a movement of attraction and repulsion going on — an attraction or repulsion of ideas of which the physical phenomenon described under a similar name is a figure. Freedom and necessity, mind and matter, the continuous and the discrete, cause and effect, are perpetually being severed from one another in thought, only to be perpetually reunited. The finite and infinite, the absolute and relative are not really opposed; the finite and the negation of the finite are alike lost in a higher or positive infinity, and the absolute is the sum or correlation of all relatives. When this reconciliation of opposites is finally completed in all its stages, the mind may come back again and review the things of sense, the opinions of philosophers, the strife of theology and politics, without being disturbed by them. Whatever is, if not the very best — and what is the best, who can tell? — is, at any rate, historical and rational, suitable to its own age, unsuitable to any other. Nor can any efforts of speculative thinkers or of soldiers and statesmen materially quicken the 'process of the suns.'

Hegel was quite sensible how great would be the difficulty of

presenting philosophy to mankind under the form of opposites. Most of us live in the one-sided truth which the understanding offers to us, and if occasionally we come across difficulties like the time-honoured controversy of necessity and free-will, or the Eleatic puzzle of Achilles and the tortoise, we relegate some of them to the sphere of mystery, others to the book of riddles, and go on our way rejoicing. Most men (like Aristotle) have been accustomed to regard a contradiction in terms as the end of strife; to be told that contradiction is the life and mainspring of the intellectual world is indeed a paradox to them. Every abstraction is at first the enemy of every other, yet they are linked together, each with all, in the chain of Being. The struggle for existence is not confined to the animals, but appears in the kingdom of thought. The divisions which arise in thought between the physical and moral and between the moral and intellectual, and the like, are deepened and widened by the formal logic which elevates the defects of the human faculties into Laws of Thought; they become a part of the mind which makes them and is also made up of them. Such distinctions become so familiar to us that we regard the thing signified by them as absolutely fixed and defined. These are some of the illusions from which Hegel delivers us by placing us above ourselves, by teaching us to analyze the growth of 'what we are pleased to call our minds,' by reverting to a time when our present distinctions of thought and language had no existence.

Of the great dislike and childish impatience of his system which would be aroused among his opponents, he was fully aware, and would often anticipate the jests which the rest of the world, 'in the superfluity of their wits,' were likely to make upon him. Men are annoyed at what puzzles them; they think what they cannot easily understand to be full of danger. Many a sceptic has stood, as he supposed, firmly rooted in the categories of the understanding which Hegel resolves into their original nothingness. For, like Plato, he 'leaves no stone unturned' in the intellectual world. Nor can we deny that he is unnecessarily difficult, or that his own mind, like that of all metaphysicians, was too much under the dominion of his system and unable to see beyond: or that the study of philosophy, if made a serious business (compare Republic), involves grave results to the

mind and life of the student. For it may encumber him without enlightening his path; and it may weaken his natural faculties of thought and expression without increasing his philosophical power. The mind easily becomes entangled among abstractions, and loses hold of facts. The glass which is adapted to distant objects takes away the vision of what is near and present to us.

To Hegel, as to the ancient Greek thinkers, philosophy was a religion, a principle of life as well as of knowledge, like the idea of good in the Sixth Book of the Republic, a cause as well as an effect, the source of growth as well as of light. In forms of thought which by most of us are regarded as mere categories, he saw or thought that he saw a gradual revelation of the Divine Being. He would have been said by his opponents to have confused God with the history of philosophy, and to have been incapable of distinguishing ideas from facts. And certainly we can scarcely understand how a deep thinker like Hegel could have hoped to revive or supplant the old traditional faith by an unintelligible abstraction: or how he could have imagined that philosophy consisted only or chiefly in the categories of logic. For abstractions, though combined by him in the notion, seem to be never really concrete; they are a metaphysical anatomy, not a living and thinking substance. Though we are reminded by him again and again that we are gathering up the world in ideas, we feel after all that we have not really spanned the gulf which separates phenomena from ontia.

Having in view some of these difficulties, he seeks — and we may follow his example — to make the understanding of his system easier (a) by illustrations, and (b) by pointing out the coincidence of the speculative idea and the historical order of thought.

(a) If we ask how opposites can coexist, we are told that many different qualities inhere in a flower or a tree or in any other concrete object, and that any conception of space or matter or time involves the two contradictory attributes of divisibility and continuousness. We may ponder over the thought of number, reminding ourselves that every unit both implies and denies the existence of every other, and that the one is many — a sum of fractions, and the many one — a sum of units. We may be reminded that in nature there is a centripetal as well as a centrifugal force, a regulator as well as a spring, a law of

attraction as well as of repulsion. The way to the West is the way also to the East; the north pole of the magnet cannot be divided from the south pole; two minus signs make a plus in Arithmetic and Algebra. Again, we may liken the successive layers of thought to the deposits of geological strata which were once fluid and are now solid, which were at one time uppermost in the series and are now hidden in the earth; or to the successive rinds or barks of trees which year by year pass inward; or to the ripple of water which appears and reappears in an ever-widening circle. Or our attention may be drawn to ideas which the moment we analyze them involve a contradiction, such as 'beginning' or 'becoming,' or to the opposite poles, as they are sometimes termed, of necessity and freedom, of idea and fact. We may be told to observe that every negative is a positive, that differences of kind are resolvable into differences of degree, and that differences of degree may be heightened into differences of kind. We may remember the common remark that there is much to be said on both sides of a question. We may be recommended to look within and to explain how opposite ideas can coexist in our own minds; and we may be told to imagine the minds of all mankind as one mind in which the true ideas of all ages and countries inhere. In our conception of God in his relation to man or of any union of the divine and human nature, a contradiction appears to be unavoidable. Is not the reconciliation of mind and body a necessity, not only of speculation but of practical life? Reflections such as these will furnish the best preparation and give the right attitude of mind for understanding the Hegelian philosophy.

(b) Hegel's treatment of the early Greek thinkers affords the readiest illustration of his meaning in conceiving all philosophy under the form of opposites. The first abstraction is to him the beginning of thought. Hitherto there had only existed a tumultuous chaos of mythological fancy, but when Thales said 'All is water' a new era began to dawn upon the world. Man was seeking to grasp the universe under a single form which was at first simply a material element, the most equable and colourless and universal which could be found. But soon the human mind became dissatisfied with the emblem, and after ringing the changes on one element after another, demanded a more abstract and perfect conception, such as one or Being, which was absolutely at rest. But the positive had its negative, the conception of Being involved Not-being, the conception of one, many, the conception of a whole, parts. Then the pendulum swung to the other side, from rest to motion, from Xenophanes to Heracleitus. The opposition of Being and Not-being projected into space became the atoms and void of Leucippus and Democritus. Until the Atomists, the abstraction of the individual did not exist; in the philosophy of Anaxagoras the idea of mind, whether human or divine, was beginning to be realized. The pendulum gave another swing, from the individual to the universal, from the object to the subject. The Sophist first uttered the word 'Man is the measure of all things,' which Socrates presented in a new form as the study of ethics. Once more we return from mind to the object of mind, which is knowledge, and out of knowledge the various degrees or kinds of knowledge more or less abstract were gradually developed. The threefold division of logic, physic, and ethics, foreshadowed in Plato, was finally established by Aristotle and the Stoics. Thus, according to Hegel, in the course of about two centuries by a process of antagonism and negation the leading thoughts of philosophy were evolved.

There is nothing like this progress of opposites in Plato, who in the Symposium denies the possibility of reconciliation until the opposition has passed away. In his own words, there is an absurdity in supposing that 'harmony is discord; for in reality harmony consists of notes of a higher and lower pitch which disagreed once, but are

now reconciled by the art of music' (Symp.). He does indeed describe objects of sense as regarded by us sometimes from one point of view and sometimes from another. As he says at the end of the Fifth Book of the Republic, 'There is nothing light which is not heavy, or great which is not small.' And he extends this relativity to the conceptions of just and good, as well as to great and small. In like manner he acknowledges that the same number may be more or less in relation to other numbers without any increase or diminution (Theat.). But the perplexity only arises out of the confusion of the human faculties; the art of measuring shows us what is truly great and truly small. Though the just and good in particular instances may vary, the IDEA of good is eternal and unchangeable. And the IDEA of good is the source of knowledge and also of Being, in which all the stages of sense and knowledge are gathered up and from being hypotheses become realities.

Leaving the comparison with Plato we may now consider the value of this invention of Hegel. There can be no question of the importance of showing that two contraries or contradictories may in certain cases be both true. The silliness of the so-called laws of thought ('All $A = A$,' or, in the negative form, 'Nothing can at the same time be both A , and not A ') has been well exposed by Hegel himself (Wallace's Hegel), who remarks that 'the form of the maxim is virtually self-contradictory, for a proposition implies a distinction between subject and predicate, whereas the maxim of identity, as it is called, $A = A$, does not fulfil what its form requires. Nor does any mind ever think or form conceptions in accordance with this law, nor does any existence conform to it.' Wisdom of this sort is well parodied in Shakespeare (Twelfth Night, 'Clown: For as the old hermit of Prague, that never saw pen and ink, very wittily said to a niece of King Gorboduc, "That that is is"...for what is "that" but "that," and "is" but "is"?''). Unless we are willing to admit that two contradictories may be true, many questions which lie at the threshold of mathematics and of morals will be insoluble puzzles to us.

The influence of opposites is felt in practical life. The understanding sees one side of a question only — the common sense of mankind joins one of two parties in politics, in religion, in philosophy. Yet, as

everybody knows, truth is not wholly the possession of either. But the characters of men are one-sided and accept this or that aspect of the truth. The understanding is strong in a single abstract principle and with this lever moves mankind. Few attain to a balance of principles or recognize truly how in all human things there is a thesis and antithesis, a law of action and of reaction. In politics we require order as well as liberty, and have to consider the proportions in which under given circumstances they may be safely combined. In religion there is a tendency to lose sight of morality, to separate goodness from the love of truth, to worship God without attempting to know him. In philosophy again there are two opposite principles, of immediate experience and of those general or a priori truths which are supposed to transcend experience. But the common sense or common opinion of mankind is incapable of apprehending these opposite sides or views — men are determined by their natural bent to one or other of them; they go straight on for a time in a single line, and may be many things by turns but not at once.

Hence the importance of familiarizing the mind with forms which will assist us in conceiving or expressing the complex or contrary aspects of life and nature. The danger is that they may be too much for us, and obscure our appreciation of facts. As the complexity of mechanics cannot be understood without mathematics, so neither can the many-sidedness of the mental and moral world be truly apprehended without the assistance of new forms of thought. One of these forms is the unity of opposites. Abstractions have a great power over us, but they are apt to be partial and one-sided, and only when modified by other abstractions do they make an approach to the truth. Many a man has become a fatalist because he has fallen under the dominion of a single idea. He says to himself, for example, that he must be either free or necessary — he cannot be both. Thus in the ancient world whole schools of philosophy passed away in the vain attempt to solve the problem of the continuity or divisibility of matter. And in comparatively modern times, though in the spirit of an ancient philosopher, Bishop Berkeley, feeling a similar perplexity, is inclined to deny the truth of infinitesimals in mathematics. Many difficulties arise in practical religion from the impossibility of conceiving body and mind at once and in adjusting their movements

to one another. There is a border ground between them which seems to belong to both; and there is as much difficulty in conceiving the body without the soul as the soul without the body. To the 'either' and 'or' philosophy ('Everything is either A or not A') should at least be added the clause 'or neither,' 'or both.' The double form makes reflection easier and more conformable to experience, and also more comprehensive. But in order to avoid paradox and the danger of giving offence to the unmetaphysical part of mankind, we may speak of it as due to the imperfection of language or the limitation of human faculties. It is nevertheless a discovery which, in Platonic language, may be termed a 'most gracious aid to thought.'

The doctrine of opposite moments of thought or of progression by antagonism, further assists us in framing a scheme or system of the sciences. The negation of one gives birth to another of them. The double notions are the joints which hold them together. The simple is developed into the complex, the complex returns again into the simple. Beginning with the highest notion of mind or thought, we may descend by a series of negations to the first generalizations of sense. Or again we may begin with the simplest elements of sense and proceed upwards to the highest being or thought. Metaphysic is the negation or absorption of physiology — physiology of chemistry — chemistry of mechanical philosophy. Similarly in mechanics, when we can no further go we arrive at chemistry — when chemistry becomes organic we arrive at physiology: when we pass from the outward and animal to the inward nature of man we arrive at moral and metaphysical philosophy. These sciences have each of them their own methods and are pursued independently of one another. But to the mind of the thinker they are all one — latent in one another — developed out of one another.

This method of opposites has supplied new instruments of thought for the solution of metaphysical problems, and has thrown down many of the walls within which the human mind was confined. Formerly when philosophers arrived at the infinite and absolute, they seemed to be lost in a region beyond human comprehension. But Hegel has shown that the absolute and infinite are no more true than the relative and finite, and that they must alike be negated before we arrive at a true absolute or a true infinite. The conceptions of the

infinite and absolute as ordinarily understood are tiresome because they are unmeaning, but there is no peculiar sanctity or mystery in them. We might as well make an infinitesimal series of fractions or a perpetually recurring decimal the object of our worship. They are the widest and also the thinnest of human ideas, or, in the language of logicians, they have the greatest extension and the least comprehension. Of all words they may be truly said to be the most inflated with a false meaning. They have been handed down from one philosopher to another until they have acquired a religious character. They seem also to derive a sacredness from their association with the Divine Being. Yet they are the poorest of the predicates under which we describe him — signifying no more than this, that he is not finite, that he is not relative, and tending to obscure his higher attributes of wisdom, goodness, truth.

The system of Hegel frees the mind from the dominion of abstract ideas. We acknowledge his originality, and some of us delight to wander in the mazes of thought which he has opened to us. For Hegel has found admirers in England and Scotland when his popularity in Germany has departed, and he, like the philosophers whom he criticizes, is of the past. No other thinker has ever dissected the human mind with equal patience and minuteness. He has lightened the burden of thought because he has shown us that the chains which we wear are of our own forging. To be able to place ourselves not only above the opinions of men but above their modes of thinking, is a great height of philosophy. This dearly obtained freedom, however, we are not disposed to part with, or to allow him to build up in a new form the ‘beggary elements’ of scholastic logic which he has thrown down. So far as they are aids to reflection and expression, forms of thought are useful, but no further: — we may easily have too many of them.

And when we are asked to believe the Hegelian to be the sole or universal logic, we naturally reply that there are other ways in which our ideas may be connected. The triplets of Hegel, the division into being, essence, and notion, are not the only or necessary modes in which the world of thought can be conceived. There may be an evolution by degrees as well as by opposites. The word ‘continuity’ suggests the possibility of resolving all differences into differences of

quantity. Again, the opposites themselves may vary from the least degree of diversity up to contradictory opposition. They are not like numbers and figures, always and everywhere of the same value. And therefore the edifice which is constructed out of them has merely an imaginary symmetry, and is really irregular and out of proportion. The spirit of Hegelian criticism should be applied to his own system, and the terms Being, Not-being, existence, essence, notion, and the like challenged and defined. For if Hegel introduces a great many distinctions, he obliterates a great many others by the help of the universal solvent 'is not,' which appears to be the simplest of negations, and yet admits of several meanings. Neither are we able to follow him in the play of metaphysical fancy which conducts him from one determination of thought to another. But we begin to suspect that this vast system is not God within us, or God immanent in the world, and may be only the invention of an individual brain. The 'beyond' is always coming back upon us however often we expel it. We do not easily believe that we have within the compass of the mind the form of universal knowledge. We rather incline to think that the method of knowledge is inseparable from actual knowledge, and wait to see what new forms may be developed out of our increasing experience and observation of man and nature. We are conscious of a Being who is without us as well as within us. Even if inclined to Pantheism we are unwilling to imagine that the meagre categories of the understanding, however ingeniously arranged or displayed, are the image of God; — that what all religions were seeking after from the beginning was the Hegelian philosophy which has been revealed in the latter days. The great metaphysician, like a prophet of old, was naturally inclined to believe that his own thoughts were divine realities. We may almost say that whatever came into his head seemed to him to be a necessary truth. He never appears to have criticized himself, or to have subjected his own ideas to the process of analysis which he applies to every other philosopher.

Hegel would have insisted that his philosophy should be accepted as a whole or not at all. He would have urged that the parts derived their meaning from one another and from the whole. He thought that he had supplied an outline large enough to contain all future knowledge,

and a method to which all future philosophies must conform. His metaphysical genius is especially shown in the construction of the categories — a work which was only begun by Kant, and elaborated to the utmost by himself. But is it really true that the part has no meaning when separated from the whole, or that knowledge to be knowledge at all must be universal? Do all abstractions shine only by the reflected light of other abstractions? May they not also find a nearer explanation in their relation to phenomena? If many of them are correlatives they are not all so, and the relations which subsist between them vary from a mere association up to a necessary connexion. Nor is it easy to determine how far the unknown element affects the known, whether, for example, new discoveries may not one day supersede our most elementary notions about nature. To a certain extent all our knowledge is conditional upon what may be known in future ages of the world. We must admit this hypothetical element, which we cannot get rid of by an assumption that we have already discovered the method to which all philosophy must conform. Hegel is right in preferring the concrete to the abstract, in setting actuality before possibility, in excluding from the philosopher's vocabulary the word 'inconceivable.' But he is too well satisfied with his own system ever to consider the effect of what is unknown on the element which is known. To the Hegelian all things are plain and clear, while he who is outside the charmed circle is in the mire of ignorance and 'logical impurity': he who is within is omniscient, or at least has all the elements of knowledge under his hand.

Hegelianism may be said to be a transcendental defence of the world as it is. There is no room for aspiration and no need of any: 'What is actual is rational, what is rational is actual.' But a good man will not readily acquiesce in this aphorism. He knows of course that all things proceed according to law whether for good or evil. But when he sees the misery and ignorance of mankind he is convinced that without any interruption of the uniformity of nature the condition of the world may be indefinitely improved by human effort. There is also an adaptation of persons to times and countries, but this is very far from being the fulfilment of their higher natures. The man of the seventeenth century is unfitted for the eighteenth, and the man of the

eighteenth for the nineteenth, and most of us would be out of place in the world of a hundred years hence. But all higher minds are much more akin than they are different: genius is of all ages, and there is perhaps more uniformity in excellence than in mediocrity. The sublimer intelligences of mankind — Plato, Dante, Sir Thomas More — meet in a higher sphere above the ordinary ways of men; they understand one another from afar, notwithstanding the interval which separates them. They are ‘the spectators of all time and of all existence;’ their works live for ever; and there is nothing to prevent the force of their individuality breaking through the uniformity which surrounds them. But such disturbers of the order of thought Hegel is reluctant to acknowledge.

The doctrine of Hegel will to many seem the expression of an indolent conservatism, and will at any rate be made an excuse for it. The mind of the patriot rebels when he is told that the worst tyranny and oppression has a natural fitness: he cannot be persuaded, for example, that the conquest of Prussia by Napoleon I. was either natural or necessary, or that any similar calamity befalling a nation should be a matter of indifference to the poet or philosopher. We may need such a philosophy or religion to console us under evils which are irremediable, but we see that it is fatal to the higher life of man. It seems to say to us, ‘The world is a vast system or machine which can be conceived under the forms of logic, but in which no single man can do any great good or any great harm. Even if it were a thousand times worse than it is, it could be arranged in categories and explained by philosophers. And what more do we want?’

The philosophy of Hegel appeals to an historical criterion: the ideas of men have a succession in time as well as an order of thought. But the assumption that there is a correspondence between the succession of ideas in history and the natural order of philosophy is hardly true even of the beginnings of thought. And in later systems forms of thought are too numerous and complex to admit of our tracing in them a regular succession. They seem also to be in part reflections of the past, and it is difficult to separate in them what is original and what is borrowed. Doubtless they have a relation to one another — the transition from Descartes to Spinoza or from Locke to Berkeley is not a matter of chance, but it can hardly be described as an

alternation of opposites or figured to the mind by the vibrations of a pendulum. Even in Aristotle and Plato, rightly understood, we cannot trace this law of action and reaction. They are both idealists, although to the one the idea is actual and immanent, — to the other only potential and transcendent, as Hegel himself has pointed out (Wallace's Hegel). The true meaning of Aristotle has been disguised from us by his own appeal to fact and the opinions of mankind in his more popular works, and by the use made of his writings in the Middle Ages. No book, except the Scriptures, has been so much read, and so little understood. The Pre-Socratic philosophies are simpler, and we may observe a progress in them; but is there any regular succession? The ideas of Being, change, number, seem to have sprung up contemporaneously in different parts of Greece and we have no difficulty in constructing them out of one another — we can see that the union of Being and Not-being gave birth to the idea of change or Becoming and that one might be another aspect of Being. Again, the Eleatics may be regarded as developing in one direction into the Megarian school, in the other into the Atomists, but there is no necessary connexion between them. Nor is there any indication that the deficiency which was felt in one school was supplemented or compensated by another. They were all efforts to supply the want which the Greeks began to feel at the beginning of the sixth century before Christ, — the want of abstract ideas. Nor must we forget the uncertainty of chronology; — if, as Aristotle says, there were Atomists before Leucippus, Eleatics before Xenophanes, and perhaps 'patrons of the flux' before Heracleitus, Hegel's order of thought in the history of philosophy would be as much disarranged as his order of religious thought by recent discoveries in the history of religion. Hegel is fond of repeating that all philosophies still live and that the earlier are preserved in the later; they are refuted, and they are not refuted, by those who succeed them. Once they reigned supreme, now they are subordinated to a power or idea greater or more comprehensive than their own. The thoughts of Socrates and Plato and Aristotle have certainly sunk deep into the mind of the world, and have exercised an influence which will never pass away; but can we say that they have the same meaning in modern and ancient philosophy? Some of them, as for example the words 'Being,'

‘essence,’ ‘matter,’ ‘form,’ either have become obsolete, or are used in new senses, whereas ‘individual,’ ‘cause,’ ‘motive,’ have acquired an exaggerated importance. Is the manner in which the logical determinations of thought, or ‘categories’ as they may be termed, have been handed down to us, really different from that in which other words have come down to us? Have they not been equally subject to accident, and are they not often used by Hegel himself in senses which would have been quite unintelligible to their original inventors — as for example, when he speaks of the ‘ground’ of Leibnitz (‘Everything has a sufficient ground’) as identical with his own doctrine of the ‘notion’ (Wallace’s Hegel), or the ‘Being and Not-being’ of Heracleitus as the same with his own ‘Becoming’?

As the historical order of thought has been adapted to the logical, so we have reason for suspecting that the Hegelian logic has been in some degree adapted to the order of thought in history. There is unfortunately no criterion to which either of them can be subjected, and not much forcing was required to bring either into near relations with the other. We may fairly doubt whether the division of the first and second parts of logic in the Hegelian system has not really arisen from a desire to make them accord with the first and second stages of the early Greek philosophy. Is there any reason why the conception of measure in the first part, which is formed by the union of quality and quantity, should not have been equally placed in the second division of mediate or reflected ideas? The more we analyze them the less exact does the coincidence of philosophy and the history of philosophy appear. Many terms which were used absolutely in the beginning of philosophy, such as ‘Being,’ ‘matter,’ ‘cause,’ and the like, became relative in the subsequent history of thought. But Hegel employs some of them absolutely, some relatively, seemingly without any principle and without any regard to their original significance.

The divisions of the Hegelian logic bear a superficial resemblance to the divisions of the scholastic logic. The first part answers to the term, the second to the proposition, the third to the syllogism. These are the grades of thought under which we conceive the world, first, in the general terms of quality, quantity, measure; secondly, under the relative forms of ‘ground’ and existence, substance and accidents,

and the like; thirdly in syllogistic forms of the individual mediated with the universal by the help of the particular. Of syllogisms there are various kinds, — qualitative, quantitative, inductive, mechanical, teleological, — which are developed out of one another. But is there any meaning in reintroducing the forms of the old logic? Who ever thinks of the world as a syllogism? What connexion is there between the proposition and our ideas of reciprocity, cause and effect, and similar relations? It is difficult enough to conceive all the powers of nature and mind gathered up in one. The difficulty is greatly increased when the new is confused with the old, and the common logic is the Procrustes' bed into which they are forced.

The Hegelian philosophy claims, as we have seen, to be based upon experience: it abrogates the distinction of a priori and a posteriori truth. It also acknowledges that many differences of kind are resolvable into differences of degree. It is familiar with the terms 'evolution,' 'development,' and the like. Yet it can hardly be said to have considered the forms of thought which are best adapted for the expression of facts. It has never applied the categories to experience; it has not defined the differences in our ideas of opposition, or development, or cause and effect, in the different sciences which make use of these terms. It rests on a knowledge which is not the result of exact or serious enquiry, but is floating in the air; the mind has been imperceptibly informed of some of the methods required in the sciences. Hegel boasts that the movement of dialectic is at once necessary and spontaneous: in reality it goes beyond experience and is unverified by it. Further, the Hegelian philosophy, while giving us the power of thinking a great deal more than we are able to fill up, seems to be wanting in some determinations of thought which we require. We cannot say that physical science, which at present occupies so large a share of popular attention, has been made easier or more intelligible by the distinctions of Hegel. Nor can we deny that he has sometimes interpreted physics by metaphysics, and confused his own philosophical fancies with the laws of nature. The very freedom of the movement is not without suspicion, seeming to imply a state of the human mind which has entirely lost sight of facts. Nor can the necessity which is attributed to it be very stringent, seeing that the successive categories or determinations of thought in

different parts of his writings are arranged by the philosopher in different ways. What is termed necessary evolution seems to be only the order in which a succession of ideas presented themselves to the mind of Hegel at a particular time.

The nomenclature of Hegel has been made by himself out of the language of common life. He uses a few words only which are borrowed from his predecessors, or from the Greek philosophy, and these generally in a sense peculiar to himself. The first stage of his philosophy answers to the word 'is,' the second to the word 'has been,' the third to the words 'has been' and 'is' combined. In other words, the first sphere is immediate, the second mediated by reflection, the third or highest returns into the first, and is both mediate and immediate. As Luther's Bible was written in the language of the common people, so Hegel seems to have thought that he gave his philosophy a truly German character by the use of idiomatic German words. But it may be doubted whether the attempt has been successful. First because such words as 'in sich seyn,' 'an sich seyn,' 'an und fur sich seyn,' though the simplest combinations of nouns and verbs, require a difficult and elaborate explanation. The simplicity of the words contrasts with the hardness of their meaning. Secondly, the use of technical phraseology necessarily separates philosophy from general literature; the student has to learn a new language of uncertain meaning which he with difficulty remembers. No former philosopher had ever carried the use of technical terms to the same extent as Hegel. The language of Plato or even of Aristotle is but slightly removed from that of common life, and was introduced naturally by a series of thinkers: the language of the scholastic logic has become technical to us, but in the Middle Ages was the vernacular Latin of priests and students. The higher spirit of philosophy, the spirit of Plato and Socrates, rebels against the Hegelian use of language as mechanical and technical.

Hegel is fond of etymologies and often seems to trifle with words. He gives etymologies which are bad, and never considers that the meaning of a word may have nothing to do with its derivation. He lived before the days of Comparative Philology or of Comparative Mythology and Religion, which would have opened a new world to him. He makes no allowance for the element of chance either in

language or thought; and perhaps there is no greater defect in his system than the want of a sound theory of language. He speaks as if thought, instead of being identical with language, was wholly independent of it. It is not the actual growth of the mind, but the imaginary growth of the Hegelian system, which is attractive to him. Neither are we able to say why of the common forms of thought some are rejected by him, while others have an undue prominence given to them. Some of them, such as 'ground' and 'existence,' have hardly any basis either in language or philosophy, while others, such as 'cause' and 'effect,' are but slightly considered. All abstractions are supposed by Hegel to derive their meaning from one another. This is true of some, but not of all, and in different degrees. There is an explanation of abstractions by the phenomena which they represent, as well as by their relation to other abstractions. If the knowledge of all were necessary to the knowledge of any one of them, the mind would sink under the load of thought. Again, in every process of reflection we seem to require a standing ground, and in the attempt to obtain a complete analysis we lose all fixedness. If, for example, the mind is viewed as the complex of ideas, or the difference between things and persons denied, such an analysis may be justified from the point of view of Hegel: but we shall find that in the attempt to criticize thought we have lost the power of thinking, and, like the Heracliteans of old, have no words in which our meaning can be expressed. Such an analysis may be of value as a corrective of popular language or thought, but should still allow us to retain the fundamental distinctions of philosophy.

In the Hegelian system ideas supersede persons. The world of thought, though sometimes described as Spirit or 'Geist,' is really impersonal. The minds of men are to be regarded as one mind, or more correctly as a succession of ideas. Any comprehensive view of the world must necessarily be general, and there may be a use with a view to comprehensiveness in dropping individuals and their lives and actions. In all things, if we leave out details, a certain degree of order begins to appear; at any rate we can make an order which, with a little exaggeration or disproportion in some of the parts, will cover the whole field of philosophy. But are we therefore justified in saying that ideas are the causes of the great movement of the world rather

than the personalities which conceived them? The great man is the expression of his time, and there may be peculiar difficulties in his age which he cannot overcome. He may be out of harmony with his circumstances, too early or too late, and then all his thoughts perish; his genius passes away unknown. But not therefore is he to be regarded as a mere waif or stray in human history, any more than he is the mere creature or expression of the age in which he lives. His ideas are inseparable from himself, and would have been nothing without him. Through a thousand personal influences they have been brought home to the minds of others. He starts from antecedents, but he is great in proportion as he disengages himself from them or absorbs himself in them. Moreover the types of greatness differ; while one man is the expression of the influences of his age, another is in antagonism to them. One man is borne on the surface of the water; another is carried forward by the current which flows beneath. The character of an individual, whether he be independent of circumstances or not, inspires others quite as much as his words. What is the teaching of Socrates apart from his personal history, or the doctrines of Christ apart from the Divine life in which they are embodied? Has not Hegel himself delineated the greatness of the life of Christ as consisting in his 'Schicksalslosigkeit' or independence of the destiny of his race? Do not persons become ideas, and is there any distinction between them? Take away the five greatest legislators, the five greatest warriors, the five greatest poets, the five greatest founders or teachers of a religion, the five greatest philosophers, the five greatest inventors, — where would have been all that we most value in knowledge or in life? And can that be a true theory of the history of philosophy which, in Hegel's own language, 'does not allow the individual to have his right'?

Once more, while we readily admit that the world is relative to the mind, and the mind to the world, and that we must suppose a common or correlative growth in them, we shrink from saying that this complex nature can contain, even in outline, all the endless forms of Being and knowledge. Are we not 'seeking the living among the dead' and dignifying a mere logical skeleton with the name of philosophy and almost of God? When we look far away into the primeval sources of thought and belief, do we suppose that the

mere accident of our being the heirs of the Greek philosophers can give us a right to set ourselves up as having the true and only standard of reason in the world? Or when we contemplate the infinite worlds in the expanse of heaven can we imagine that a few meagre categories derived from language and invented by the genius of one or two great thinkers contain the secret of the universe? Or, having regard to the ages during which the human race may yet endure, do we suppose that we can anticipate the proportions human knowledge may attain even within the short space of one or two thousand years? Again, we have a difficulty in understanding how ideas can be causes, which to us seems to be as much a figure of speech as the old notion of a creator artist, 'who makes the world by the help of the demigods' (Plato, *Tim.*), or with 'a golden pair of compasses' measures out the circumference of the universe (Milton, *P.L.*). We can understand how the idea in the mind of an inventor is the cause of the work which is produced by it; and we can dimly imagine how this universal frame may be animated by a divine intelligence. But we cannot conceive how all the thoughts of men that ever were, which are themselves subject to so many external conditions of climate, country, and the like, even if regarded as the single thought of a Divine Being, can be supposed to have made the world. We appear to be only wrapping up ourselves in our own conceits — to be confusing cause and effect — to be losing the distinction between reflection and action, between the human and divine.

These are some of the doubts and suspicions which arise in the mind of a student of Hegel, when, after living for a time within the charmed circle, he removes to a little distance and looks back upon what he has learnt, from the vantage-ground of history and experience. The enthusiasm of his youth has passed away, the authority of the master no longer retains a hold upon him. But he does not regret the time spent in the study of him. He finds that he has received from him a real enlargement of mind, and much of the true spirit of philosophy, even when he has ceased to believe in him. He returns again and again to his writings as to the recollections of a first love, not undeserving of his admiration still. Perhaps if he were asked how he can admire without believing, or what value he can attribute to what he knows to be erroneous, he might answer in some

such manner as the following: —

1. That in Hegel he finds glimpses of the genius of the poet and of the common sense of the man of the world. His system is not cast in a poetic form, but neither has all this load of logic extinguished in him the feeling of poetry. He is the true countryman of his contemporaries Goethe and Schiller. Many fine expressions are scattered up and down in his writings, as when he tells us that ‘the Crusaders went to the Sepulchre but found it empty.’ He delights to find vestiges of his own philosophy in the older German mystics. And though he can be scarcely said to have mixed much in the affairs of men, for, as his biographer tells us, ‘he lived for thirty years in a single room,’ yet he is far from being ignorant of the world. No one can read his writings without acquiring an insight into life. He loves to touch with the spear of logic the follies and self-deceptions of mankind, and make them appear in their natural form, stripped of the disguises of language and custom. He will not allow men to defend themselves by an appeal to one-sided or abstract principles. In this age of reason any one can too easily find a reason for doing what he likes (Wallace). He is suspicious of a distinction which is often made between a person’s character and his conduct. His spirit is the opposite of that of Jesuitism or casuistry (Wallace). He affords an example of a remark which has been often made, that in order to know the world it is not necessary to have had a great experience of it.

2. Hegel, if not the greatest philosopher, is certainly the greatest critic of philosophy who ever lived. No one else has equally mastered the opinions of his predecessors or traced the connexion of them in the same manner. No one has equally raised the human mind above the trivialities of the common logic and the unmeaningness of ‘mere’ abstractions, and above imaginary possibilities, which, as he truly says, have no place in philosophy. No one has won so much for the kingdom of ideas. Whatever may be thought of his own system it will hardly be denied that he has overthrown Locke, Kant, Hume, and the so-called philosophy of common sense. He shows us that only by the study of metaphysics can we get rid of metaphysics, and that those who are in theory most opposed to them are in fact most entirely and hopelessly enslaved by them: ‘Die reinen Physiker sind

nur die Thiere.' The disciple of Hegel will hardly become the slave of any other system-maker. What Bacon seems to promise him he will find realized in the great German thinker, an emancipation nearly complete from the influences of the scholastic logic.

3. Many of those who are least disposed to become the votaries of Hegelianism nevertheless recognize in his system a new logic supplying a variety of instruments and methods hitherto unemployed. We may not be able to agree with him in assimilating the natural order of human thought with the history of philosophy, and still less in identifying both with the divine idea or nature. But we may acknowledge that the great thinker has thrown a light on many parts of human knowledge, and has solved many difficulties. We cannot receive his doctrine of opposites as the last word of philosophy, but still we may regard it as a very important contribution to logic. We cannot affirm that words have no meaning when taken out of their connexion in the history of thought. But we recognize that their meaning is to a great extent due to association, and to their correlation with one another. We see the advantage of viewing in the concrete what mankind regard only in the abstract. There is much to be said for his faith or conviction, that God is immanent in the world, — within the sphere of the human mind, and not beyond it. It was natural that he himself, like a prophet of old, should regard the philosophy which he had invented as the voice of God in man. But this by no means implies that he conceived himself as creating God in thought. He was the servant of his own ideas and not the master of them. The philosophy of history and the history of philosophy may be almost said to have been discovered by him. He has done more to explain Greek thought than all other writers put together. Many ideas of development, evolution, reciprocity, which have become the symbols of another school of thinkers may be traced to his speculations. In the theology and philosophy of England as well as of Germany, and also in the lighter literature of both countries, there are always appearing 'fragments of the great banquet' of Hegel.

SOPHIST.

PERSONS OF THE DIALOGUE:

Theodorus, Theaetetus, Socrates. An Eleatic Stranger, whom Theodorus and Theaetetus bring with them. The younger Socrates, who is a silent auditor.

THEODORUS: Here we are, Socrates, true to our agreement of yesterday; and we bring with us a stranger from Elea, who is a disciple of Parmenides and Zeno, and a true philosopher.

SOCRATES: Is he not rather a god, Theodorus, who comes to us in the disguise of a stranger? For Homer says that all the gods, and especially the god of strangers, are companions of the meek and just, and visit the good and evil among men. And may not your companion be one of those higher powers, a cross-examining deity, who has come to spy out our weakness in argument, and to cross-examine us?

THEODORUS: Nay, Socrates, he is not one of the disputatious sort — he is too good for that. And, in my opinion, he is not a god at all; but divine he certainly is, for this is a title which I should give to all philosophers.

SOCRATES: Capital, my friend! and I may add that they are almost as hard to be discerned as the gods. For the true philosophers, and such as are not merely made up for the occasion, appear in various forms unrecognized by the ignorance of men, and they ‘hover about cities,’ as Homer declares, looking from above upon human life; and some think nothing of them, and others can never think enough; and sometimes they appear as statesmen, and sometimes as sophists; and then, again, to many they seem to be no better than madmen. I should like to ask our Eleatic friend, if he would tell us, what is thought about them in Italy, and to whom the terms are applied.

THEODORUS: What terms?

SOCRATES: Sophist, statesman, philosopher.

THEODORUS: What is your difficulty about them, and what made you ask?

SOCRATES: I want to know whether by his countrymen they are regarded as one or two; or do they, as the names are three, distinguish also three kinds, and assign one to each name?

THEODORUS: I dare say that the Stranger will not object to discuss the question. What do you say, Stranger?

STRANGER: I am far from objecting, Theodorus, nor have I any difficulty in replying that by us they are regarded as three. But to define precisely the nature of each of them is by no means a slight or easy task.

THEODORUS: You have happened to light, Socrates, almost on the very question which we were asking our friend before we came hither, and he excused himself to us, as he does now to you; although he admitted that the matter had been fully discussed, and that he remembered the answer.

SOCRATES: Then do not, Stranger, deny us the first favour which we ask of you: I am sure that you will not, and therefore I shall only beg of you to say whether you like and are accustomed to make a long oration on a subject which you want to explain to another, or to proceed by the method of question and answer. I remember hearing a very noble discussion in which Parmenides employed the latter of the two methods, when I was a young man, and he was far advanced in years. (Compare Parm.)

STRANGER: I prefer to talk with another when he responds pleasantly, and is light in hand; if not, I would rather have my own say.

SOCRATES: Any one of the present company will respond kindly to you, and you can choose whom you like of them; I should recommend you to take a young person — Theaetetus, for example — unless you have a preference for some one else.

STRANGER: I feel ashamed, Socrates, being a new-comer into your

society, instead of talking a little and hearing others talk, to be spinning out a long soliloquy or address, as if I wanted to show off. For the true answer will certainly be a very long one, a great deal longer than might be expected from such a short and simple question. At the same time, I fear that I may seem rude and ungracious if I refuse your courteous request, especially after what you have said. For I certainly cannot object to your proposal, that Theaetetus should respond, having already conversed with him myself, and being recommended by you to take him.

THEAETETUS: But are you sure, Stranger, that this will be quite so acceptable to the rest of the company as Socrates imagines?

STRANGER: You hear them applauding, Theaetetus; after that, there is nothing more to be said. Well then, I am to argue with you, and if you tire of the argument, you may complain of your friends and not of me.

THEAETETUS: I do not think that I shall tire, and if I do, I shall get my friend here, young Socrates, the namesake of the elder Socrates, to help; he is about my own age, and my partner at the gymnasium, and is constantly accustomed to work with me.

STRANGER: Very good; you can decide about that for yourself as we proceed. Meanwhile you and I will begin together and enquire into the nature of the Sophist, first of the three: I should like you to make out what he is and bring him to light in a discussion; for at present we are only agreed about the name, but of the thing to which we both apply the name possibly you have one notion and I another; whereas we ought always to come to an understanding about the thing itself in terms of a definition, and not merely about the name minus the definition. Now the tribe of Sophists which we are investigating is not easily caught or defined; and the world has long ago agreed, that if great subjects are to be adequately treated, they must be studied in the lesser and easier instances of them before we proceed to the greatest of all. And as I know that the tribe of Sophists is troublesome and hard to be caught, I should recommend that we practise beforehand the method which is to be applied to him on

some simple and smaller thing, unless you can suggest a better way.

THEAETETUS: Indeed I cannot.

STRANGER: Then suppose that we work out some lesser example which will be a pattern of the greater?

THEAETETUS: Good.

STRANGER: What is there which is well known and not great, and is yet as susceptible of definition as any larger thing? Shall I say an angler? He is familiar to all of us, and not a very interesting or important person.

THEAETETUS: He is not.

STRANGER: Yet I suspect that he will furnish us with the sort of definition and line of enquiry which we want.

THEAETETUS: Very good.

STRANGER: Let us begin by asking whether he is a man having art or not having art, but some other power.

THEAETETUS: He is clearly a man of art.

STRANGER: And of arts there are two kinds?

THEAETETUS: What are they?

STRANGER: There is agriculture, and the tending of mortal creatures, and the art of constructing or moulding vessels, and there is the art of imitation — all these may be appropriately called by a single name.

THEAETETUS: What do you mean? And what is the name?

STRANGER: He who brings into existence something that did not exist before is said to be a producer, and that which is brought into existence is said to be produced.

THEAETETUS: True.

STRANGER: And all the arts which were just now mentioned are characterized by this power of producing?

THEAETETUS: They are.

STRANGER: Then let us sum them up under the name of productive or creative art.

THEAETETUS: Very good.

STRANGER: Next follows the whole class of learning and cognition; then comes trade, fighting, hunting. And since none of these produces anything, but is only engaged in conquering by word or deed, or in preventing others from conquering, things which exist and have been already produced — in each and all of these branches there appears to be an art which may be called acquisitive.

THEAETETUS: Yes, that is the proper name.

STRANGER: Seeing, then, that all arts are either acquisitive or creative, in which class shall we place the art of the angler?

THEAETETUS: Clearly in the acquisitive class.

STRANGER: And the acquisitive may be subdivided into two parts: there is exchange, which is voluntary and is effected by gifts, hire, purchase; and the other part of acquisitive, which takes by force of word or deed, may be termed conquest?

THEAETETUS: That is implied in what has been said.

STRANGER: And may not conquest be again subdivided?

THEAETETUS: How?

STRANGER: Open force may be called fighting, and secret force may have the general name of hunting?

THEAETETUS: Yes.

STRANGER: And there is no reason why the art of hunting should not be further divided.

THEAETETUS: How would you make the division?

STRANGER: Into the hunting of living and of lifeless prey.

THEAETETUS: Yes, if both kinds exist.

STRANGER: Of course they exist; but the hunting after lifeless things having no special name, except some sorts of diving, and other small matters, may be omitted; the hunting after living things may be called animal hunting.

THEAETETUS: Yes.

STRANGER: And animal hunting may be truly said to have two divisions, land-animal hunting, which has many kinds and names, and water-animal hunting, or the hunting after animals who swim?

THEAETETUS: True.

STRANGER: And of swimming animals, one class lives on the wing and the other in the water?

THEAETETUS: Certainly.

STRANGER: Fowling is the general term under which the hunting of all birds is included.

THEAETETUS: True.

STRANGER: The hunting of animals who live in the water has the general name of fishing.

THEAETETUS: Yes.

STRANGER: And this sort of hunting may be further divided also into two principal kinds?

THEAETETUS: What are they?

STRANGER: There is one kind which takes them in nets, another which takes them by a blow.

THEAETETUS: What do you mean, and how do you distinguish

them?

STRANGER: As to the first kind — all that surrounds and encloses anything to prevent egress, may be rightly called an enclosure.

THEAETETUS: Very true.

STRANGER: For which reason twig baskets, casting-nets, nooses, creels, and the like may all be termed ‘enclosures’?

THEAETETUS: True.

STRANGER: And therefore this first kind of capture may be called by us capture with enclosures, or something of that sort?

THEAETETUS: Yes.

STRANGER: The other kind, which is practised by a blow with hooks and three-pronged spears, when summed up under one name, may be called striking, unless you, Theaetetus, can find some better name?

THEAETETUS: Never mind the name — what you suggest will do very well.

STRANGER: There is one mode of striking, which is done at night, and by the light of a fire, and is by the hunters themselves called firing, or spearing by firelight.

THEAETETUS: True.

STRANGER: And the fishing by day is called by the general name of barbing, because the spears, too, are barbed at the point.

THEAETETUS: Yes, that is the term.

STRANGER: Of this barb-fishing, that which strikes the fish who is below from above is called spearing, because this is the way in which the three-pronged spears are mostly used.

THEAETETUS: Yes, it is often called so.

STRANGER: Then now there is only one kind remaining.

THEAETETUS: What is that?

STRANGER: When a hook is used, and the fish is not struck in any chance part of his body, as he is with the spear, but only about the head and mouth, and is then drawn out from below upwards with reeds and rods: — What is the right name of that mode of fishing, Theaetetus?

THEAETETUS: I suspect that we have now discovered the object of our search.

STRANGER: Then now you and I have come to an understanding not only about the name of the angler's art, but about the definition of the thing itself. One half of all art was acquisitive — half of the acquisitive art was conquest or taking by force, half of this was hunting, and half of hunting was hunting animals, half of this was hunting water animals — of this again, the under half was fishing, half of fishing was striking; a part of striking was fishing with a barb, and one half of this again, being the kind which strikes with a hook and draws the fish from below upwards, is the art which we have been seeking, and which from the nature of the operation is denoted angling or drawing up (*aspalieutike*, *anaspasthai*).

THEAETETUS: The result has been quite satisfactorily brought out.

STRANGER: And now, following this pattern, let us endeavour to find out what a Sophist is.

THEAETETUS: By all means.

STRANGER: The first question about the angler was, whether he was a skilled artist or unskilled?

THEAETETUS: True.

STRANGER: And shall we call our new friend unskilled, or a thorough master of his craft?

THEAETETUS: Certainly not unskilled, for his name, as, indeed,

you imply, must surely express his nature.

STRANGER: Then he must be supposed to have some art.

THEAETETUS: What art?

STRANGER: By heaven, they are cousins! it never occurred to us.

THEAETETUS: Who are cousins?

STRANGER: The angler and the Sophist.

THEAETETUS: In what way are they related?

STRANGER: They both appear to me to be hunters.

THEAETETUS: How the Sophist? Of the other we have spoken.

STRANGER: You remember our division of hunting, into hunting after swimming animals and land animals?

THEAETETUS: Yes.

STRANGER: And you remember that we subdivided the swimming and left the land animals, saying that there were many kinds of them?

THEAETETUS: Certainly.

STRANGER: Thus far, then, the Sophist and the angler, starting from the art of acquiring, take the same road?

THEAETETUS: So it would appear.

STRANGER: Their paths diverge when they reach the art of animal hunting; the one going to the sea-shore, and to the rivers and to the lakes, and angling for the animals which are in them.

THEAETETUS: Very true.

STRANGER: While the other goes to land and water of another sort — rivers of wealth and broad meadow-lands of generous youth; and he also is intending to take the animals which are in them.

THEAETETUS: What do you mean?

STRANGER: Of hunting on land there are two principal divisions.

THEAETETUS: What are they?

STRANGER: One is the hunting of tame, and the other of wild animals.

THEAETETUS: But are tame animals ever hunted?

STRANGER: Yes, if you include man under tame animals. But if you like you may say that there are no tame animals, or that, if there are, man is not among them; or you may say that man is a tame animal but is not hunted — you shall decide which of these alternatives you prefer.

THEAETETUS: I should say, Stranger, that man is a tame animal, and I admit that he is hunted.

STRANGER: Then let us divide the hunting of tame animals into two parts.

THEAETETUS: How shall we make the division?

STRANGER: Let us define piracy, man-stealing, tyranny, the whole military art, by one name, as hunting with violence.

THEAETETUS: Very good.

STRANGER: But the art of the lawyer, of the popular orator, and the art of conversation may be called in one word the art of persuasion.

THEAETETUS: True.

STRANGER: And of persuasion, there may be said to be two kinds?

THEAETETUS: What are they?

STRANGER: One is private, and the other public.

THEAETETUS: Yes; each of them forms a class.

STRANGER: And of private hunting, one sort receives hire, and the other brings gifts.

THEAETETUS: I do not understand you.

STRANGER: You seem never to have observed the manner in which lovers hunt.

THEAETETUS: To what do you refer?

STRANGER: I mean that they lavish gifts on those whom they hunt in addition to other inducements.

THEAETETUS: Most true.

STRANGER: Let us admit this, then, to be the amatory art.

THEAETETUS: Certainly.

STRANGER: But that sort of hireling whose conversation is pleasing and who baits his hook only with pleasure and exacts nothing but his maintenance in return, we should all, if I am not mistaken, describe as possessing flattery or an art of making things pleasant.

THEAETETUS: Certainly.

STRANGER: And that sort, which professes to form acquaintances only for the sake of virtue, and demands a reward in the shape of money, may be fairly called by another name?

THEAETETUS: To be sure.

STRANGER: And what is the name? Will you tell me?

THEAETETUS: It is obvious enough; for I believe that we have discovered the Sophist: which is, as I conceive, the proper name for the class described.

STRANGER: Then now, Theaetetus, his art may be traced as a branch of the appropriative, acquisitive family — which hunts animals, — living — land — tame animals; which hunts man, —

privately — for hire, — taking money in exchange — having the semblance of education; and this is termed Sophistry, and is a hunt after young men of wealth and rank — such is the conclusion.

THEAETETUS: Just so.

STRANGER: Let us take another branch of his genealogy; for he is a professor of a great and many-sided art; and if we look back at what has preceded we see that he presents another aspect, besides that of which we are speaking.

THEAETETUS: In what respect?

STRANGER: There were two sorts of acquisitive art; the one concerned with hunting, the other with exchange.

THEAETETUS: There were.

STRANGER: And of the art of exchange there are two divisions, the one of giving, and the other of selling.

THEAETETUS: Let us assume that.

STRANGER: Next, we will suppose the art of selling to be divided into two parts.

THEAETETUS: How?

STRANGER: There is one part which is distinguished as the sale of a man's own productions; another, which is the exchange of the works of others.

THEAETETUS: Certainly.

STRANGER: And is not that part of exchange which takes place in the city, being about half of the whole, termed retailing?

THEAETETUS: Yes.

STRANGER: And that which exchanges the goods of one city for those of another by selling and buying is the exchange of the merchant?

THEAETETUS: To be sure.

STRANGER: And you are aware that this exchange of the merchant is of two kinds: it is partly concerned with food for the use of the body, and partly with the food of the soul which is bartered and received in exchange for money.

THEAETETUS: What do you mean?

STRANGER: You want to know what is the meaning of food for the soul; the other kind you surely understand.

THEAETETUS: Yes.

STRANGER: Take music in general and painting and marionette playing and many other things, which are purchased in one city, and carried away and sold in another — wares of the soul which are hawked about either for the sake of instruction or amusement; — may not he who takes them about and sells them be quite as truly called a merchant as he who sells meats and drinks?

THEAETETUS: To be sure he may.

STRANGER: And would you not call by the same name him who buys up knowledge and goes about from city to city exchanging his wares for money?

THEAETETUS: Certainly I should.

STRANGER: Of this merchandise of the soul, may not one part be fairly termed the art of display? And there is another part which is certainly not less ridiculous, but being a trade in learning must be called by some name germane to the matter?

THEAETETUS: Certainly.

STRANGER: The latter should have two names, — one descriptive of the sale of the knowledge of virtue, and the other of the sale of other kinds of knowledge.

THEAETETUS: Of course.

STRANGER: The name of art-seller corresponds well enough to the latter; but you must try and tell me the name of the other.

THEAETETUS: He must be the Sophist, whom we are seeking; no other name can possibly be right.

STRANGER: No other; and so this trader in virtue again turns out to be our friend the Sophist, whose art may now be traced from the art of acquisition through exchange, trade, merchandise, to a merchandise of the soul which is concerned with speech and the knowledge of virtue.

THEAETETUS: Quite true.

STRANGER: And there may be a third reappearance of him; — for he may have settled down in a city, and may fabricate as well as buy these same wares, intending to live by selling them, and he would still be called a Sophist?

THEAETETUS: Certainly.

STRANGER: Then that part of the acquisitive art which exchanges, and of exchange which either sells a man's own productions or retails those of others, as the case may be, and in either way sells the knowledge of virtue, you would again term Sophistry?

THEAETETUS: I must, if I am to keep pace with the argument.

STRANGER: Let us consider once more whether there may not be yet another aspect of sophistry.

THEAETETUS: What is it?

STRANGER: In the acquisitive there was a subdivision of the combative or fighting art.

THEAETETUS: There was.

STRANGER: Perhaps we had better divide it.

THEAETETUS: What shall be the divisions?

STRANGER: There shall be one division of the competitive, and another of the pugnacious.

THEAETETUS: Very good.

STRANGER: That part of the pugnacious which is a contest of bodily strength may be properly called by some such name as violent.

THEAETETUS: True.

STRANGER: And when the war is one of words, it may be termed controversy?

THEAETETUS: Yes.

STRANGER: And controversy may be of two kinds.

THEAETETUS: What are they?

STRANGER: When long speeches are answered by long speeches, and there is public discussion about the just and unjust, that is forensic controversy.

THEAETETUS: Yes.

STRANGER: And there is a private sort of controversy, which is cut up into questions and answers, and this is commonly called disputation?

THEAETETUS: Yes, that is the name.

STRANGER: And of disputation, that sort which is only a discussion about contracts, and is carried on at random, and without rules of art, is recognized by the reasoning faculty to be a distinct class, but has hitherto had no distinctive name, and does not deserve to receive one from us.

THEAETETUS: No; for the different sorts of it are too minute and heterogeneous.

STRANGER: But that which proceeds by rules of art to dispute

about justice and injustice in their own nature, and about things in general, we have been accustomed to call argumentation (Eristic)?

THEAETETUS: Certainly.

STRANGER: And of argumentation, one sort wastes money, and the other makes money.

THEAETETUS: Very true.

STRANGER: Suppose we try and give to each of these two classes a name.

THEAETETUS: Let us do so.

STRANGER: I should say that the habit which leads a man to neglect his own affairs for the pleasure of conversation, of which the style is far from being agreeable to the majority of his hearers, may be fairly termed loquacity: such is my opinion.

THEAETETUS: That is the common name for it.

STRANGER: But now who the other is, who makes money out of private disputation, it is your turn to say.

THEAETETUS: There is only one true answer: he is the wonderful Sophist, of whom we are in pursuit, and who reappears again for the fourth time.

STRANGER: Yes, and with a fresh pedigree, for he is the money-making species of the Eristic, disputatious, controversial, pugnacious, combative, acquisitive family, as the argument has already proven.

THEAETETUS: Certainly.

STRANGER: How true was the observation that he was a many-sided animal, and not to be caught with one hand, as they say!

THEAETETUS: Then you must catch him with two.

STRANGER: Yes, we must, if we can. And therefore let us try

another track in our pursuit of him: You are aware that there are certain menial occupations which have names among servants?

THEAETETUS: Yes, there are many such; which of them do you mean?

STRANGER: I mean such as sifting, straining, winnowing, threshing.

THEAETETUS: Certainly.

STRANGER: And besides these there are a great many more, such as carding, spinning, adjusting the warp and the woof; and thousands of similar expressions are used in the arts.

THEAETETUS: Of what are they to be patterns, and what are we going to do with them all?

STRANGER: I think that in all of these there is implied a notion of division.

THEAETETUS: Yes.

STRANGER: Then if, as I was saying, there is one art which includes all of them, ought not that art to have one name?

THEAETETUS: And what is the name of the art?

STRANGER: The art of discerning or discriminating.

THEAETETUS: Very good.

STRANGER: Think whether you cannot divide this.

THEAETETUS: I should have to think a long while.

STRANGER: In all the previously named processes either like has been separated from like or the better from the worse.

THEAETETUS: I see now what you mean.

STRANGER: There is no name for the first kind of separation; of the second, which throws away the worse and preserves the better, I do

know a name.

THEAETETUS: What is it?

STRANGER: Every discernment or discrimination of that kind, as I have observed, is called a purification.

THEAETETUS: Yes, that is the usual expression.

STRANGER: And any one may see that purification is of two kinds.

THEAETETUS: Perhaps so, if he were allowed time to think; but I do not see at this moment.

STRANGER: There are many purifications of bodies which may with propriety be comprehended under a single name.

THEAETETUS: What are they, and what is their name?

STRANGER: There is the purification of living bodies in their inward and in their outward parts, of which the former is duly effected by medicine and gymnastic, the latter by the not very dignified art of the bath-man; and there is the purification of inanimate substances — to this the arts of fulling and of furbishing in general attend in a number of minute particulars, having a variety of names which are thought ridiculous.

THEAETETUS: Very true.

STRANGER: There can be no doubt that they are thought ridiculous, Theaetetus; but then the dialectical art never considers whether the benefit to be derived from the purge is greater or less than that to be derived from the sponge, and has not more interest in the one than in the other; her endeavour is to know what is and is not kindred in all arts, with a view to the acquisition of intelligence; and having this in view, she honours them all alike, and when she makes comparisons, she counts one of them not a whit more ridiculous than another; nor does she esteem him who adduces as his example of hunting, the general's art, at all more decorous than another who cites that of the vermin-destroyer, but only as the greater pretender of the two. And

as to your question concerning the name which was to comprehend all these arts of purification, whether of animate or inanimate bodies, the art of dialectic is in no wise particular about fine words, if she may be only allowed to have a general name for all other purifications, binding them up together and separating them off from the purification of the soul or intellect. For this is the purification at which she wants to arrive, and this we should understand to be her aim.

THEAETETUS: Yes, I understand; and I agree that there are two sorts of purification, and that one of them is concerned with the soul, and that there is another which is concerned with the body.

STRANGER: Excellent; and now listen to what I am going to say, and try to divide further the first of the two.

THEAETETUS: Whatever line of division you suggest, I will endeavour to assist you.

STRANGER: Do we admit that virtue is distinct from vice in the soul?

THEAETETUS: Certainly.

STRANGER: And purification was to leave the good and to cast out whatever is bad?

THEAETETUS: True.

STRANGER: Then any taking away of evil from the soul may be properly called purification?

THEAETETUS: Yes.

STRANGER: And in the soul there are two kinds of evil.

THEAETETUS: What are they?

STRANGER: The one may be compared to disease in the body, the other to deformity.

THEAETETUS: I do not understand.

STRANGER: Perhaps you have never reflected that disease and discord are the same.

THEAETETUS: To this, again, I know not what I should reply.

STRANGER: Do you not conceive discord to be a dissolution of kindred elements, originating in some disagreement?

THEAETETUS: Just that.

STRANGER: And is deformity anything but the want of measure, which is always unsightly?

THEAETETUS: Exactly.

STRANGER: And do we not see that opinion is opposed to desire, pleasure to anger, reason to pain, and that all these elements are opposed to one another in the souls of bad men?

THEAETETUS: Certainly.

STRANGER: And yet they must all be akin?

THEAETETUS: Of course.

STRANGER: Then we shall be right in calling vice a discord and disease of the soul?

THEAETETUS: Most true.

STRANGER: And when things having motion, and aiming at an appointed mark, continually miss their aim and glance aside, shall we say that this is the effect of symmetry among them, or of the want of symmetry?

THEAETETUS: Clearly of the want of symmetry.

STRANGER: But surely we know that no soul is voluntarily ignorant of anything?

THEAETETUS: Certainly not.

STRANGER: And what is ignorance but the aberration of a mind which is bent on truth, and in which the process of understanding is perverted?

THEAETETUS: True.

STRANGER: Then we are to regard an unintelligent soul as deformed and devoid of symmetry?

THEAETETUS: Very true.

STRANGER: Then there are these two kinds of evil in the soul — the one which is generally called vice, and is obviously a disease of the soul...

THEAETETUS: Yes.

STRANGER: And there is the other, which they call ignorance, and which, because existing only in the soul, they will not allow to be vice.

THEAETETUS: I certainly admit what I at first disputed — that there are two kinds of vice in the soul, and that we ought to consider cowardice, intemperance, and injustice to be alike forms of disease in the soul, and ignorance, of which there are all sorts of varieties, to be deformity.

STRANGER: And in the case of the body are there not two arts which have to do with the two bodily states?

THEAETETUS: What are they?

STRANGER: There is gymnastic, which has to do with deformity, and medicine, which has to do with disease.

THEAETETUS: True.

STRANGER: And where there is insolence and injustice and cowardice, is not chastisement the art which is most required?

THEAETETUS: That certainly appears to be the opinion of

mankind.

STRANGER: Again, of the various kinds of ignorance, may not instruction be rightly said to be the remedy?

THEAETETUS: True.

STRANGER: And of the art of instruction, shall we say that there is one or many kinds? At any rate there are two principal ones. Think.

THEAETETUS: I will.

STRANGER: I believe that I can see how we shall soonest arrive at the answer to this question.

THEAETETUS: How?

STRANGER: If we can discover a line which divides ignorance into two halves. For a division of ignorance into two parts will certainly imply that the art of instruction is also twofold, answering to the two divisions of ignorance.

THEAETETUS: Well, and do you see what you are looking for?

STRANGER: I do seem to myself to see one very large and bad sort of ignorance which is quite separate, and may be weighed in the scale against all other sorts of ignorance put together.

THEAETETUS: What is it?

STRANGER: When a person supposes that he knows, and does not know; this appears to be the great source of all the errors of the intellect.

THEAETETUS: True.

STRANGER: And this, if I am not mistaken, is the kind of ignorance which specially earns the title of stupidity.

THEAETETUS: True.

STRANGER: What name, then, shall be given to the sort of

instruction which gets rid of this?

THEAETETUS: The instruction which you mean, Stranger, is, I should imagine, not the teaching of handicraft arts, but what, thanks to us, has been termed education in this part the world.

STRANGER: Yes, Theaetetus, and by nearly all Hellenes. But we have still to consider whether education admits of any further division.

THEAETETUS: We have.

STRANGER: I think that there is a point at which such a division is possible.

THEAETETUS: Where?

STRANGER: Of education, one method appears to be rougher, and another smoother.

THEAETETUS: How are we to distinguish the two?

STRANGER: There is the time-honoured mode which our fathers commonly practised towards their sons, and which is still adopted by many — either of roughly reproofing their errors, or of gently advising them; which varieties may be correctly included under the general term of admonition.

THEAETETUS: True.

STRANGER: But whereas some appear to have arrived at the conclusion that all ignorance is involuntary, and that no one who thinks himself wise is willing to learn any of those things in which he is conscious of his own cleverness, and that the admonitory sort of instruction gives much trouble and does little good —

THEAETETUS: There they are quite right.

STRANGER: Accordingly, they set to work to eradicate the spirit of conceit in another way.

THEAETETUS: In what way?

STRANGER: They cross-examine a man's words, when he thinks that he is saying something and is really saying nothing, and easily convict him of inconsistencies in his opinions; these they then collect by the dialectical process, and placing them side by side, show that they contradict one another about the same things, in relation to the same things, and in the same respect. He, seeing this, is angry with himself, and grows gentle towards others, and thus is entirely delivered from great prejudices and harsh notions, in a way which is most amusing to the hearer, and produces the most lasting good effect on the person who is the subject of the operation. For as the physician considers that the body will receive no benefit from taking food until the internal obstacles have been removed, so the purifier of the soul is conscious that his patient will receive no benefit from the application of knowledge until he is refuted, and from refutation learns modesty; he must be purged of his prejudices first and made to think that he knows only what he knows, and no more.

THEAETETUS: That is certainly the best and wisest state of mind.

STRANGER: For all these reasons, Theaetetus, we must admit that refutation is the greatest and chiefest of purifications, and he who has not been refuted, though he be the Great King himself, is in an awful state of impurity; he is uninstructed and deformed in those things in which he who would be truly blessed ought to be fairest and purest.

THEAETETUS: Very true.

STRANGER: And who are the ministers of this art? I am afraid to say the Sophists.

THEAETETUS: Why?

STRANGER: Lest we should assign to them too high a prerogative.

THEAETETUS: Yet the Sophist has a certain likeness to our minister of purification.

STRANGER: Yes, the same sort of likeness which a wolf, who is the

fiercest of animals, has to a dog, who is the gentlest. But he who would not be found tripping, ought to be very careful in this matter of comparisons, for they are most slippery things. Nevertheless, let us assume that the Sophists are the men. I say this provisionally, for I think that the line which divides them will be marked enough if proper care is taken.

THEAETETUS: Likely enough.

STRANGER: Let us grant, then, that from the discerning art comes purification, and from purification let there be separated off a part which is concerned with the soul; of this mental purification instruction is a portion, and of instruction education, and of education, that refutation of vain conceit which has been discovered in the present argument; and let this be called by you and me the nobly-descended art of Sophistry.

THEAETETUS: Very well; and yet, considering the number of forms in which he has presented himself, I begin to doubt how I can with any truth or confidence describe the real nature of the Sophist.

STRANGER: You naturally feel perplexed; and yet I think that he must be still more perplexed in his attempt to escape us, for as the proverb says, when every way is blocked, there is no escape; now, then, is the time of all others to set upon him.

THEAETETUS: True.

STRANGER: First let us wait a moment and recover breath, and while we are resting, we may reckon up in how many forms he has appeared. In the first place, he was discovered to be a paid hunter after wealth and youth.

THEAETETUS: Yes.

STRANGER: In the second place, he was a merchant in the goods of the soul.

THEAETETUS: Certainly.

STRANGER: In the third place, he has turned out to be a retailer of the same sort of wares.

THEAETETUS: Yes; and in the fourth place, he himself manufactured the learned wares which he sold.

STRANGER: Quite right; I will try and remember the fifth myself. He belonged to the fighting class, and was further distinguished as a hero of debate, who professed the eristic art.

THEAETETUS: True.

STRANGER: The sixth point was doubtful, and yet we at last agreed that he was a purger of souls, who cleared away notions obstructive to knowledge.

THEAETETUS: Very true.

STRANGER: Do you not see that when the professor of any art has one name and many kinds of knowledge, there must be something wrong? The multiplicity of names which is applied to him shows that the common principle to which all these branches of knowledge are tending, is not understood.

THEAETETUS: I should imagine this to be the case.

STRANGER: At any rate we will understand him, and no indolence shall prevent us. Let us begin again, then, and re-examine some of our statements concerning the Sophist; there was one thing which appeared to me especially characteristic of him.

THEAETETUS: To what are you referring?

STRANGER: We were saying of him, if I am not mistaken, that he was a disputer?

THEAETETUS: We were.

STRANGER: And does he not also teach others the art of disputation?

THEAETETUS: Certainly he does.

STRANGER: And about what does he profess that he teaches men to dispute? To begin at the beginning — Does he make them able to dispute about divine things, which are invisible to men in general?

THEAETETUS: At any rate, he is said to do so.

STRANGER: And what do you say of the visible things in heaven and earth, and the like?

THEAETETUS: Certainly he disputes, and teaches to dispute about them.

STRANGER: Then, again, in private conversation, when any universal assertion is made about generation and essence, we know that such persons are tremendous argufiers, and are able to impart their own skill to others.

THEAETETUS: Undoubtedly.

STRANGER: And do they not profess to make men able to dispute about law and about politics in general?

THEAETETUS: Why, no one would have anything to say to them, if they did not make these professions.

STRANGER: In all and every art, what the craftsman ought to say in answer to any question is written down in a popular form, and he who likes may learn.

THEAETETUS: I suppose that you are referring to the precepts of Protagoras about wrestling and the other arts?

STRANGER: Yes, my friend, and about a good many other things. In a word, is not the art of disputation a power of disputing about all things?

THEAETETUS: Certainly; there does not seem to be much which is left out.

STRANGER: But oh! my dear youth, do you suppose this possible? for perhaps your young eyes may see things which to our duller sight do not appear.

THEAETETUS: To what are you alluding? I do not think that I understand your present question.

STRANGER: I ask whether anybody can understand all things.

THEAETETUS: Happy would mankind be if such a thing were possible!

SOCRATES: But how can any one who is ignorant dispute in a rational manner against him who knows?

THEAETETUS: He cannot.

STRANGER: Then why has the sophistical art such a mysterious power?

THEAETETUS: To what do you refer?

STRANGER: How do the Sophists make young men believe in their supreme and universal wisdom? For if they neither disputed nor were thought to dispute rightly, or being thought to do so were deemed no wiser for their controversial skill, then, to quote your own observation, no one would give them money or be willing to learn their art.

THEAETETUS: They certainly would not.

STRANGER: But they are willing.

THEAETETUS: Yes, they are.

STRANGER: Yes, and the reason, as I should imagine, is that they are supposed to have knowledge of those things about which they dispute?

THEAETETUS: Certainly.

STRANGER: And they dispute about all things?

THEAETETUS: True.

STRANGER: And therefore, to their disciples, they appear to be all-wise?

THEAETETUS: Certainly.

STRANGER: But they are not; for that was shown to be impossible.

THEAETETUS: Impossible, of course.

STRANGER: Then the Sophist has been shown to have a sort of conjectural or apparent knowledge only of all things, which is not the truth?

THEAETETUS: Exactly; no better description of him could be given.

STRANGER: Let us now take an illustration, which will still more clearly explain his nature.

THEAETETUS: What is it?

STRANGER: I will tell you, and you shall answer me, giving your very closest attention. Suppose that a person were to profess, not that he could speak or dispute, but that he knew how to make and do all things, by a single art.

THEAETETUS: All things?

STRANGER: I see that you do not understand the first word that I utter, for you do not understand the meaning of 'all.'

THEAETETUS: No, I do not.

STRANGER: Under all things, I include you and me, and also animals and trees.

THEAETETUS: What do you mean?

STRANGER: Suppose a person to say that he will make you and me, and all creatures.

THEAETETUS: What would he mean by ‘making’? He cannot be a husbandman; — for you said that he is a maker of animals.

STRANGER: Yes; and I say that he is also the maker of the sea, and the earth, and the heavens, and the gods, and of all other things; and, further, that he can make them in no time, and sell them for a few pence.

THEAETETUS: That must be a jest.

STRANGER: And when a man says that he knows all things, and can teach them to another at a small cost, and in a short time, is not that a jest?

THEAETETUS: Certainly.

STRANGER: And is there any more artistic or graceful form of jest than imitation?

THEAETETUS: Certainly not; and imitation is a very comprehensive term, which includes under one class the most diverse sorts of things.

STRANGER: We know, of course, that he who professes by one art to make all things is really a painter, and by the painter’s art makes resemblances of real things which have the same name with them; and he can deceive the less intelligent sort of young children, to whom he shows his pictures at a distance, into the belief that he has the absolute power of making whatever he likes.

THEAETETUS: Certainly.

STRANGER: And may there not be supposed to be an imitative art of reasoning? Is it not possible to enchant the hearts of young men by words poured through their ears, when they are still at a distance from the truth of facts, by exhibiting to them fictitious arguments, and making them think that they are true, and that the speaker is the wisest of men in all things?

THEAETETUS: Yes; why should there not be another such art?

STRANGER: But as time goes on, and their hearers advance in years, and come into closer contact with realities, and have learnt by sad experience to see and feel the truth of things, are not the greater part of them compelled to change many opinions which they formerly entertained, so that the great appears small to them, and the easy difficult, and all their dreamy speculations are overturned by the facts of life?

THEAETETUS: That is my view, as far as I can judge, although, at my age, I may be one of those who see things at a distance only.

STRANGER: And the wish of all of us, who are your friends, is and always will be to bring you as near to the truth as we can without the sad reality. And now I should like you to tell me, whether the Sophist is not visibly a magician and imitator of true being; or are we still disposed to think that he may have a true knowledge of the various matters about which he disputes?

THEAETETUS: But how can he, Stranger? Is there any doubt, after what has been said, that he is to be located in one of the divisions of children's play?

STRANGER: Then we must place him in the class of magicians and mimics.

THEAETETUS: Certainly we must.

STRANGER: And now our business is not to let the animal out, for we have got him in a sort of dialectical net, and there is one thing which he decidedly will not escape.

THEAETETUS: What is that?

STRANGER: The inference that he is a juggler.

THEAETETUS: Precisely my own opinion of him.

STRANGER: Then, clearly, we ought as soon as possible to divide the image-making art, and go down into the net, and, if the Sophist does not run away from us, to seize him according to orders and

deliver him over to reason, who is the lord of the hunt, and proclaim the capture of him; and if he creeps into the recesses of the imitative art, and secretes himself in one of them, to divide again and follow him up until in some sub-section of imitation he is caught. For our method of tackling each and all is one which neither he nor any other creature will ever escape in triumph.

THEAETETUS: Well said; and let us do as you propose.

STRANGER: Well, then, pursuing the same analytic method as before, I think that I can discern two divisions of the imitative art, but I am not as yet able to see in which of them the desired form is to be found.

THEAETETUS: Will you tell me first what are the two divisions of which you are speaking?

STRANGER: One is the art of likeness-making; — generally a likeness of anything is made by producing a copy which is executed according to the proportions of the original, similar in length and breadth and depth, each thing receiving also its appropriate colour.

THEAETETUS: Is not this always the aim of imitation?

STRANGER: Not always; in works either of sculpture or of painting, which are of any magnitude, there is a certain degree of deception; for artists were to give the true proportions of their fair works, the upper part, which is farther off, would appear to be out of proportion in comparison with the lower, which is nearer; and so they give up the truth in their images and make only the proportions which appear to be beautiful, disregarding the real ones.

THEAETETUS: Quite true.

STRANGER: And that which being other is also like, may we not fairly call a likeness or image?

THEAETETUS: Yes.

STRANGER: And may we not, as I did just now, call that part of the

imitative art which is concerned with making such images the art of likeness-making?

THEAETETUS: Let that be the name.

STRANGER: And what shall we call those resemblances of the beautiful, which appear such owing to the unfavourable position of the spectator, whereas if a person had the power of getting a correct view of works of such magnitude, they would appear not even like that to which they profess to be like? May we not call these 'appearances,' since they appear only and are not really like?

THEAETETUS: Certainly.

STRANGER: There is a great deal of this kind of thing in painting, and in all imitation.

THEAETETUS: Of course.

STRANGER: And may we not fairly call the sort of art, which produces an appearance and not an image, phantastic art?

THEAETETUS: Most fairly.

STRANGER: These then are the two kinds of image-making — the art of making likenesses, and phantastic or the art of making appearances?

THEAETETUS: True.

STRANGER: I was doubtful before in which of them I should place the Sophist, nor am I even now able to see clearly; verily he is a wonderful and inscrutable creature. And now in the cleverest manner he has got into an impossible place.

THEAETETUS: Yes, he has.

STRANGER: Do you speak advisedly, or are you carried away at the moment by the habit of assenting into giving a hasty answer?

THEAETETUS: May I ask to what you are referring?

STRANGER: My dear friend, we are engaged in a very difficult speculation — there can be no doubt of that; for how a thing can appear and seem, and not be, or how a man can say a thing which is not true, has always been and still remains a very perplexing question. Can any one say or think that falsehood really exists, and avoid being caught in a contradiction? Indeed, Theaetetus, the task is a difficult one.

THEAETETUS: Why?

STRANGER: He who says that falsehood exists has the audacity to assert the being of not-being; for this is implied in the possibility of falsehood. But, my boy, in the days when I was a boy, the great Parmenides protested against this doctrine, and to the end of his life he continued to inculcate the same lesson — always repeating both in verse and out of verse:

‘Keep your mind from this way of enquiry, for never will you show that not-being is.’

Such is his testimony, which is confirmed by the very expression when sifted a little. Would you object to begin with the consideration of the words themselves?

THEAETETUS: Never mind about me; I am only desirous that you should carry on the argument in the best way, and that you should take me with you.

STRANGER: Very good; and now say, do we venture to utter the forbidden word ‘not-being’?

THEAETETUS: Certainly we do.

STRANGER: Let us be serious then, and consider the question neither in strife nor play: suppose that one of the hearers of Parmenides was asked, ‘To what is the term “not-being” to be applied?’ — do you know what sort of object he would single out in reply, and what answer he would make to the enquirer?

THEAETETUS: That is a difficult question, and one not to be

answered at all by a person like myself.

STRANGER: There is at any rate no difficulty in seeing that the predicate 'not-being' is not applicable to any being.

THEAETETUS: None, certainly.

STRANGER: And if not to being, then not to something.

THEAETETUS: Of course not.

STRANGER: It is also plain, that in speaking of something we speak of being, for to speak of an abstract something naked and isolated from all being is impossible.

THEAETETUS: Impossible.

STRANGER: You mean by assenting to imply that he who says something must say some one thing?

THEAETETUS: Yes.

STRANGER: Some in the singular (ti) you would say is the sign of one, some in the dual (tine) of two, some in the plural (tines) of many?

THEAETETUS: Exactly.

STRANGER: Then he who says 'not something' must say absolutely nothing.

THEAETETUS: Most assuredly.

STRANGER: And as we cannot admit that a man speaks and says nothing, he who says 'not-being' does not speak at all.

THEAETETUS: The difficulty of the argument can no further go.

STRANGER: Not yet, my friend, is the time for such a word; for there still remains of all perplexities the first and greatest, touching the very foundation of the matter.

THEAETETUS: What do you mean? Do not be afraid to speak.

STRANGER: To that which is, may be attributed some other thing which is?

THEAETETUS: Certainly.

STRANGER: But can anything which is, be attributed to that which is not?

THEAETETUS: Impossible.

STRANGER: And all number is to be reckoned among things which are?

THEAETETUS: Yes, surely number, if anything, has a real existence.

STRANGER: Then we must not attempt to attribute to not-being number either in the singular or plural?

THEAETETUS: The argument implies that we should be wrong in doing so.

STRANGER: But how can a man either express in words or even conceive in thought things which are not or a thing which is not without number?

THEAETETUS: How indeed?

STRANGER: When we speak of things which are not, are we not attributing plurality to not-being?

THEAETETUS: Certainly.

STRANGER: But, on the other hand, when we say 'what is not,' do we not attribute unity?

THEAETETUS: Manifestly.

STRANGER: Nevertheless, we maintain that you may not and ought not to attribute being to not-being?

THEAETETUS: Most true.

STRANGER: Do you see, then, that not-being in itself can neither be spoken, uttered, or thought, but that it is unthinkable, unutterable, unspeakable, indescribable?

THEAETETUS: Quite true.

STRANGER: But, if so, I was wrong in telling you just now that the difficulty which was coming is the greatest of all.

THEAETETUS: What! is there a greater still behind?

STRANGER: Well, I am surprised, after what has been said already, that you do not see the difficulty in which he who would refute the notion of not-being is involved. For he is compelled to contradict himself as soon as he makes the attempt.

THEAETETUS: What do you mean? Speak more clearly.

STRANGER: Do not expect clearness from me. For I, who maintain that not-being has no part either in the one or many, just now spoke and am still speaking of not-being as one; for I say 'not-being.' Do you understand?

THEAETETUS: Yes.

STRANGER: And a little while ago I said that not-being is unutterable, unspeakable, indescribable: do you follow?

THEAETETUS: I do after a fashion.

STRANGER: When I introduced the word 'is,' did I not contradict what I said before?

THEAETETUS: Clearly.

STRANGER: And in using the singular verb, did I not speak of not-being as one?

THEAETETUS: Yes.

STRANGER: And when I spoke of not-being as indescribable and unspeakable and unutterable, in using each of these words in the

singular, did I not refer to not-being as one?

THEAETETUS: Certainly.

STRANGER: And yet we say that, strictly speaking, it should not be defined as one or many, and should not even be called 'it,' for the use of the word 'it' would imply a form of unity.

THEAETETUS: Quite true.

STRANGER: How, then, can any one put any faith in me? For now, as always, I am unequal to the refutation of not-being. And therefore, as I was saying, do not look to me for the right way of speaking about not-being; but come, let us try the experiment with you.

THEAETETUS: What do you mean?

STRANGER: Make a noble effort, as becomes youth, and endeavour with all your might to speak of not-being in a right manner, without introducing into it either existence or unity or plurality.

THEAETETUS: It would be a strange boldness in me which would attempt the task when I see you thus discomfited.

STRANGER: Say no more of ourselves; but until we find some one or other who can speak of not-being without number, we must acknowledge that the Sophist is a clever rogue who will not be got out of his hole.

THEAETETUS: Most true.

STRANGER: And if we say to him that he professes an art of making appearances, he will grapple with us and retort our argument upon ourselves; and when we call him an image-maker he will say, 'Pray what do you mean at all by an image?' — and I should like to know, Theaetetus, how we can possibly answer the younger's question?

THEAETETUS: We shall doubtless tell him of the images which are reflected in water or in mirrors; also of sculptures, pictures, and other duplicates.

STRANGER: I see, Theaetetus, that you have never made the acquaintance of the Sophist.

THEAETETUS: Why do you think so?

STRANGER: He will make believe to have his eyes shut, or to have none.

THEAETETUS: What do you mean?

STRANGER: When you tell him of something existing in a mirror, or in sculpture, and address him as though he had eyes, he will laugh you to scorn, and will pretend that he knows nothing of mirrors and streams, or of sight at all; he will say that he is asking about an idea.

THEAETETUS: What can he mean?

STRANGER: The common notion pervading all these objects, which you speak of as many, and yet call by the single name of image, as though it were the unity under which they were all included. How will you maintain your ground against him?

THEAETETUS: How, Stranger, can I describe an image except as something fashioned in the likeness of the true?

STRANGER: And do you mean this something to be some other true thing, or what do you mean?

THEAETETUS: Certainly not another true thing, but only a resemblance.

STRANGER: And you mean by true that which really is?

THEAETETUS: Yes.

STRANGER: And the not true is that which is the opposite of the true?

THEAETETUS: Exactly.

STRANGER: A resemblance, then, is not really real, if, as you say, not true?

THEAETETUS: Nay, but it is in a certain sense.

STRANGER: You mean to say, not in a true sense?

THEAETETUS: Yes; it is in reality only an image.

STRANGER: Then what we call an image is in reality really unreal.

THEAETETUS: In what a strange complication of being and not-being we are involved!

STRANGER: Strange! I should think so. See how, by his reciprocation of opposites, the many-headed Sophist has compelled us, quite against our will, to admit the existence of not-being.

THEAETETUS: Yes, indeed, I see.

STRANGER: The difficulty is how to define his art without falling into a contradiction.

THEAETETUS: How do you mean? And where does the danger lie?

STRANGER: When we say that he deceives us with an illusion, and that his art is illusory, do we mean that our soul is led by his art to think falsely, or what do we mean?

THEAETETUS: There is nothing else to be said.

STRANGER: Again, false opinion is that form of opinion which thinks the opposite of the truth: — You would assent?

THEAETETUS: Certainly.

STRANGER: You mean to say that false opinion thinks what is not?

THEAETETUS: Of course.

STRANGER: Does false opinion think that things which are not are not, or that in a certain sense they are?

THEAETETUS: Things that are not must be imagined to exist in a certain sense, if any degree of falsehood is to be possible.

STRANGER: And does not false opinion also think that things which most certainly exist do not exist at all?

THEAETETUS: Yes.

STRANGER: And here, again, is falsehood?

THEAETETUS: Falsehood — yes.

STRANGER: And in like manner, a false proposition will be deemed to be one which asserts the non-existence of things which are, and the existence of things which are not.

THEAETETUS: There is no other way in which a false proposition can arise.

STRANGER: There is not; but the Sophist will deny these statements. And indeed how can any rational man assent to them, when the very expressions which we have just used were before acknowledged by us to be unutterable, unspeakable, indescribable, unthinkable? Do you see his point, Theaetetus?

THEAETETUS: Of course he will say that we are contradicting ourselves when we hazard the assertion, that falsehood exists in opinion and in words; for in maintaining this, we are compelled over and over again to assert being of not-being, which we admitted just now to be an utter impossibility.

STRANGER: How well you remember! And now it is high time to hold a consultation as to what we ought to do about the Sophist; for if we persist in looking for him in the class of false workers and magicians, you see that the handles for objection and the difficulties which will arise are very numerous and obvious.

THEAETETUS: They are indeed.

STRANGER: We have gone through but a very small portion of them, and they are really infinite.

THEAETETUS: If that is the case, we cannot possibly catch the Sophist.

STRANGER: Shall we then be so faint-hearted as to give him up?

THEAETETUS: Certainly not, I should say, if we can get the slightest hold upon him.

STRANGER: Will you then forgive me, and, as your words imply, not be altogether displeased if I flinch a little from the grasp of such a sturdy argument?

THEAETETUS: To be sure I will.

STRANGER: I have a yet more urgent request to make.

THEAETETUS: Which is — ?

STRANGER: That you will promise not to regard me as a parricide.

THEAETETUS: And why?

STRANGER: Because, in self-defence, I must test the philosophy of my father Parmenides, and try to prove by main force that in a certain sense not-being is, and that being, on the other hand, is not.

THEAETETUS: Some attempt of the kind is clearly needed.

STRANGER: Yes, a blind man, as they say, might see that, and, unless these questions are decided in one way or another, no one when he speaks of false words, or false opinion, or idols, or images, or imitations, or appearances, or about the arts which are concerned with them; can avoid falling into ridiculous contradictions.

THEAETETUS: Most true.

STRANGER: And therefore I must venture to lay hands on my father's argument; for if I am to be over-scrupulous, I shall have to give the matter up.

THEAETETUS: Nothing in the world should ever induce us to do so.

STRANGER: I have a third little request which I wish to make.

THEAETETUS: What is it?

STRANGER: You heard me say what I have always felt and still feel — that I have no heart for this argument?

THEAETETUS: I did.

STRANGER: I tremble at the thought of what I have said, and expect that you will deem me mad, when you hear of my sudden changes and shiftings; let me therefore observe, that I am examining the question entirely out of regard for you.

THEAETETUS: There is no reason for you to fear that I shall impute any impropriety to you, if you attempt this refutation and proof; take heart, therefore, and proceed.

STRANGER: And where shall I begin the perilous enterprise? I think that the road which I must take is —

THEAETETUS: Which? — Let me hear.

STRANGER: I think that we had better, first of all, consider the points which at present are regarded as self-evident, lest we may have fallen into some confusion, and be too ready to assent to one another, fancying that we are quite clear about them.

THEAETETUS: Say more distinctly what you mean.

STRANGER: I think that Parmenides, and all ever yet undertook to determine the number and nature of existences, talked to us in rather a light and easy strain.

THEAETETUS: How?

STRANGER: As if we had been children, to whom they repeated each his own mythus or story; — one said that there were three principles, and that at one time there was war between certain of them; and then again there was peace, and they were married and begat children, and brought them up; and another spoke of two principles, — a moist and a dry, or a hot and a cold, and made them marry and cohabit. The Eleatics, however, in our part of the world,

say that all things are many in name, but in nature one; this is their mythus, which goes back to Xenophanes, and is even older. Then there are Ionian, and in more recent times Sicilian muses, who have arrived at the conclusion that to unite the two principles is safer, and to say that being is one and many, and that these are held together by enmity and friendship, ever parting, ever meeting, as the severer Muses assert, while the gentler ones do not insist on the perpetual strife and peace, but admit a relaxation and alternation of them; peace and unity sometimes prevailing under the sway of Aphrodite, and then again plurality and war, by reason of a principle of strife. Whether any of them spoke the truth in all this is hard to determine; besides, antiquity and famous men should have reverence, and not be liable to accusations so serious. Yet one thing may be said of them without offence —

THEAETETUS: What thing?

STRANGER: That they went on their several ways disdaining to notice people like ourselves; they did not care whether they took us with them, or left us behind them.

THEAETETUS: How do you mean?

STRANGER: I mean to say, that when they talk of one, two, or more elements, which are or have become or are becoming, or again of heat mingling with cold, assuming in some other part of their works separations and mixtures, — tell me, Theaetetus, do you understand what they mean by these expressions? When I was a younger man, I used to fancy that I understood quite well what was meant by the term ‘not-being,’ which is our present subject of dispute; and now you see in what a fix we are about it.

THEAETETUS: I see.

STRANGER: And very likely we have been getting into the same perplexity about ‘being,’ and yet may fancy that when anybody utters the word, we understand him quite easily, although we do not know about not-being. But we may be; equally ignorant of both.

THEAETETUS: I dare say.

STRANGER: And the same may be said of all the terms just mentioned.

THEAETETUS: True.

STRANGER: The consideration of most of them may be deferred; but we had better now discuss the chief captain and leader of them.

THEAETETUS: Of what are you speaking? You clearly think that we must first investigate what people mean by the word 'being.'

STRANGER: You follow close at my heels, Theaetetus. For the right method, I conceive, will be to call into our presence the dualistic philosophers and to interrogate them. 'Come,' we will say, 'Ye, who affirm that hot and cold or any other two principles are the universe, what is this term which you apply to both of them, and what do you mean when you say that both and each of them "are"? How are we to understand the word "are"? Upon your view, are we to suppose that there is a third principle over and above the other two, — three in all, and not two? For clearly you cannot say that one of the two principles is being, and yet attribute being equally to both of them; for, if you did, whichever of the two is identified with being, will comprehend the other; and so they will be one and not two.'

THEAETETUS: Very true.

STRANGER: But perhaps you mean to give the name of 'being' to both of them together?

THEAETETUS: Quite likely.

STRANGER: 'Then, friends,' we shall reply to them, 'the answer is plainly that the two will still be resolved into one.'

THEAETETUS: Most true.

STRANGER: 'Since, then, we are in a difficulty, please to tell us what you mean, when you speak of being; for there can be no doubt that you always from the first understood your own meaning,

whereas we once thought that we understood you, but now we are in a great strait. Please to begin by explaining this matter to us, and let us no longer fancy that we understand you, when we entirely misunderstand you.' There will be no impropriety in our demanding an answer to this question, either of the dualists or of the pluralists?

THEAETETUS: Certainly not.

STRANGER: And what about the assertors of the oneness of the all — must we not endeavour to ascertain from them what they mean by 'being'?

THEAETETUS: By all means.

STRANGER: Then let them answer this question: One, you say, alone is? 'Yes,' they will reply.

THEAETETUS: True.

STRANGER: And there is something which you call 'being'?

THEAETETUS: 'Yes.'

STRANGER: And is being the same as one, and do you apply two names to the same thing?

THEAETETUS: What will be their answer, Stranger?

STRANGER: It is clear, Theaetetus, that he who asserts the unity of being will find a difficulty in answering this or any other question.

THEAETETUS: Why so?

STRANGER: To admit of two names, and to affirm that there is nothing but unity, is surely ridiculous?

THEAETETUS: Certainly.

STRANGER: And equally irrational to admit that a name is anything?

THEAETETUS: How so?

STRANGER: To distinguish the name from the thing, implies duality.

THEAETETUS: Yes.

STRANGER: And yet he who identifies the name with the thing will be compelled to say that it is the name of nothing, or if he says that it is the name of something, even then the name will only be the name of a name, and of nothing else.

THEAETETUS: True.

STRANGER: And the one will turn out to be only one of one, and being absolute unity, will represent a mere name.

THEAETETUS: Certainly.

STRANGER: And would they say that the whole is other than the one that is, or the same with it?

THEAETETUS: To be sure they would, and they actually say so.

STRANGER: If being is a whole, as Parmenides sings, —

‘Every way like unto the fullness of a well-rounded sphere, Evenly balanced from the centre on every side, And must needs be neither greater nor less in any way, Neither on this side nor on that—’

then being has a centre and extremes, and, having these, must also have parts.

THEAETETUS: True.

STRANGER: Yet that which has parts may have the attribute of unity in all the parts, and in this way being all and a whole, may be one?

THEAETETUS: Certainly.

STRANGER: But that of which this is the condition cannot be absolute unity?

THEAETETUS: Why not?

STRANGER: Because, according to right reason, that which is truly one must be affirmed to be absolutely indivisible.

THEAETETUS: Certainly.

STRANGER: But this indivisible, if made up of many parts, will contradict reason.

THEAETETUS: I understand.

STRANGER: Shall we say that being is one and a whole, because it has the attribute of unity? Or shall we say that being is not a whole at all?

THEAETETUS: That is a hard alternative to offer.

STRANGER: Most true; for being, having in a certain sense the attribute of one, is yet proved not to be the same as one, and the all is therefore more than one.

THEAETETUS: Yes.

STRANGER: And yet if being be not a whole, through having the attribute of unity, and there be such a thing as an absolute whole, being lacks something of its own nature?

THEAETETUS: Certainly.

STRANGER: Upon this view, again, being, having a defect of being, will become not-being?

THEAETETUS: True.

STRANGER: And, again, the all becomes more than one, for being and the whole will each have their separate nature.

THEAETETUS: Yes.

STRANGER: But if the whole does not exist at all, all the previous difficulties remain the same, and there will be the further difficulty,

that besides having no being, being can never have come into being.

THEAETETUS: Why so?

STRANGER: Because that which comes into being always comes into being as a whole, so that he who does not give whole a place among beings, cannot speak either of essence or generation as existing.

THEAETETUS: Yes, that certainly appears to be true.

STRANGER: Again; how can that which is not a whole have any quantity? For that which is of a certain quantity must necessarily be the whole of that quantity.

THEAETETUS: Exactly.

STRANGER: And there will be innumerable other points, each of them causing infinite trouble to him who says that being is either one or two.

THEAETETUS: The difficulties which are dawning upon us prove this; for one objection connects with another, and they are always involving what has preceded in a greater and worse perplexity.

STRANGER: We are far from having exhausted the more exact thinkers who treat of being and not-being. But let us be content to leave them, and proceed to view those who speak less precisely; and we shall find as the result of all, that the nature of being is quite as difficult to comprehend as that of not-being.

THEAETETUS: Then now we will go to the others.

STRANGER: There appears to be a sort of war of Giants and Gods going on amongst them; they are fighting with one another about the nature of essence.

THEAETETUS: How is that?

STRANGER: Some of them are dragging down all things from heaven and from the unseen to earth, and they literally grasp in their

hands rocks and oaks; of these they lay hold, and obstinately maintain, that the things only which can be touched or handled have being or essence, because they define being and body as one, and if any one else says that what is not a body exists they altogether despise him, and will hear of nothing but body.

THEAETETUS: I have often met with such men, and terrible fellows they are.

STRANGER: And that is the reason why their opponents cautiously defend themselves from above, out of an unseen world, mightily contending that true essence consists of certain intelligible and incorporeal ideas; the bodies of the materialists, which by them are maintained to be the very truth, they break up into little bits by their arguments, and affirm them to be, not essence, but generation and motion. Between the two armies, Theaetetus, there is always an endless conflict raging concerning these matters.

THEAETETUS: True.

STRANGER: Let us ask each party in turn, to give an account of that which they call essence.

THEAETETUS: How shall we get it out of them?

STRANGER: With those who make being to consist in ideas, there will be less difficulty, for they are civil people enough; but there will be very great difficulty, or rather an absolute impossibility, in getting an opinion out of those who drag everything down to matter. Shall I tell you what we must do?

THEAETETUS: What?

STRANGER: Let us, if we can, really improve them; but if this is not possible, let us imagine them to be better than they are, and more willing to answer in accordance with the rules of argument, and then their opinion will be more worth having; for that which better men acknowledge has more weight than that which is acknowledged by inferior men. Moreover we are no respecters of persons, but seekers after truth.

THEAETETUS: Very good.

STRANGER: Then now, on the supposition that they are improved, let us ask them to state their views, and do you interpret them.

THEAETETUS: Agreed.

STRANGER: Let them say whether they would admit that there is such a thing as a mortal animal.

THEAETETUS: Of course they would.

STRANGER: And do they not acknowledge this to be a body having a soul?

THEAETETUS: Certainly they do.

STRANGER: Meaning to say that the soul is something which exists?

THEAETETUS: True.

STRANGER: And do they not say that one soul is just, and another unjust, and that one soul is wise, and another foolish?

THEAETETUS: Certainly.

STRANGER: And that the just and wise soul becomes just and wise by the possession of justice and wisdom, and the opposite under opposite circumstances?

THEAETETUS: Yes, they do.

STRANGER: But surely that which may be present or may be absent will be admitted by them to exist?

THEAETETUS: Certainly.

STRANGER: And, allowing that justice, wisdom, the other virtues, and their opposites exist, as well as a soul in which they inhere, do they affirm any of them to be visible and tangible, or are they all invisible?

THEAETETUS: They would say that hardly any of them are visible.

STRANGER: And would they say that they are corporeal?

THEAETETUS: They would distinguish: the soul would be said by them to have a body; but as to the other qualities of justice, wisdom, and the like, about which you asked, they would not venture either to deny their existence, or to maintain that they were all corporeal.

STRANGER: Verily, Theaetetus, I perceive a great improvement in them; the real aborigines, children of the dragon's teeth, would have been deterred by no shame at all, but would have obstinately asserted that nothing is which they are not able to squeeze in their hands.

THEAETETUS: That is pretty much their notion.

STRANGER: Let us push the question; for if they will admit that any, even the smallest particle of being, is incorporeal, it is enough; they must then say what that nature is which is common to both the corporeal and incorporeal, and which they have in their mind's eye when they say of both of them that they 'are.' Perhaps they may be in a difficulty; and if this is the case, there is a possibility that they may accept a notion of ours respecting the nature of being, having nothing of their own to offer.

THEAETETUS: What is the notion? Tell me, and we shall soon see.

STRANGER: My notion would be, that anything which possesses any sort of power to affect another, or to be affected by another, if only for a single moment, however trifling the cause and however slight the effect, has real existence; and I hold that the definition of being is simply power.

THEAETETUS: They accept your suggestion, having nothing better of their own to offer.

STRANGER: Very good; perhaps we, as well as they, may one day change our minds; but, for the present, this may be regarded as the understanding which is established with them.

THEAETETUS: Agreed.

STRANGER: Let us now go to the friends of ideas; of their opinions, too, you shall be the interpreter.

THEAETETUS: I will.

STRANGER: To them we say — You would distinguish essence from generation?

THEAETETUS: ‘Yes,’ they reply.

STRANGER: And you would allow that we participate in generation with the body, and through perception, but we participate with the soul through thought in true essence; and essence you would affirm to be always the same and immutable, whereas generation or becoming varies?

THEAETETUS: Yes; that is what we should affirm.

STRANGER: Well, fair sirs, we say to them, what is this participation, which you assert of both? Do you agree with our recent definition?

THEAETETUS: What definition?

STRANGER: We said that being was an active or passive energy, arising out of a certain power which proceeds from elements meeting with one another. Perhaps your ears, Theaetetus, may fail to catch their answer, which I recognize because I have been accustomed to hear it.

THEAETETUS: And what is their answer?

STRANGER: They deny the truth of what we were just now saying to the aborigines about existence.

THEAETETUS: What was that?

STRANGER: Any power of doing or suffering in a degree however slight was held by us to be a sufficient definition of being?

THEAETETUS: True.

STRANGER: They deny this, and say that the power of doing or suffering is confined to becoming, and that neither power is applicable to being.

THEAETETUS: And is there not some truth in what they say?

STRANGER: Yes; but our reply will be, that we want to ascertain from them more distinctly, whether they further admit that the soul knows, and that being or essence is known.

THEAETETUS: There can be no doubt that they say so.

STRANGER: And is knowing and being known doing or suffering, or both, or is the one doing and the other suffering, or has neither any share in either?

THEAETETUS: Clearly, neither has any share in either; for if they say anything else, they will contradict themselves.

STRANGER: I understand; but they will allow that if to know is active, then, of course, to be known is passive. And on this view being, in so far as it is known, is acted upon by knowledge, and is therefore in motion; for that which is in a state of rest cannot be acted upon, as we affirm.

THEAETETUS: True.

STRANGER: And, O heavens, can we ever be made to believe that motion and life and soul and mind are not present with perfect being? Can we imagine that being is devoid of life and mind, and exists in awful unmeaningness an everlasting fixture?

THEAETETUS: That would be a dreadful thing to admit, Stranger.

STRANGER: But shall we say that has mind and not life?

THEAETETUS: How is that possible?

STRANGER: Or shall we say that both inhere in perfect being, but

that it has no soul which contains them?

THEAETETUS: And in what other way can it contain them?

STRANGER: Or that being has mind and life and soul, but although endowed with soul remains absolutely unmoved?

THEAETETUS: All three suppositions appear to me to be irrational.

STRANGER: Under being, then, we must include motion, and that which is moved.

THEAETETUS: Certainly.

STRANGER: Then, Theaetetus, our inference is, that if there is no motion, neither is there any mind anywhere, or about anything or belonging to any one.

THEAETETUS: Quite true.

STRANGER: And yet this equally follows, if we grant that all things are in motion — upon this view too mind has no existence.

THEAETETUS: How so?

STRANGER: Do you think that sameness of condition and mode and subject could ever exist without a principle of rest?

THEAETETUS: Certainly not.

STRANGER: Can you see how without them mind could exist, or come into existence anywhere?

THEAETETUS: No.

STRANGER: And surely contend we must in every possible way against him who would annihilate knowledge and reason and mind, and yet ventures to speak confidently about anything.

THEAETETUS: Yes, with all our might.

STRANGER: Then the philosopher, who has the truest reverence for these qualities, cannot possibly accept the notion of those who say

that the whole is at rest, either as unity or in many forms: and he will be utterly deaf to those who assert universal motion. As children say entreatingly 'Give us both,' so he will include both the moveable and immoveable in his definition of being and all.

THEAETETUS: Most true.

STRANGER: And now, do we seem to have gained a fair notion of being?

THEAETETUS: Yes truly.

STRANGER: Alas, Theaetetus, methinks that we are now only beginning to see the real difficulty of the enquiry into the nature of it.

THEAETETUS: What do you mean?

STRANGER: O my friend, do you not see that nothing can exceed our ignorance, and yet we fancy that we are saying something good?

THEAETETUS: I certainly thought that we were; and I do not at all understand how we never found out our desperate case.

STRANGER: Reflect: after having made these admissions, may we not be justly asked the same questions which we ourselves were asking of those who said that all was hot and cold?

THEAETETUS: What were they? Will you recall them to my mind?

STRANGER: To be sure I will, and I will remind you of them, by putting the same questions to you which I did to them, and then we shall get on.

THEAETETUS: True.

STRANGER: Would you not say that rest and motion are in the most entire opposition to one another?

THEAETETUS: Of course.

STRANGER: And yet you would say that both and either of them equally are?

THEAETETUS: I should.

STRANGER: And when you admit that both or either of them are, do you mean to say that both or either of them are in motion?

THEAETETUS: Certainly not.

STRANGER: Or do you wish to imply that they are both at rest, when you say that they are?

THEAETETUS: Of course not.

STRANGER: Then you conceive of being as some third and distinct nature, under which rest and motion are alike included; and, observing that they both participate in being, you declare that they are.

THEAETETUS: Truly we seem to have an intimation that being is some third thing, when we say that rest and motion are.

STRANGER: Then being is not the combination of rest and motion, but something different from them.

THEAETETUS: So it would appear.

STRANGER: Being, then, according to its own nature, is neither in motion nor at rest.

THEAETETUS: That is very much the truth.

STRANGER: Where, then, is a man to look for help who would have any clear or fixed notion of being in his mind?

THEAETETUS: Where, indeed?

STRANGER: I scarcely think that he can look anywhere; for that which is not in motion must be at rest, and again, that which is not at rest must be in motion; but being is placed outside of both these classes. Is this possible?

THEAETETUS: Utterly impossible.

STRANGER: Here, then, is another thing which we ought to bear in mind.

THEAETETUS: What?

STRANGER: When we were asked to what we were to assign the appellation of not-being, we were in the greatest difficulty: — do you remember?

THEAETETUS: To be sure.

STRANGER: And are we not now in as great a difficulty about being?

THEAETETUS: I should say, Stranger, that we are in one which is, if possible, even greater.

STRANGER: Then let us acknowledge the difficulty; and as being and not-being are involved in the same perplexity, there is hope that when the one appears more or less distinctly, the other will equally appear; and if we are able to see neither, there may still be a chance of steering our way in between them, without any great discredit.

THEAETETUS: Very good.

STRANGER: Let us enquire, then, how we come to predicate many names of the same thing.

THEAETETUS: Give an example.

STRANGER: I mean that we speak of man, for example, under many names — that we attribute to him colours and forms and magnitudes and virtues and vices, in all of which instances and in ten thousand others we not only speak of him as a man, but also as good, and having numberless other attributes, and in the same way anything else which we originally supposed to be one is described by us as many, and under many names.

THEAETETUS: That is true.

STRANGER: And thus we provide a rich feast for tyros, whether

young or old; for there is nothing easier than to argue that the one cannot be many, or the many one; and great is their delight in denying that a man is good; for man, they insist, is man and good is good. I dare say that you have met with persons who take an interest in such matters — they are often elderly men, whose meagre sense is thrown into amazement by these discoveries of theirs, which they believe to be the height of wisdom.

THEAETETUS: Certainly, I have.

STRANGER: Then, not to exclude any one who has ever speculated at all upon the nature of being, let us put our questions to them as well as to our former friends.

THEAETETUS: What questions?

STRANGER: Shall we refuse to attribute being to motion and rest, or anything to anything, and assume that they do not mingle, and are incapable of participating in one another? Or shall we gather all into one class of things communicable with one another? Or are some things communicable and others not? — Which of these alternatives, Theaetetus, will they prefer?

THEAETETUS: I have nothing to answer on their behalf. Suppose that you take all these hypotheses in turn, and see what are the consequences which follow from each of them.

STRANGER: Very good, and first let us assume them to say that nothing is capable of participating in anything else in any respect; in that case rest and motion cannot participate in being at all.

THEAETETUS: They cannot.

STRANGER: But would either of them be if not participating in being?

THEAETETUS: No.

STRANGER: Then by this admission everything is instantly overturned, as well the doctrine of universal motion as of universal

rest, and also the doctrine of those who distribute being into immutable and everlasting kinds; for all these add on a notion of being, some affirming that things 'are' truly in motion, and others that they 'are' truly at rest.

THEAETETUS: Just so.

STRANGER: Again, those who would at one time compound, and at another resolve all things, whether making them into one and out of one creating infinity, or dividing them into finite elements, and forming compounds out of these; whether they suppose the processes of creation to be successive or continuous, would be talking nonsense in all this if there were no admixture.

THEAETETUS: True.

STRANGER: Most ridiculous of all will the men themselves be who want to carry out the argument and yet forbid us to call anything, because participating in some affection from another, by the name of that other.

THEAETETUS: Why so?

STRANGER: Why, because they are compelled to use the words 'to be,' 'apart,' 'from others,' 'in itself,' and ten thousand more, which they cannot give up, but must make the connecting links of discourse; and therefore they do not require to be refuted by others, but their enemy, as the saying is, inhabits the same house with them; they are always carrying about with them an adversary, like the wonderful ventriloquist, Eurycles, who out of their own bellies audibly contradicts them.

THEAETETUS: Precisely so; a very true and exact illustration.

STRANGER: And now, if we suppose that all things have the power of communion with one another — what will follow?

THEAETETUS: Even I can solve that riddle.

STRANGER: How?

THEAETETUS: Why, because motion itself would be at rest, and rest again in motion, if they could be attributed to one another.

STRANGER: But this is utterly impossible.

THEAETETUS: Of course.

STRANGER: Then only the third hypothesis remains.

THEAETETUS: True.

STRANGER: For, surely, either all things have communion with all; or nothing with any other thing; or some things communicate with some things and others not.

THEAETETUS: Certainly.

STRANGER: And two out of these three suppositions have been found to be impossible.

THEAETETUS: Yes.

STRANGER: Every one then, who desires to answer truly, will adopt the third and remaining hypothesis of the communion of some with some.

THEAETETUS: Quite true.

STRANGER: This communion of some with some may be illustrated by the case of letters; for some letters do not fit each other, while others do.

THEAETETUS: Of course.

STRANGER: And the vowels, especially, are a sort of bond which pervades all the other letters, so that without a vowel one consonant cannot be joined to another.

THEAETETUS: True.

STRANGER: But does every one know what letters will unite with what? Or is art required in order to do so?

THEAETETUS: Art is required.

STRANGER: What art?

THEAETETUS: The art of grammar.

STRANGER: And is not this also true of sounds high and low? — Is not he who has the art to know what sounds mingle, a musician, and he who is ignorant, not a musician?

THEAETETUS: Yes.

STRANGER: And we shall find this to be generally true of art or the absence of art.

THEAETETUS: Of course.

STRANGER: And as classes are admitted by us in like manner to be some of them capable and others incapable of intermixture, must not he who would rightly show what kinds will unite and what will not, proceed by the help of science in the path of argument? And will he not ask if the connecting links are universal, and so capable of intermixture with all things; and again, in divisions, whether there are not other universal classes, which make them possible?

THEAETETUS: To be sure he will require science, and, if I am not mistaken, the very greatest of all sciences.

STRANGER: How are we to call it? By Zeus, have we not lighted unwittingly upon our free and noble science, and in looking for the Sophist have we not entertained the philosopher unawares?

THEAETETUS: What do you mean?

STRANGER: Should we not say that the division according to classes, which neither makes the same other, nor makes other the same, is the business of the dialectical science?

THEAETETUS: That is what we should say.

STRANGER: Then, surely, he who can divide rightly is able to see

clearly one form pervading a scattered multitude, and many different forms contained under one higher form; and again, one form knit together into a single whole and pervading many such wholes, and many forms, existing only in separation and isolation. This is the knowledge of classes which determines where they can have communion with one another and where not.

THEAETETUS: Quite true.

STRANGER: And the art of dialectic would be attributed by you only to the philosopher pure and true?

THEAETETUS: Who but he can be worthy?

STRANGER: In this region we shall always discover the philosopher, if we look for him; like the Sophist, he is not easily discovered, but for a different reason.

THEAETETUS: For what reason?

STRANGER: Because the Sophist runs away into the darkness of not-being, in which he has learned by habit to feel about, and cannot be discovered because of the darkness of the place. Is not that true?

THEAETETUS: It seems to be so.

STRANGER: And the philosopher, always holding converse through reason with the idea of being, is also dark from excess of light; for the souls of the many have no eye which can endure the vision of the divine.

THEAETETUS: Yes; that seems to be quite as true as the other.

STRANGER: Well, the philosopher may hereafter be more fully considered by us, if we are disposed; but the Sophist must clearly not be allowed to escape until we have had a good look at him.

THEAETETUS: Very good.

STRANGER: Since, then, we are agreed that some classes have a communion with one another, and others not, and some have

communion with a few and others with many, and that there is no reason why some should not have universal communion with all, let us now pursue the enquiry, as the argument suggests, not in relation to all ideas, lest the multitude of them should confuse us, but let us select a few of those which are reckoned to be the principal ones, and consider their several natures and their capacity of communion with one another, in order that if we are not able to apprehend with perfect clearness the notions of being and not-being, we may at least not fall short in the consideration of them, so far as they come within the scope of the present enquiry, if peradventure we may be allowed to assert the reality of not-being, and yet escape unscathed.

THEAETETUS: We must do so.

STRANGER: The most important of all the genera are those which we were just now mentioning — being and rest and motion.

THEAETETUS: Yes, by far.

STRANGER: And two of these are, as we affirm, incapable of communion with one another.

THEAETETUS: Quite incapable.

STRANGER: Whereas being surely has communion with both of them, for both of them are?

THEAETETUS: Of course.

STRANGER: That makes up three of them.

THEAETETUS: To be sure.

STRANGER: And each of them is other than the remaining two, but the same with itself.

THEAETETUS: True.

STRANGER: But then, what is the meaning of these two words, 'same' and 'other'? Are they two new kinds other than the three, and yet always of necessity intermingling with them, and are we to have

five kinds instead of three; or when we speak of the same and other, are we unconsciously speaking of one of the three first kinds?

THEAETETUS: Very likely we are.

STRANGER: But, surely, motion and rest are neither the other nor the same.

THEAETETUS: How is that?

STRANGER: Whatever we attribute to motion and rest in common, cannot be either of them.

THEAETETUS: Why not?

STRANGER: Because motion would be at rest and rest in motion, for either of them, being predicated of both, will compel the other to change into the opposite of its own nature, because partaking of its opposite.

THEAETETUS: Quite true.

STRANGER: Yet they surely both partake of the same and of the other?

THEAETETUS: Yes.

STRANGER: Then we must not assert that motion, any more than rest, is either the same or the other.

THEAETETUS: No; we must not.

STRANGER: But are we to conceive that being and the same are identical?

THEAETETUS: Possibly.

STRANGER: But if they are identical, then again in saying that motion and rest have being, we should also be saying that they are the same.

THEAETETUS: Which surely cannot be.

STRANGER: Then being and the same cannot be one.

THEAETETUS: Scarcely.

STRANGER: Then we may suppose the same to be a fourth class, which is now to be added to the three others.

THEAETETUS: Quite true.

STRANGER: And shall we call the other a fifth class? Or should we consider being and other to be two names of the same class?

THEAETETUS: Very likely.

STRANGER: But you would agree, if I am not mistaken, that existences are relative as well as absolute?

THEAETETUS: Certainly.

STRANGER: And the other is always relative to other?

THEAETETUS: True.

STRANGER: But this would not be the case unless being and the other entirely differed; for, if the other, like being, were absolute as well as relative, then there would have been a kind of other which was not other than other. And now we find that what is other must of necessity be what it is in relation to some other.

THEAETETUS: That is the true state of the case.

STRANGER: Then we must admit the other as the fifth of our selected classes.

THEAETETUS: Yes.

STRANGER: And the fifth class pervades all classes, for they all differ from one another, not by reason of their own nature, but because they partake of the idea of the other.

THEAETETUS: Quite true.

STRANGER: Then let us now put the case with reference to each of the five.

THEAETETUS: How?

STRANGER: First there is motion, which we affirm to be absolutely 'other' than rest: what else can we say?

THEAETETUS: It is so.

STRANGER: And therefore is not rest.

THEAETETUS: Certainly not.

STRANGER: And yet is, because partaking of being.

THEAETETUS: True.

STRANGER: Again, motion is other than the same?

THEAETETUS: Just so.

STRANGER: And is therefore not the same.

THEAETETUS: It is not.

STRANGER: Yet, surely, motion is the same, because all things partake of the same.

THEAETETUS: Very true.

STRANGER: Then we must admit, and not object to say, that motion is the same and is not the same, for we do not apply the terms 'same' and 'not the same,' in the same sense; but we call it the 'same,' in relation to itself, because partaking of the same; and not the same, because having communion with the other, it is thereby severed from the same, and has become not that but other, and is therefore rightly spoken of as 'not the same.'

THEAETETUS: To be sure.

STRANGER: And if absolute motion in any point of view partook of rest, there would be no absurdity in calling motion stationary.

THEAETETUS: Quite right, — that is, on the supposition that some classes mingle with one another, and others not.

STRANGER: That such a communion of kinds is according to nature, we had already proved before we arrived at this part of our discussion.

THEAETETUS: Certainly.

STRANGER: Let us proceed, then. May we not say that motion is other than the other, having been also proved by us to be other than the same and other than rest?

THEAETETUS: That is certain.

STRANGER: Then, according to this view, motion is other and also not other?

THEAETETUS: True.

STRANGER: What is the next step? Shall we say that motion is other than the three and not other than the fourth, — for we agreed that there are five classes about and in the sphere of which we proposed to make enquiry?

THEAETETUS: Surely we cannot admit that the number is less than it appeared to be just now.

STRANGER: Then we may without fear contend that motion is other than being?

THEAETETUS: Without the least fear.

STRANGER: The plain result is that motion, since it partakes of being, really is and also is not?

THEAETETUS: Nothing can be plainer.

STRANGER: Then not-being necessarily exists in the case of motion and of every class; for the nature of the other entering into them all, makes each of them other than being, and so non-existent; and therefore of all of them, in like manner, we may truly say that they are not; and again, inasmuch as they partake of being, that they are and are existent.

THEAETETUS: So we may assume.

STRANGER: Every class, then, has plurality of being and infinity of not-being.

THEAETETUS: So we must infer.

STRANGER: And being itself may be said to be other than the other kinds.

THEAETETUS: Certainly.

STRANGER: Then we may infer that being is not, in respect of as many other things as there are; for not-being these it is itself one, and is not the other things, which are infinite in number.

THEAETETUS: That is not far from the truth.

STRANGER: And we must not quarrel with this result, since it is of the nature of classes to have communion with one another; and if any one denies our present statement [viz., that being is not, etc.], let him first argue with our former conclusion [i.e., respecting the communion of ideas], and then he may proceed to argue with what follows.

THEAETETUS: Nothing can be fairer.

STRANGER: Let me ask you to consider a further question.

THEAETETUS: What question?

STRANGER: When we speak of not-being, we speak, I suppose, not of something opposed to being, but only different.

THEAETETUS: What do you mean?

STRANGER: When we speak of something as not great, does the expression seem to you to imply what is little any more than what is equal?

THEAETETUS: Certainly not.

STRANGER: The negative particles, *ou* and *me*, when prefixed to words, do not imply opposition, but only difference from the words, or more correctly from the things represented by the words, which follow them.

THEAETETUS: Quite true.

STRANGER: There is another point to be considered, if you do not object.

THEAETETUS: What is it?

STRANGER: The nature of the other appears to me to be divided into fractions like knowledge.

THEAETETUS: How so?

STRANGER: Knowledge, like the other, is one; and yet the various parts of knowledge have each of them their own particular name, and hence there are many arts and kinds of knowledge.

THEAETETUS: Quite true.

STRANGER: And is not the case the same with the parts of the other, which is also one?

THEAETETUS: Very likely; but will you tell me how?

STRANGER: There is some part of the other which is opposed to the beautiful?

THEAETETUS: There is.

STRANGER: Shall we say that this has or has not a name?

THEAETETUS: It has; for whatever we call not-beautiful is other than the beautiful, not than something else.

STRANGER: And now tell me another thing.

THEAETETUS: What?

STRANGER: Is the not-beautiful anything but this — an existence parted off from a certain kind of existence, and again from another point of view opposed to an existing something?

THEAETETUS: True.

STRANGER: Then the not-beautiful turns out to be the opposition of being to being?

THEAETETUS: Very true.

STRANGER: But upon this view, is the beautiful a more real and the not-beautiful a less real existence?

THEAETETUS: Not at all.

STRANGER: And the not-great may be said to exist, equally with the great?

THEAETETUS: Yes.

STRANGER: And, in the same way, the just must be placed in the same category with the not-just — the one cannot be said to have any more existence than the other.

THEAETETUS: True.

STRANGER: The same may be said of other things; seeing that the nature of the other has a real existence, the parts of this nature must equally be supposed to exist.

THEAETETUS: Of course.

STRANGER: Then, as would appear, the opposition of a part of the other, and of a part of being, to one another, is, if I may venture to say so, as truly essence as being itself, and implies not the opposite of being, but only what is other than being.

THEAETETUS: Beyond question.

STRANGER: What then shall we call it?

THEAETETUS: Clearly, not-being; and this is the very nature for which the Sophist compelled us to search.

STRANGER: And has not this, as you were saying, as real an existence as any other class? May I not say with confidence that not-being has an assured existence, and a nature of its own? Just as the great was found to be great and the beautiful beautiful, and the not-great not-great, and the not-beautiful not-beautiful, in the same manner not-being has been found to be and is not-being, and is to be reckoned one among the many classes of being. Do you, Theaetetus,

still feel any doubt of this?

THEAETETUS: None whatever.

STRANGER: Do you observe that our scepticism has carried us beyond the range of Parmenides' prohibition?

THEAETETUS: In what?

STRANGER: We have advanced to a further point, and shown him more than he forbade us to investigate.

THEAETETUS: How is that?

STRANGER: Why, because he says —

‘Not-being never is, and do thou keep thy thoughts from this way of enquiry.’

THEAETETUS: Yes, he says so.

STRANGER: Whereas, we have not only proved that things which are not are, but we have shown what form of being not-being is; for we have shown that the nature of the other is, and is distributed over all things in their relations to one another, and whatever part of the other is contrasted with being, this is precisely what we have ventured to call not-being.

THEAETETUS: And surely, Stranger, we were quite right.

STRANGER: Let not any one say, then, that while affirming the opposition of not-being to being, we still assert the being of not-being; for as to whether there is an opposite of being, to that enquiry we have long said good-bye — it may or may not be, and may or may not be capable of definition. But as touching our present account of not-being, let a man either convince us of error, or, so long as he cannot, he too must say, as we are saying, that there is a communion of classes, and that being, and difference or other, traverse all things and mutually interpenetrate, so that the other partakes of being, and by reason of this participation is, and yet is not that of which it partakes, but other, and being other than being, it is clearly a

necessity that not-being should be. And again, being, through partaking of the other, becomes a class other than the remaining classes, and being other than all of them, is not each one of them, and is not all the rest, so that undoubtedly there are thousands upon thousands of cases in which being is not, and all other things, whether regarded individually or collectively, in many respects are, and in many respects are not.

THEAETETUS: True.

STRANGER: And he who is sceptical of this contradiction, must think how he can find something better to say; or if he sees a puzzle, and his pleasure is to drag words this way and that, the argument will prove to him, that he is not making a worthy use of his faculties; for there is no charm in such puzzles, and there is no difficulty in detecting them; but we can tell him of something else the pursuit of which is noble and also difficult.

THEAETETUS: What is it?

STRANGER: A thing of which I have already spoken; — letting alone these puzzles as involving no difficulty, he should be able to follow and criticize in detail every argument, and when a man says that the same is in a manner other, or that other is the same, to understand and refute him from his own point of view, and in the same respect in which he asserts either of these affections. But to show that somehow and in some sense the same is other, or the other same, or the great small, or the like unlike; and to delight in always bringing forward such contradictions, is no real refutation, but is clearly the new-born babe of some one who is only beginning to approach the problem of being.

THEAETETUS: To be sure.

STRANGER: For certainly, my friend, the attempt to separate all existences from one another is a barbarism and utterly unworthy of an educated or philosophical mind.

THEAETETUS: Why so?

STRANGER: The attempt at universal separation is the final annihilation of all reasoning; for only by the union of conceptions with one another do we attain to discourse of reason.

THEAETETUS: True.

STRANGER: And, observe that we were only just in time in making a resistance to such separatists, and compelling them to admit that one thing mingles with another.

THEAETETUS: Why so?

STRANGER: Why, that we might be able to assert discourse to be a kind of being; for if we could not, the worst of all consequences would follow; we should have no philosophy. Moreover, the necessity for determining the nature of discourse presses upon us at this moment; if utterly deprived of it, we could no more hold discourse; and deprived of it we should be if we admitted that there was no admixture of natures at all.

THEAETETUS: Very true. But I do not understand why at this moment we must determine the nature of discourse.

STRANGER: Perhaps you will see more clearly by the help of the following explanation.

THEAETETUS: What explanation?

STRANGER: Not-being has been acknowledged by us to be one among many classes diffused over all being.

THEAETETUS: True.

STRANGER: And thence arises the question, whether not-being mingles with opinion and language.

THEAETETUS: How so?

STRANGER: If not-being has no part in the proposition, then all things must be true; but if not-being has a part, then false opinion and false speech are possible, for to think or to say what is not — is

falsehood, which thus arises in the region of thought and in speech.

THEAETETUS: That is quite true.

STRANGER: And where there is falsehood surely there must be deceit.

THEAETETUS: Yes.

STRANGER: And if there is deceit, then all things must be full of idols and images and fancies.

THEAETETUS: To be sure.

STRANGER: Into that region the Sophist, as we said, made his escape, and, when he had got there, denied the very possibility of falsehood; no one, he argued, either conceived or uttered falsehood, inasmuch as not-being did not in any way partake of being.

THEAETETUS: True.

STRANGER: And now, not-being has been shown to partake of being, and therefore he will not continue fighting in this direction, but he will probably say that some ideas partake of not-being, and some not, and that language and opinion are of the non-partaking class; and he will still fight to the death against the existence of the image-making and phantastic art, in which we have placed him, because, as he will say, opinion and language do not partake of not-being, and unless this participation exists, there can be no such thing as falsehood. And, with the view of meeting this evasion, we must begin by enquiring into the nature of language, opinion, and imagination, in order that when we find them we may find also that they have communion with not-being, and, having made out the connexion of them, may thus prove that falsehood exists; and therein we will imprison the Sophist, if he deserves it, or, if not, we will let him go again and look for him in another class.

THEAETETUS: Certainly, Stranger, there appears to be truth in what was said about the Sophist at first, that he was of a class not easily caught, for he seems to have abundance of defences, which he throws

up, and which must every one of them be stormed before we can reach the man himself. And even now, we have with difficulty got through his first defence, which is the not-being of not-being, and lo! here is another; for we have still to show that falsehood exists in the sphere of language and opinion, and there will be another and another line of defence without end.

STRANGER: Any one, Theaetetus, who is able to advance even a little ought to be of good cheer, for what would he who is dispirited at a little progress do, if he were making none at all, or even undergoing a repulse? Such a faint heart, as the proverb says, will never take a city: but now that we have succeeded thus far, the citadel is ours, and what remains is easier.

THEAETETUS: Very true.

STRANGER: Then, as I was saying, let us first of all obtain a conception of language and opinion, in order that we may have clearer grounds for determining, whether not-being has any concern with them, or whether they are both always true, and neither of them ever false.

THEAETETUS: True.

STRANGER: Then, now, let us speak of names, as before we were speaking of ideas and letters; for that is the direction in which the answer may be expected.

THEAETETUS: And what is the question at issue about names?

STRANGER: The question at issue is whether all names may be connected with one another, or none, or only some of them.

THEAETETUS: Clearly the last is true.

STRANGER: I understand you to say that words which have a meaning when in sequence may be connected, but that words which have no meaning when in sequence cannot be connected?

THEAETETUS: What are you saying?

STRANGER: What I thought that you intended when you gave your assent; for there are two sorts of intimation of being which are given by the voice.

THEAETETUS: What are they?

STRANGER: One of them is called nouns, and the other verbs.

THEAETETUS: Describe them.

STRANGER: That which denotes action we call a verb.

THEAETETUS: True.

STRANGER: And the other, which is an articulate mark set on those who do the actions, we call a noun.

THEAETETUS: Quite true.

STRANGER: A succession of nouns only is not a sentence, any more than of verbs without nouns.

THEAETETUS: I do not understand you.

STRANGER: I see that when you gave your assent you had something else in your mind. But what I intended to say was, that a mere succession of nouns or of verbs is not discourse.

THEAETETUS: What do you mean?

STRANGER: I mean that words like ‘walks,’ ‘runs,’ ‘sleeps,’ or any other words which denote action, however many of them you string together, do not make discourse.

THEAETETUS: How can they?

STRANGER: Or, again, when you say ‘lion,’ ‘stag,’ ‘horse,’ or any other words which denote agents — neither in this way of stringing words together do you attain to discourse; for there is no expression of action or inaction, or of the existence of existence or non-existence indicated by the sounds, until verbs are mingled with nouns; then the words fit, and the smallest combination of them

forms language, and is the simplest and least form of discourse.

THEAETETUS: Again I ask, What do you mean?

STRANGER: When any one says 'A man learns,' should you not call this the simplest and least of sentences?

THEAETETUS: Yes.

STRANGER: Yes, for he now arrives at the point of giving an intimation about something which is, or is becoming, or has become, or will be. And he not only names, but he does something, by connecting verbs with nouns; and therefore we say that he discourses, and to this connexion of words we give the name of discourse.

THEAETETUS: True.

STRANGER: And as there are some things which fit one another, and other things which do not fit, so there are some vocal signs which do, and others which do not, combine and form discourse.

THEAETETUS: Quite true.

STRANGER: There is another small matter.

THEAETETUS: What is it?

STRANGER: A sentence must and cannot help having a subject.

THEAETETUS: True.

STRANGER: And must be of a certain quality.

THEAETETUS: Certainly.

STRANGER: And now let us mind what we are about.

THEAETETUS: We must do so.

STRANGER: I will repeat a sentence to you in which a thing and an action are combined, by the help of a noun and a verb; and you shall tell me of whom the sentence speaks.

THEAETETUS: I will, to the best of my power.

STRANGER: 'Theaetetus sits' — not a very long sentence.

THEAETETUS: Not very.

STRANGER: Of whom does the sentence speak, and who is the subject? that is what you have to tell.

THEAETETUS: Of me; I am the subject.

STRANGER: Or this sentence, again —

THEAETETUS: What sentence?

STRANGER: 'Theaetetus, with whom I am now speaking, is flying.'

THEAETETUS: That also is a sentence which will be admitted by every one to speak of me, and to apply to me.

STRANGER: We agreed that every sentence must necessarily have a certain quality.

THEAETETUS: Yes.

STRANGER: And what is the quality of each of these two sentences?

THEAETETUS: The one, as I imagine, is false, and the other true.

STRANGER: The true says what is true about you?

THEAETETUS: Yes.

STRANGER: And the false says what is other than true?

THEAETETUS: Yes.

STRANGER: And therefore speaks of things which are not as if they were?

THEAETETUS: True.

STRANGER: And say that things are real of you which are not; for,

as we were saying, in regard to each thing or person, there is much that is and much that is not.

THEAETETUS: Quite true.

STRANGER: The second of the two sentences which related to you was first of all an example of the shortest form consistent with our definition.

THEAETETUS: Yes, this was implied in recent admission.

STRANGER: And, in the second place, it related to a subject?

THEAETETUS: Yes.

STRANGER: Who must be you, and can be nobody else?

THEAETETUS: Unquestionably.

STRANGER: And it would be no sentence at all if there were no subject, for, as we proved, a sentence which has no subject is impossible.

THEAETETUS: Quite true.

STRANGER: When other, then, is asserted of you as the same, and not-being as being, such a combination of nouns and verbs is really and truly false discourse.

THEAETETUS: Most true.

STRANGER: And therefore thought, opinion, and imagination are now proved to exist in our minds both as true and false.

THEAETETUS: How so?

STRANGER: You will know better if you first gain a knowledge of what they are, and in what they severally differ from one another.

THEAETETUS: Give me the knowledge which you would wish me to gain.

STRANGER: Are not thought and speech the same, with this

exception, that what is called thought is the unuttered conversation of the soul with herself?

THEAETETUS: Quite true.

STRANGER: But the stream of thought which flows through the lips and is audible is called speech?

THEAETETUS: True.

STRANGER: And we know that there exists in speech...

THEAETETUS: What exists?

STRANGER: Affirmation.

THEAETETUS: Yes, we know it.

STRANGER: When the affirmation or denial takes Place in silence and in the mind only, have you any other name by which to call it but opinion?

THEAETETUS: There can be no other name.

STRANGER: And when opinion is presented, not simply, but in some form of sense, would you not call it imagination?

THEAETETUS: Certainly.

STRANGER: And seeing that language is true and false, and that thought is the conversation of the soul with herself, and opinion is the end of thinking, and imagination or phantasy is the union of sense and opinion, the inference is that some of them, since they are akin to language, should have an element of falsehood as well as of truth?

THEAETETUS: Certainly.

STRANGER: Do you perceive, then, that false opinion and speech have been discovered sooner than we expected? — For just now we seemed to be undertaking a task which would never be accomplished.

THEAETETUS: I perceive.

STRANGER: Then let us not be discouraged about the future; but now having made this discovery, let us go back to our previous classification.

THEAETETUS: What classification?

STRANGER: We divided image-making into two sorts; the one likeness-making, the other imaginative or phantastic.

THEAETETUS: True.

STRANGER: And we said that we were uncertain in which we should place the Sophist.

THEAETETUS: We did say so.

STRANGER: And our heads began to go round more and more when it was asserted that there is no such thing as an image or idol or appearance, because in no manner or time or place can there ever be such a thing as falsehood.

THEAETETUS: True.

STRANGER: And now, since there has been shown to be false speech and false opinion, there may be imitations of real existences, and out of this condition of the mind an art of deception may arise.

THEAETETUS: Quite possible.

STRANGER: And we have already admitted, in what preceded, that the Sophist was lurking in one of the divisions of the likeness-making art?

THEAETETUS: Yes.

STRANGER: Let us, then, renew the attempt, and in dividing any class, always take the part to the right, holding fast to that which holds the Sophist, until we have stripped him of all his common properties, and reached his difference or peculiar. Then we may

exhibit him in his true nature, first to ourselves and then to kindred dialectical spirits.

THEAETETUS: Very good.

STRANGER: You may remember that all art was originally divided by us into creative and acquisitive.

THEAETETUS: Yes.

STRANGER: And the Sophist was flitting before us in the acquisitive class, in the subdivisions of hunting, contests, merchandize, and the like.

THEAETETUS: Very true.

STRANGER: But now that the imitative art has enclosed him, it is clear that we must begin by dividing the art of creation; for imitation is a kind of creation — of images, however, as we affirm, and not of real things.

THEAETETUS: Quite true.

STRANGER: In the first place, there are two kinds of creation.

THEAETETUS: What are they?

STRANGER: One of them is human and the other divine.

THEAETETUS: I do not follow.

STRANGER: Every power, as you may remember our saying originally, which causes things to exist, not previously existing, was defined by us as creative.

THEAETETUS: I remember.

STRANGER: Looking, now, at the world and all the animals and plants, at things which grow upon the earth from seeds and roots, as well as at inanimate substances which are formed within the earth, fusile or non-fusile, shall we say that they come into existence — not having existed previously — by the creation of God, or shall we

agree with vulgar opinion about them?

THEAETETUS: What is it?

STRANGER: The opinion that nature brings them into being from some spontaneous and unintelligent cause. Or shall we say that they are created by a divine reason and a knowledge which comes from God?

THEAETETUS: I dare say that, owing to my youth, I may often waver in my view, but now when I look at you and see that you incline to refer them to God, I defer to your authority.

STRANGER: Nobly said, Theaetetus, and if I thought that you were one of those who would hereafter change your mind, I would have gently argued with you, and forced you to assent; but as I perceive that you will come of yourself and without any argument of mine, to that belief which, as you say, attracts you, I will not forestall the work of time. Let me suppose, then, that things which are said to be made by nature are the work of divine art, and that things which are made by man out of these are works of human art. And so there are two kinds of making and production, the one human and the other divine.

THEAETETUS: True.

STRANGER: Then, now, subdivide each of the two sections which we have already.

THEAETETUS: How do you mean?

STRANGER: I mean to say that you should make a vertical division of production or invention, as you have already made a lateral one.

THEAETETUS: I have done so.

STRANGER: Then, now, there are in all four parts or segments — two of them have reference to us and are human, and two of them have reference to the gods and are divine.

THEAETETUS: True.

STRANGER: And, again, in the division which was supposed to be made in the other way, one part in each subdivision is the making of the things themselves, but the two remaining parts may be called the making of likenesses; and so the productive art is again divided into two parts.

THEAETETUS: Tell me the divisions once more.

STRANGER: I suppose that we, and the other animals, and the elements out of which things are made — fire, water, and the like — are known by us to be each and all the creation and work of God.

THEAETETUS: True.

STRANGER: And there are images of them, which are not them, but which correspond to them; and these are also the creation of a wonderful skill.

THEAETETUS: What are they?

STRANGER: The appearances which spring up of themselves in sleep or by day, such as a shadow when darkness arises in a fire, or the reflection which is produced when the light in bright and smooth objects meets on their surface with an external light, and creates a perception the opposite of our ordinary sight.

THEAETETUS: Yes; and the images as well as the creation are equally the work of a divine hand.

STRANGER: And what shall we say of human art? Do we not make one house by the art of building, and another by the art of drawing, which is a sort of dream created by man for those who are awake?

THEAETETUS: Quite true.

STRANGER: And other products of human creation are also twofold and go in pairs; there is the thing, with which the art of making the thing is concerned, and the image, with which imitation is concerned.

THEAETETUS: Now I begin to understand, and am ready to acknowledge that there are two kinds of production, and each of

them twofold; in the lateral division there is both a divine and a human production; in the vertical there are realities and a creation of a kind of similitudes.

STRANGER: And let us not forget that of the imitative class the one part was to have been likeness-making, and the other phantastic, if it could be shown that falsehood is a reality and belongs to the class of real being.

THEAETETUS: Yes.

STRANGER: And this appeared to be the case; and therefore now, without hesitation, we shall number the different kinds as two.

THEAETETUS: True.

STRANGER: Then, now, let us again divide the phantastic art.

THEAETETUS: Where shall we make the division?

STRANGER: There is one kind which is produced by an instrument, and another in which the creator of the appearance is himself the instrument.

THEAETETUS: What do you mean?

STRANGER: When any one makes himself appear like another in his figure or his voice, imitation is the name for this part of the phantastic art.

THEAETETUS: Yes.

STRANGER: Let this, then, be named the art of mimicry, and this the province assigned to it; as for the other division, we are weary and will give that up, leaving to some one else the duty of making the class and giving it a suitable name.

THEAETETUS: Let us do as you say — assign a sphere to the one and leave the other.

STRANGER: There is a further distinction, Theaetetus, which is

worthy of our consideration, and for a reason which I will tell you.

THEAETETUS: Let me hear.

STRANGER: There are some who imitate, knowing what they imitate, and some who do not know. And what line of distinction can there possibly be greater than that which divides ignorance from knowledge?

THEAETETUS: There can be no greater.

STRANGER: Was not the sort of imitation of which we spoke just now the imitation of those who know? For he who would imitate you would surely know you and your figure?

THEAETETUS: Naturally.

STRANGER: And what would you say of the figure or form of justice or of virtue in general? Are we not well aware that many, having no knowledge of either, but only a sort of opinion, do their best to show that this opinion is really entertained by them, by expressing it, as far as they can, in word and deed?

THEAETETUS: Yes, that is very common.

STRANGER: And do they always fail in their attempt to be thought just, when they are not? Or is not the very opposite true?

THEAETETUS: The very opposite.

STRANGER: Such a one, then, should be described as an imitator — to be distinguished from the other, as he who is ignorant is distinguished from him who knows?

THEAETETUS: True.

STRANGER: Can we find a suitable name for each of them? This is clearly not an easy task; for among the ancients there was some confusion of ideas, which prevented them from attempting to divide genera into species; wherefore there is no great abundance of names. Yet, for the sake of distinctness, I will make bold to call the imitation

which coexists with opinion, the imitation of appearance — that which coexists with science, a scientific or learned imitation.

THEAETETUS: Granted.

STRANGER: The former is our present concern, for the Sophist was classed with imitators indeed, but not among those who have knowledge.

THEAETETUS: Very true.

STRANGER: Let us, then, examine our imitator of appearance, and see whether he is sound, like a piece of iron, or whether there is still some crack in him.

THEAETETUS: Let us examine him.

STRANGER: Indeed there is a very considerable crack; for if you look, you find that one of the two classes of imitators is a simple creature, who thinks that he knows that which he only fancies; the other sort has knocked about among arguments, until he suspects and fears that he is ignorant of that which to the many he pretends to know.

THEAETETUS: There are certainly the two kinds which you describe.

STRANGER: Shall we regard one as the simple imitator — the other as the dissembling or ironical imitator?

THEAETETUS: Very good.

STRANGER: And shall we further speak of this latter class as having one or two divisions?

THEAETETUS: Answer yourself.

STRANGER: Upon consideration, then, there appear to me to be two; there is the dissembler, who harangues a multitude in public in a long speech, and the dissembler, who in private and in short speeches compels the person who is conversing with him to contradict himself.

THEAETETUS: What you say is most true.

STRANGER: And who is the maker of the longer speeches? Is he the statesman or the popular orator?

THEAETETUS: The latter.

STRANGER: And what shall we call the other? Is he the philosopher or the Sophist?

THEAETETUS: The philosopher he cannot be, for upon our view he is ignorant; but since he is an imitator of the wise he will have a name which is formed by an adaptation of the word *sophos*. What shall we name him? I am pretty sure that I cannot be mistaken in terming him the true and very Sophist.

STRANGER: Shall we bind up his name as we did before, making a chain from one end of his genealogy to the other?

THEAETETUS: By all means.

STRANGER: He, then, who traces the pedigree of his art as follows — who, belonging to the conscious or dissembling section of the art of causing self-contradiction, is an imitator of appearance, and is separated from the class of phantastic which is a branch of image-making into that further division of creation, the juggling of words, a creation human, and not divine — any one who affirms the real Sophist to be of this blood and lineage will say the very truth.

THEAETETUS: Undoubtedly.

STATESMAN

Translated by Benjamin Jowett

This dialogue describes a conversation between Socrates, the mathematician Theodorus, another man named Socrates and an unnamed philosopher from Elea referred to as the Stranger. This late dialogue is ostensibly an attempt to arrive at a definition of “statesman,” as opposed to “sophist” or “philosopher” and is presented as following the action of the *Sophist*.

A bust of Socrates in the Palermo Archaeological Museum

INTRODUCTION AND ANALYSIS.
STATESMAN

INTRODUCTION AND ANALYSIS.

In the *Phaedrus*, the *Republic*, the *Philebus*, the *Parmenides*, and the *Sophist*, we may observe the tendency of Plato to combine two or more subjects or different aspects of the same subject in a single dialogue. In the *Sophist* and *Statesman* especially we note that the discussion is partly regarded as an illustration of method, and that analogies are brought from afar which throw light on the main subject. And in his later writings generally we further remark a decline of style, and of dramatic power; the characters excite little or no interest, and the digressions are apt to overlay the main thesis; there is not the 'callida junctura' of an artistic whole. Both the serious discussions and the jests are sometimes out of place. The invincible Socrates is withdrawn from view; and new foes begin to appear under old names. Plato is now chiefly concerned, not with the original *Sophist*, but with the sophistry of the schools of philosophy, which are making reasoning impossible; and is driven by them out of the regions of transcendental speculation back into the path of common sense. A logical or psychological phase takes the place of the doctrine of Ideas in his mind. He is constantly dwelling on the importance of regular classification, and of not putting words in the place of things. He has banished the poets, and is beginning to use a technical language. He is bitter and satirical, and seems to be sadly conscious of the realities of human life. Yet the ideal glory of the Platonic philosophy is not extinguished. He is still looking for a city in which kings are either philosophers or gods (compare *Laws*).

The *Statesman* has lost the grace and beauty of the earlier dialogues. The mind of the writer seems to be so overpowered in the effort of thought as to impair his style; at least his gift of expression does not keep up with the increasing difficulty of his theme. The idea of the king or statesman and the illustration of method are connected, not like the love and rhetoric of the *Phaedrus*, by 'little invisible pegs,' but in a confused and inartistic manner, which fails to produce any impression of a whole on the mind of the reader. Plato apologizes for his tediousness, and acknowledges that the improvement of his audience has been his only aim in some of his

digressions. His own image may be used as a motto of his style: like an inexpert statuary he has made the figure or outline too large, and is unable to give the proper colours or proportions to his work. He makes mistakes only to correct them — this seems to be his way of drawing attention to common dialectical errors. The Eleatic stranger, here, as in the *Sophist*, has no appropriate character, and appears only as the expositor of a political ideal, in the delineation of which he is frequently interrupted by purely logical illustrations. The younger Socrates resembles his namesake in nothing but a name. The dramatic character is so completely forgotten, that a special reference is twice made to discussions in the *Sophist*; and this, perhaps, is the strongest ground which can be urged for doubting the genuineness of the work. But, when we remember that a similar allusion is made in the *Laws* to the *Republic*, we see that the entire disregard of dramatic propriety is not always a sufficient reason for doubting the genuineness of a Platonic writing.

The search after the Statesman, which is carried on, like that for the *Sophist*, by the method of dichotomy, gives an opportunity for many humorous and satirical remarks. Several of the jests are mannered and laboured: for example, the turn of words with which the dialogue opens; or the clumsy joke about man being an animal, who has a power of two-feet — both which are suggested by the presence of Theodorus, the geometrician. There is political as well as logical insight in refusing to admit the division of mankind into Hellenes and Barbarians: ‘if a crane could speak, he would in like manner oppose men and all other animals to cranes.’ The pride of the Hellene is further humbled, by being compared to a Phrygian or Lydian. Plato glories in this impartiality of the dialectical method, which places birds in juxtaposition with men, and the king side by side with the bird-catcher; king or vermin-destroyer are objects of equal interest to science (compare Parmen.). There are other passages which show that the irony of Socrates was a lesson which Plato was not slow in learning — as, for example, the passing remark, that ‘the kings and statesmen of our day are in their breeding and education very like their subjects;’ or the anticipation that the rivals of the king will be found in the class of servants; or the imposing attitude of the priests, who are the established interpreters of the will of heaven,

authorized by law. Nothing is more bitter in all his writings than his comparison of the contemporary politicians to lions, centaurs, satyrs, and other animals of a feebler sort, who are ever changing their forms and natures. But, as in the later dialogues generally, the play of humour and the charm of poetry have departed, never to return.

Still the *Politicus* contains a higher and more ideal conception of politics than any other of Plato's writings. The city of which there is a pattern in heaven (*Republic*), is here described as a *Paradisiacal* state of human society. In the truest sense of all, the ruler is not man but God; and such a government existed in a former cycle of human history, and may again exist when the gods resume their care of mankind. In a secondary sense, the true form of government is that which has scientific rulers, who are irresponsible to their subjects. Not power but knowledge is the characteristic of a king or royal person. And the rule of a man is better and higher than law, because he is more able to deal with the infinite complexity of human affairs. But mankind, in despair of finding a true ruler, are willing to acquiesce in any law or custom which will save them from the caprice of individuals. They are ready to accept any of the six forms of government which prevail in the world. To the Greek, *nomos* was a sacred word, but the political idealism of Plato soars into a region beyond; for the laws he would substitute the intelligent will of the legislator. Education is originally to implant in men's minds a sense of truth and justice, which is the divine bond of states, and the legislator is to contrive human bonds, by which dissimilar natures may be united in marriage and supply the deficiencies of one another. As in the *Republic*, the government of philosophers, the causes of the perversion of states, the regulation of marriages, are still the political problems with which Plato's mind is occupied. He treats them more slightly, partly because the dialogue is shorter, and also because the discussion of them is perpetually crossed by the other interest of dialectic, which has begun to absorb him.

The plan of the *Politicus* or *Statesman* may be briefly sketched as follows: (1) By a process of division and subdivision we discover the true herdsman or king of men. But before we can rightly distinguish him from his rivals, we must view him, (2) as he is presented to us in a famous ancient tale: the tale will also enable us to distinguish the

divine from the human herdsman or shepherd: (3) and besides our fable, we must have an example; for our example we will select the art of weaving, which will have to be distinguished from the kindred arts; and then, following this pattern, we will separate the king from his subordinates or competitors. (4) But are we not exceeding all due limits; and is there not a measure of all arts and sciences, to which the art of discourse must conform? There is; but before we can apply this measure, we must know what is the aim of discourse: and our discourse only aims at the dialectical improvement of ourselves and others. — Having made our apology, we return once more to the king or statesman, and proceed to contrast him with pretenders in the same line with him, under their various forms of government. (5) His characteristic is, that he alone has science, which is superior to law and written enactments; these do but spring out of the necessities of mankind, when they are in despair of finding the true king. (6) The sciences which are most akin to the royal are the sciences of the general, the judge, the orator, which minister to him, but even these are subordinate to him. (7) Fixed principles are implanted by education, and the king or statesman completes the political web by marrying together dissimilar natures, the courageous and the temperate, the bold and the gentle, who are the warp and the woof of society.

The outline may be filled up as follows: —

SOCRATES: I have reason to thank you, Theodorus, for the acquaintance of Theaetetus and the Stranger.

THEODORUS: And you will have three times as much reason to thank me when they have delineated the Statesman and Philosopher, as well as the Sophist.

SOCRATES: Does the great geometrician apply the same measure to all three? Are they not divided by an interval which no geometrical ratio can express?

THEODORUS: By the god Ammon, Socrates, you are right; and I am glad to see that you have not forgotten your geometry. But before I retaliate on you, I must request the Stranger to finish the argument...

The Stranger suggests that Theaetetus shall be allowed to rest, and that Socrates the younger shall respond in his place; Theodorus

agrees to the suggestion, and Socrates remarks that the name of the one and the face of the other give him a right to claim relationship with both of them. They propose to take the Statesman after the Sophist; his path they must determine, and part off all other ways, stamping upon them a single negative form (compare *Soph.*).

The Stranger begins the enquiry by making a division of the arts and sciences into theoretical and practical — the one kind concerned with knowledge exclusively, and the other with action; arithmetic and the mathematical sciences are examples of the former, and carpentering and handicraft arts of the latter (compare *Philebus*). Under which of the two shall we place the Statesman? Or rather, shall we not first ask, whether the king, statesman, master, householder, practise one art or many? As the adviser of a physician may be said to have medical science and to be a physician, so the adviser of a king has royal science and is a king. And the master of a large household may be compared to the ruler of a small state. Hence we conclude that the science of the king, statesman, and householder is one and the same. And this science is akin to knowledge rather than to action. For a king rules with his mind, and not with his hands.

But theoretical science may be a science either of judging, like arithmetic, or of ruling and superintending, like that of the architect or master-builder. And the science of the king is of the latter nature; but the power which he exercises is underived and uncontrolled, — a characteristic which distinguishes him from heralds, prophets, and other inferior officers. He is the wholesale dealer in command, and the herald, or other officer, retails his commands to others. Again, a ruler is concerned with the production of some object, and objects may be divided into living and lifeless, and rulers into the rulers of living and lifeless objects. And the king is not like the master-builder, concerned with lifeless matter, but has the task of managing living animals. And the tending of living animals may be either a tending of individuals, or a managing of herds. And the Statesman is not a groom, but a herdsman, and his art may be called either the art of managing a herd, or the art of collective management: — Which do you prefer? ‘No matter.’ Very good, Socrates, and if you are not too particular about words you will be all the richer some day in true wisdom. But how would you subdivide the herdsman’s art? ‘I should

say, that there is one management of men, and another of beasts.' Very good, but you are in too great a hurry to get to man. All divisions which are rightly made should cut through the middle; if you attend to this rule, you will be more likely to arrive at classes. 'I do not understand the nature of my mistake.' Your division was like a division of the human race into Hellenes and Barbarians, or into Lydians or Phrygians and all other nations, instead of into male and female; or like a division of number into ten thousand and all other numbers, instead of into odd and even. And I should like you to observe further, that though I maintain a class to be a part, there is no similar necessity for a part to be a class. But to return to your division, you spoke of men and other animals as two classes — the second of which you comprehended under the general name of beasts. This is the sort of division which an intelligent crane would make: he would put cranes into a class by themselves for their special glory, and jumble together all others, including man, in the class of beasts. An error of this kind can only be avoided by a more regular subdivision. Just now we divided the whole class of animals into gregarious and non-gregarious, omitting the previous division into tame and wild. We forgot this in our hurry to arrive at man, and found by experience, as the proverb says, that 'the more haste the worse speed.'

And now let us begin again at the art of managing herds. You have probably heard of the fish-preserves in the Nile and in the ponds of the Great King, and of the nurseries of geese and cranes in Thessaly. These suggest a new division into the rearing or management of land-herds and of water-herds: — I need not say with which the king is concerned. And land-herds may be divided into walking and flying; and every idiot knows that the political animal is a pedestrian. At this point we may take a longer or a shorter road, and as we are already near the end, I see no harm in taking the longer, which is the way of mesotomy, and accords with the principle which we were laying down. The tame, walking, herding animal, may be divided into two classes — the horned and the hornless, and the king is concerned with the hornless; and these again may be subdivided into animals having or not having cloven feet, or mixing or not mixing the breed; and the king or statesman has the care of

animals which have not cloven feet, and which do not mix the breed. And now, if we omit dogs, who can hardly be said to herd, I think that we have only two species left which remain undivided: and how are we to distinguish them? To geometricians, like you and Theaetetus, I can have no difficulty in explaining that man is a diameter, having a power of two feet; and the power of four-legged creatures, being the double of two feet, is the diameter of our diameter. There is another excellent jest which I spy in the two remaining species. Men and birds are both bipeds, and human beings are running a race with the airiest and freest of creation, in which they are far behind their competitors; — this is a great joke, and there is a still better in the juxtaposition of the bird-taker and the king, who may be seen scampering after them. For, as we remarked in discussing the Sophist, the dialectical method is no respecter of persons. But we might have proceeded, as I was saying, by another and a shorter road. In that case we should have begun by dividing land animals into bipeds and quadrupeds, and bipeds into winged and wingless; we should then have taken the Statesman and set him over the ‘bipes implume,’ and put the reins of government into his hands.

Here let us sum up: — The science of pure knowledge had a part which was the science of command, and this had a part which was a science of wholesale command; and this was divided into the management of animals, and was again parted off into the management of herds of animals, and again of land animals, and these into hornless, and these into bipeds; and so at last we arrived at man, and found the political and royal science. And yet we have not clearly distinguished the political shepherd from his rivals. No one would think of usurping the prerogatives of the ordinary shepherd, who on all hands is admitted to be the trainer, matchmaker, doctor, musician of his flock. But the royal shepherd has numberless competitors, from whom he must be distinguished; there are merchants, husbandmen, physicians, who will all dispute his right to manage the flock. I think that we can best distinguish him by having recourse to a famous old tradition, which may amuse as well as instruct us; the narrative is perfectly true, although the scepticism of mankind is prone to doubt the tales of old. You have heard what happened in the quarrel of Atreus and Thyestes? ‘You mean about

the golden lamb?’ No, not that; but another part of the story, which tells how the sun and stars once arose in the west and set in the east, and that the god reversed their motion, as a witness to the right of Atreus. ‘There is such a story.’ And no doubt you have heard of the empire of Cronos, and of the earthborn men? The origin of these and the like stories is to be found in the tale which I am about to narrate.

There was a time when God directed the revolutions of the world, but at the completion of a certain cycle he let go; and the world, by a necessity of its nature, turned back, and went round the other way. For divine things alone are unchangeable; but the earth and heavens, although endowed with many glories, have a body, and are therefore liable to perturbation. In the case of the world, the perturbation is very slight, and amounts only to a reversal of motion. For the lord of moving things is alone self-moved; neither can piety allow that he goes at one time in one direction and at another time in another; or that God has given the universe opposite motions; or that there are two gods, one turning it in one direction, another in another. But the truth is, that there are two cycles of the world, and in one of them it is governed by an immediate Providence, and receives life and immortality, and in the other is let go again, and has a reverse action during infinite ages. This new action is spontaneous, and is due to exquisite perfection of balance, to the vast size of the universe, and to the smallness of the pivot upon which it turns. All changes in the heaven affect the animal world, and this being the greatest of them, is most destructive to men and animals. At the beginning of the cycle before our own very few of them had survived; and on these a mighty change passed. For their life was reversed like the motion of the world, and first of all coming to a stand then quickly returned to youth and beauty. The white locks of the aged became black; the cheeks of the bearded man were restored to their youth and fineness; the young men grew softer and smaller, and, being reduced to the condition of children in mind as well as body, began to vanish away; and the bodies of those who had died by violence, in a few moments underwent a parallel change and disappeared. In that cycle of existence there was no such thing as the procreation of animals from one another, but they were born of the earth, and of this our ancestors, who came into being immediately after the end of the last

cycle and at the beginning of this, have preserved the recollection. Such traditions are often now unduly discredited, and yet they may be proved by internal evidence. For observe how consistent the narrative is; as the old returned to youth, so the dead returned to life; the wheel of their existence having been reversed, they rose again from the earth: a few only were reserved by God for another destiny. Such was the origin of the earthborn men.

‘And is this cycle, of which you are speaking, the reign of Cronos, or our present state of existence?’ No, Socrates, that blessed and spontaneous life belongs not to this, but to the previous state, in which God was the governor of the whole world, and other gods subject to him ruled over parts of the world, as is still the case in certain places. They were shepherds of men and animals, each of them sufficing for those of whom he had the care. And there was no violence among them, or war, or devouring of one another. Their life was spontaneous, because in those days God ruled over man; and he was to man what man is now to the animals. Under his government there were no estates, or private possessions, or families; but the earth produced a sufficiency of all things, and men were born out of the earth, having no traditions of the past; and as the temperature of the seasons was mild, they took no thought for raiment, and had no beds, but lived and dwelt in the open air.

Such was the age of Cronos, and the age of Zeus is our own. Tell me, which is the happier of the two? Or rather, shall I tell you that the happiness of these children of Cronos must have depended on how they used their time? If having boundless leisure, and the power of discoursing not only with one another but with the animals, they had employed these advantages with a view to philosophy, gathering from every nature some addition to their store of knowledge; — or again, if they had merely eaten and drunk, and told stories to one another, and to the beasts; — in either case, I say, there would be no difficulty in answering the question. But as nobody knows which they did, the question must remain unanswered. And here is the point of my tale. In the fulness of time, when the earthborn men had all passed away, the ruler of the universe let go the helm, and became a spectator; and destiny and natural impulse swayed the world. At the same instant all the inferior deities gave up their hold; the whole

universe rebounded, and there was a great earthquake, and utter ruin of all manner of animals. After a while the tumult ceased, and the universal creature settled down in his accustomed course, having authority over all other creatures, and following the instructions of his God and Father, at first more precisely, afterwards with less exactness. The reason of the falling off was the disengagement of a former chaos; 'a muddy vesture of decay' was a part of his original nature, out of which he was brought by his Creator, under whose immediate guidance, while he remained in that former cycle, the evil was minimized and the good increased to the utmost. And in the beginning of the new cycle all was well enough, but as time went on, discord entered in; at length the good was minimized and the evil everywhere diffused, and there was a danger of universal ruin. Then the Creator, seeing the world in great straits, and fearing that chaos and infinity would come again, in his tender care again placed himself at the helm and restored order, and made the world immortal and imperishable. Once more the cycle of life and generation was reversed; the infants grew into young men, and the young men became greyheaded; no longer did the animals spring out of the earth; as the whole world was now lord of its own progress, so the parts were to be self-created and self-nourished. At first the case of men was very helpless and pitiable; for they were alone among the wild beasts, and had to carry on the struggle for existence without arts or knowledge, and had no food, and did not know how to get any. That was the time when Prometheus brought them fire, Hephaestus and Athene taught them arts, and other gods gave them seeds and plants. Out of these human life was framed; for mankind were left to themselves, and ordered their own ways, living, like the universe, in one cycle after one manner, and in another cycle after another manner.

Enough of the myth, which may show us two errors of which we were guilty in our account of the king. The first and grand error was in choosing for our king a god, who belongs to the other cycle, instead of a man from our own; there was a lesser error also in our failure to define the nature of the royal functions. The myth gave us only the image of a divine shepherd, whereas the statesmen and kings of our own day very much resemble their subjects in education

and breeding. On retracing our steps we find that we gave too narrow a designation to the art which was concerned with command-for-self over living creatures, when we called it the 'feeding' of animals in flocks. This would apply to all shepherds, with the exception of the Statesman; but if we say 'managing' or 'tending' animals, the term would include him as well. Having remodelled the name, we may subdivide as before, first separating the human from the divine shepherd or manager. Then we may subdivide the human art of governing into the government of willing and unwilling subjects — royalty and tyranny — which are the extreme opposites of one another, although we in our simplicity have hitherto confounded them.

And yet the figure of the king is still defective. We have taken up a lump of fable, and have used more than we needed. Like statuaries, we have made some of the features out of proportion, and shall lose time in reducing them. Or our mythus may be compared to a picture, which is well drawn in outline, but is not yet enlivened by colour. And to intelligent persons language is, or ought to be, a better instrument of description than any picture. 'But what, Stranger, is the deficiency of which you speak?' No higher truth can be made clear without an example; every man seems to know all things in a dream, and to know nothing when he is awake. And the nature of example can only be illustrated by an example. Children are taught to read by being made to compare cases in which they do not know a certain letter with cases in which they know it, until they learn to recognize it in all its combinations. Example comes into use when we identify something unknown with that which is known, and form a common notion of both of them. Like the child who is learning his letters, the soul recognizes some of the first elements of things; and then again is at fault and unable to recognize them when they are translated into the difficult language of facts. Let us, then, take an example, which will illustrate the nature of example, and will also assist us in characterizing the political science, and in separating the true king from his rivals.

I will select the example of weaving, or, more precisely, weaving of wool. In the first place, all possessions are either productive or preventive; of the preventive sort are spells and antidotes, divine and

human, and also defences, and defences are either arms or screens, and screens are veils and also shields against heat and cold, and shields against heat and cold are shelters and coverings, and coverings are blankets or garments, and garments are in one piece or have many parts; and of these latter, some are stitched and others are fastened, and of these again some are made of fibres of plants and some of hair, and of these some are cemented with water and earth, and some are fastened with their own material; the latter are called clothes, and are made by the art of clothing, from which the art of weaving differs only in name, as the political differs from the royal science. Thus we have drawn several distinctions, but as yet have not distinguished the weaving of garments from the kindred and co-operative arts. For the first process to which the material is subjected is the opposite of weaving — I mean carding. And the art of carding, and the whole art of the fuller and the mender, are concerned with the treatment and production of clothes, as well as the art of weaving. Again, there are the arts which make the weaver's tools. And if we say that the weaver's art is the greatest and noblest of those which have to do with woollen garments, — this, although true, is not sufficiently distinct; because these other arts require to be first cleared away. Let us proceed, then, by regular steps: — There are causal or principal, and co-operative or subordinate arts. To the causal class belong the arts of washing and mending, of carding and spinning the threads, and the other arts of working in wool; these are chiefly of two kinds, falling under the two great categories of composition and division. Carding is of the latter sort. But our concern is chiefly with that part of the art of wool-working which composes, and of which one kind twists and the other interlaces the threads, whether the firmer texture of the warp or the looser texture of the woof. These are adapted to each other, and the orderly composition of them forms a woollen garment. And the art which presides over these operations is the art of weaving.

But why did we go through this circuitous process, instead of saying at once that weaving is the art of entwining the warp and the woof? In order that our labour may not seem to be lost, I must explain the whole nature of excess and defect. There are two arts of measuring — one is concerned with relative size, and the other has

reference to a mean or standard of what is meet. The difference between good and evil is the difference between a mean or measure and excess or defect. All things require to be compared, not only with one another, but with the mean, without which there would be no beauty and no art, whether the art of the statesman or the art of weaving or any other; for all the arts guard against excess or defect, which are real evils. This we must endeavour to show, if the arts are to exist; and the proof of this will be a harder piece of work than the demonstration of the existence of not-being which we proved in our discussion about the Sophist. At present I am content with the indirect proof that the existence of such a standard is necessary to the existence of the arts. The standard or measure, which we are now only applying to the arts, may be some day required with a view to the demonstration of absolute truth.

We may now divide this art of measurement into two parts; placing in the one part all the arts which measure the relative size or number of objects, and in the other all those which depend upon a mean or standard. Many accomplished men say that the art of measurement has to do with all things, but these persons, although in this notion of theirs they may very likely be right, are apt to fail in seeing the differences of classes — they jumble together in one the ‘more’ and the ‘too much,’ which are very different things. Whereas the right way is to find the differences of classes, and to comprehend the things which have any affinity under the same class.

I will make one more observation by the way. When a pupil at a school is asked the letters which make up a particular word, is he not asked with a view to his knowing the same letters in all words? And our enquiry about the Statesman in like manner is intended not only to improve our knowledge of politics, but our reasoning powers generally. Still less would any one analyze the nature of weaving for its own sake. There is no difficulty in exhibiting sensible images, but the greatest and noblest truths have no outward form adapted to the eye of sense, and are only revealed in thought. And all that we are now saying is said for the sake of them. I make these remarks, because I want you to get rid of any impression that our discussion about weaving and about the reversal of the universe, and the other discussion about the Sophist and not-being, were tedious and

irrelevant. Please to observe that they can only be fairly judged when compared with what is meet; and yet not with what is meet for producing pleasure, nor even meet for making discoveries, but for the great end of developing the dialectical method and sharpening the wits of the auditors. He who censures us, should prove that, if our words had been fewer, they would have been better calculated to make men dialecticians.

And now let us return to our king or statesman, and transfer to him the example of weaving. The royal art has been separated from that of other herdsmen, but not from the causal and co-operative arts which exist in states; these do not admit of dichotomy, and therefore they must be carved neatly, like the limbs of a victim, not into more parts than are necessary. And first (1) we have the large class of instruments, which includes almost everything in the world; from these may be parted off (2) vessels which are framed for the preservation of things, moist or dry, prepared in the fire or out of the fire. The royal or political art has nothing to do with either of these, any more than with the arts of making (3) vehicles, or (4) defences, whether dresses, or arms, or walls, or (5) with the art of making ornaments, whether pictures or other playthings, as they may be fitly called, for they have no serious use. Then (6) there are the arts which furnish gold, silver, wood, bark, and other materials, which should have been put first; these, again, have no concern with the kingly science; any more than the arts (7) which provide food and nourishment for the human body, and which furnish occupation to the husbandman, huntsman, doctor, cook, and the like, but not to the king or statesman. Further, there are small things, such as coins, seals, stamps, which may with a little violence be comprehended in one of the above-mentioned classes. Thus they will embrace every species of property with the exception of animals, — but these have been already included in the art of tending herds. There remains only the class of slaves or ministers, among whom I expect that the real rivals of the king will be discovered. I am not speaking of the veritable slave bought with money, nor of the hireling who lets himself out for service, nor of the trader or merchant, who at best can only lay claim to economical and not to royal science. Nor am I referring to government officials, such as heralds and scribes, for

these are only the servants of the rulers, and not the rulers themselves. I admit that there may be something strange in any servants pretending to be masters, but I hardly think that I could have been wrong in supposing that the principal claimants to the throne will be of this class. Let us try once more: There are diviners and priests, who are full of pride and prerogative; these, as the law declares, know how to give acceptable gifts to the gods, and in many parts of Hellas the duty of performing solemn sacrifices is assigned to the chief magistrate, as at Athens to the King Archon. At last, then, we have found a trace of those whom we were seeking. But still they are only servants and ministers.

And who are these who next come into view in various forms of men and animals and other monsters appearing — lions and centaurs and satyrs — who are these? I did not know them at first, for every one looks strange when he is unexpected. But now I recognize the politician and his troop, the chief of Sophists, the prince of charlatans, the most accomplished of wizards, who must be carefully distinguished from the true king or statesman. And here I will interpose a question: What are the true forms of government? Are they not three — monarchy, oligarchy, and democracy? and the distinctions of freedom and compulsion, law and no law, poverty and riches expand these three into six. Monarchy may be divided into royalty and tyranny; oligarchy into aristocracy and plutocracy; and democracy may observe the law or may not observe it. But are any of these governments worthy of the name? Is not government a science, and are we to suppose that scientific government is secured by the rulers being many or few, rich or poor, or by the rule being compulsory or voluntary? Can the many attain to science? In no Hellenic city are there fifty good draught players, and certainly there are not as many kings, for by kings we mean all those who are possessed of the political science. A true government must therefore be the government of one, or of a few. And they may govern us either with or without law, and whether they are poor or rich, and however they govern, provided they govern on some scientific principle, — it makes no difference. And as the physician may cure us with our will, or against our will, and by any mode of treatment, burning, bleeding, lowering, fattening, if he only proceeds

scientifically: so the true governor may reduce or fatten or bleed the body corporate, while he acts according to the rules of his art, and with a view to the good of the state, whether according to law or without law.

‘I do not like the notion, that there can be good government without law.’

I must explain: Law-making certainly is the business of a king; and yet the best thing of all is, not that the law should rule, but that the king should rule, for the varieties of circumstances are endless, and no simple or universal rule can suit them all, or last for ever. The law is just an ignorant brute of a tyrant, who insists always on his commands being fulfilled under all circumstances. ‘Then why have we laws at all?’ I will answer that question by asking you whether the training master gives a different discipline to each of his pupils, or whether he has a general rule of diet and exercise which is suited to the constitutions of the majority? ‘The latter.’ The legislator, too, is obliged to lay down general laws, and cannot enact what is precisely suitable to each particular case. He cannot be sitting at every man’s side all his life, and prescribe for him the minute particulars of his duty, and therefore he is compelled to impose on himself and others the restriction of a written law. Let me suppose now, that a physician or trainer, having left directions for his patients or pupils, goes into a far country, and comes back sooner than he intended; owing to some unexpected change in the weather, the patient or pupil seems to require a different mode of treatment: Would he persist in his old commands, under the idea that all others are noxious and heterodox? Viewed in the light of science, would not the continuance of such regulations be ridiculous? And if the legislator, or another like him, comes back from a far country, is he to be prohibited from altering his own laws? The common people say: Let a man persuade the city first, and then let him impose new laws. But is a physician only to cure his patients by persuasion, and not by force? Is he a worse physician who uses a little gentle violence in effecting the cure? Or shall we say, that the violence is just, if exercised by a rich man, and unjust, if by a poor man? May not any man, rich or poor, with or without law, and whether the citizens like or not, do what is for their good? The pilot saves the

lives of the crew, not by laying down rules, but by making his art a law, and, like him, the true governor has a strength of art which is superior to the law. This is scientific government, and all others are imitations only. Yet no great number of persons can attain to this science. And hence follows an important result. The true political principle is to assert the inviolability of the law, which, though not the best thing possible, is best for the imperfect condition of man.

I will explain my meaning by an illustration: — Suppose that mankind, indignant at the rogueries and caprices of physicians and pilots, call together an assembly, in which all who like may speak, the skilled as well as the unskilled, and that in their assembly they make decrees for regulating the practice of navigation and medicine which are to be binding on these professions for all time. Suppose that they elect annually by vote or lot those to whom authority in either department is to be delegated. And let us further imagine, that when the term of their magistracy has expired, the magistrates appointed by them are summoned before an ignorant and unprofessional court, and may be condemned and punished for breaking the regulations. They even go a step further, and enact, that he who is found enquiring into the truth of navigation and medicine, and is seeking to be wise above what is written, shall be called not an artist, but a dreamer, a prating Sophist and a corruptor of youth; and if he try to persuade others to investigate those sciences in a manner contrary to the law, he shall be punished with the utmost severity. And like rules might be extended to any art or science. But what would be the consequence?

‘The arts would utterly perish, and human life, which is bad enough already, would become intolerable.’

But suppose, once more, that we were to appoint some one as the guardian of the law, who was both ignorant and interested, and who perverted the law: would not this be a still worse evil than the other? ‘Certainly.’ For the laws are based on some experience and wisdom. Hence the wiser course is, that they should be observed, although this is not the best thing of all, but only the second best. And whoever, having skill, should try to improve them, would act in the spirit of the law-giver. But then, as we have seen, no great number of men, whether poor or rich, can be makers of laws. And so, the nearest

approach to true government is, when men do nothing contrary to their own written laws and national customs. When the rich preserve their customs and maintain the law, this is called aristocracy, or if they neglect the law, oligarchy. When an individual rules according to law, whether by the help of science or opinion, this is called monarchy; and when he has royal science he is a king, whether he be so in fact or not; but when he rules in spite of law, and is blind with ignorance and passion, he is called a tyrant. These forms of government exist, because men despair of the true king ever appearing among them; if he were to appear, they would joyfully hand over to him the reins of government. But, as there is no natural ruler of the hive, they meet together and make laws. And do we wonder, when the foundation of politics is in the letter only, at the miseries of states? Ought we not rather to admire the strength of the political bond? For cities have endured the worst of evils time out of mind; many cities have been shipwrecked, and some are like ships foundering, because their pilots are absolutely ignorant of the science which they profess.

Let us next ask, which of these untrue forms of government is the least bad, and which of them is the worst? I said at the beginning, that each of the three forms of government, royalty, aristocracy, and democracy, might be divided into two, so that the whole number of them, including the best, will be seven. Under monarchy we have already distinguished royalty and tyranny; of oligarchy there were two kinds, aristocracy and plutocracy; and democracy may also be divided, for there is a democracy which observes, and a democracy which neglects, the laws. The government of one is the best and the worst — the government of a few is less bad and less good — the government of the many is the least bad and least good of them all, being the best of all lawless governments, and the worst of all lawful ones. But the rulers of all these states, unless they have knowledge, are maintainers of idols, and themselves idols — wizards, and also Sophists; for, after many windings, the term ‘Sophist’ comes home to them.

And now enough of centaurs and satyrs: the play is ended, and they may quit the political stage. Still there remain some other and better elements, which adhere to the royal science, and must be

drawn off in the refiner's fire before the gold can become quite pure. The arts of the general, the judge, and the orator, will have to be separated from the royal art; when the separation has been made, the nature of the king will be unalloyed. Now there are inferior sciences, such as music and others; and there is a superior science, which determines whether music is to be learnt or not, and this is different from them, and the governor of them. The science which determines whether we are to use persuasion, or not, is higher than the art of persuasion; the science which determines whether we are to go to war, is higher than the art of the general. The science which makes the laws, is higher than that which only administers them. And the science which has this authority over the rest, is the science of the king or statesman.

Once more we will endeavour to view this royal science by the light of our example. We may compare the state to a web, and I will show you how the different threads are drawn into one. You would admit — would you not? — that there are parts of virtue (although this position is sometimes assailed by Eristics), and one part of virtue is temperance, and another courage. These are two principles which are in a manner antagonistic to one another; and they pervade all nature; the whole class of the good and beautiful is included under them. The beautiful may be subdivided into two lesser classes: one of these is described by us in terms expressive of motion or energy, and the other in terms expressive of rest and quietness. We say, how manly! how vigorous! how ready! and we say also, how calm! how temperate! how dignified! This opposition of terms is extended by us to all actions, to the tones of the voice, the notes of music, the workings of the mind, the characters of men. The two classes both have their exaggerations; and the exaggerations of the one are termed 'hardness,' 'violence,' 'madness;' of the other 'cowardliness,' or 'sluggishness.' And if we pursue the enquiry, we find that these opposite characters are naturally at variance, and can hardly be reconciled. In lesser matters the antagonism between them is ludicrous, but in the State may be the occasion of grave disorders, and may disturb the whole course of human life. For the orderly class are always wanting to be at peace, and hence they pass imperceptibly into the condition of slaves; and the courageous sort are always

wanting to go to war, even when the odds are against them, and are soon destroyed by their enemies. But the true art of government, first preparing the material by education, weaves the two elements into one, maintaining authority over the carders of the wool, and selecting the proper subsidiary arts which are necessary for making the web. The royal science is queen of educators, and begins by choosing the natures which she is to train, punishing with death and exterminating those who are violently carried away to atheism and injustice, and enslaving those who are wallowing in the mire of ignorance. The rest of the citizens she blends into one, combining the stronger element of courage, which we may call the warp, with the softer element of temperance, which we may imagine to be the woof. These she binds together, first taking the eternal elements of the honourable, the good, and the just, and fastening them with a divine cord in a heaven-born nature, and then fastening the animal elements with a human cord. The good legislator can implant by education the higher principles; and where they exist there is no difficulty in inserting the lesser human bonds, by which the State is held together; these are the laws of intermarriage, and of union for the sake of offspring. Most persons in their marriages seek after wealth or power; or they are clannish, and choose those who are like themselves, — the temperate marrying the temperate, and the courageous the courageous. The two classes thrive and flourish at first, but they soon degenerate; the one become mad, and the other feeble and useless. This would not have been the case, if they had both originally held the same notions about the honourable and the good; for then they never would have allowed the temperate natures to be separated from the courageous, but they would have bound them together by common honours and reputations, by intermarriages, and by the choice of rulers who combine both qualities. The temperate are careful and just, but are wanting in the power of action; the courageous fall short of them in justice, but in action are superior to them: and no state can prosper in which either of these qualities is wanting. The noblest and best of all webs or states is that which the royal science weaves, combining the two sorts of natures in a single texture, and in this enfolding freeman and slave and every other social element, and presiding over them all.

‘Your picture, Stranger, of the king and statesman, no less than of the Sophist, is quite perfect.’

...

The principal subjects in the Statesman may be conveniently embraced under six or seven heads: — (1) the myth; (2) the dialectical interest; (3) the political aspects of the dialogue; (4) the satirical and paradoxical vein; (5) the necessary imperfection of law; (6) the relation of the work to the other writings of Plato; lastly (7), we may briefly consider the genuineness of the Sophist and Statesman, which can hardly be assumed without proof, since the two dialogues have been questioned by three such eminent Platonic scholars as Socher, Schaarschmidt, and Ueberweg.

I. The hand of the master is clearly visible in the myth. First in the connection with mythology; — he wins a kind of verisimilitude for this as for his other myths, by adopting received traditions, of which he pretends to find an explanation in his own larger conception (compare Introduction to Critias). The young Socrates has heard of the sun rising in the west and setting in the east, and of the earth-born men; but he has never heard the origin of these remarkable phenomena. Nor is Plato, here or elsewhere, wanting in denunciations of the incredulity of ‘this latter age,’ on which the lovers of the marvellous have always delighted to enlarge. And he is not without express testimony to the truth of his narrative; — such testimony as, in the Timaeus, the first men gave of the names of the gods (‘They must surely have known their own ancestors’). For the first generation of the new cycle, who lived near the time, are supposed to have preserved a recollection of a previous one. He also appeals to internal evidence, viz. the perfect coherence of the tale, though he is very well aware, as he says in the Cratylus, that there may be consistency in error as well as in truth. The gravity and minuteness with which some particulars are related also lend an artful aid. The profound interest and ready assent of the young Socrates, who is not too old to be amused ‘with a tale which a child would love to hear,’ are a further assistance. To those who were naturally inclined to believe that the fortunes of mankind are influenced by the stars, or who maintained that some one principle, like the principle of the Same and the Other in the Timaeus, pervades

all things in the world, the reversal of the motion of the heavens seemed necessarily to produce a reversal of the order of human life. The spheres of knowledge, which to us appear wide asunder as the poles, astronomy and medicine, were naturally connected in the minds of early thinkers, because there was little or nothing in the space between them. Thus there is a basis of philosophy, on which the improbabilities of the tale may be said to rest. These are some of the devices by which Plato, like a modern novelist, seeks to familiarize the marvellous.

The myth, like that of the *Timaeus* and *Critias*, is rather historical than poetical, in this respect corresponding to the general change in the later writings of Plato, when compared with the earlier ones. It is hardly a myth in the sense in which the term might be applied to the myth of the *Phaedrus*, the *Republic*, the *Phaedo*, or the *Gorgias*, but may be more aptly compared with the didactic tale in which Protagoras describes the fortunes of primitive man, or with the description of the gradual rise of a new society in the Third Book of the *Laws*. Some discrepancies may be observed between the mythology of the *Statesman* and the *Timaeus*, and between the *Timaeus* and the *Republic*. But there is no reason to expect that all Plato's visions of a former, any more than of a future, state of existence, should conform exactly to the same pattern. We do not find perfect consistency in his philosophy; and still less have we any right to demand this of him in his use of mythology and figures of speech. And we observe that while employing all the resources of a writer of fiction to give credibility to his tales, he is not disposed to insist upon their literal truth. Rather, as in the *Phaedo*, he says, 'Something of the kind is true;' or, as in the *Gorgias*, 'This you will think to be an old wife's tale, but you can think of nothing truer;' or, as in the *Statesman*, he describes his work as a 'mass of mythology,' which was introduced in order to teach certain lessons; or, as in the *Phaedrus*, he secretly laughs at such stories while refusing to disturb the popular belief in them.

The greater interest of the myth consists in the philosophical lessons which Plato presents to us in this veiled form. Here, as in the tale of Er, the son of Armenius, he touches upon the question of freedom and necessity, both in relation to God and nature. For at first

the universe is governed by the immediate providence of God, — this is the golden age, — but after a while the wheel is reversed, and man is left to himself. Like other theologians and philosophers, Plato relegates his explanation of the problem to a transcendental world; he speaks of what in modern language might be termed ‘impossibilities in the nature of things,’ hindering God from continuing immanent in the world. But there is some inconsistency; for the ‘letting go’ is spoken of as a divine act, and is at the same time attributed to the necessary imperfection of matter; there is also a numerical necessity for the successive births of souls. At first, man and the world retain their divine instincts, but gradually degenerate. As in the Book of Genesis, the first fall of man is succeeded by a second; the misery and wickedness of the world increase continually. The reason of this further decline is supposed to be the disorganisation of matter: the latent seeds of a former chaos are disengaged, and envelope all things. The condition of man becomes more and more miserable; he is perpetually waging an unequal warfare with the beasts. At length he obtains such a measure of education and help as is necessary for his existence. Though deprived of God’s help, he is not left wholly destitute; he has received from Athene and Hephaestus a knowledge of the arts; other gods give him seeds and plants; and out of these human life is reconstructed. He now eats bread in the sweat of his brow, and has dominion over the animals, subjected to the conditions of his nature, and yet able to cope with them by divine help. Thus Plato may be said to represent in a figure — (1) the state of innocence; (2) the fall of man; (3) the still deeper decline into barbarism; (4) the restoration of man by the partial interference of God, and the natural growth of the arts and of civilised society. Two lesser features of this description should not pass unnoticed: — (1) the primitive men are supposed to be created out of the earth, and not after the ordinary manner of human generation — half the causes of moral evil are in this way removed; (2) the arts are attributed to a divine revelation: and so the greatest difficulty in the history of pre-historic man is solved. Though no one knew better than Plato that the introduction of the gods is not a reason, but an excuse for not giving a reason (Cratylus), yet, considering that more than two thousand years later mankind are still discussing these problems, we may be

satisfied to find in Plato a statement of the difficulties which arise in conceiving the relation of man to God and nature, without expecting to obtain from him a solution of them. In such a tale, as in the *Phaedrus*, various aspects of the Ideas were doubtless indicated to Plato's own mind, as the corresponding theological problems are to us. The immanence of things in the Ideas, or the partial separation of them, and the self-motion of the supreme Idea, are probably the forms in which he would have interpreted his own parable.

He touches upon another question of great interest — the consciousness of evil — what in the Jewish Scriptures is called 'eating of the tree of the knowledge of good and evil.' At the end of the narrative, the Eleatic asks his companion whether this life of innocence, or that which men live at present, is the better of the two. He wants to distinguish between the mere animal life of innocence, the 'city of pigs,' as it is comically termed by Glaucon in the *Republic*, and the higher life of reason and philosophy. But as no one can determine the state of man in the world before the Fall, 'the question must remain unanswered.' Similar questions have occupied the minds of theologians in later ages; but they can hardly be said to have found an answer. Professor Campbell well observes, that the general spirit of the myth may be summed up in the words of the *Lysis*: 'If evil were to perish, should we hunger any more, or thirst any more, or have any similar sensations? Yet perhaps the question what will or will not be is a foolish one, for who can tell?' As in the *Theaetetus*, evil is supposed to continue, — here, as the consequence of a former state of the world, a sort of mephitic vapour exhaling from some ancient chaos, — there, as involved in the possibility of good, and incident to the mixed state of man.

Once more — and this is the point of connexion with the rest of the dialogue — the myth is intended to bring out the difference between the ideal and the actual state of man. In all ages of the world men have dreamed of a state of perfection, which has been, and is to be, but never is, and seems to disappear under the necessary conditions of human society. The uselessness, the danger, the true value of such political ideals have often been discussed; youth is too ready to believe in them; age to disparage them. Plato's '*prudens quaestio*' respecting the comparative happiness of men in this and in

a former cycle of existence is intended to elicit this contrast between the golden age and 'the life under Zeus' which is our own. To confuse the divine and human, or hastily apply one to the other, is a 'tremendous error.' Of the ideal or divine government of the world we can form no true or adequate conception; and this our mixed state of life, in which we are partly left to ourselves, but not wholly deserted by the gods, may contain some higher elements of good and knowledge than could have existed in the days of innocence under the rule of Cronos. So we may venture slightly to enlarge a Platonic thought which admits of a further application to Christian theology. Here are suggested also the distinctions between God causing and permitting evil, and between his more and less immediate government of the world.

II. The dialectical interest of the Statesman seems to contend in Plato's mind with the political; the dialogue might have been designated by two equally descriptive titles — either the 'Statesman,' or 'Concerning Method.' Dialectic, which in the earlier writings of Plato is a revival of the Socratic question and answer applied to definition, is now occupied with classification; there is nothing in which he takes greater delight than in processes of division (compare *Phaedr.*); he pursues them to a length out of proportion to his main subject, and appears to value them as a dialectical exercise, and for their own sake. A poetical vision of some order or hierarchy of ideas or sciences has already been floating before us in the *Symposium* and the *Republic*. And in the *Phaedrus* this aspect of dialectic is further sketched out, and the art of rhetoric is based on the division of the characters of mankind into their several classes. The same love of divisions is apparent in the *Gorgias*. But in a well-known passage of the *Philebus* occurs the first criticism on the nature of classification. There we are exhorted not to fall into the common error of passing from unity to infinity, but to find the intermediate classes; and we are reminded that in any process of generalization, there may be more than one class to which individuals may be referred, and that we must carry on the process of division until we have arrived at the infima species.

These precepts are not forgotten, either in the *Sophist* or in the *Statesman*. The *Sophist* contains four examples of division, carried

on by regular steps, until in four different lines of descent we detect the Sophist. In the Statesman the king or statesman is discovered by a similar process; and we have a summary, probably made for the first time, of possessions appropriated by the labour of man, which are distributed into seven classes. We are warned against preferring the shorter to the longer method; — if we divide in the middle, we are most likely to light upon species; at the same time, the important remark is made, that ‘a part is not to be confounded with a class.’ Having discovered the genus under which the king falls, we proceed to distinguish him from the collateral species. To assist our imagination in making this separation, we require an example. The higher ideas, of which we have a dreamy knowledge, can only be represented by images taken from the external world. But, first of all, the nature of example is explained by an example. The child is taught to read by comparing the letters in words which he knows with the same letters in unknown combinations; and this is the sort of process which we are about to attempt. As a parallel to the king we select the worker in wool, and compare the art of weaving with the royal science, trying to separate either of them from the inferior classes to which they are akin. This has the incidental advantage, that weaving and the web furnish us with a figure of speech, which we can afterwards transfer to the State.

There are two uses of examples or images — in the first place, they suggest thoughts — secondly, they give them a distinct form. In the infancy of philosophy, as in childhood, the language of pictures is natural to man: truth in the abstract is hardly won, and only by use familiarized to the mind. Examples are akin to analogies, and have a reflex influence on thought; they people the vacant mind, and may often originate new directions of enquiry. Plato seems to be conscious of the suggestiveness of imagery; the general analogy of the arts is constantly employed by him as well as the comparison of particular arts — weaving, the refining of gold, the learning to read, music, statuary, painting, medicine, the art of the pilot — all of which occur in this dialogue alone: though he is also aware that ‘comparisons are slippery things,’ and may often give a false clearness to ideas. We shall find, in the *Philebus*, a division of sciences into practical and speculative, and into more or less

speculative: here we have the idea of master-arts, or sciences which control inferior ones. Besides the supreme science of dialectic, 'which will forget us, if we forget her,' another master-science for the first time appears in view — the science of government, which fixes the limits of all the rest. This conception of the political or royal science as, from another point of view, the science of sciences, which holds sway over the rest, is not originally found in Aristotle, but in Plato.

The doctrine that virtue and art are in a mean, which is familiarized to us by the study of the *Nicomachean Ethics*, is also first distinctly asserted in the *Statesman* of Plato. The too much and the too little are in restless motion: they must be fixed by a mean, which is also a standard external to them. The art of measuring or finding a mean between excess and defect, like the principle of division in the *Phaedrus*, receives a particular application to the art of discourse. The excessive length of a discourse may be blamed; but who can say what is excess, unless he is furnished with a measure or standard? Measure is the life of the arts, and may some day be discovered to be the single ultimate principle in which all the sciences are contained. Other forms of thought may be noted — the distinction between causal and co-operative arts, which may be compared with the distinction between primary and co-operative causes in the *Timæus*; or between cause and condition in the *Phædo*; the passing mention of economical science; the opposition of rest and motion, which is found in all nature; the general conception of two great arts of composition and division, in which are contained weaving, politics, dialectic; and in connexion with the conception of a mean, the two arts of measuring.

In the *Theætetus*, Plato remarks that precision in the use of terms, though sometimes pedantic, is sometimes necessary. Here he makes the opposite reflection, that there may be a philosophical disregard of words. The evil of mere verbal oppositions, the requirement of an impossible accuracy in the use of terms, the error of supposing that philosophy was to be found in language, the danger of word-catching, have frequently been discussed by him in the previous dialogues, but nowhere has the spirit of modern inductive philosophy been more happily indicated than in the words of the *Statesman*:—

‘If you think more about things, and less about words, you will be richer in wisdom as you grow older.’ A similar spirit is discernible in the remarkable expressions, ‘the long and difficult language of facts;’ and ‘the interrogation of every nature, in order to obtain the particular contribution of each to the store of knowledge.’ Who has described ‘the feeble intelligence of all things; given by metaphysics better than the Eleatic Stranger in the words— ‘The higher ideas can hardly be set forth except through the medium of examples; every man seems to know all things in a kind of dream, and then again nothing when he is awake?’ Or where is the value of metaphysical pursuits more truly expressed than in the words,— ‘The greatest and noblest things have no outward image of themselves visible to man: therefore we should learn to give a rational account of them?’

III. The political aspects of the dialogue are closely connected with the dialectical. As in the *Cratylus*, the legislator has ‘the dialectician standing on his right hand;’ so in the *Statesman*, the king or statesman is the dialectician, who, although he may be in a private station, is still a king. Whether he has the power or not, is a mere accident; or rather he has the power, for what ought to be is (‘*Was ist vernünftig, das ist wirklich*’); and he ought to be and is the true governor of mankind. There is a reflection in this idealism of the Socratic ‘Virtue is knowledge;’ and, without idealism, we may remark that knowledge is a great part of power. Plato does not trouble himself to construct a machinery by which ‘philosophers shall be made kings,’ as in the *Republic*: he merely holds up the ideal, and affirms that in some sense science is really supreme over human life.

He is struck by the observation ‘*quam parva sapientia regitur mundus*,’ and is touched with a feeling of the ills which afflict states. The condition of Megara before and during the Peloponnesian War, of Athens under the Thirty and afterwards, of Syracuse and the other Sicilian cities in their alternations of democratic excess and tyranny, might naturally suggest such reflections. Some states he sees already shipwrecked, others foundering for want of a pilot; and he wonders not at their destruction, but at their endurance. For they ought to have perished long ago, if they had depended on the wisdom of their rulers. The mingled pathos and satire of this remark is characteristic

of Plato's later style.

The king is the personification of political science. And yet he is something more than this, — the perfectly good and wise tyrant of the Laws, whose will is better than any law. He is the special providence who is always interfering with and regulating all things. Such a conception has sometimes been entertained by modern theologians, and by Plato himself, of the Supreme Being. But whether applied to Divine or to human governors the conception is faulty for two reasons, neither of which are noticed by Plato: — first, because all good government supposes a degree of co-operation in the ruler and his subjects, — an 'education in politics' as well as in moral virtue; secondly, because government, whether Divine or human, implies that the subject has a previous knowledge of the rules under which he is living. There is a fallacy, too, in comparing unchangeable laws with a personal governor. For the law need not necessarily be an 'ignorant and brutal tyrant,' but gentle and humane, capable of being altered in the spirit of the legislator, and of being administered so as to meet the cases of individuals. Not only in fact, but in idea, both elements must remain — the fixed law and the living will; the written word and the spirit; the principles of obligation and of freedom; and their applications whether made by law or equity in particular cases.

There are two sides from which positive laws may be attacked: — either from the side of nature, which rises up and rebels against them in the spirit of Callicles in the *Gorgias*; or from the side of idealism, which attempts to soar above them, — and this is the spirit of Plato in the *Statesman*. But he soon falls, like Icarus, and is content to walk instead of flying; that is, to accommodate himself to the actual state of human things. Mankind have long been in despair of finding the true ruler; and therefore are ready to acquiesce in any of the five or six received forms of government as better than none. And the best thing which they can do (though only the second best in reality), is to reduce the ideal state to the conditions of actual life. Thus in the *Statesman*, as in the *Laws*, we have three forms of government, which we may venture to term, (1) the ideal, (2) the practical, (3) the sophistical — what ought to be, what might be, what is. And thus Plato seems to stumble, almost by accident, on the notion of a

constitutional monarchy, or of a monarchy ruling by laws.

The divine foundations of a State are to be laid deep in education (Republic), and at the same time some little violence may be used in exterminating natures which are incapable of education (compare Laws). Plato is strongly of opinion that the legislator, like the physician, may do men good against their will (compare Gorgias). The human bonds of states are formed by the inter-marriage of dispositions adapted to supply the defects of each other. As in the Republic, Plato has observed that there are opposite natures in the world, the strong and the gentle, the courageous and the temperate, which, borrowing an expression derived from the image of weaving, he calls the warp and the woof of human society. To interlace these is the crowning achievement of political science. In the Protagoras, Socrates was maintaining that there was only one virtue, and not many: now Plato is inclined to think that there are not only parallel, but opposite virtues, and seems to see a similar opposition pervading all art and nature. But he is satisfied with laying down the principle, and does not inform us by what further steps the union of opposites is to be effected.

In the loose framework of a single dialogue Plato has thus combined two distinct subjects — politics and method. Yet they are not so far apart as they appear: in his own mind there was a secret link of connexion between them. For the philosopher or dialectician is also the only true king or statesman. In the execution of his plan Plato has invented or distinguished several important forms of thought, and made incidentally many valuable remarks. Questions of interest both in ancient and modern politics also arise in the course of the dialogue, which may with advantage be further considered by us:

a. The imaginary ruler, whether God or man, is above the law, and is a law to himself and to others. Among the Greeks as among the Jews, law was a sacred name, the gift of God, the bond of states. But in the Statesman of Plato, as in the New Testament, the word has also become the symbol of an imperfect good, which is almost an evil. The law sacrifices the individual to the universal, and is the tyranny of the many over the few (compare Republic). It has fixed rules which are the props of order, and will not swerve or bend in extreme

cases. It is the beginning of political society, but there is something higher — an intelligent ruler, whether God or man, who is able to adapt himself to the endless varieties of circumstances. Plato is fond of picturing the advantages which would result from the union of the tyrant who has power with the legislator who has wisdom: he regards this as the best and speediest way of reforming mankind. But institutions cannot thus be artificially created, nor can the external authority of a ruler impose laws for which a nation is unprepared. The greatest power, the highest wisdom, can only proceed one or two steps in advance of public opinion. In all stages of civilization human nature, after all our efforts, remains intractable, — not like clay in the hands of the potter, or marble under the chisel of the sculptor. Great changes occur in the history of nations, but they are brought about slowly, like the changes in the frame of nature, upon which the puny arm of man hardly makes an impression. And, speaking generally, the slowest growths, both in nature and in politics, are the most permanent.

b. Whether the best form of the ideal is a person or a law may fairly be doubted. The former is more akin to us: it clothes itself in poetry and art, and appeals to reason more in the form of feeling: in the latter there is less danger of allowing ourselves to be deluded by a figure of speech. The ideal of the Greek state found an expression in the deification of law: the ancient Stoic spoke of a wise man perfect in virtue, who was fancifully said to be a king; but neither they nor Plato had arrived at the conception of a person who was also a law. Nor is it easy for the Christian to think of God as wisdom, truth, holiness, and also as the wise, true, and holy one. He is always wanting to break through the abstraction and interrupt the law, in order that he may present to himself the more familiar image of a divine friend. While the impersonal has too slender a hold upon the affections to be made the basis of religion, the conception of a person on the other hand tends to degenerate into a new kind of idolatry. Neither criticism nor experience allows us to suppose that there are interferences with the laws of nature; the idea is inconceivable to us and at variance with facts. The philosopher or theologian who could realize to mankind that a person is a law, that the higher rule has no exception, that goodness, like knowledge, is also power, would

breathe a new religious life into the world.

c. Besides the imaginary rule of a philosopher or a God, the actual forms of government have to be considered. In the infancy of political science, men naturally ask whether the rule of the many or of the few is to be preferred. If by 'the few' we mean 'the good' and by 'the many,' 'the bad,' there can be but one reply: 'The rule of one good man is better than the rule of all the rest, if they are bad.' For, as Heracleitus says, 'One is ten thousand if he be the best.' If, however, we mean by the rule of the few the rule of a class neither better nor worse than other classes, not devoid of a feeling of right, but guided mostly by a sense of their own interests, and by the rule of the many the rule of all classes, similarly under the influence of mixed motives, no one would hesitate to answer— 'The rule of all rather than one, because all classes are more likely to take care of all than one of another; and the government has greater power and stability when resting on a wider basis.' Both in ancient and modern times the best balanced form of government has been held to be the best; and yet it should not be so nicely balanced as to make action and movement impossible.

The statesman who builds his hope upon the aristocracy, upon the middle classes, upon the people, will probably, if he have sufficient experience of them, conclude that all classes are much alike, and that one is as good as another, and that the liberties of no class are safe in the hands of the rest. The higher ranks have the advantage in education and manners, the middle and lower in industry and self-denial; in every class, to a certain extent, a natural sense of right prevails, sometimes communicated from the lower to the higher, sometimes from the higher to the lower, which is too strong for class interests. There have been crises in the history of nations, as at the time of the Crusades or the Reformation, or the French Revolution, when the same inspiration has taken hold of whole peoples, and permanently raised the sense of freedom and justice among mankind.

But even supposing the different classes of a nation, when viewed impartially, to be on a level with each other in moral virtue, there remain two considerations of opposite kinds which enter into the problem of government. Admitting of course that the upper and lower classes are equal in the eye of God and of the law, yet the one

may be by nature fitted to govern and the other to be governed. A ruling caste does not soon altogether lose the governing qualities, nor a subject class easily acquire them. Hence the phenomenon so often observed in the old Greek revolutions, and not without parallel in modern times, that the leaders of the democracy have been themselves of aristocratic origin. The people are expecting to be governed by representatives of their own, but the true man of the people either never appears, or is quickly altered by circumstances. Their real wishes hardly make themselves felt, although their lower interests and prejudices may sometimes be flattered and yielded to for the sake of ulterior objects by those who have political power. They will often learn by experience that the democracy has become a plutocracy. The influence of wealth, though not the enjoyment of it, has become diffused among the poor as well as among the rich; and society, instead of being safer, is more at the mercy of the tyrant, who, when things are at the worst, obtains a guard — that is, an army — and announces himself as the saviour.

The other consideration is of an opposite kind. Admitting that a few wise men are likely to be better governors than the unwise many, yet it is not in their power to fashion an entire people according to their behest. When with the best intentions the benevolent despot begins his regime, he finds the world hard to move. A succession of good kings has at the end of a century left the people an inert and unchanged mass. The Roman world was not permanently improved by the hundred years of Hadrian and the Antonines. The kings of Spain during the last century were at least equal to any contemporary sovereigns in virtue and ability. In certain states of the world the means are wanting to render a benevolent power effectual. These means are not a mere external organisation of posts or telegraphs, hardly the introduction of new laws or modes of industry. A change must be made in the spirit of a people as well as in their externals. The ancient legislator did not really take a blank tablet and inscribe upon it the rules which reflection and experience had taught him to be for a nation's interest; no one would have obeyed him if he had. But he took the customs which he found already existing in a half-civilised state of society: these he reduced to form and inscribed on pillars; he defined what had before been undefined, and gave

certainty to what was uncertain. No legislation ever sprang, like Athene, in full power out of the head either of God or man.

Plato and Aristotle are sensible of the difficulty of combining the wisdom of the few with the power of the many. According to Plato, he is a physician who has the knowledge of a physician, and he is a king who has the knowledge of a king. But how the king, one or more, is to obtain the required power, is hardly at all considered by him. He presents the idea of a perfect government, but except the regulation for mixing different tempers in marriage, he never makes any provision for the attainment of it. Aristotle, casting aside ideals, would place the government in a middle class of citizens, sufficiently numerous for stability, without admitting the populace; and such appears to have been the constitution which actually prevailed for a short time at Athens — the rule of the Five Thousand — characterized by Thucydides as the best government of Athens which he had known. It may however be doubted how far, either in a Greek or modern state, such a limitation is practicable or desirable; for those who are left outside the pale will always be dangerous to those who are within, while on the other hand the leaven of the mob can hardly affect the representation of a great country. There is reason for the argument in favour of a property qualification; there is reason also in the arguments of those who would include all and so exhaust the political situation.

The true answer to the question is relative to the circumstances of nations. How can we get the greatest intelligence combined with the greatest power? The ancient legislator would have found this question more easy than we do. For he would have required that all persons who had a share of government should have received their education from the state and have borne her burdens, and should have served in her fleets and armies. But though we sometimes hear the cry that we must 'educate the masses, for they are our masters,' who would listen to a proposal that the franchise should be confined to the educated or to those who fulfil political duties? Then again, we know that the masses are not our masters, and that they are more likely to become so if we educate them. In modern politics so many interests have to be consulted that we are compelled to do, not what is best, but what is possible.

d. Law is the first principle of society, but it cannot supply all the wants of society, and may easily cause more evils than it cures. Plato is aware of the imperfection of law in failing to meet the varieties of circumstances: he is also aware that human life would be intolerable if every detail of it were placed under legal regulation. It may be a great evil that physicians should kill their patients or captains cast away their ships, but it would be a far greater evil if each particular in the practice of medicine or seamanship were regulated by law. Much has been said in modern times about the duty of leaving men to themselves, which is supposed to be the best way of taking care of them. The question is often asked, What are the limits of legislation in relation to morals? And the answer is to the same effect, that morals must take care of themselves. There is a one-sided truth in these answers, if they are regarded as condemnations of the interference with commerce in the last century or of clerical persecution in the Middle Ages. But 'laissez-faire' is not the best but only the second best. What the best is, Plato does not attempt to determine; he only contrasts the imperfection of law with the wisdom of the perfect ruler.

Laws should be just, but they must also be certain, and we are obliged to sacrifice something of their justice to their certainty. Suppose a wise and good judge, who paying little or no regard to the law, attempted to decide with perfect justice the cases that were brought before him. To the uneducated person he would appear to be the ideal of a judge. Such justice has been often exercised in primitive times, or at the present day among eastern rulers. But in the first place it depends entirely on the personal character of the judge. He may be honest, but there is no check upon his dishonesty, and his opinion can only be overruled, not by any principle of law, but by the opinion of another judging like himself without law. In the second place, even if he be ever so honest, his mode of deciding questions would introduce an element of uncertainty into human life; no one would know beforehand what would happen to him, or would seek to conform in his conduct to any rule of law. For the compact which the law makes with men, that they shall be protected if they observe the law in their dealings with one another, would have to be substituted another principle of a more general character, that they shall be

protected by the law if they act rightly in their dealings with one another. The complexity of human actions and also the uncertainty of their effects would be increased tenfold. For one of the principal advantages of law is not merely that it enforces honesty, but that it makes men act in the same way, and requires them to produce the same evidence of their acts. Too many laws may be the sign of a corrupt and overcivilized state of society, too few are the sign of an uncivilized one; as soon as commerce begins to grow, men make themselves customs which have the validity of laws. Even equity, which is the exception to the law, conforms to fixed rules and lies for the most part within the limits of previous decisions.

IV. The bitterness of the Statesman is characteristic of Plato's later style, in which the thoughts of youth and love have fled away, and we are no longer tended by the Muses or the Graces. We do not venture to say that Plato was soured by old age, but certainly the kindness and courtesy of the earlier dialogues have disappeared. He sees the world under a harder and grimmer aspect: he is dealing with the reality of things, not with visions or pictures of them: he is seeking by the aid of dialectic only, to arrive at truth. He is deeply impressed with the importance of classification: in this alone he finds the true measure of human things; and very often in the process of division curious results are obtained. For the dialectical art is no respecter of persons: king and vermin-taker are all alike to the philosopher. There may have been a time when the king was a god, but he now is pretty much on a level with his subjects in breeding and education. Man should be well advised that he is only one of the animals, and the Hellene in particular should be aware that he himself was the author of the distinction between Hellene and Barbarian, and that the Phrygian would equally divide mankind into Phrygians and Barbarians, and that some intelligent animal, like a crane, might go a step further, and divide the animal world into cranes and all other animals. Plato cannot help laughing (compare *Theaet.*) when he thinks of the king running after his subjects, like the pig-driver or the bird-taker. He would seriously have him consider how many competitors there are to his throne, chiefly among the class of serving-men. A good deal of meaning is lurking in the expression— 'There is no art of feeding mankind worthy the

name.' There is a similar depth in the remark,— 'The wonder about states is not that they are short-lived, but that they last so long in spite of the badness of their rulers.'

V. There is also a paradoxical element in the Statesman which delights in reversing the accustomed use of words. The law which to the Greek was the highest object of reverence is an ignorant and brutal tyrant — the tyrant is converted into a beneficent king. The sophist too is no longer, as in the earlier dialogues, the rival of the statesman, but assumes his form. Plato sees that the ideal of the state in his own day is more and more severed from the actual. From such ideals as he had once formed, he turns away to contemplate the decline of the Greek cities which were far worse now in his old age than they had been in his youth, and were to become worse and worse in the ages which followed. He cannot contain his disgust at the contemporary statesmen, sophists who had turned politicians, in various forms of men and animals, appearing, some like lions and centaurs, others like satyrs and monkeys. In this new disguise the Sophists make their last appearance on the scene: in the *Laws* Plato appears to have forgotten them, or at any rate makes only a slight allusion to them in a single passage (*Laws*).

VI. The Statesman is naturally connected with the Sophist. At first sight we are surprised to find that the Eleatic Stranger discourses to us, not only concerning the nature of Being and Not-being, but concerning the king and statesman. We perceive, however, that there is no inappropriateness in his maintaining the character of chief speaker, when we remember the close connexion which is assumed by Plato to exist between politics and dialectic. In both dialogues the Proteus Sophist is exhibited, first, in the disguise of an Eristic, secondly, of a false statesman. There are several lesser features which the two dialogues have in common. The styles and the situations of the speakers are very similar; there is the same love of division, and in both of them the mind of the writer is greatly occupied about method, to which he had probably intended to return in the projected 'Philosopher.'

The Statesman stands midway between the *Republic* and the *Laws*, and is also related to the *Timaeus*. The mythical or cosmical element reminds us of the *Timaeus*, the ideal of the *Republic*. A

previous chaos in which the elements as yet were not, is hinted at both in the *Timaeus* and *Statesman*. The same ingenious arts of giving verisimilitude to a fiction are practised in both dialogues, and in both, as well as in the myth at the end of the *Republic*, Plato touches on the subject of necessity and free-will. The words in which he describes the miseries of states seem to be an amplification of the 'Cities will never cease from ill' of the *Republic*. The point of view in both is the same; and the differences not really important, e.g. in the myth, or in the account of the different kinds of states. But the treatment of the subject in the *Statesman* is fragmentary, and the shorter and later work, as might be expected, is less finished, and less worked out in detail. The idea of measure and the arrangement of the sciences supply connecting links both with the *Republic* and the *Philebus*.

More than any of the preceding dialogues, the *Statesman* seems to approximate in thought and language to the *Laws*. There is the same decline and tendency to monotony in style, the same self-consciousness, awkwardness, and over-civility; and in the *Laws* is contained the pattern of that second best form of government, which, after all, is admitted to be the only attainable one in this world. The 'gentle violence,' the marriage of dissimilar natures, the figure of the warp and the woof, are also found in the *Laws*. Both expressly recognize the conception of a first or ideal state, which has receded into an invisible heaven. Nor does the account of the origin and growth of society really differ in them, if we make allowance for the mythic character of the narrative in the *Statesman*. The virtuous tyrant is common to both of them; and the Eleatic Stranger takes up a position similar to that of the Athenian Stranger in the *Laws*.

VII. There would have been little disposition to doubt the genuineness of the *Sophist* and *Statesman*, if they had been compared with the *Laws* rather than with the *Republic*, and the *Laws* had been received, as they ought to be, on the authority of Aristotle and on the ground of their intrinsic excellence, as an undoubted work of Plato. The detailed consideration of the genuineness and order of the Platonic dialogues has been reserved for another place: a few of the reasons for defending the *Sophist* and *Statesman* may be given here.

1. The excellence, importance, and metaphysical originality of the

two dialogues: no works at once so good and of such length are known to have proceeded from the hands of a forger.

2. The resemblances in them to other dialogues of Plato are such as might be expected to be found in works of the same author, and not in those of an imitator, being too subtle and minute to have been invented by another. The similar passages and turns of thought are generally inferior to the parallel passages in his earlier writings; and we might a priori have expected that, if altered, they would have been improved. But the comparison of the *Laws* proves that this repetition of his own thoughts and words in an inferior form is characteristic of Plato's later style.

3. The close connexion of them with the *Theaetetus*, *Parmenides*, and *Philebus*, involves the fate of these dialogues, as well as of the two suspected ones.

4. The suspicion of them seems mainly to rest on a presumption that in Plato's writings we may expect to find an uniform type of doctrine and opinion. But however we arrange the order, or narrow the circle of the dialogues, we must admit that they exhibit a growth and progress in the mind of Plato. And the appearance of change or progress is not to be regarded as impugning the genuineness of any particular writings, but may be even an argument in their favour. If we suppose the Sophist and Politicus to stand halfway between the Republic and the Laws, and in near connexion with the Theaetetus, the Parmenides, the Philebus, the arguments against them derived from differences of thought and style disappear or may be said without paradox in some degree to confirm their genuineness. There is no such interval between the Republic or Phaedrus and the two suspected dialogues, as that which separates all the earlier writings of Plato from the Laws. And the Theaetetus, Parmenides, and Philebus, supply links, by which, however different from them, they may be reunited with the great body of the Platonic writings.

STATESMAN

PERSONS OF THE DIALOGUE:

Theodorus, Socrates, The Eleatic Stranger, The Younger Socrates.

SOCRATES: I owe you many thanks, indeed, Theodorus, for the acquaintance both of Theaetetus and of the Stranger.

THEODORUS: And in a little while, Socrates, you will owe me three times as many, when they have completed for you the delineation of the Statesman and of the Philosopher, as well as of the Sophist.

SOCRATES: Sophist, statesman, philosopher! O my dear Theodorus, do my ears truly witness that this is the estimate formed of them by the great calculator and geometrician?

THEODORUS: What do you mean, Socrates?

SOCRATES: I mean that you rate them all at the same value, whereas they are really separated by an interval, which no geometrical ratio can express.

THEODORUS: By Ammon, the god of Cyrene, Socrates, that is a very fair hit; and shows that you have not forgotten your geometry. I will retaliate on you at some other time, but I must now ask the Stranger, who will not, I hope, tire of his goodness to us, to proceed either with the Statesman or with the Philosopher, whichever he prefers.

STRANGER: That is my duty, Theodorus; having begun I must go on, and not leave the work unfinished. But what shall be done with Theaetetus?

THEODORUS: In what respect?

STRANGER: Shall we relieve him, and take his companion, the Young Socrates, instead of him? What do you advise?

THEODORUS: Yes, give the other a turn, as you propose. The

young always do better when they have intervals of rest.

SOCRATES: I think, Stranger, that both of them may be said to be in some way related to me; for the one, as you affirm, has the cut of my ugly face (compare Theaet.), the other is called by my name. And we should always be on the look-out to recognize a kinsman by the style of his conversation. I myself was discoursing with Theaetetus yesterday, and I have just been listening to his answers; my namesake I have not yet examined, but I must. Another time will do for me; to-day let him answer you.

STRANGER: Very good. Young Socrates, do you hear what the elder Socrates is proposing?

YOUNG SOCRATES: I do.

STRANGER: And do you agree to his proposal?

YOUNG SOCRATES: Certainly.

STRANGER: As you do not object, still less can I. After the Sophist, then, I think that the Statesman naturally follows next in the order of enquiry. And please to say, whether he, too, should be ranked among those who have science.

YOUNG SOCRATES: Yes.

STRANGER: Then the sciences must be divided as before?

YOUNG SOCRATES: I dare say.

STRANGER: But yet the division will not be the same?

YOUNG SOCRATES: How then?

STRANGER: They will be divided at some other point.

YOUNG SOCRATES: Yes.

STRANGER: Where shall we discover the path of the Statesman? We must find and separate off, and set our seal upon this, and we will set the mark of another class upon all diverging paths. Thus the soul

will conceive of all kinds of knowledge under two classes.

YOUNG SOCRATES: To find the path is your business, Stranger, and not mine.

STRANGER: Yes, Socrates, but the discovery, when once made, must be yours as well as mine.

YOUNG SOCRATES: Very good.

STRANGER: Well, and are not arithmetic and certain other kindred arts, merely abstract knowledge, wholly separated from action?

YOUNG SOCRATES: True.

STRANGER: But in the art of carpentering and all other handicrafts, the knowledge of the workman is merged in his work; he not only knows, but he also makes things which previously did not exist.

YOUNG SOCRATES: Certainly.

STRANGER: Then let us divide sciences in general into those which are practical and those which are purely intellectual.

YOUNG SOCRATES: Let us assume these two divisions of science, which is one whole.

STRANGER: And are 'statesman,' 'king,' 'master,' or 'householder,' one and the same; or is there a science or art answering to each of these names? Or rather, allow me to put the matter in another way.

YOUNG SOCRATES: Let me hear.

STRANGER: If any one who is in a private station has the skill to advise one of the public physicians, must not he also be called a physician?

YOUNG SOCRATES: Yes.

STRANGER: And if any one who is in a private station is able to advise the ruler of a country, may not he be said to have the

knowledge which the ruler himself ought to have?

YOUNG SOCRATES: True.

STRANGER: But surely the science of a true king is royal science?

YOUNG SOCRATES: Yes.

STRANGER: And will not he who possesses this knowledge, whether he happens to be a ruler or a private man, when regarded only in reference to his art, be truly called 'royal'?

YOUNG SOCRATES: He certainly ought to be.

STRANGER: And the householder and master are the same?

YOUNG SOCRATES: Of course.

STRANGER: Again, a large household may be compared to a small state: — will they differ at all, as far as government is concerned?

YOUNG SOCRATES: They will not.

STRANGER: Then, returning to the point which we were just now discussing, do we not clearly see that there is one science of all of them; and this science may be called either royal or political or economical; we will not quarrel with any one about the name.

YOUNG SOCRATES: Certainly not.

STRANGER: This too, is evident, that the king cannot do much with his hands, or with his whole body, towards the maintenance of his empire, compared with what he does by the intelligence and strength of his mind.

YOUNG SOCRATES: Clearly not.

STRANGER: Then, shall we say that the king has a greater affinity to knowledge than to manual arts and to practical life in general?

YOUNG SOCRATES: Certainly he has.

STRANGER: Then we may put all together as one and the same —

statesmanship and the statesman — the kingly science and the king.

YOUNG SOCRATES: Clearly.

STRANGER: And now we shall only be proceeding in due order if we go on to divide the sphere of knowledge?

YOUNG SOCRATES: Very good.

STRANGER: Think whether you can find any joint or parting in knowledge.

YOUNG SOCRATES: Tell me of what sort.

STRANGER: Such as this: You may remember that we made an art of calculation?

YOUNG SOCRATES: Yes.

STRANGER: Which was, unmistakeably, one of the arts of knowledge?

YOUNG SOCRATES: Certainly.

STRANGER: And to this art of calculation which discerns the differences of numbers shall we assign any other function except to pass judgment on their differences?

YOUNG SOCRATES: How could we?

STRANGER: You know that the master-builder does not work himself, but is the ruler of workmen?

YOUNG SOCRATES: Yes.

STRANGER: He contributes knowledge, not manual labour?

YOUNG SOCRATES: True.

STRANGER: And may therefore be justly said to share in theoretical science?

YOUNG SOCRATES: Quite true.

STRANGER: But he ought not, like the calculator, to regard his functions as at an end when he has formed a judgment; — he must assign to the individual workmen their appropriate task until they have completed the work.

YOUNG SOCRATES: True.

STRANGER: Are not all such sciences, no less than arithmetic and the like, subjects of pure knowledge; and is not the difference between the two classes, that the one sort has the power of judging only, and the other of ruling as well?

YOUNG SOCRATES: That is evident.

STRANGER: May we not very properly say, that of all knowledge, there are two divisions — one which rules, and the other which judges?

YOUNG SOCRATES: I should think so.

STRANGER: And when men have anything to do in common, that they should be of one mind is surely a desirable thing?

YOUNG SOCRATES: Very true.

STRANGER: Then while we are at unity among ourselves, we need not mind about the fancies of others?

YOUNG SOCRATES: Certainly not.

STRANGER: And now, in which of these divisions shall we place the king? — Is he a judge and a kind of spectator? Or shall we assign to him the art of command — for he is a ruler?

YOUNG SOCRATES: The latter, clearly.

STRANGER: Then we must see whether there is any mark of division in the art of command too. I am inclined to think that there is a distinction similar to that of manufacturer and retail dealer, which parts off the king from the herald.

YOUNG SOCRATES: How is this?

STRANGER: Why, does not the retailer receive and sell over again the productions of others, which have been sold before?

YOUNG SOCRATES: Certainly he does.

STRANGER: And is not the herald under command, and does he not receive orders, and in his turn give them to others?

YOUNG SOCRATES: Very true.

STRANGER: Then shall we mingle the kingly art in the same class with the art of the herald, the interpreter, the boatswain, the prophet, and the numerous kindred arts which exercise command; or, as in the preceding comparison we spoke of manufacturers, or sellers for themselves, and of retailers, — seeing, too, that the class of supreme rulers, or rulers for themselves, is almost nameless — shall we make a word following the same analogy, and refer kings to a supreme or ruling-for-self science, leaving the rest to receive a name from some one else? For we are seeking the ruler; and our enquiry is not concerned with him who is not a ruler.

YOUNG SOCRATES: Very good.

STRANGER: Thus a very fair distinction has been attained between the man who gives his own commands, and him who gives another's. And now let us see if the supreme power allows of any further division.

YOUNG SOCRATES: By all means.

STRANGER: I think that it does; and please to assist me in making the division.

YOUNG SOCRATES: At what point?

STRANGER: May not all rulers be supposed to command for the sake of producing something?

YOUNG SOCRATES: Certainly.

STRANGER: Nor is there any difficulty in dividing the things produced into two classes.

YOUNG SOCRATES: How would you divide them?

STRANGER: Of the whole class, some have life and some are without life.

YOUNG SOCRATES: True.

STRANGER: And by the help of this distinction we may make, if we please, a subdivision of the section of knowledge which commands.

YOUNG SOCRATES: At what point?

STRANGER: One part may be set over the production of lifeless, the other of living objects; and in this way the whole will be divided.

YOUNG SOCRATES: Certainly.

STRANGER: That division, then, is complete; and now we may leave one half, and take up the other; which may also be divided into two.

YOUNG SOCRATES: Which of the two halves do you mean?

STRANGER: Of course that which exercises command about animals. For, surely, the royal science is not like that of a master-workman, a science presiding over lifeless objects; — the king has a nobler function, which is the management and control of living beings.

YOUNG SOCRATES: True.

STRANGER: And the breeding and tending of living beings may be observed to be sometimes a tending of the individual; in other cases, a common care of creatures in flocks?

YOUNG SOCRATES: True.

STRANGER: But the statesman is not a tender of individuals — not like the driver or groom of a single ox or horse; he is rather to be

compared with the keeper of a drove of horses or oxen.

YOUNG SOCRATES: Yes, I see, thanks to you.

STRANGER: Shall we call this art of tending many animals together, the art of managing a herd, or the art of collective management?

YOUNG SOCRATES: No matter; — whichever suggests itself to us in the course of conversation.

STRANGER: Very good, Socrates; and, if you continue to be not too particular about names, you will be all the richer in wisdom when you are an old man. And now, as you say, leaving the discussion of the name, — can you see a way in which a person, by showing the art of herding to be of two kinds, may cause that which is now sought amongst twice the number of things, to be then sought amongst half that number?

YOUNG SOCRATES: I will try; — there appears to me to be one management of men and another of beasts.

STRANGER: You have certainly divided them in a most straightforward and manly style; but you have fallen into an error which hereafter I think that we had better avoid.

YOUNG SOCRATES: What is the error?

STRANGER: I think that we had better not cut off a single small portion which is not a species, from many larger portions; the part should be a species. To separate off at once the subject of investigation, is a most excellent plan, if only the separation be rightly made; and you were under the impression that you were right, because you saw that you would come to man; and this led you to hasten the steps. But you should not chip off too small a piece, my friend; the safer way is to cut through the middle; which is also the more likely way of finding classes. Attention to this principle makes all the difference in a process of enquiry.

YOUNG SOCRATES: What do you mean, Stranger?

STRANGER: I will endeavour to speak more plainly out of love to your good parts, Socrates; and, although I cannot at present entirely explain myself, I will try, as we proceed, to make my meaning a little clearer.

YOUNG SOCRATES: What was the error of which, as you say, we were guilty in our recent division?

STRANGER: The error was just as if some one who wanted to divide the human race, were to divide them after the fashion which prevails in this part of the world; here they cut off the Hellenes as one species, and all the other species of mankind, which are innumerable, and have no ties or common language, they include under the single name of 'barbarians,' and because they have one name they are supposed to be of one species also. Or suppose that in dividing numbers you were to cut off ten thousand from all the rest, and make of it one species, comprehending the rest under another separate name, you might say that here too was a single class, because you had given it a single name. Whereas you would make a much better and more equal and logical classification of numbers, if you divided them into odd and even; or of the human species, if you divided them into male and female; and only separated off Lydians or Phrygians, or any other tribe, and arrayed them against the rest of the world, when you could no longer make a division into parts which were also classes.

YOUNG SOCRATES: Very true; but I wish that this distinction between a part and a class could still be made somewhat plainer.

STRANGER: O Socrates, best of men, you are imposing upon me a very difficult task. We have already digressed further from our original intention than we ought, and you would have us wander still further away. But we must now return to our subject; and hereafter, when there is a leisure hour, we will follow up the other track; at the same time, I wish you to guard against imagining that you ever heard me declare —

YOUNG SOCRATES: What?

STRANGER: That a class and a part are distinct.

YOUNG SOCRATES: What did I hear, then?

STRANGER: That a class is necessarily a part, but there is no similar necessity that a part should be a class; that is the view which I should always wish you to attribute to me, Socrates.

YOUNG SOCRATES: So be it.

STRANGER: There is another thing which I should like to know.

YOUNG SOCRATES: What is it?

STRANGER: The point at which we digressed; for, if I am not mistaken, the exact place was at the question, Where you would divide the management of herds. To this you appeared rather too ready to answer that there were two species of animals; man being one, and all brutes making up the other.

YOUNG SOCRATES: True.

STRANGER: I thought that in taking away a part, you imagined that the remainder formed a class, because you were able to call them by the common name of brutes.

YOUNG SOCRATES: That again is true.

STRANGER: Suppose now, O most courageous of dialecticians, that some wise and understanding creature, such as a crane is reputed to be, were, in imitation of you, to make a similar division, and set up cranes against all other animals to their own special glorification, at the same time jumbling together all the others, including man, under the appellation of brutes, — here would be the sort of error which we must try to avoid.

YOUNG SOCRATES: How can we be safe?

STRANGER: If we do not divide the whole class of animals, we shall be less likely to fall into that error.

YOUNG SOCRATES: We had better not take the whole?

STRANGER: Yes, there lay the source of error in our former division.

YOUNG SOCRATES: How?

STRANGER: You remember how that part of the art of knowledge which was concerned with command, had to do with the rearing of living creatures, — I mean, with animals in herds?

YOUNG SOCRATES: Yes.

STRANGER: In that case, there was already implied a division of all animals into tame and wild; those whose nature can be tamed are called tame, and those which cannot be tamed are called wild.

YOUNG SOCRATES: True.

STRANGER: And the political science of which we are in search, is and ever was concerned with tame animals, and is also confined to gregarious animals.

YOUNG SOCRATES: Yes.

STRANGER: But then we ought not to divide, as we did, taking the whole class at once. Neither let us be in too great haste to arrive quickly at the political science; for this mistake has already brought upon us the misfortune of which the proverb speaks.

YOUNG SOCRATES: What misfortune?

STRANGER: The misfortune of too much haste, which is too little speed.

YOUNG SOCRATES: And all the better, Stranger; — we got what we deserved.

STRANGER: Very well: Let us then begin again, and endeavour to divide the collective rearing of animals; for probably the completion of the argument will best show what you are so anxious to know. Tell

me, then —

YOUNG SOCRATES: What?

STRANGER: Have you ever heard, as you very likely may — for I do not suppose that you ever actually visited them — of the preserves of fishes in the Nile, and in the ponds of the Great King; or you may have seen similar preserves in wells at home?

YOUNG SOCRATES: Yes, to be sure, I have seen them, and I have often heard the others described.

STRANGER: And you may have heard also, and may have been assured by report, although you have not travelled in those regions, of nurseries of geese and cranes in the plains of Thessaly?

YOUNG SOCRATES: Certainly.

STRANGER: I asked you, because here is a new division of the management of herds, into the management of land and of water herds.

YOUNG SOCRATES: There is.

STRANGER: And do you agree that we ought to divide the collective rearing of herds into two corresponding parts, the one the rearing of water, and the other the rearing of land herds?

YOUNG SOCRATES: Yes.

STRANGER: There is surely no need to ask which of these two contains the royal art, for it is evident to everybody.

YOUNG SOCRATES: Certainly.

STRANGER: Any one can divide the herds which feed on dry land?

YOUNG SOCRATES: How would you divide them?

STRANGER: I should distinguish between those which fly and those which walk.

YOUNG SOCRATES: Most true.

STRANGER: And where shall we look for the political animal? Might not an idiot, so to speak, know that he is a pedestrian?

YOUNG SOCRATES: Certainly.

STRANGER: The art of managing the walking animal has to be further divided, just as you might halve an even number.

YOUNG SOCRATES: Clearly.

STRANGER: Let me note that here appear in view two ways to that part or class which the argument aims at reaching, — the one a speedier way, which cuts off a small portion and leaves a large; the other agrees better with the principle which we were laying down, that as far as we can we should divide in the middle; but it is longer. We can take either of them, whichever we please.

YOUNG SOCRATES: Cannot we have both ways?

STRANGER: Together? What a thing to ask! but, if you take them in turn, you clearly may.

YOUNG SOCRATES: Then I should like to have them in turn.

STRANGER: There will be no difficulty, as we are near the end; if we had been at the beginning, or in the middle, I should have demurred to your request; but now, in accordance with your desire, let us begin with the longer way; while we are fresh, we shall get on better. And now attend to the division.

YOUNG SOCRATES: Let me hear.

STRANGER: The tame walking herding animals are distributed by nature into two classes.

YOUNG SOCRATES: Upon what principle?

STRANGER: The one grows horns; and the other is without horns.

YOUNG SOCRATES: Clearly.

STRANGER: Suppose that you divide the science which manages pedestrian animals into two corresponding parts, and define them; for if you try to invent names for them, you will find the intricacy too great.

YOUNG SOCRATES: How must I speak of them, then?

STRANGER: In this way: let the science of managing pedestrian animals be divided into two parts, and one part assigned to the horned herd, and the other to the herd that has no horns.

YOUNG SOCRATES: All that you say has been abundantly proved, and may therefore be assumed.

STRANGER: The king is clearly the shepherd of a polled herd, who have no horns.

YOUNG SOCRATES: That is evident.

STRANGER: Shall we break up this hornless herd into sections, and endeavour to assign to him what is his?

YOUNG SOCRATES: By all means.

STRANGER: Shall we distinguish them by their having or not having cloven feet, or by their mixing or not mixing the breed? You know what I mean.

YOUNG SOCRATES: What?

STRANGER: I mean that horses and asses naturally breed from one another.

YOUNG SOCRATES: Yes.

STRANGER: But the remainder of the hornless herd of tame animals will not mix the breed.

YOUNG SOCRATES: Very true.

STRANGER: And of which has the Statesman charge, — of the mixed or of the unmixed race?

YOUNG SOCRATES: Clearly of the unmixed.

STRANGER: I suppose that we must divide this again as before.

YOUNG SOCRATES: We must.

STRANGER: Every tame and herding animal has now been split up, with the exception of two species; for I hardly think that dogs should be reckoned among gregarious animals.

YOUNG SOCRATES: Certainly not; but how shall we divide the two remaining species?

STRANGER: There is a measure of difference which may be appropriately employed by you and Theaetetus, who are students of geometry.

YOUNG SOCRATES: What is that?

STRANGER: The diameter; and, again, the diameter of a diameter. (Compare Meno.)

YOUNG SOCRATES: What do you mean?

STRANGER: How does man walk, but as a diameter whose power is two feet?

YOUNG SOCRATES: Just so.

STRANGER: And the power of the remaining kind, being the power of twice two feet, may be said to be the diameter of our diameter.

YOUNG SOCRATES: Certainly; and now I think that I pretty nearly understand you.

STRANGER: In these divisions, Socrates, I descry what would make another famous jest.

YOUNG SOCRATES: What is it?

STRANGER: Human beings have come out in the same class with the freest and airiest of creation, and have been running a race with

them.

YOUNG SOCRATES: I remark that very singular coincidence.

STRANGER: And would you not expect the slowest to arrive last?

YOUNG SOCRATES: Indeed I should.

STRANGER: And there is a still more ridiculous consequence, that the king is found running about with the herd and in close competition with the bird-catcher, who of all mankind is most of an adept at the airy life. (Plato is here introducing a new subdivision, i.e. that of bipeds into men and birds. Others however refer the passage to the division into quadrupeds and bipeds, making pigs compete with human beings and the pig-driver with the king. According to this explanation we must translate the words above, 'freest and airiest of creation,' 'worthiest and laziest of creation.')

YOUNG SOCRATES: Certainly.

STRANGER: Then here, Socrates, is still clearer evidence of the truth of what was said in the enquiry about the Sophist? (Compare Sophist.)

YOUNG SOCRATES: What?

STRANGER: That the dialectical method is no respecter of persons, and does not set the great above the small, but always arrives in her own way at the truest result.

YOUNG SOCRATES: Clearly.

STRANGER: And now, I will not wait for you to ask, but will of my own accord take you by the shorter road to the definition of a king.

YOUNG SOCRATES: By all means.

STRANGER: I say that we should have begun at first by dividing land animals into biped and quadruped; and since the winged herd, and that alone, comes out in the same class with man, we should divide bipeds into those which have feathers and those which have

not, and when they have been divided, and the art of the management of mankind is brought to light, the time will have come to produce our Statesman and ruler, and set him like a charioteer in his place, and hand over to him the reins of state, for that too is a vocation which belongs to him.

YOUNG SOCRATES: Very good; you have paid me the debt, — I mean, that you have completed the argument, and I suppose that you added the digression by way of interest. (Compare Republic.)

STRANGER: Then now, let us go back to the beginning, and join the links, which together make the definition of the name of the Statesman's art.

YOUNG SOCRATES: By all means.

STRANGER: The science of pure knowledge had, as we said originally, a part which was the science of rule or command, and from this was derived another part, which was called command-for-self, on the analogy of selling-for-self; an important section of this was the management of living animals, and this again was further limited to the management of them in herds; and again in herds of pedestrian animals. The chief division of the latter was the art of managing pedestrian animals which are without horns; this again has a part which can only be comprehended under one term by joining together three names — shepherding pure-bred animals. The only further subdivision is the art of man-herding, — this has to do with bipeds, and is what we were seeking after, and have now found, being at once the royal and political.

YOUNG SOCRATES: To be sure.

STRANGER: And do you think, Socrates, that we really have done as you say?

YOUNG SOCRATES: What?

STRANGER: Do you think, I mean, that we have really fulfilled our intention? — There has been a sort of discussion, and yet the investigation seems to me not to be perfectly worked out: this is

where the enquiry fails.

YOUNG SOCRATES: I do not understand.

STRANGER: I will try to make the thought, which is at this moment present in my mind, clearer to us both.

YOUNG SOCRATES: Let me hear.

STRANGER: There were many arts of shepherding, and one of them was the political, which had the charge of one particular herd?

YOUNG SOCRATES: Yes.

STRANGER: And this the argument defined to be the art of rearing, not horses or other brutes, but the art of rearing man collectively?

YOUNG SOCRATES: True.

STRANGER: Note, however, a difference which distinguishes the king from all other shepherds.

YOUNG SOCRATES: To what do you refer?

STRANGER: I want to ask, whether any one of the other herdsmen has a rival who professes and claims to share with him in the management of the herd?

YOUNG SOCRATES: What do you mean?

STRANGER: I mean to say that merchants, husbandmen, providers of food, and also training-masters and physicians, will all contend with the herdsmen of humanity, whom we call Statesmen, declaring that they themselves have the care of rearing or managing mankind, and that they rear not only the common herd, but also the rulers themselves.

YOUNG SOCRATES: Are they not right in saying so?

STRANGER: Very likely they may be, and we will consider their claim. But we are certain of this, — that no one will raise a similar claim as against the herdsman, who is allowed on all hands to be the

sole and only feeder and physician of his herd; he is also their match-maker and accoucheur; no one else knows that department of science. And he is their merry-maker and musician, as far as their nature is susceptible of such influences, and no one can console and soothe his own herd better than he can, either with the natural tones of his voice or with instruments. And the same may be said of tenders of animals in general.

YOUNG SOCRATES: Very true.

STRANGER: But if this is as you say, can our argument about the king be true and unimpeachable? Were we right in selecting him out of ten thousand other claimants to be the shepherd and rearer of the human flock?

YOUNG SOCRATES: Surely not.

STRANGER: Had we not reason just to now to apprehend, that although we may have described a sort of royal form, we have not as yet accurately worked out the true image of the Statesman? and that we cannot reveal him as he truly is in his own nature, until we have disengaged and separated him from those who hang about him and claim to share in his prerogatives?

YOUNG SOCRATES: Very true.

STRANGER: And that, Socrates, is what we must do, if we do not mean to bring disgrace upon the argument at its close.

YOUNG SOCRATES: We must certainly avoid that.

STRANGER: Then let us make a new beginning, and travel by a different road.

YOUNG SOCRATES: What road?

STRANGER: I think that we may have a little amusement; there is a famous tale, of which a good portion may with advantage be interwoven, and then we may resume our series of divisions, and proceed in the old path until we arrive at the desired summit. Shall

we do as I say?

YOUNG SOCRATES: By all means.

STRANGER: Listen, then, to a tale which a child would love to hear; and you are not too old for childish amusement.

YOUNG SOCRATES: Let me hear.

STRANGER: There did really happen, and will again happen, like many other events of which ancient tradition has preserved the record, the portent which is traditionally said to have occurred in the quarrel of Atreus and Thyestes. You have heard, no doubt, and remember what they say happened at that time?

YOUNG SOCRATES: I suppose you to mean the token of the birth of the golden lamb.

STRANGER: No, not that; but another part of the story, which tells how the sun and the stars once rose in the west, and set in the east, and that the god reversed their motion, and gave them that which they now have as a testimony to the right of Atreus.

YOUNG SOCRATES: Yes; there is that legend also.

STRANGER: Again, we have been often told of the reign of Cronos.

YOUNG SOCRATES: Yes, very often.

STRANGER: Did you ever hear that the men of former times were earth-born, and not begotten of one another?

YOUNG SOCRATES: Yes, that is another old tradition.

STRANGER: All these stories, and ten thousand others which are still more wonderful, have a common origin; many of them have been lost in the lapse of ages, or are repeated only in a disconnected form; but the origin of them is what no one has told, and may as well be told now; for the tale is suited to throw light on the nature of the king.

YOUNG SOCRATES: Very good; and I hope that you will give the whole story, and leave out nothing.

STRANGER: Listen, then. There is a time when God himself guides and helps to roll the world in its course; and there is a time, on the completion of a certain cycle, when he lets go, and the world being a living creature, and having originally received intelligence from its author and creator, turns about and by an inherent necessity revolves in the opposite direction.

YOUNG SOCRATES: Why is that?

STRANGER: Why, because only the most divine things of all remain ever unchanged and the same, and body is not included in this class. Heaven and the universe, as we have termed them, although they have been endowed by the Creator with many glories, partake of a bodily nature, and therefore cannot be entirely free from perturbation. But their motion is, as far as possible, single and in the same place, and of the same kind; and is therefore only subject to a reversal, which is the least alteration possible. For the lord of all moving things is alone able to move of himself; and to think that he moves them at one time in one direction and at another time in another is blasphemy. Hence we must not say that the world is either self-moved always, or all made to go round by God in two opposite courses; or that two Gods, having opposite purposes, make it move round. But as I have already said (and this is the only remaining alternative) the world is guided at one time by an external power which is divine and receives fresh life and immortality from the renewing hand of the Creator, and again, when let go, moves spontaneously, being set free at such a time as to have, during infinite cycles of years, a reverse movement: this is due to its perfect balance, to its vast size, and to the fact that it turns on the smallest pivot.

YOUNG SOCRATES: Your account of the world seems to be very reasonable indeed.

STRANGER: Let us now reflect and try to gather from what has

been said the nature of the phenomenon which we affirmed to be the cause of all these wonders. It is this.

YOUNG SOCRATES: What?

STRANGER: The reversal which takes place from time to time of the motion of the universe.

YOUNG SOCRATES: How is that the cause?

STRANGER: Of all changes of the heavenly motions, we may consider this to be the greatest and most complete.

YOUNG SOCRATES: I should imagine so.

STRANGER: And it may be supposed to result in the greatest changes to the human beings who are the inhabitants of the world at the time.

YOUNG SOCRATES: Such changes would naturally occur.

STRANGER: And animals, as we know, survive with difficulty great and serious changes of many different kinds when they come upon them at once.

YOUNG SOCRATES: Very true.

STRANGER: Hence there necessarily occurs a great destruction of them, which extends also to the life of man; few survivors of the race are left, and those who remain become the subjects of several novel and remarkable phenomena, and of one in particular, which takes place at the time when the transition is made to the cycle opposite to that in which we are now living.

YOUNG SOCRATES: What is it?

STRANGER: The life of all animals first came to a standstill, and the mortal nature ceased to be or look older, and was then reversed and grew young and delicate; the white locks of the aged darkened again, and the cheeks the bearded man became smooth, and recovered their former bloom; the bodies of youths in their prime

grew softer and smaller, continually by day and night returning and becoming assimilated to the nature of a newly-born child in mind as well as body; in the succeeding stage they wasted away and wholly disappeared. And the bodies of those who died by violence at that time quickly passed through the like changes, and in a few days were no more seen.

YOUNG SOCRATES: Then how, Stranger, were the animals created in those days; and in what way were they begotten of one another?

STRANGER: It is evident, Socrates, that there was no such thing in the then order of nature as the procreation of animals from one another; the earth-born race, of which we hear in story, was the one which existed in those days — they rose again from the ground; and of this tradition, which is now-a-days often unduly discredited, our ancestors, who were nearest in point of time to the end of the last period and came into being at the beginning of this, are to us the heralds. And mark how consistent the sequel of the tale is; after the return of age to youth, follows the return of the dead, who are lying in the earth, to life; simultaneously with the reversal of the world the wheel of their generation has been turned back, and they are put together and rise and live in the opposite order, unless God has carried any of them away to some other lot. According to this tradition they of necessity sprang from the earth and have the name of earth-born, and so the above legend clings to them.

YOUNG SOCRATES: Certainly that is quite consistent with what has preceded; but tell me, was the life which you said existed in the reign of Cronos in that cycle of the world, or in this? For the change in the course of the stars and the sun must have occurred in both.

STRANGER: I see that you enter into my meaning; — no, that blessed and spontaneous life does not belong to the present cycle of the world, but to the previous one, in which God superintended the whole revolution of the universe; and the several parts the universe were distributed under the rule of certain inferior deities, as is the way in some places still. There were demigods, who were the shepherds of the various species and herds of animals, and each one

was in all respects sufficient for those of whom he was the shepherd; neither was there any violence, or devouring of one another, or war or quarrel among them; and I might tell of ten thousand other blessings, which belonged to that dispensation. The reason why the life of man was, as tradition says, spontaneous, is as follows: In those days God himself was their shepherd, and ruled over them, just as man, who is by comparison a divine being, still rules over the lower animals. Under him there were no forms of government or separate possession of women and children; for all men rose again from the earth, having no memory of the past. And although they had nothing of this sort, the earth gave them fruits in abundance, which grew on trees and shrubs unbidden, and were not planted by the hand of man. And they dwelt naked, and mostly in the open air, for the temperature of their seasons was mild; and they had no beds, but lay on soft couches of grass, which grew plentifully out of the earth. Such was the life of man in the days of Cronos, Socrates; the character of our present life, which is said to be under Zeus, you know from your own experience. Can you, and will you, determine which of them you deem the happier?

YOUNG SOCRATES: Impossible.

STRANGER: Then shall I determine for you as well as I can?

YOUNG SOCRATES: By all means.

STRANGER: Suppose that the nurslings of Cronos, having this boundless leisure, and the power of holding intercourse, not only with men, but with the brute creation, had used all these advantages with a view to philosophy, conversing with the brutes as well as with one another, and learning of every nature which was gifted with any special power, and was able to contribute some special experience to the store of wisdom, there would be no difficulty in deciding that they would be a thousand times happier than the men of our own day. Or, again, if they had merely eaten and drunk until they were full, and told stories to one another and to the animals — such stories as are now attributed to them — in this case also, as I should imagine, the answer would be easy. But until some satisfactory witness can be

found of the love of that age for knowledge and discussion, we had better let the matter drop, and give the reason why we have unearthed this tale, and then we shall be able to get on. In the fulness of time, when the change was to take place, and the earth-born race had all perished, and every soul had completed its proper cycle of births and been sown in the earth her appointed number of times, the pilot of the universe let the helm go, and retired to his place of view; and then Fate and innate desire reversed the motion of the world. Then also all the inferior deities who share the rule of the supreme power, being informed of what was happening, let go the parts of the world which were under their control. And the world turning round with a sudden shock, being impelled in an opposite direction from beginning to end, was shaken by a mighty earthquake, which wrought a new destruction of all manner of animals. Afterwards, when sufficient time had elapsed, the tumult and confusion and earthquake ceased, and the universal creature, once more at peace, attained to a calm, and settled down into his own orderly and accustomed course, having the charge and rule of himself and of all the creatures which are contained in him, and executing, as far as he remembered them, the instructions of his Father and Creator, more precisely at first, but afterwards with less exactness. The reason of the falling off was the admixture of matter in him; this was inherent in the primal nature, which was full of disorder, until attaining to the present order. From God, the constructor, the world received all that is good in him, but from a previous state came elements of evil and unrighteousness, which, thence derived, first of all passed into the world, and were then transmitted to the animals. While the world was aided by the pilot in nurturing the animals, the evil was small, and great the good which he produced, but after the separation, when the world was let go, at first all proceeded well enough; but, as time went on, there was more and more forgetting, and the old discord again held sway and burst forth in full glory; and at last small was the good, and great was the admixture of evil, and there was a danger of universal ruin to the world, and to the things contained in him. Wherefore God, the orderer of all, in his tender care, seeing that the world was in great straits, and fearing that all might be dissolved in the storm and disappear in infinite chaos, again seated himself at the

helm; and bringing back the elements which had fallen into dissolution and disorder to the motion which had prevailed under his dispensation, he set them in order and restored them, and made the world imperishable and immortal. And this is the whole tale, of which the first part will suffice to illustrate the nature of the king. For when the world turned towards the present cycle of generation, the age of man again stood still, and a change opposite to the previous one was the result. The small creatures which had almost disappeared grew in and stature, and the newly-born children of the earth became grey and died and sank into the earth again. All things changed, imitating and following the condition of the universe, and of necessity agreeing with that in their mode of conception and generation and nurture; for no animal was any longer allowed to come into being in the earth through the agency of other creative beings, but as the world was ordained to be the lord of his own progress, in like manner the parts were ordained to grow and generate and give nourishment, as far as they could, of themselves, impelled by a similar movement. And so we have arrived at the real end of this discourse; for although there might be much to tell of the lower animals, and of the condition out of which they changed and of the causes of the change, about men there is not much, and that little is more to the purpose. Deprived of the care of God, who had possessed and tended them, they were left helpless and defenceless, and were torn in pieces by the beasts, who were naturally fierce and had now grown wild. And in the first ages they were still without skill or resource; the food which once grew spontaneously had failed, and as yet they knew not how to procure it, because they had never felt the pressure of necessity. For all these reasons they were in a great strait; wherefore also the gifts spoken of in the old tradition were imparted to man by the gods, together with so much teaching and education as was indispensable; fire was given to them by Prometheus, the arts by Hephaestus and his fellow-worker, Athene, seeds and plants by others. From these is derived all that has helped to frame human life; since the care of the Gods, as I was saying, had now failed men, and they had to order their course of life for themselves, and were their own masters, just like the universal creature whom they imitate and follow, ever changing, as he changes,

and ever living and growing, at one time in one manner, and at another time in another. Enough of the story, which may be of use in showing us how greatly we erred in the delineation of the king and the statesman in our previous discourse.

YOUNG SOCRATES: What was this great error of which you speak?

STRANGER: There were two; the first a lesser one, the other was an error on a much larger and grander scale.

YOUNG SOCRATES: What do you mean?

STRANGER: I mean to say that when we were asked about a king and statesman of the present cycle and generation, we told of a shepherd of a human flock who belonged to the other cycle, and of one who was a god when he ought to have been a man; and this a great error. Again, we declared him to be the ruler of the entire State, without explaining how: this was not the whole truth, nor very intelligible; but still it was true, and therefore the second error was not so great as the first.

YOUNG SOCRATES: Very good.

STRANGER: Before we can expect to have a perfect description of the statesman we must define the nature of his office.

YOUNG SOCRATES: Certainly.

STRANGER: And the myth was introduced in order to show, not only that all others are rivals of the true shepherd who is the object of our search, but in order that we might have a clearer view of him who is alone worthy to receive this appellation, because he alone of shepherds and herdsmen, according to the image which we have employed, has the care of human beings.

YOUNG SOCRATES: Very true.

STRANGER: And I cannot help thinking, Socrates, that the form of the divine shepherd is even higher than that of a king; whereas the

statesmen who are now on earth seem to be much more like their subjects in character, and much more nearly to partake of their breeding and education.

YOUNG SOCRATES: Certainly.

STRANGER: Still they must be investigated all the same, to see whether, like the divine shepherd, they are above their subjects or on a level with them.

YOUNG SOCRATES: Of course.

STRANGER: To resume: — Do you remember that we spoke of a command-for-self exercised over animals, not singly but collectively, which we called the art of rearing a herd?

YOUNG SOCRATES: Yes, I remember.

STRANGER: There, somewhere, lay our error; for we never included or mentioned the Statesman; and we did not observe that he had no place in our nomenclature.

YOUNG SOCRATES: How was that?

STRANGER: All other herdsmen ‘rear’ their herds, but this is not a suitable term to apply to the Statesman; we should use a name which is common to them all.

YOUNG SOCRATES: True, if there be such a name.

STRANGER: Why, is not ‘care’ of herds applicable to all? For this implies no feeding, or any special duty; if we say either ‘tending’ the herds, or ‘managing’ the herds, or ‘having the care’ of them, the same word will include all, and then we may wrap up the Statesman with the rest, as the argument seems to require.

YOUNG SOCRATES: Quite right; but how shall we take the next step in the division?

STRANGER: As before we divided the art of ‘rearing’ herds accordingly as they were land or water herds, winged and wingless,

mixing or not mixing the breed, horned and hornless, so we may divide by these same differences the ‘tending’ of herds, comprehending in our definition the kingship of to-day and the rule of Cronos.

YOUNG SOCRATES: That is clear; but I still ask, what is to follow.

STRANGER: If the word had been ‘managing’ herds, instead of feeding or rearing them, no one would have argued that there was no care of men in the case of the politician, although it was justly contended, that there was no human art of feeding them which was worthy of the name, or at least, if there were, many a man had a prior and greater right to share in such an art than any king.

YOUNG SOCRATES: True.

STRANGER: But no other art or science will have a prior or better right than the royal science to care for human society and to rule over men in general.

YOUNG SOCRATES: Quite true.

STRANGER: In the next place, Socrates, we must surely notice that a great error was committed at the end of our analysis.

YOUNG SOCRATES: What was it?

STRANGER: Why, supposing we were ever so sure that there is such an art as the art of rearing or feeding bipeds, there was no reason why we should call this the royal or political art, as though there were no more to be said.

YOUNG SOCRATES: Certainly not.

STRANGER: Our first duty, as we were saying, was to remodel the name, so as to have the notion of care rather than of feeding, and then to divide, for there may be still considerable divisions.

YOUNG SOCRATES: How can they be made?

STRANGER: First, by separating the divine shepherd from the

human guardian or manager.

YOUNG SOCRATES: True.

STRANGER: And the art of management which is assigned to man would again have to be subdivided.

YOUNG SOCRATES: On what principle?

STRANGER: On the principle of voluntary and compulsory.

YOUNG SOCRATES: Why?

STRANGER: Because, if I am not mistaken, there has been an error here; for our simplicity led us to rank king and tyrant together, whereas they are utterly distinct, like their modes of government.

YOUNG SOCRATES: True.

STRANGER: Then, now, as I said, let us make the correction and divide human care into two parts, on the principle of voluntary and compulsory.

YOUNG SOCRATES: Certainly.

STRANGER: And if we call the management of violent rulers tyranny, and the voluntary management of herds of voluntary bipeds politics, may we not further assert that he who has this latter art of management is the true king and statesman?

YOUNG SOCRATES: I think, Stranger, that we have now completed the account of the Statesman.

STRANGER: Would that we had, Socrates, but I have to satisfy myself as well as you; and in my judgment the figure of the king is not yet perfected; like statuaries who, in their too great haste, having overdone the several parts of their work, lose time in cutting them down, so too we, partly out of haste, partly out of a magnanimous desire to expose our former error, and also because we imagined that a king required grand illustrations, have taken up a marvellous lump of fable, and have been obliged to use more than was necessary. This

made us discourse at large, and, nevertheless, the story never came to an end. And our discussion might be compared to a picture of some living being which had been fairly drawn in outline, but had not yet attained the life and clearness which is given by the blending of colours. Now to intelligent persons a living being had better be delineated by language and discourse than by any painting or work of art: to the duller sort by works of art.

YOUNG SOCRATES: Very true; but what is the imperfection which still remains? I wish that you would tell me.

STRANGER: The higher ideas, my dear friend, can hardly be set forth except through the medium of examples; every man seems to know all things in a dreamy sort of way, and then again to wake up and to know nothing.

YOUNG SOCRATES: What do you mean?

STRANGER: I fear that I have been unfortunate in raising a question about our experience of knowledge.

YOUNG SOCRATES: Why so?

STRANGER: Why, because my ‘example’ requires the assistance of another example.

YOUNG SOCRATES: Proceed; you need not fear that I shall tire.

STRANGER: I will proceed, finding, as I do, such a ready listener in you: when children are beginning to know their letters —

YOUNG SOCRATES: What are you going to say?

STRANGER: That they distinguish the several letters well enough in very short and easy syllables, and are able to tell them correctly.

YOUNG SOCRATES: Certainly.

STRANGER: Whereas in other syllables they do not recognize them, and think and speak falsely of them.

YOUNG SOCRATES: Very true.

STRANGER: Will not the best and easiest way of bringing them to a knowledge of what they do not as yet know be —

YOUNG SOCRATES: Be what?

STRANGER: To refer them first of all to cases in which they judge correctly about the letters in question, and then to compare these with the cases in which they do not as yet know, and to show them that the letters are the same, and have the same character in both combinations, until all cases in which they are right have been placed side by side with all cases in which they are wrong. In this way they have examples, and are made to learn that each letter in every combination is always the same and not another, and is always called by the same name.

YOUNG SOCRATES: Certainly.

STRANGER: Are not examples formed in this manner? We take a thing and compare it with another distinct instance of the same thing, of which we have a right conception, and out of the comparison there arises one true notion, which includes both of them.

YOUNG SOCRATES: Exactly.

STRANGER: Can we wonder, then, that the soul has the same uncertainty about the alphabet of things, and sometimes and in some cases is firmly fixed by the truth in each particular, and then, again, in other cases is altogether at sea; having somehow or other a correct notion of combinations; but when the elements are transferred into the long and difficult language (syllables) of facts, is again ignorant of them?

YOUNG SOCRATES: There is nothing wonderful in that.

STRANGER: Could any one, my friend, who began with false opinion ever expect to arrive even at a small portion of truth and to attain wisdom?

YOUNG SOCRATES: Hardly.

STRANGER: Then you and I will not be far wrong in trying to see the nature of example in general in a small and particular instance; afterwards from lesser things we intend to pass to the royal class, which is the highest form of the same nature, and endeavour to discover by rules of art what the management of cities is; and then the dream will become a reality to us.

YOUNG SOCRATES: Very true.

STRANGER: Then, once more, let us resume the previous argument, and as there were innumerable rivals of the royal race who claim to have the care of states, let us part them all off, and leave him alone; and, as I was saying, a model or example of this process has first to be framed.

YOUNG SOCRATES: Exactly.

STRANGER: What model is there which is small, and yet has any analogy with the political occupation? Suppose, Socrates, that if we have no other example at hand, we choose weaving, or, more precisely, weaving of wool — this will be quite enough, without taking the whole of weaving, to illustrate our meaning?

YOUNG SOCRATES: Certainly.

STRANGER: Why should we not apply to weaving the same processes of division and subdivision which we have already applied to other classes; going once more as rapidly as we can through all the steps until we come to that which is needed for our purpose?

YOUNG SOCRATES: How do you mean?

STRANGER: I shall reply by actually performing the process.

YOUNG SOCRATES: Very good.

STRANGER: All things which we make or acquire are either creative or preventive; of the preventive class are antidotes, divine and human, and also defences; and defences are either military

weapons or protections; and protections are veils, and also shields against heat and cold, and shields against heat and cold are shelters and coverings; and coverings are blankets and garments; and garments are some of them in one piece, and others of them are made in several parts; and of these latter some are stitched, others are fastened and not stitched; and of the not stitched, some are made of the sinews of plants, and some of hair; and of these, again, some are cemented with water and earth, and others are fastened together by themselves. And these last defences and coverings which are fastened together by themselves are called clothes, and the art which superintends them we may call, from the nature of the operation, the art of clothing, just as before the art of the Statesman was derived from the State; and may we not say that the art of weaving, at least that largest portion of it which was concerned with the making of clothes, differs only in name from this art of clothing, in the same way that, in the previous case, the royal science differed from the political?

YOUNG SOCRATES: Most true.

STRANGER: In the next place, let us make the reflection, that the art of weaving clothes, which an incompetent person might fancy to have been sufficiently described, has been separated off from several others which are of the same family, but not from the co-operative arts.

YOUNG SOCRATES: And which are the kindred arts?

STRANGER: I see that I have not taken you with me. So I think that we had better go backwards, starting from the end. We just now parted off from the weaving of clothes, the making of blankets, which differ from each other in that one is put under and the other is put around: and these are what I termed kindred arts.

YOUNG SOCRATES: I understand.

STRANGER: And we have subtracted the manufacture of all articles made of flax and cords, and all that we just now metaphorically termed the sinews of plants, and we have also separated off the

process of felting and the putting together of materials by stitching and sewing, of which the most important part is the cobbler's art.

YOUNG SOCRATES: Precisely.

STRANGER: Then we separated off the currier's art, which prepared coverings in entire pieces, and the art of sheltering, and subtracted the various arts of making water-tight which are employed in building, and in general in carpentering, and in other crafts, and all such arts as furnish impediments to thieving and acts of violence, and are concerned with making the lids of boxes and the fixing of doors, being divisions of the art of joining; and we also cut off the manufacture of arms, which is a section of the great and manifold art of making defences; and we originally began by parting off the whole of the magic art which is concerned with antidotes, and have left, as would appear, the very art of which we were in search, the art of protection against winter cold, which fabricates woollen defences, and has the name of weaving.

YOUNG SOCRATES: Very true.

STRANGER: Yes, my boy, but that is not all; for the first process to which the material is subjected is the opposite of weaving.

YOUNG SOCRATES: How so?

STRANGER: Weaving is a sort of uniting?

YOUNG SOCRATES: Yes.

STRANGER: But the first process is a separation of the clotted and matted fibres?

YOUNG SOCRATES: What do you mean?

STRANGER: I mean the work of the carder's art; for we cannot say that carding is weaving, or that the carder is a weaver.

YOUNG SOCRATES: Certainly not.

STRANGER: Again, if a person were to say that the art of making

the warp and the woof was the art of weaving, he would say what was paradoxical and false.

YOUNG SOCRATES: To be sure.

STRANGER: Shall we say that the whole art of the fuller or of the mender has nothing to do with the care and treatment of clothes, or are we to regard all these as arts of weaving?

YOUNG SOCRATES: Certainly not.

STRANGER: And yet surely all these arts will maintain that they are concerned with the treatment and production of clothes; they will dispute the exclusive prerogative of weaving, and though assigning a larger sphere to that, will still reserve a considerable field for themselves.

YOUNG SOCRATES: Very true.

STRANGER: Besides these, there are the arts which make tools and instruments of weaving, and which will claim at least to be co-operative causes in every work of the weaver.

YOUNG SOCRATES: Most true.

STRANGER: Well, then, suppose that we define weaving, or rather that part of it which has been selected by us, to be the greatest and noblest of arts which are concerned with woollen garments — shall we be right? Is not the definition, although true, wanting in clearness and completeness; for do not all those other arts require to be first cleared away?

YOUNG SOCRATES: True.

STRANGER: Then the next thing will be to separate them, in order that the argument may proceed in a regular manner?

YOUNG SOCRATES: By all means.

STRANGER: Let us consider, in the first place, that there are two kinds of arts entering into everything which we do.

YOUNG SOCRATES: What are they?

STRANGER: The one kind is the conditional or co-operative, the other the principal cause.

YOUNG SOCRATES: What do you mean?

STRANGER: The arts which do not manufacture the actual thing, but which furnish the necessary tools for the manufacture, without which the several arts could not fulfil their appointed work, are co-operative; but those which make the things themselves are causal.

YOUNG SOCRATES: A very reasonable distinction.

STRANGER: Thus the arts which make spindles, combs, and other instruments of the production of clothes, may be called co-operative, and those which treat and fabricate the things themselves, causal.

YOUNG SOCRATES: Very true.

STRANGER: The arts of washing and mending, and the other preparatory arts which belong to the causal class, and form a division of the great art of adornment, may be all comprehended under what we call the fuller's art.

YOUNG SOCRATES: Very good.

STRANGER: Carding and spinning threads and all the parts of the process which are concerned with the actual manufacture of a woollen garment form a single art, which is one of those universally acknowledged, — the art of working in wool.

YOUNG SOCRATES: To be sure.

STRANGER: Of working in wool, again, there are two divisions, and both these are parts of two arts at once.

YOUNG SOCRATES: How is that?

STRANGER: Carding and one half of the use of the comb, and the other processes of wool-working which separate the composite, may

be classed together as belonging both to the art of wool-working, and also to one of the two great arts which are of universal application — the art of composition and the art of division.

YOUNG SOCRATES: Yes.

STRANGER: To the latter belong carding and the other processes of which I was just now speaking; the art of discernment or division in wool and yarn, which is effected in one manner with the comb and in another with the hands, is variously described under all the names which I just now mentioned.

YOUNG SOCRATES: Very true.

STRANGER: Again, let us take some process of wool-working which is also a portion of the art of composition, and, dismissing the elements of division which we found there, make two halves, one on the principle of composition, and the other on the principle of division.

YOUNG SOCRATES: Let that be done.

STRANGER: And once more, Socrates, we must divide the part which belongs at once both to wool-working and composition, if we are ever to discover satisfactorily the aforesaid art of weaving.

YOUNG SOCRATES: We must.

STRANGER: Yes, certainly, and let us call one part of the art the art of twisting threads, the other the art of combining them.

YOUNG SOCRATES: Do I understand you, in speaking of twisting, to be referring to manufacture of the warp?

STRANGER: Yes, and of the woof too; how, if not by twisting, is the woof made?

YOUNG SOCRATES: There is no other way.

STRANGER: Then suppose that you define the warp and the woof, for I think that the definition will be of use to you.

YOUNG SOCRATES: How shall I define them?

STRANGER: As thus: A piece of carded wool which is drawn out lengthwise and breadthwise is said to be pulled out.

YOUNG SOCRATES: Yes.

STRANGER: And the wool thus prepared, when twisted by the spindle, and made into a firm thread, is called the warp, and the art which regulates these operations the art of spinning the warp.

YOUNG SOCRATES: True.

STRANGER: And the threads which are more loosely spun, having a softness proportioned to the intertexture of the warp and to the degree of force used in dressing the cloth, — the threads which are thus spun are called the woof, and the art which is set over them may be called the art of spinning the woof.

YOUNG SOCRATES: Very true.

STRANGER: And, now, there can be no mistake about the nature of the part of weaving which we have undertaken to define. For when that part of the art of composition which is employed in the working of wool forms a web by the regular intertexture of warp and woof, the entire woven substance is called by us a woollen garment, and the art which presides over this is the art of weaving.

YOUNG SOCRATES: Very true.

STRANGER: But why did we not say at once that weaving is the art of entwining warp and woof, instead of making a long and useless circuit?

YOUNG SOCRATES: I thought, Stranger, that there was nothing useless in what was said.

STRANGER: Very likely, but you may not always think so, my sweet friend; and in case any feeling of dissatisfaction should hereafter arise in your mind, as it very well may, let me lay down a principle which will apply to arguments in general.

YOUNG SOCRATES: Proceed.

STRANGER: Let us begin by considering the whole nature of excess and defect, and then we shall have a rational ground on which we may praise or blame too much length or too much shortness in discussions of this kind.

YOUNG SOCRATES: Let us do so.

STRANGER: The points on which I think that we ought to dwell are the following: —

YOUNG SOCRATES: What?

STRANGER: Length and shortness, excess and defect; with all of these the art of measurement is conversant.

YOUNG SOCRATES: Yes.

STRANGER: And the art of measurement has to be divided into two parts, with a view to our present purpose.

YOUNG SOCRATES: Where would you make the division?

STRANGER: As thus: I would make two parts, one having regard to the relativity of greatness and smallness to each other; and there is another, without which the existence of production would be impossible.

YOUNG SOCRATES: What do you mean?

STRANGER: Do you not think that it is only natural for the greater to be called greater with reference to the less alone, and the less less with reference to the greater alone?

YOUNG SOCRATES: Yes.

STRANGER: Well, but is there not also something exceeding and exceeded by the principle of the mean, both in speech and action, and is not this a reality, and the chief mark of difference between good and bad men?

YOUNG SOCRATES: Plainly.

STRANGER: Then we must suppose that the great and small exist and are discerned in both these ways, and not, as we were saying before, only relatively to one another, but there must also be another comparison of them with the mean or ideal standard; would you like to hear the reason why?

YOUNG SOCRATES: Certainly.

STRANGER: If we assume the greater to exist only in relation to the less, there will never be any comparison of either with the mean.

YOUNG SOCRATES: True.

STRANGER: And would not this doctrine be the ruin of all the arts and their creations; would not the art of the Statesman and the aforesaid art of weaving disappear? For all these arts are on the watch against excess and defect, not as unrealities, but as real evils, which occasion a difficulty in action; and the excellence or beauty of every work of art is due to this observance of measure.

YOUNG SOCRATES: Certainly.

STRANGER: But if the science of the Statesman disappears, the search for the royal science will be impossible.

YOUNG SOCRATES: Very true.

STRANGER: Well, then, as in the case of the Sophist we extorted the inference that not-being had an existence, because here was the point at which the argument eluded our grasp, so in this we must endeavour to show that the greater and less are not only to be measured with one another, but also have to do with the production of the mean; for if this is not admitted, neither a statesman nor any other man of action can be an undisputed master of his science.

YOUNG SOCRATES: Yes, we must certainly do again what we did then.

STRANGER: But this, Socrates, is a greater work than the other, of

which we only too well remember the length. I think, however, that we may fairly assume something of this sort —

YOUNG SOCRATES: What?

STRANGER: That we shall some day require this notion of a mean with a view to the demonstration of absolute truth; meanwhile, the argument that the very existence of the arts must be held to depend on the possibility of measuring more or less, not only with one another, but also with a view to the attainment of the mean, seems to afford a grand support and satisfactory proof of the doctrine which we are maintaining; for if there are arts, there is a standard of measure, and if there is a standard of measure, there are arts; but if either is wanting, there is neither.

YOUNG SOCRATES: True; and what is the next step?

STRANGER: The next step clearly is to divide the art of measurement into two parts, as we have said already, and to place in the one part all the arts which measure number, length, depth, breadth, swiftness with their opposites; and to have another part in which they are measured with the mean, and the fit, and the opportune, and the due, and with all those words, in short, which denote a mean or standard removed from the extremes.

YOUNG SOCRATES: Here are two vast divisions, embracing two very different spheres.

STRANGER: There are many accomplished men, Socrates, who say, believing themselves to speak wisely, that the art of measurement is universal, and has to do with all things. And this means what we are now saying; for all things which come within the province of art do certainly in some sense partake of measure. But these persons, because they are not accustomed to distinguish classes according to real forms, jumble together two widely different things, relation to one another, and to a standard, under the idea that they are the same, and also fall into the converse error of dividing other things not according to their real parts. Whereas the right way is, if a man has first seen the unity of things, to go on with the enquiry and not desist

until he has found all the differences contained in it which form distinct classes; nor again should he be able to rest contented with the manifold diversities which are seen in a multitude of things until he has comprehended all of them that have any affinity within the bounds of one similarity and embraced them within the reality of a single kind. But we have said enough on this head, and also of excess and defect; we have only to bear in mind that two divisions of the art of measurement have been discovered which are concerned with them, and not forget what they are.

YOUNG SOCRATES: We will not forget.

STRANGER: And now that this discussion is completed, let us go on to consider another question, which concerns not this argument only but the conduct of such arguments in general.

YOUNG SOCRATES: What is this new question?

STRANGER: Take the case of a child who is engaged in learning his letters: when he is asked what letters make up a word, should we say that the question is intended to improve his grammatical knowledge of that particular word, or of all words?

YOUNG SOCRATES: Clearly, in order that he may have a better knowledge of all words.

STRANGER: And is our enquiry about the Statesman intended only to improve our knowledge of politics, or our power of reasoning generally?

YOUNG SOCRATES: Clearly, as in the former example, the purpose is general.

STRANGER: Still less would any rational man seek to analyse the notion of weaving for its own sake. But people seem to forget that some things have sensible images, which are readily known, and can be easily pointed out when any one desires to answer an enquirer without any trouble or argument; whereas the greatest and highest truths have no outward image of themselves visible to man, which he who wishes to satisfy the soul of the enquirer can adapt to the eye of

sense (compare Phaedr.), and therefore we ought to train ourselves to give and accept a rational account of them; for immaterial things, which are the noblest and greatest, are shown only in thought and idea, and in no other way, and all that we are now saying is said for the sake of them. Moreover, there is always less difficulty in fixing the mind on small matters than on great.

YOUNG SOCRATES: Very good.

STRANGER: Let us call to mind the bearing of all this.

YOUNG SOCRATES: What is it?

STRANGER: I wanted to get rid of any impression of tediousness which we may have experienced in the discussion about weaving, and the reversal of the universe, and in the discussion concerning the Sophist and the being of not-being. I know that they were felt to be too long, and I reproached myself with this, fearing that they might be not only tedious but irrelevant; and all that I have now said is only designed to prevent the recurrence of any such disagreeables for the future.

YOUNG SOCRATES: Very good. Will you proceed?

STRANGER: Then I would like to observe that you and I, remembering what has been said, should praise or blame the length or shortness of discussions, not by comparing them with one another, but with what is fitting, having regard to the part of measurement, which, as we said, was to be borne in mind.

YOUNG SOCRATES: Very true.

STRANGER: And yet, not everything is to be judged even with a view to what is fitting; for we should only want such a length as is suited to give pleasure, if at all, as a secondary matter; and reason tells us, that we should be contented to make the ease or rapidity of an enquiry, not our first, but our second object; the first and highest of all being to assert the great method of division according to species — whether the discourse be shorter or longer is not to the point. No offence should be taken at length, but the longer and

shorter are to be employed indifferently, according as either of them is better calculated to sharpen the wits of the auditors. Reason would also say to him who censures the length of discourses on such occasions and cannot away with their circumlocution, that he should not be in such a hurry to have done with them, when he can only complain that they are tedious, but he should prove that if they had been shorter they would have made those who took part in them better dialecticians, and more capable of expressing the truth of things; about any other praise and blame, he need not trouble himself — he should pretend not to hear them. But we have had enough of this, as you will probably agree with me in thinking. Let us return to our Statesman, and apply to his case the aforesaid example of weaving.

YOUNG SOCRATES: Very good; — let us do as you say.

STRANGER: The art of the king has been separated from the similar arts of shepherds, and, indeed, from all those which have to do with herds at all. There still remain, however, of the causal and co-operative arts those which are immediately concerned with States, and which must first be distinguished from one another.

YOUNG SOCRATES: Very good.

STRANGER: You know that these arts cannot easily be divided into two halves; the reason will be very evident as we proceed.

YOUNG SOCRATES: Then we had better do so.

STRANGER: We must carve them like a victim into members or limbs, since we cannot bisect them. (Compare *Phaedr.*) For we certainly should divide everything into as few parts as possible.

YOUNG SOCRATES: What is to be done in this case?

STRANGER: What we did in the example of weaving — all those arts which furnish the tools were regarded by us as co-operative.

YOUNG SOCRATES: Yes.

STRANGER: So now, and with still more reason, all arts which make any implement in a State, whether great or small, may be regarded by us as co-operative, for without them neither State nor Statesmanship would be possible; and yet we are not inclined to say that any of them is a product of the kingly art.

YOUNG SOCRATES: No, indeed.

STRANGER: The task of separating this class from others is not an easy one; for there is plausibility in saying that anything in the world is the instrument of doing something. But there is another class of possessions in a city, of which I have a word to say.

YOUNG SOCRATES: What class do you mean?

STRANGER: A class which may be described as not having this power; that is to say, not like an instrument, framed for production, but designed for the preservation of that which is produced.

YOUNG SOCRATES: To what do you refer?

STRANGER: To the class of vessels, as they are comprehensively termed, which are constructed for the preservation of things moist and dry, of things prepared in the fire or out of the fire; this is a very large class, and has, if I am not mistaken, literally nothing to do with the royal art of which we are in search.

YOUNG SOCRATES: Certainly not.

STRANGER: There is also a third class of possessions to be noted, different from these and very extensive, moving or resting on land or water, honourable and also dishonourable. The whole of this class has one name, because it is intended to be sat upon, being always a seat for something.

YOUNG SOCRATES: What is it?

STRANGER: A vehicle, which is certainly not the work of the Statesman, but of the carpenter, potter, and coppersmith.

YOUNG SOCRATES: I understand.

STRANGER: And is there not a fourth class which is again different, and in which most of the things formerly mentioned are contained, — every kind of dress, most sorts of arms, walls and enclosures, whether of earth or stone, and ten thousand other things? all of which being made for the sake of defence, may be truly called defences, and are for the most part to be regarded as the work of the builder or of the weaver, rather than of the Statesman.

YOUNG SOCRATES: Certainly.

STRANGER: Shall we add a fifth class, of ornamentation and drawing, and of the imitations produced by drawing and music, which are designed for amusement only, and may be fairly comprehended under one name?

YOUNG SOCRATES: What is it?

STRANGER: Plaything is the name.

YOUNG SOCRATES: Certainly.

STRANGER: That one name may be fitly predicated of all of them, for none of these things have a serious purpose — amusement is their sole aim.

YOUNG SOCRATES: That again I understand.

STRANGER: Then there is a class which provides materials for all these, out of which and in which the arts already mentioned fabricate their works; — this manifold class, I say, which is the creation and offspring of many other arts, may I not rank sixth?

YOUNG SOCRATES: What do you mean?

STRANGER: I am referring to gold, silver, and other metals, and all that wood-cutting and shearing of every sort provides for the art of carpentry and plaiting; and there is the process of barking and stripping the cuticle of plants, and the currier's art, which strips off the skins of animals, and other similar arts which manufacture corks and papyri and cords, and provide for the manufacture of composite

species out of simple kinds — the whole class may be termed the primitive and simple possession of man, and with this the kingly science has no concern at all.

YOUNG SOCRATES: True.

STRANGER: The provision of food and of all other things which mingle their particles with the particles of the human body, and minister to the body, will form a seventh class, which may be called by the general term of nourishment, unless you have any better name to offer. This, however, appertains rather to the husbandman, huntsman, trainer, doctor, cook, and is not to be assigned to the Statesman's art.

YOUNG SOCRATES: Certainly not.

STRANGER: These seven classes include nearly every description of property, with the exception of tame animals. Consider; — there was the original material, which ought to have been placed first; next come instruments, vessels, vehicles, defences, playthings, nourishment; small things, which may be included under one of these — as for example, coins, seals and stamps, are omitted, for they have not in them the character of any larger kind which includes them; but some of them may, with a little forcing, be placed among ornaments, and others may be made to harmonize with the class of implements. The art of herding, which has been already divided into parts, will include all property in tame animals, except slaves.

YOUNG SOCRATES: Very true.

STRANGER: The class of slaves and ministers only remains, and I suspect that in this the real aspirants for the throne, who are the rivals of the king in the formation of the political web, will be discovered; just as spinners, carders, and the rest of them, were the rivals of the weaver. All the others, who were termed co-operators, have been got rid of among the occupations already mentioned, and separated from the royal and political science.

YOUNG SOCRATES: I agree.

STRANGER: Let us go a little nearer, in order that we may be more certain of the complexion of this remaining class.

YOUNG SOCRATES: Let us do so.

STRANGER: We shall find from our present point of view that the greatest servants are in a case and condition which is the reverse of what we anticipated.

YOUNG SOCRATES: Who are they?

STRANGER: Those who have been purchased, and have so become possessions; these are unmistakably slaves, and certainly do not claim royal science.

YOUNG SOCRATES: Certainly not.

STRANGER: Again, freemen who of their own accord become the servants of the other classes in a State, and who exchange and equalise the products of husbandry and the other arts, some sitting in the market-place, others going from city to city by land or sea, and giving money in exchange for money or for other productions — the money-changer, the merchant, the ship-owner, the retailer, will not put in any claim to statecraft or politics?

YOUNG SOCRATES: No; unless, indeed, to the politics of commerce.

STRANGER: But surely men whom we see acting as hirelings and serfs, and too happy to turn their hand to anything, will not profess to share in royal science?

YOUNG SOCRATES: Certainly not.

STRANGER: But what would you say of some other serviceable officials?

YOUNG SOCRATES: Who are they, and what services do they perform?

STRANGER: There are heralds, and scribes perfected by practice,

and divers others who have great skill in various sorts of business connected with the government of states — what shall we call them?

YOUNG SOCRATES: They are the officials, and servants of the rulers, as you just now called them, but not themselves rulers.

STRANGER: There may be something strange in any servant pretending to be a ruler, and yet I do not think that I could have been dreaming when I imagined that the principal claimants to political science would be found somewhere in this neighbourhood.

YOUNG SOCRATES: Very true.

STRANGER: Well, let us draw nearer, and try the claims of some who have not yet been tested: in the first place, there are diviners, who have a portion of servile or ministerial science, and are thought to be the interpreters of the gods to men.

YOUNG SOCRATES: True.

STRANGER: There is also the priestly class, who, as the law declares, know how to give the gods gifts from men in the form of sacrifices which are acceptable to them, and to ask on our behalf blessings in return from them. Now both these are branches of the servile or ministerial art.

YOUNG SOCRATES: Yes, clearly.

STRANGER: And here I think that we seem to be getting on the right track; for the priest and the diviner are swollen with pride and prerogative, and they create an awful impression of themselves by the magnitude of their enterprises; in Egypt, the king himself is not allowed to reign, unless he have priestly powers, and if he should be of another class and has thrust himself in, he must get enrolled in the priesthood. In many parts of Hellas, the duty of offering the most solemn propitiatory sacrifices is assigned to the highest magistracies, and here, at Athens, the most solemn and national of the ancient sacrifices are supposed to be celebrated by him who has been chosen by lot to be the King Archon.

YOUNG SOCRATES: Precisely.

STRANGER: But who are these other kings and priests elected by lot who now come into view followed by their retainers and a vast throng, as the former class disappears and the scene changes?

YOUNG SOCRATES: Whom can you mean?

STRANGER: They are a strange crew.

YOUNG SOCRATES: Why strange?

STRANGER: A minute ago I thought that they were animals of every tribe; for many of them are like lions and centaurs, and many more like satyrs and such weak and shifty creatures; — Protean shapes quickly changing into one another's forms and natures; and now, Socrates, I begin to see who they are.

YOUNG SOCRATES: Who are they? You seem to be gazing on some strange vision.

STRANGER: Yes; every one looks strange when you do not know him; and just now I myself fell into this mistake — at first sight, coming suddenly upon him, I did not recognize the politician and his troop.

YOUNG SOCRATES: Who is he?

STRANGER: The chief of Sophists and most accomplished of wizards, who must at any cost be separated from the true king or Statesman, if we are ever to see daylight in the present enquiry.

YOUNG SOCRATES: That is a hope not lightly to be renounced.

STRANGER: Never, if I can help it; and, first, let me ask you a question.

YOUNG SOCRATES: What?

STRANGER: Is not monarchy a recognized form of government?

YOUNG SOCRATES: Yes.

STRANGER: And, after monarchy, next in order comes the government of the few?

YOUNG SOCRATES: Of course.

STRANGER: Is not the third form of government the rule of the multitude, which is called by the name of democracy?

YOUNG SOCRATES: Certainly.

STRANGER: And do not these three expand in a manner into five, producing out of themselves two other names?

YOUNG SOCRATES: What are they?

YOUNG SOCRATES: What are they?

STRANGER: There is a criterion of voluntary and involuntary, poverty and riches, law and the absence of law, which men now-a-days apply to them; the two first they subdivide accordingly, and ascribe to monarchy two forms and two corresponding names, royalty and tyranny.

YOUNG SOCRATES: Very true.

STRANGER: And the government of the few they distinguish by the names of aristocracy and oligarchy.

YOUNG SOCRATES: Certainly.

STRANGER: Democracy alone, whether rigidly observing the laws or not, and whether the multitude rule over the men of property with their consent or against their consent, always in ordinary language has the same name.

YOUNG SOCRATES: True.

STRANGER: But do you suppose that any form of government which is defined by these characteristics of the one, the few, or the many, of poverty or wealth, of voluntary or compulsory submission, of written law or the absence of law, can be a right one?

YOUNG SOCRATES: Why not?

STRANGER: Reflect; and follow me.

YOUNG SOCRATES: In what direction?

STRANGER: Shall we abide by what we said at first, or shall we retract our words?

YOUNG SOCRATES: To what do you refer?

STRANGER: If I am not mistaken, we said that royal power was a science?

YOUNG SOCRATES: Yes.

STRANGER: And a science of a peculiar kind, which was selected out of the rest as having a character which is at once judicial and authoritative?

YOUNG SOCRATES: Yes.

STRANGER: And there was one kind of authority over lifeless things and another over living animals; and so we proceeded in the division step by step up to this point, not losing the idea of science, but unable as yet to determine the nature of the particular science?

YOUNG SOCRATES: True.

STRANGER: Hence we are led to observe that the distinguishing principle of the State cannot be the few or many, the voluntary or involuntary, poverty or riches; but some notion of science must enter into it, if we are to be consistent with what has preceded.

YOUNG SOCRATES: And we must be consistent.

STRANGER: Well, then, in which of these various forms of States may the science of government, which is among the greatest of all sciences and most difficult to acquire, be supposed to reside? That we must discover, and then we shall see who are the false politicians who pretend to be politicians but are not, although they persuade

many, and shall separate them from the wise king.

YOUNG SOCRATES: That, as the argument has already intimated, will be our duty.

STRANGER: Do you think that the multitude in a State can attain political science?

YOUNG SOCRATES: Impossible.

STRANGER: But, perhaps, in a city of a thousand men, there would be a hundred, or say fifty, who could?

YOUNG SOCRATES: In that case political science would certainly be the easiest of all sciences; there could not be found in a city of that number as many really first-rate draught-players, if judged by the standard of the rest of Hellas, and there would certainly not be as many kings. For kings we may truly call those who possess royal science, whether they rule or not, as was shown in the previous argument.

STRANGER: Thank you for reminding me; and the consequence is that any true form of government can only be supposed to be the government of one, two, or, at any rate, of a few.

YOUNG SOCRATES: Certainly.

STRANGER: And these, whether they rule with the will, or against the will, of their subjects, with written laws or without written laws, and whether they are poor or rich, and whatever be the nature of their rule, must be supposed, according to our present view, to rule on some scientific principle; just as the physician, whether he cures us against our will or with our will, and whatever be his mode of treatment, — incision, burning, or the infliction of some other pain, — whether he practises out of a book or not out of a book, and whether he be rich or poor, whether he purges or reduces in some other way, or even fattens his patients, is a physician all the same, so long as he exercises authority over them according to rules of art, if he only does them good and heals and saves them. And this we lay down to be the only proper test of the art of medicine, or of any other

art of command.

YOUNG SOCRATES: Quite true.

STRANGER: Then that can be the only true form of government in which the governors are really found to possess science, and are not mere pretenders, whether they rule according to law or without law, over willing or unwilling subjects, and are rich or poor themselves — none of these things can with any propriety be included in the notion of the ruler.

YOUNG SOCRATES: True.

STRANGER: And whether with a view to the public good they purge the State by killing some, or exiling some; whether they reduce the size of the body corporate by sending out from the hive swarms of citizens, or, by introducing persons from without, increase it; while they act according to the rules of wisdom and justice, and use their power with a view to the general security and improvement, the city over which they rule, and which has these characteristics, may be described as the only true State. All other governments are not genuine or real; but only imitations of this, and some of them are better and some of them are worse; the better are said to be well governed, but they are mere imitations like the others.

YOUNG SOCRATES: I agree, Stranger, in the greater part of what you say; but as to their ruling without laws — the expression has a harsh sound.

STRANGER: You have been too quick for me, Socrates; I was just going to ask you whether you objected to any of my statements. And now I see that we shall have to consider this notion of there being good government without laws.

YOUNG SOCRATES: Certainly.

STRANGER: There can be no doubt that legislation is in a manner the business of a king, and yet the best thing of all is not that the law should rule, but that a man should rule supposing him to have wisdom and royal power. Do you see why this is?

YOUNG SOCRATES: Why?

STRANGER: Because the law does not perfectly comprehend what is noblest and most just for all and therefore cannot enforce what is best. The differences of men and actions, and the endless irregular movements of human things, do not admit of any universal and simple rule. And no art whatsoever can lay down a rule which will last for all time.

YOUNG SOCRATES: Of course not.

STRANGER: But the law is always striving to make one; — like an obstinate and ignorant tyrant, who will not allow anything to be done contrary to his appointment, or any question to be asked — not even in sudden changes of circumstances, when something happens to be better than what he commanded for some one.

YOUNG SOCRATES: Certainly; the law treats us all precisely in the manner which you describe.

STRANGER: A perfectly simple principle can never be applied to a state of things which is the reverse of simple.

YOUNG SOCRATES: True.

STRANGER: Then if the law is not the perfection of right, why are we compelled to make laws at all? The reason of this has next to be investigated.

YOUNG SOCRATES: Certainly.

STRANGER: Let me ask, whether you have not meetings for gymnastic contests in your city, such as there are in other cities, at which men compete in running, wrestling, and the like?

YOUNG SOCRATES: Yes; they are very common among us.

STRANGER: And what are the rules which are enforced on their pupils by professional trainers or by others having similar authority? Can you remember?

YOUNG SOCRATES: To what do you refer?

STRANGER: The training-masters do not issue minute rules for individuals, or give every individual what is exactly suited to his constitution; they think that they ought to go more roughly to work, and to prescribe generally the regimen which will benefit the majority.

YOUNG SOCRATES: Very true.

STRANGER: And therefore they assign equal amounts of exercise to them all; they send them forth together, and let them rest together from their running, wrestling, or whatever the form of bodily exercise may be.

YOUNG SOCRATES: True.

STRANGER: And now observe that the legislator who has to preside over the herd, and to enforce justice in their dealings with one another, will not be able, in enacting for the general good, to provide exactly what is suitable for each particular case.

YOUNG SOCRATES: He cannot be expected to do so.

STRANGER: He will lay down laws in a general form for the majority, roughly meeting the cases of individuals; and some of them he will deliver in writing, and others will be unwritten; and these last will be traditional customs of the country.

YOUNG SOCRATES: He will be right.

STRANGER: Yes, quite right; for how can he sit at every man's side all through his life, prescribing for him the exact particulars of his duty? Who, Socrates, would be equal to such a task? No one who really had the royal science, if he had been able to do this, would have imposed upon himself the restriction of a written law.

YOUNG SOCRATES: So I should infer from what has now been said.

STRANGER: Or rather, my good friend, from what is going to be said.

YOUNG SOCRATES: And what is that?

STRANGER: Let us put to ourselves the case of a physician, or trainer, who is about to go into a far country, and is expecting to be a long time away from his patients — thinking that his instructions will not be remembered unless they are written down, he will leave notes of them for the use of his pupils or patients.

YOUNG SOCRATES: True.

STRANGER: But what would you say, if he came back sooner than he had intended, and, owing to an unexpected change of the winds or other celestial influences, something else happened to be better for them, — would he not venture to suggest this new remedy, although not contemplated in his former prescription? Would he persist in observing the original law, neither himself giving any new commandments, nor the patient daring to do otherwise than was prescribed, under the idea that this course only was healthy and medicinal, all others noxious and heterodox? Viewed in the light of science and true art, would not all such enactments be utterly ridiculous?

YOUNG SOCRATES: Utterly.

STRANGER: And if he who gave laws, written or unwritten, determining what was good or bad, honourable or dishonourable, just or unjust, to the tribes of men who flock together in their several

cities, and are governed in accordance with them; if, I say, the wise legislator were suddenly to come again, or another like to him, is he to be prohibited from changing them? — would not this prohibition be in reality quite as ridiculous as the other?

YOUNG SOCRATES: Certainly.

STRANGER: Do you know a plausible saying of the common people which is in point?

YOUNG SOCRATES: I do not recall what you mean at the moment.

STRANGER: They say that if any one knows how the ancient laws may be improved, he must first persuade his own State of the improvement, and then he may legislate, but not otherwise.

YOUNG SOCRATES: And are they not right?

STRANGER: I dare say. But supposing that he does use some gentle violence for their good, what is this violence to be called? Or rather, before you answer, let me ask the same question in reference to our previous instances.

YOUNG SOCRATES: What do you mean?

STRANGER: Suppose that a skilful physician has a patient, of whatever sex or age, whom he compels against his will to do something for his good which is contrary to the written rules; what is this compulsion to be called? Would you ever dream of calling it a violation of the art, or a breach of the laws of health? Nothing could be more unjust than for the patient to whom such violence is applied, to charge the physician who practises the violence with wanting skill or aggravating his disease.

YOUNG SOCRATES: Most true.

STRANGER: In the political art error is not called disease, but evil, or disgrace, or injustice.

YOUNG SOCRATES: Quite true.

STRANGER: And when the citizen, contrary to law and custom, is compelled to do what is juster and better and nobler than he did before, the last and most absurd thing which he could say about such violence is that he has incurred disgrace or evil or injustice at the hands of those who compelled him.

YOUNG SOCRATES: Very true.

STRANGER: And shall we say that the violence, if exercised by a rich man, is just, and if by a poor man, unjust? May not any man, rich or poor, with or without laws, with the will of the citizens or against the will of the citizens, do what is for their interest? Is not this the true principle of government, according to which the wise and good man will order the affairs of his subjects? As the pilot, by watching continually over the interests of the ship and of the crew, — not by laying down rules, but by making his art a law, — preserves the lives of his fellow-sailors, even so, and in the self-same way, may there not be a true form of polity created by those who are able to govern in a similar spirit, and who show a strength of art which is superior to the law? Nor can wise rulers ever err while they observing the one great rule of distributing justice to the citizens with intelligence and skill, are able to preserve them, and, as far as may be, to make them better from being worse.

YOUNG SOCRATES: No one can deny what has been now said.

STRANGER: Neither, if you consider, can any one deny the other statement.

YOUNG SOCRATES: What was it?

STRANGER: We said that no great number of persons, whoever they may be, can attain political knowledge, or order a State wisely, but that the true government is to be found in a small body, or in an individual, and that other States are but imitations of this, as we said a little while ago, some for the better and some for the worse.

YOUNG SOCRATES: What do you mean? I cannot have understood your previous remark about imitations.

STRANGER: And yet the mere suggestion which I hastily threw out is highly important, even if we leave the question where it is, and do not seek by the discussion of it to expose the error which prevails in this matter.

YOUNG SOCRATES: What do you mean?

STRANGER: The idea which has to be grasped by us is not easy or familiar; but we may attempt to express it thus: — Supposing the government of which I have been speaking to be the only true model, then the others must use the written laws of this — in no other way can they be saved; they will have to do what is now generally approved, although not the best thing in the world.

YOUNG SOCRATES: What is this?

STRANGER: No citizen should do anything contrary to the laws, and any infringement of them should be punished with death and the most extreme penalties; and this is very right and good when regarded as the second best thing, if you set aside the first, of which I was just now speaking. Shall I explain the nature of what I call the second best?

YOUNG SOCRATES: By all means.

STRANGER: I must again have recourse to my favourite images; through them, and them alone, can I describe kings and rulers.

YOUNG SOCRATES: What images?

STRANGER: The noble pilot and the wise physician, who ‘is worth many another man’ — in the similitude of these let us endeavour to discover some image of the king.

YOUNG SOCRATES: What sort of an image?

STRANGER: Well, such as this: — Every man will reflect that he suffers strange things at the hands of both of them; the physician saves any whom he wishes to save, and any whom he wishes to maltreat he maltreats — cutting or burning them; and at the same

time requiring them to bring him payments, which are a sort of tribute, of which little or nothing is spent upon the sick man, and the greater part is consumed by him and his domestics; and the finale is that he receives money from the relations of the sick man or from some enemy of his, and puts him out of the way. And the pilots of ships are guilty of numberless evil deeds of the same kind; they intentionally play false and leave you ashore when the hour of sailing arrives; or they cause mishaps at sea and cast away their freight; and are guilty of other rogueries. Now suppose that we, bearing all this in mind, were to determine, after consideration, that neither of these arts shall any longer be allowed to exercise absolute control either over freemen or over slaves, but that we will summon an assembly either of all the people, or of the rich only, that anybody who likes, whatever may be his calling, or even if he have no calling, may offer an opinion either about seamanship or about diseases — whether as to the manner in which physic or surgical instruments are to be applied to the patient, or again about the vessels and the nautical implements which are required in navigation, and how to meet the dangers of winds and waves which are incidental to the voyage, how to behave when encountering pirates, and what is to be done with the old-fashioned galleys, if they have to fight with others of a similar build — and that, whatever shall be decreed by the multitude on these points, upon the advice of persons skilled or unskilled, shall be written down on triangular tablets and columns, or enacted although unwritten to be national customs; and that in all future time vessels shall be navigated and remedies administered to the patient after this fashion.

YOUNG SOCRATES: What a strange notion!

STRANGER: Suppose further, that the pilots and physicians are appointed annually, either out of the rich, or out of the whole people, and that they are elected by lot; and that after their election they navigate vessels and heal the sick according to the written rules.

YOUNG SOCRATES: Worse and worse.

STRANGER: But hear what follows: — When the year of office has

expired, the pilot or physician has to come before a court of review, in which the judges are either selected from the wealthy classes or chosen by lot out of the whole people; and anybody who pleases may be their accuser, and may lay to their charge, that during the past year they have not navigated their vessels or healed their patients according to the letter of the law and the ancient customs of their ancestors; and if either of them is condemned, some of the judges must fix what he is to suffer or pay.

YOUNG SOCRATES: He who is willing to take a command under such conditions, deserves to suffer any penalty.

STRANGER: Yet once more, we shall have to enact that if any one is detected enquiring into piloting and navigation, or into health and the true nature of medicine, or about the winds, or other conditions of the atmosphere, contrary to the written rules, and has any ingenious notions about such matters, he is not to be called a pilot or physician, but a cloudy prating sophist; — further, on the ground that he is a corrupter of the young, who would persuade them to follow the art of medicine or piloting in an unlawful manner, and to exercise an arbitrary rule over their patients or ships, any one who is qualified by law may inform against him, and indict him in some court, and then if he is found to be persuading any, whether young or old, to act contrary to the written law, he is to be punished with the utmost rigour; for no one should presume to be wiser than the laws; and as touching healing and health and piloting and navigation, the nature of them is known to all, for anybody may learn the written laws and the national customs. If such were the mode of procedure, Socrates, about these sciences and about generalship, and any branch of hunting, or about painting or imitation in general, or carpentry, or any sort of handicraft, or husbandry, or planting, or if we were to see an art of rearing horses, or tending herds, or divination, or any ministerial service, or draught-playing, or any science conversant with number, whether simple or square or cube, or comprising motion, — I say, if all these things were done in this way according to written regulations, and not according to art, what would be the result?

YOUNG SOCRATES: All the arts would utterly perish, and could never be recovered, because enquiry would be unlawful. And human life, which is bad enough already, would then become utterly unendurable.

STRANGER: But what, if while compelling all these operations to be regulated by written law, we were to appoint as the guardian of the laws some one elected by a show of hands, or by lot, and he caring nothing about the laws, were to act contrary to them from motives of interest or favour, and without knowledge, — would not this be a still worse evil than the former?

YOUNG SOCRATES: Very true.

STRANGER: To go against the laws, which are based upon long experience, and the wisdom of counsellors who have graciously recommended them and persuaded the multitude to pass them, would be a far greater and more ruinous error than any adherence to written law?

YOUNG SOCRATES: Certainly.

STRANGER: Therefore, as there is a danger of this, the next best thing in legislating is not to allow either the individual or the multitude to break the law in any respect whatever.

YOUNG SOCRATES: True.

STRANGER: The laws would be copies of the true particulars of action as far as they admit of being written down from the lips of those who have knowledge?

YOUNG SOCRATES: Certainly they would.

STRANGER: And, as we were saying, he who has knowledge and is a true Statesman, will do many things within his own sphere of action by his art without regard to the laws, when he is of opinion that something other than that which he has written down and enjoined to be observed during his absence would be better.

YOUNG SOCRATES: Yes, we said so.

STRANGER: And any individual or any number of men, having fixed laws, in acting contrary to them with a view to something better, would only be acting, as far as they are able, like the true Statesman?

YOUNG SOCRATES: Certainly.

STRANGER: If they had no knowledge of what they were doing, they would imitate the truth, and they would always imitate ill; but if they had knowledge, the imitation would be the perfect truth, and an imitation no longer.

YOUNG SOCRATES: Quite true.

STRANGER: And the principle that no great number of men are able to acquire a knowledge of any art has been already admitted by us.

YOUNG SOCRATES: Yes, it has.

STRANGER: Then the royal or political art, if there be such an art, will never be attained either by the wealthy or by the other mob.

YOUNG SOCRATES: Impossible.

STRANGER: Then the nearest approach which these lower forms of government can ever make to the true government of the one scientific ruler, is to do nothing contrary to their own written laws and national customs.

YOUNG SOCRATES: Very good.

STRANGER: When the rich imitate the true form, such a government is called aristocracy; and when they are regardless of the laws, oligarchy.

YOUNG SOCRATES: True.

STRANGER: Or again, when an individual rules according to law in imitation of him who knows, we call him a king; and if he rules

according to law, we give him the same name, whether he rules with opinion or with knowledge.

YOUNG SOCRATES: To be sure.

STRANGER: And when an individual truly possessing knowledge rules, his name will surely be the same — he will be called a king; and thus the five names of governments, as they are now reckoned, become one.

YOUNG SOCRATES: That is true.

STRANGER: And when an individual ruler governs neither by law nor by custom, but following in the steps of the true man of science pretends that he can only act for the best by violating the laws, while in reality appetite and ignorance are the motives of the imitation, may not such an one be called a tyrant?

YOUNG SOCRATES: Certainly.

STRANGER: And this we believe to be the origin of the tyrant and the king, of oligarchies, and aristocracies, and democracies, — because men are offended at the one monarch, and can never be made to believe that any one can be worthy of such authority, or is able and willing in the spirit of virtue and knowledge to act justly and holily to all; they fancy that he will be a despot who will wrong and harm and slay whom he pleases of us; for if there could be such a despot as we describe, they would acknowledge that we ought to be too glad to have him, and that he alone would be the happy ruler of a true and perfect State.

YOUNG SOCRATES: To be sure.

STRANGER: But then, as the State is not like a beehive, and has no natural head who is at once recognized to be the superior both in body and in mind, mankind are obliged to meet and make laws, and endeavour to approach as nearly as they can to the true form of government.

YOUNG SOCRATES: True.

STRANGER: And when the foundation of politics is in the letter only and in custom, and knowledge is divorced from action, can we wonder, Socrates, at the miseries which there are, and always will be, in States? Any other art, built on such a foundation and thus conducted, would ruin all that it touched. Ought we not rather to wonder at the natural strength of the political bond? For States have endured all this, time out of mind, and yet some of them still remain and are not overthrown, though many of them, like ships at sea, founder from time to time, and perish and have perished and will hereafter perish, through the badness of their pilots and crews, who have the worst sort of ignorance of the highest truths — I mean to say, that they are wholly unacquainted with politics, of which, above all other sciences, they believe themselves to have acquired the most perfect knowledge.

YOUNG SOCRATES: Very true.

STRANGER: Then the question arises: — which of these untrue forms of government is the least oppressive to their subjects, though they are all oppressive; and which is the worst of them? Here is a consideration which is beside our present purpose, and yet having regard to the whole it seems to influence all our actions: we must examine it.

YOUNG SOCRATES: Yes, we must.

STRANGER: You may say that of the three forms, the same is at once the hardest and the easiest.

YOUNG SOCRATES: What do you mean?

STRANGER: I am speaking of the three forms of government, which I mentioned at the beginning of this discussion — monarchy, the rule of the few, and the rule of the many.

YOUNG SOCRATES: True.

STRANGER: If we divide each of these we shall have six, from which the true one may be distinguished as a seventh.

YOUNG SOCRATES: How would you make the division?

STRANGER: Monarchy divides into royalty and tyranny; the rule of the few into aristocracy, which has an auspicious name, and oligarchy; and democracy or the rule of the many, which before was one, must now be divided.

YOUNG SOCRATES: On what principle of division?

STRANGER: On the same principle as before, although the name is now discovered to have a twofold meaning. For the distinction of ruling with law or without law, applies to this as well as to the rest.

YOUNG SOCRATES: Yes.

STRANGER: The division made no difference when we were looking for the perfect State, as we showed before. But now that this has been separated off, and, as we said, the others alone are left for us, the principle of law and the absence of law will bisect them all.

YOUNG SOCRATES: That would seem to follow, from what has been said.

STRANGER: Then monarchy, when bound by good prescriptions or laws, is the best of all the six, and when lawless is the most bitter and oppressive to the subject.

YOUNG SOCRATES: True.

STRANGER: The government of the few, which is intermediate between that of the one and many, is also intermediate in good and evil; but the government of the many is in every respect weak and unable to do either any great good or any great evil, when compared with the others, because the offices are too minutely subdivided and too many hold them. And this therefore is the worst of all lawful governments, and the best of all lawless ones. If they are all without the restraints of law, democracy is the form in which to live is best; if they are well ordered, then this is the last which you should choose, as royalty, the first form, is the best, with the exception of the seventh, for that excels them all, and is among States what God is

among men.

YOUNG SOCRATES: You are quite right, and we should choose that above all.

STRANGER: The members of all these States, with the exception of the one which has knowledge, may be set aside as being not Statesmen but partisans, — upholders of the most monstrous idols, and themselves idols; and, being the greatest imitators and magicians, they are also the greatest of Sophists.

YOUNG SOCRATES: The name of Sophist after many windings in the argument appears to have been most justly fixed upon the politicians, as they are termed.

STRANGER: And so our satyric drama has been played out; and the troop of Centaurs and Satyrs, however unwilling to leave the stage, have at last been separated from the political science.

YOUNG SOCRATES: So I perceive.

STRANGER: There remain, however, natures still more troublesome, because they are more nearly akin to the king, and more difficult to discern; the examination of them may be compared to the process of refining gold.

YOUNG SOCRATES: What is your meaning?

STRANGER: The workmen begin by sifting away the earth and stones and the like; there remain in a confused mass the valuable elements akin to gold, which can only be separated by fire, — copper, silver, and other precious metal; these are at last refined away by the use of tests, until the gold is left quite pure.

YOUNG SOCRATES: Yes, that is the way in which these things are said to be done.

STRANGER: In like manner, all alien and uncongenial matter has been separated from political science, and what is precious and of a kindred nature has been left; there remain the nobler arts of the

general and the judge, and the higher sort of oratory which is an ally of the royal art, and persuades men to do justice, and assists in guiding the helm of States: — How can we best clear away all these, leaving him whom we seek alone and unalloyed?

YOUNG SOCRATES: That is obviously what has in some way to be attempted.

STRANGER: If the attempt is all that is wanting, he shall certainly be brought to light; and I think that the illustration of music may assist in exhibiting him. Please to answer me a question.

YOUNG SOCRATES: What question?

STRANGER: There is such a thing as learning music or handicraft arts in general?

YOUNG SOCRATES: There is.

STRANGER: And is there any higher art or science, having power to decide which of these arts are and are not to be learned; — what do you say?

YOUNG SOCRATES: I should answer that there is.

STRANGER: And do we acknowledge this science to be different from the others?

YOUNG SOCRATES: Yes.

STRANGER: And ought the other sciences to be superior to this, or no single science to any other? Or ought this science to be the overseer and governor of all the others?

YOUNG SOCRATES: The latter.

STRANGER: You mean to say that the science which judges whether we ought to learn or not, must be superior to the science which is learned or which teaches?

YOUNG SOCRATES: Far superior.

STRANGER: And the science which determines whether we ought to persuade or not, must be superior to the science which is able to persuade?

YOUNG SOCRATES: Of course.

STRANGER: Very good; and to what science do we assign the power of persuading a multitude by a pleasing tale and not by teaching?

YOUNG SOCRATES: That power, I think, must clearly be assigned to rhetoric.

STRANGER: And to what science do we give the power of determining whether we are to employ persuasion or force towards any one, or to refrain altogether?

YOUNG SOCRATES: To that science which governs the arts of speech and persuasion.

STRANGER: Which, if I am not mistaken, will be politics?

YOUNG SOCRATES: Very good.

STRANGER: Rhetoric seems to be quickly distinguished from politics, being a different species, yet ministering to it.

YOUNG SOCRATES: Yes.

STRANGER: But what would you think of another sort of power or science?

YOUNG SOCRATES: What science?

STRANGER: The science which has to do with military operations against our enemies — is that to be regarded as a science or not?

YOUNG SOCRATES: How can generalship and military tactics be regarded as other than a science?

STRANGER: And is the art which is able and knows how to advise when we are to go to war, or to make peace, the same as this or

different?

YOUNG SOCRATES: If we are to be consistent, we must say different.

STRANGER: And we must also suppose that this rules the other, if we are not to give up our former notion?

YOUNG SOCRATES: True.

STRANGER: And, considering how great and terrible the whole art of war is, can we imagine any which is superior to it but the truly royal?

YOUNG SOCRATES: No other.

STRANGER: The art of the general is only ministerial, and therefore not political?

YOUNG SOCRATES: Exactly.

STRANGER: Once more let us consider the nature of the righteous judge.

YOUNG SOCRATES: Very good.

STRANGER: Does he do anything but decide the dealings of men with one another to be just or unjust in accordance with the standard which he receives from the king and legislator, — showing his own peculiar virtue only in this, that he is not perverted by gifts, or fears, or pity, or by any sort of favour or enmity, into deciding the suits of men with one another contrary to the appointment of the legislator?

YOUNG SOCRATES: No; his office is such as you describe.

STRANGER: Then the inference is that the power of the judge is not royal, but only the power of a guardian of the law which ministers to the royal power?

YOUNG SOCRATES: True.

STRANGER: The review of all these sciences shows that none of

them is political or royal. For the truly royal ought not itself to act, but to rule over those who are able to act; the king ought to know what is and what is not a fitting opportunity for taking the initiative in matters of the greatest importance, whilst others should execute his orders.

YOUNG SOCRATES: True.

STRANGER: And, therefore, the arts which we have described, as they have no authority over themselves or one another, but are each of them concerned with some special action of their own, have, as they ought to have, special names corresponding to their several actions.

YOUNG SOCRATES: I agree.

STRANGER: And the science which is over them all, and has charge of the laws, and of all matters affecting the State, and truly weaves them all into one, if we would describe under a name characteristic of their common nature, most truly we may call politics.

YOUNG SOCRATES: Exactly so.

STRANGER: Then, now that we have discovered the various classes in a State, shall I analyse politics after the pattern which weaving supplied?

YOUNG SOCRATES: I greatly wish that you would.

STRANGER: Then I must describe the nature of the royal web, and show how the various threads are woven into one piece.

YOUNG SOCRATES: Clearly.

STRANGER: A task has to be accomplished, which, although difficult, appears to be necessary.

YOUNG SOCRATES: Certainly the attempt must be made.

STRANGER: To assume that one part of virtue differs in kind from another, is a position easily assailable by contentious disputants, who

appeal to popular opinion.

YOUNG SOCRATES: I do not understand.

STRANGER: Let me put the matter in another way: I suppose that you would consider courage to be a part of virtue?

YOUNG SOCRATES: Certainly I should.

STRANGER: And you would think temperance to be different from courage; and likewise to be a part of virtue?

YOUNG SOCRATES: True.

STRANGER: I shall venture to put forward a strange theory about them.

YOUNG SOCRATES: What is it?

STRANGER: That they are two principles which thoroughly hate one another and are antagonistic throughout a great part of nature.

YOUNG SOCRATES: How singular!

STRANGER: Yes, very — for all the parts of virtue are commonly said to be friendly to one another.

YOUNG SOCRATES: Yes.

STRANGER: Then let us carefully investigate whether this is universally true, or whether there are not parts of virtue which are at war with their kindred in some respect.

YOUNG SOCRATES: Tell me how we shall consider that question.

STRANGER: We must extend our enquiry to all those things which we consider beautiful and at the same time place in two opposite classes.

YOUNG SOCRATES: Explain; what are they?

STRANGER: Acuteness and quickness, whether in body or soul or in the movement of sound, and the imitations of them which painting

and music supply, you must have praised yourself before now, or been present when others praised them.

YOUNG SOCRATES: Certainly.

STRANGER: And do you remember the terms in which they are praised?

YOUNG SOCRATES: I do not.

STRANGER: I wonder whether I can explain to you in words the thought which is passing in my mind.

YOUNG SOCRATES: Why not?

STRANGER: You fancy that this is all so easy: Well, let us consider these notions with reference to the opposite classes of action under which they fall. When we praise quickness and energy and acuteness, whether of mind or body or sound, we express our praise of the quality which we admire by one word, and that one word is manliness or courage.

YOUNG SOCRATES: How?

STRANGER: We speak of an action as energetic and brave, quick and manly, and vigorous too; and when we apply the name of which I speak as the common attribute of all these natures, we certainly praise them.

YOUNG SOCRATES: True.

STRANGER: And do we not often praise the quiet strain of action also?

YOUNG SOCRATES: To be sure.

STRANGER: And do we not then say the opposite of what we said of the other?

YOUNG SOCRATES: How do you mean?

STRANGER: We exclaim How calm! How temperate! in admiration

of the slow and quiet working of the intellect, and of steadiness and gentleness in action, of smoothness and depth of voice, and of all rhythmical movement and of music in general, when these have a proper solemnity. Of all such actions we predicate not courage, but a name indicative of order.

YOUNG SOCRATES: Very true.

STRANGER: But when, on the other hand, either of these is out of place, the names of either are changed into terms of censure.

YOUNG SOCRATES: How so?

STRANGER: Too great sharpness or quickness or hardness is termed violence or madness; too great slowness or gentleness is called cowardice or sluggishness; and we may observe, that for the most part these qualities, and the temperance and manliness of the opposite characters, are arrayed as enemies on opposite sides, and do not mingle with one another in their respective actions; and if we pursue the enquiry, we shall find that men who have these different qualities of mind differ from one another.

YOUNG SOCRATES: In what respect?

STRANGER: In respect of all the qualities which I mentioned, and very likely of many others. According to their respective affinities to either class of actions they distribute praise and blame, — praise to the actions which are akin to their own, blame to those of the opposite party — and out of this many quarrels and occasions of quarrel arise among them.

YOUNG SOCRATES: True.

STRANGER: The difference between the two classes is often a trivial concern; but in a state, and when affecting really important matters, becomes of all disorders the most hateful.

YOUNG SOCRATES: To what do you refer?

STRANGER: To nothing short of the whole regulation of human

life. For the orderly class are always ready to lead a peaceful life, quietly doing their own business; this is their manner of behaving with all men at home, and they are equally ready to find some way of keeping the peace with foreign States. And on account of this fondness of theirs for peace, which is often out of season where their influence prevails, they become by degrees unwarlike, and bring up their young men to be like themselves; they are at the mercy of their enemies; whence in a few years they and their children and the whole city often pass imperceptibly from the condition of freemen into that of slaves.

YOUNG SOCRATES: What a cruel fate!

STRANGER: And now think of what happens with the more courageous natures. Are they not always inciting their country to go to war, owing to their excessive love of the military life? they raise up enemies against themselves many and mighty, and either utterly ruin their native-land or enslave and subject it to its foes?

YOUNG SOCRATES: That, again, is true.

STRANGER: Must we not admit, then, that where these two classes exist, they always feel the greatest antipathy and antagonism towards one another?

YOUNG SOCRATES: We cannot deny it.

STRANGER: And returning to the enquiry with which we began, have we not found that considerable portions of virtue are at variance with one another, and give rise to a similar opposition in the characters who are endowed with them?

YOUNG SOCRATES: True.

STRANGER: Let us consider a further point.

YOUNG SOCRATES: What is it?

STRANGER: I want to know, whether any constructive art will make any, even the most trivial thing, out of bad and good materials

indifferently, if this can be helped? does not all art rather reject the bad as far as possible, and accept the good and fit materials, and from these elements, whether like or unlike, gathering them all into one, work out some nature or idea?

YOUNG SOCRATES: To, be sure.

STRANGER: Then the true and natural art of statesmanship will never allow any State to be formed by a combination of good and bad men, if this can be avoided; but will begin by testing human natures in play, and after testing them, will entrust them to proper teachers who are the ministers of her purposes — she will herself give orders, and maintain authority; just as the art of weaving continually gives orders and maintains authority over the carders and all the others who prepare the material for the work, commanding the subsidiary arts to execute the works which she deems necessary for making the web.

YOUNG SOCRATES: Quite true.

STRANGER: In like manner, the royal science appears to me to be the mistress of all lawful educators and instructors, and having this queenly power, will not permit them to train men in what will produce characters unsuited to the political constitution which she desires to create, but only in what will produce such as are suitable. Those which have no share of manliness and temperance, or any other virtuous inclination, and, from the necessity of an evil nature, are violently carried away to godlessness and insolence and injustice, she gets rid of by death and exile, and punishes them with the greatest of disgraces.

YOUNG SOCRATES: That is commonly said.

STRANGER: But those who are wallowing in ignorance and baseness she bows under the yoke of slavery.

YOUNG SOCRATES: Quite right.

STRANGER: The rest of the citizens, out of whom, if they have education, something noble may be made, and who are capable of

being united by the statesman, the kingly art blends and weaves together; taking on the one hand those whose natures tend rather to courage, which is the stronger element and may be regarded as the warp, and on the other hand those which incline to order and gentleness, and which are represented in the figure as spun thick and soft, after the manner of the woof — these, which are naturally opposed, she seeks to bind and weave together in the following manner:

YOUNG SOCRATES: In what manner?

STRANGER: First of all, she takes the eternal element of the soul and binds it with a divine cord, to which it is akin, and then the animal nature, and binds that with human cords.

YOUNG SOCRATES: I do not understand what you mean.

STRANGER: The meaning is, that the opinion about the honourable and the just and good and their opposites, which is true and confirmed by reason, is a divine principle, and when implanted in the soul, is implanted, as I maintain, in a nature of heavenly birth.

YOUNG SOCRATES: Yes; what else should it be?

STRANGER: Only the Statesman and the good legislator, having the inspiration of the royal muse, can implant this opinion, and he, only in the rightly educated, whom we were just now describing.

YOUNG SOCRATES: Likely enough.

STRANGER: But him who cannot, we will not designate by any of the names which are the subject of the present enquiry.

YOUNG SOCRATES: Very right.

STRANGER: The courageous soul when attaining this truth becomes civilized, and rendered more capable of partaking of justice; but when not partaking, is inclined to brutality. Is not that true?

YOUNG SOCRATES: Certainly.

STRANGER: And again, the peaceful and orderly nature, if sharing in these opinions, becomes temperate and wise, as far as this may be in a State, but if not, deservedly obtains the ignominious name of silliness.

YOUNG SOCRATES: Quite true.

STRANGER: Can we say that such a connexion as this will lastingly unite the evil with one another or with the good, or that any science would seriously think of using a bond of this kind to join such materials?

YOUNG SOCRATES: Impossible.

STRANGER: But in those who were originally of a noble nature, and who have been nurtured in noble ways, and in those only, may we not say that union is implanted by law, and that this is the medicine which art prescribes for them, and of all the bonds which unite the dissimilar and contrary parts of virtue is not this, as I was saying, the divinest?

YOUNG SOCRATES: Very true.

STRANGER: Where this divine bond exists there is no difficulty in imagining, or when you have imagined, in creating the other bonds, which are human only.

YOUNG SOCRATES: How is that, and what bonds do you mean?

STRANGER: Rights of intermarriage, and ties which are formed between States by giving and taking children in marriage, or between individuals by private betrothals and espousals. For most persons form marriage connexions without due regard to what is best for the procreation of children.

YOUNG SOCRATES: In what way?

STRANGER: They seek after wealth and power, which in matrimony are objects not worthy even of a serious censure.

YOUNG SOCRATES: There is no need to consider them at all.

STRANGER: More reason is there to consider the practice of those who make family their chief aim, and to indicate their error.

YOUNG SOCRATES: Quite true.

STRANGER: They act on no true principle at all; they seek their ease and receive with open arms those who are like themselves, and hate those who are unlike them, being too much influenced by feelings of dislike.

YOUNG SOCRATES: How so?

STRANGER: The quiet orderly class seek for natures like their own, and as far as they can they marry and give in marriage exclusively in this class, and the courageous do the same; they seek natures like their own, whereas they should both do precisely the opposite.

YOUNG SOCRATES: How and why is that?

STRANGER: Because courage, when untempered by the gentler nature during many generations, may at first bloom and strengthen, but at last bursts forth into downright madness.

YOUNG SOCRATES: Like enough.

STRANGER: And then, again, the soul which is over-full of modesty and has no element of courage in many successive generations, is apt to grow too indolent, and at last to become utterly paralyzed and useless.

YOUNG SOCRATES: That, again, is quite likely.

STRANGER: It was of these bonds I said that there would be no difficulty in creating them, if only both classes originally held the same opinion about the honourable and good; — indeed, in this single work, the whole process of royal weaving is comprised — never to allow temperate natures to be separated from the brave, but to weave them together, like the warp and the woof, by common sentiments and honours and reputation, and by the giving of pledges to one another; and out of them forming one smooth and even web,

to entrust to them the offices of State.

YOUNG SOCRATES: How do you mean?

STRANGER: Where one officer only is needed, you must choose a ruler who has both these qualities — when many, you must mingle some of each, for the temperate ruler is very careful and just and safe, but is wanting in thoroughness and go.

YOUNG SOCRATES: Certainly, that is very true.

STRANGER: The character of the courageous, on the other hand, falls short of the former in justice and caution, but has the power of action in a remarkable degree, and where either of these two qualities is wanting, there cities cannot altogether prosper either in their public or private life.

YOUNG SOCRATES: Certainly they cannot.

STRANGER: This then we declare to be the completion of the web of political action, which is created by a direct intertexture of the brave and temperate natures, whenever the royal science has drawn the two minds into communion with one another by unanimity and friendship, and having perfected the noblest and best of all the webs which political life admits, and enfolding therein all other inhabitants of cities, whether slaves or freemen, binds them in one fabric and governs and presides over them, and, in so far as to be happy is vouchsafed to a city, in no particular fails to secure their happiness.

YOUNG SOCRATES: Your picture, Stranger, of the king and statesman, no less than of the Sophist, is quite perfect.

PHILEBUS

Translated by Benjamin Jowett

This is one of Plato's last dialogues, which was completed by 347 BC. The dialogue concerns the relative value of pleasure and knowledge, and offers a model for thinking about how complex structures are developed. The dialogue is generally considered to contain less humour than earlier dialogues, emphasising philosophy and speculation over drama and poetry.

CONTENTS

INTRODUCTION AND ANALYSIS.
PHILEBUS.

INTRODUCTION AND ANALYSIS.

The *Philebus* appears to be one of the later writings of Plato, in which the style has begun to alter, and the dramatic and poetical element has become subordinate to the speculative and philosophical. In the development of abstract thought great advances have been made on the *Protagoras* or the *Phaedrus*, and even on the *Republic*. But there is a corresponding diminution of artistic skill, a want of character in the persons, a laboured march in the dialogue, and a degree of confusion and incompleteness in the general design. As in the speeches of *Thucydides*, the multiplication of ideas seems to interfere with the power of expression. Instead of the equally diffused grace and ease of the earlier dialogues there occur two or three highly-wrought passages; instead of the ever-flowing play of humour, now appearing, now concealed, but always present, are inserted a good many bad jests, as we may venture to term them. We may observe an attempt at artificial ornament, and far-fetched modes of expression; also clamorous demands on the part of his companions, that *Socrates* shall answer his own questions, as well as other defects of style, which remind us of the *Laws*. The connection is often abrupt and inharmonious, and far from clear. Many points require further explanation; e.g. the reference of pleasure to the indefinite class, compared with the assertion which almost immediately follows, that pleasure and pain naturally have their seat in the third or mixed class: these two statements are unreconciled. In like manner, the table of goods does not distinguish between the two heads of measure and symmetry; and though a hint is given that the divine mind has the first place, nothing is said of this in the final summing up. The relation of the goods to the sciences does not appear; though dialectic may be thought to correspond to the highest good, the sciences and arts and true opinions are enumerated in the fourth class. We seem to have an intimation of a further discussion, in which some topics lightly passed over were to receive a fuller consideration. The various uses of the word 'mixed,' for the mixed life, the mixed class of elements, the mixture of pleasures, or of pleasure and pain, are a further source of perplexity. Our ignorance

of the opinions which Plato is attacking is also an element of obscurity. Many things in a controversy might seem relevant, if we knew to what they were intended to refer. But no conjecture will enable us to supply what Plato has not told us; or to explain, from our fragmentary knowledge of them, the relation in which his doctrine stood to the Eleatic Being or the Megarian good, or to the theories of Aristippus or Antisthenes respecting pleasure. Nor are we able to say how far Plato in the *Philebus* conceives the finite and infinite (which occur both in the fragments of Philolaus and in the Pythagorean table of opposites) in the same manner as contemporary Pythagoreans.

There is little in the characters which is worthy of remark. The Socrates of the *Philebus* is devoid of any touch of Socratic irony, though here, as in the *Phaedrus*, he twice attributes the flow of his ideas to a sudden inspiration. The interlocutor Protarchus, the son of Callias, who has been a hearer of Gorgias, is supposed to begin as a disciple of the partisans of pleasure, but is drawn over to the opposite side by the arguments of Socrates. The instincts of ingenuous youth are easily induced to take the better part. *Philebus*, who has withdrawn from the argument, is several times brought back again, that he may support pleasure, of which he remains to the end the uncompromising advocate. On the other hand, the youthful group of listeners by whom he is surrounded, '*Philebus*' boys' as they are termed, whose presence is several times intimated, are described as all of them at last convinced by the arguments of Socrates. They bear a very faded resemblance to the interested audiences of the *Charmides*, *Lysis*, or *Protagoras*. Other signs of relation to external life in the dialogue, or references to contemporary things and persons, with the single exception of the allusions to the anonymous enemies of pleasure, and the teachers of the flux, there are none.

The omission of the doctrine of recollection, derived from a previous state of existence, is a note of progress in the philosophy of Plato. The transcendental theory of pre-existent ideas, which is chiefly discussed by him in the *Meno*, the *Phaedo*, and the *Phaedrus*, has given way to a psychological one. The omission is rendered more significant by his having occasion to speak of memory as the basis of desire. Of the ideas he treats in the same sceptical spirit which

appears in his criticism of them in the *Parmenides*. He touches on the same difficulties and he gives no answer to them. His mode of speaking of the analytical and synthetical processes may be compared with his discussion of the same subject in the *Phaedrus*; here he dwells on the importance of dividing the genera into all the species, while in the *Phaedrus* he conveys the same truth in a figure, when he speaks of carving the whole, which is described under the image of a victim, into parts or members, 'according to their natural articulation, without breaking any of them.' There is also a difference, which may be noted, between the two dialogues. For whereas in the *Phaedrus*, and also in the *Symposium*, the dialectician is described as a sort of enthusiast or lover, in the *Philebus*, as in all the later writings of Plato, the element of love is wanting; the topic is only introduced, as in the *Republic*, by way of illustration. On other subjects of which they treat in common, such as the nature and kinds of pleasure, true and false opinion, the nature of the good, the order and relation of the sciences, the *Republic* is less advanced than the *Philebus*, which contains, perhaps, more metaphysical truth more obscurely expressed than any other Platonic dialogue. Here, as Plato expressly tells us, he is 'forging weapons of another make,' i.e. new categories and modes of conception, though 'some of the old ones might do again.'

But if superior in thought and dialectical power, the *Philebus* falls very far short of the *Republic* in fancy and feeling. The development of the reason undisturbed by the emotions seems to be the ideal at which Plato aims in his later dialogues. There is no mystic enthusiasm or rapturous contemplation of ideas. Whether we attribute this change to the greater feebleness of age, or to the development of the quarrel between philosophy and poetry in Plato's own mind, or perhaps, in some degree, to a carelessness about artistic effect, when he was absorbed in abstract ideas, we can hardly be wrong in assuming, amid such a variety of indications, derived from style as well as subject, that the *Philebus* belongs to the later period of his life and authorship. But in this, as in all the later writings of Plato, there are not wanting thoughts and expressions in which he rises to his highest level.

The plan is complicated, or rather, perhaps, the want of plan

renders the progress of the dialogue difficult to follow. A few leading ideas seem to emerge: the relation of the one and many, the four original elements, the kinds of pleasure, the kinds of knowledge, the scale of goods. These are only partially connected with one another. The dialogue is not rightly entitled 'Concerning pleasure' or 'Concerning good,' but should rather be described as treating of the relations of pleasure and knowledge, after they have been duly analyzed, to the good. (1) The question is asked, whether pleasure or wisdom is the chief good, or some nature higher than either; and if the latter, how pleasure and wisdom are related to this higher good. (2) Before we can reply with exactness, we must know the kinds of pleasure and the kinds of knowledge. (3) But still we may affirm generally, that the combined life of pleasure and wisdom or knowledge has more of the character of the good than either of them when isolated. (4) to determine which of them partakes most of the higher nature, we must know under which of the four unities or elements they respectively fall. These are, first, the infinite; secondly, the finite; thirdly, the union of the two; fourthly, the cause of the union. Pleasure is of the first, wisdom or knowledge of the third class, while reason or mind is akin to the fourth or highest.

(5) Pleasures are of two kinds, the mixed and unmixed. Of mixed pleasures there are three classes — (a) those in which both the pleasures and pains are corporeal, as in eating and hunger; (b) those in which there is a pain of the body and pleasure of the mind, as when you are hungry and are looking forward to a feast; (c) those in which the pleasure and pain are both mental. Of unmixed pleasures there are four kinds: those of sight, hearing, smell, knowledge.

(6) The sciences are likewise divided into two classes, theoretical and productive: of the latter, one part is pure, the other impure. The pure part consists of arithmetic, mensuration, and weighing. Arts like carpentering, which have an exact measure, are to be regarded as higher than music, which for the most part is mere guess-work. But there is also a higher arithmetic, and a higher mensuration, which is exclusively theoretical; and a dialectical science, which is higher still and the truest and purest knowledge.

(7) We are now able to determine the composition of the perfect life. First, we admit the pure pleasures and the pure sciences;

secondly, the impure sciences, but not the impure pleasures. We have next to discover what element of goodness is contained in this mixture. There are three criteria of goodness — beauty, symmetry, truth. These are clearly more akin to reason than to pleasure, and will enable us to fix the places of both of them in the scale of good. First in the scale is measure; the second place is assigned to symmetry; the third, to reason and wisdom; the fourth, to knowledge and true opinion; the fifth, to pure pleasures; and here the Muse says ‘Enough.’

‘Bidding farewell to Philebus and Socrates,’ we may now consider the metaphysical conceptions which are presented to us. These are (I) the paradox of unity and plurality; (II) the table of categories or elements; (III) the kinds of pleasure; (IV) the kinds of knowledge; (V) the conception of the good. We may then proceed to examine (VI) the relation of the Philebus to the Republic, and to other dialogues.

I. The paradox of the one and many originated in the restless dialectic of Zeno, who sought to prove the absolute existence of the one by showing the contradictions that are involved in admitting the existence of the many (compare Parm.). Zeno illustrated the contradiction by well-known examples taken from outward objects. But Socrates seems to intimate that the time had arrived for discarding these hackneyed illustrations; such difficulties had long been solved by common sense (‘*solvitur ambulando*’); the fact of the co-existence of opposites was a sufficient answer to them. He will leave them to Cynics and Eristics; the youth of Athens may discourse of them to their parents. To no rational man could the circumstance that the body is one, but has many members, be any longer a stumbling-block.

Plato’s difficulty seems to begin in the region of ideas. He cannot understand how an absolute unity, such as the Eleatic Being, can be broken up into a number of individuals, or be in and out of them at once. Philosophy had so deepened or intensified the nature of one or Being, by the thoughts of successive generations, that the mind could no longer imagine ‘Being’ as in a state of change or division. To say that the verb of existence is the copula, or that unity is a mere unit, is to us easy; but to the Greek in a particular stage of thought such an

analysis involved the same kind of difficulty as the conception of God existing both in and out of the world would to ourselves. Nor was he assisted by the analogy of sensible objects. The sphere of mind was dark and mysterious to him; but instead of being illustrated by sense, the greatest light appeared to be thrown on the nature of ideas when they were contrasted with sense.

Both here and in the *Parmenides*, where similar difficulties are raised, Plato seems prepared to desert his ancient ground. He cannot tell the relation in which abstract ideas stand to one another, and therefore he transfers the one and many out of his transcendental world, and proceeds to lay down practical rules for their application to different branches of knowledge. As in the *Republic* he supposes the philosopher to proceed by regular steps, until he arrives at the idea of good; as in the *Sophist* and *Politicus* he insists that in dividing the whole into its parts we should bisect in the middle in the hope of finding species; as in the *Phaedrus* (see above) he would have 'no limb broken' of the organism of knowledge; — so in the *Philebus* he urges the necessity of filling up all the intermediate links which occur (compare Bacon's 'media axiomata') in the passage from unity to infinity. With him the idea of science may be said to anticipate science; at a time when the sciences were not yet divided, he wants to impress upon us the importance of classification; neither neglecting the many individuals, nor attempting to count them all, but finding the genera and species under which they naturally fall. Here, then, and in the parallel passages of the *Phaedrus* and of the *Sophist*, is found the germ of the most fruitful notion of modern science.

Plato describes with ludicrous exaggeration the influence exerted by the one and many on the minds of young men in their first fervour of metaphysical enthusiasm (compare *Republic*). But they are none the less an everlasting quality of reason or reasoning which never grows old in us. At first we have but a confused conception of them, analogous to the eyes blinking at the light in the *Republic*. To this Plato opposes the revelation from Heaven of the real relations of them, which some Prometheus, who gave the true fire from heaven, is supposed to have imparted to us. Plato is speaking of two things — (1) the crude notion of the one and many, which powerfully affects

the ordinary mind when first beginning to think; (2) the same notion when cleared up by the help of dialectic.

To us the problem of the one and many has lost its chief interest and perplexity. We readily acknowledge that a whole has many parts, that the continuous is also the divisible, that in all objects of sense there is a one and many, and that a like principle may be applied to analogy to purely intellectual conceptions. If we attend to the meaning of the words, we are compelled to admit that two contradictory statements are true. But the antinomy is so familiar as to be scarcely observed by us. Our sense of the contradiction, like Plato's, only begins in a higher sphere, when we speak of necessity and free-will, of mind and body, of Three Persons and One Substance, and the like. The world of knowledge is always dividing more and more; every truth is at first the enemy of every other truth. Yet without this division there can be no truth; nor any complete truth without the reunion of the parts into a whole. And hence the coexistence of opposites in the unity of the idea is regarded by Hegel as the supreme principle of philosophy; and the law of contradiction, which is affirmed by logicians to be an ultimate principle of the human mind, is displaced by another law, which asserts the coexistence of contradictories as imperfect and divided elements of the truth. Without entering further into the depths of Hegelianism, we may remark that this and all similar attempts to reconcile antinomies have their origin in the old Platonic problem of the 'One and Many.'

II. 1. The first of Plato's categories or elements is the infinite. This is the negative of measure or limit; the unthinkable, the unknowable; of which nothing can be affirmed; the mixture or chaos which preceded distinct kinds in the creation of the world; the first vague impression of sense; the more or less which refuses to be reduced to rule, having certain affinities with evil, with pleasure, with ignorance, and which in the scale of being is farthest removed from the beautiful and good. To a Greek of the age of Plato, the idea of an infinite mind would have been an absurdity. He would have insisted that 'the good is of the nature of the finite,' and that the infinite is a mere negative, which is on the level of sensation, and not of thought. He was aware that there was a distinction between the infinitely great and the infinitely small, but he would have equally denied the claim

of either to true existence. Of that positive infinity, or infinite reality, which we attribute to God, he had no conception.

The Greek conception of the infinite would be more truly described, in our way of speaking, as the indefinite. To us, the notion of infinity is subsequent rather than prior to the finite, expressing not absolute vacancy or negation, but only the removal of limit or restraint, which we suppose to exist not before but after we have already set bounds to thought and matter, and divided them after their kinds. From different points of view, either the finite or infinite may be looked upon respectively both as positive and negative (compare ‘*Omnis determinatio est negatio*’)¹ and the conception of the one determines that of the other. The Greeks and the moderns seem to be nearly at the opposite poles in their manner of regarding them. And both are surprised when they make the discovery, as Plato has done in the *Sophist*, how large an element negation forms in the framework of their thoughts.

2, 3. The finite element which mingles with and regulates the infinite is best expressed to us by the word ‘law.’ It is that which measures all things and assigns to them their limit; which preserves them in their natural state, and brings them within the sphere of human cognition. This is described by the terms harmony, health, order, perfection, and the like. All things, in as far as they are good, even pleasures, which are for the most part indefinite, partake of this element. We should be wrong in attributing to Plato the conception of laws of nature derived from observation and experiment. And yet he has as intense a conviction as any modern philosopher that nature does not proceed by chance. But observing that the wonderful construction of number and figure, which he had within himself, and which seemed to be prior to himself, explained a part of the phenomena of the external world, he extended their principles to the whole, finding in them the true type both of human life and of the order of nature.

Two other points may be noticed respecting the third class. First, that Plato seems to be unconscious of any interval or chasm which separates the finite from the infinite. The one is in various ways and degrees working in the other. Hence he has implicitly answered the difficulty with which he started, of how the one could remain one

and yet be divided among many individuals, or 'how ideas could be in and out of themselves,' and the like. Secondly, that in this mixed class we find the idea of beauty. Good, when exhibited under the aspect of measure or symmetry, becomes beauty. And if we translate his language into corresponding modern terms, we shall not be far wrong in saying that here, as well as in the Republic, Plato conceives beauty under the idea of proportion.

4. Last and highest in the list of principles or elements is the cause of the union of the finite and infinite, to which Plato ascribes the order of the world. Reasoning from man to the universe, he argues that as there is a mind in the one, there must be a mind in the other, which he identifies with the royal mind of Zeus. This is the first cause of which 'our ancestors spoke,' as he says, appealing to tradition, in the Philebus as well as in the Timaeus. The 'one and many' is also supposed to have been revealed by tradition. For the mythical element has not altogether disappeared.

Some characteristic differences may here be noted, which distinguish the ancient from the modern mode of conceiving God.

a. To Plato, the idea of God or mind is both personal and impersonal. Nor in ascribing, as appears to us, both these attributes to him, and in speaking of God both in the masculine and neuter gender, did he seem to himself inconsistent. For the difference between the personal and impersonal was not marked to him as to ourselves. We make a fundamental distinction between a thing and a person, while to Plato, by the help of various intermediate abstractions, such as end, good, cause, they appear almost to meet in one, or to be two aspects of the same. Hence, without any reconciliation or even remark, in the Republic he speaks at one time of God or Gods, and at another time of the Good. So in the Phaedrus he seems to pass unconsciously from the concrete to the abstract conception of the Ideas in the same dialogue. Nor in the Philebus is he careful to show in what relation the idea of the divine mind stands to the supreme principle of measure.

b. Again, to us there is a strongly-marked distinction between a first cause and a final cause. And we should commonly identify a first cause with God, and the final cause with the world, which is His work. But Plato, though not a Pantheist, and very far from

confounding God with the world, tends to identify the first with the final cause. The cause of the union of the finite and infinite might be described as a higher law; the final measure which is the highest expression of the good may also be described as the supreme law. Both these conceptions are realized chiefly by the help of the material world; and therefore when we pass into the sphere of ideas can hardly be distinguished.

The four principles are required for the determination of the relative places of pleasure and wisdom. Plato has been saying that we should proceed by regular steps from the one to the many. Accordingly, before assigning the precedence either to good or pleasure, he must first find out and arrange in order the general principles of things. Mind is ascertained to be akin to the nature of the cause, while pleasure is found in the infinite or indefinite class. We may now proceed to divide pleasure and knowledge after their kinds.

III. 1. Plato speaks of pleasure as indefinite, as relative, as a generation, and in all these points of view as in a category distinct from good. For again we must repeat, that to the Greek 'the good is of the nature of the finite,' and, like virtue, either is, or is nearly allied to, knowledge. The modern philosopher would remark that the indefinite is equally real with the definite. Health and mental qualities are in the concrete undefined; they are nevertheless real goods, and Plato rightly regards them as falling under the finite class. Again, we are able to define objects or ideas, not in so far as they are in the mind, but in so far as they are manifested externally, and can therefore be reduced to rule and measure. And if we adopt the test of definiteness, the pleasures of the body are more capable of being defined than any other pleasures. As in art and knowledge generally, we proceed from without inwards, beginning with facts of sense, and passing to the more ideal conceptions of mental pleasure, happiness, and the like.

2. Pleasure is depreciated as relative, while good is exalted as absolute. But this distinction seems to arise from an unfair mode of regarding them; the abstract idea of the one is compared with the concrete experience of the other. For all pleasure and all knowledge may be viewed either abstracted from the mind, or in relation to the

mind (compare Aristot. Nic. Ethics). The first is an idea only, which may be conceived as absolute and unchangeable, and then the abstract idea of pleasure will be equally unchangeable with that of knowledge. But when we come to view either as phenomena of consciousness, the same defects are for the most part incident to both of them. Our hold upon them is equally transient and uncertain; the mind cannot be always in a state of intellectual tension, any more than capable of feeling pleasure always. The knowledge which is at one time clear and distinct, at another seems to fade away, just as the pleasure of health after sickness, or of eating after hunger, soon passes into a neutral state of unconsciousness and indifference. Change and alternation are necessary for the mind as well as for the body; and in this is to be acknowledged, not an element of evil, but rather a law of nature. The chief difference between subjective pleasure and subjective knowledge in respect of permanence is that the latter, when our feeble faculties are able to grasp it, still conveys to us an idea of unchangeableness which cannot be got rid of.

3. In the language of ancient philosophy, the relative character of pleasure is described as becoming or generation. This is relative to Being or Essence, and from one point of view may be regarded as the Heraclitean flux in contrast with the Eleatic Being; from another, as the transient enjoyment of eating and drinking compared with the supposed permanence of intellectual pleasures. But to us the distinction is unmeaning, and belongs to a stage of philosophy which has passed away. Plato himself seems to have suspected that the continuance or life of things is quite as much to be attributed to a principle of rest as of motion (compare Charm. Cratyl.). A later view of pleasure is found in Aristotle, who agrees with Plato in many points, e.g. in his view of pleasure as a restoration to nature, in his distinction between bodily and mental, between necessary and non-necessary pleasures. But he is also in advance of Plato; for he affirms that pleasure is not in the body at all; and hence not even the bodily pleasures are to be spoken of as generations, but only as accompanied by generation (Nic. Eth.).

4. Plato attempts to identify vicious pleasures with some form of error, and insists that the term false may be applied to them: in this he appears to be carrying out in a confused manner the Socratic

doctrine, that virtue is knowledge, vice ignorance. He will allow of no distinction between the pleasures and the erroneous opinions on which they are founded, whether arising out of the illusion of distance or not. But to this we naturally reply with Protarchus, that the pleasure is what it is, although the calculation may be false, or the after-effects painful. It is difficult to acquit Plato, to use his own language, of being a 'tyro in dialectics,' when he overlooks such a distinction. Yet, on the other hand, we are hardly fair judges of confusions of thought in those who view things differently from ourselves.

5. There appears also to be an incorrectness in the notion which occurs both here and in the *Gorgias*, of the simultaneousness of merely bodily pleasures and pains. We may, perhaps, admit, though even this is not free from doubt, that the feeling of pleasureable hope or recollection is, or rather may be, simultaneous with acute bodily suffering. But there is no such coexistence of the pain of thirst with the pleasures of drinking; they are not really simultaneous, for the one expels the other. Nor does Plato seem to have considered that the bodily pleasures, except in certain extreme cases, are unattended with pain. Few philosophers will deny that a degree of pleasure attends eating and drinking; and yet surely we might as well speak of the pains of digestion which follow, as of the pains of hunger and thirst which precede them. Plato's conception is derived partly from the extreme case of a man suffering pain from hunger or thirst, partly from the image of a full and empty vessel. But the truth is rather, that while the gratification of our bodily desires constantly affords some degree of pleasure, the antecedent pains are scarcely perceived by us, being almost done away with by use and regularity.

6. The desire to classify pleasures as accompanied or not accompanied by antecedent pains, has led Plato to place under one head the pleasures of smell and sight, as well as those derived from sounds of music and from knowledge. He would have done better to make a separate class of the pleasures of smell, having no association of mind, or perhaps to have divided them into natural and artificial. The pleasures of sight and sound might then have been regarded as being the expression of ideas. But this higher and truer point of view never appears to have occurred to Plato. Nor has he any distinction

between the fine arts and the mechanical; and, neither here nor anywhere, an adequate conception of the beautiful in external things.

7. Plato agrees partially with certain 'surly or fastidious' philosophers, as he terms them, who defined pleasure to be the absence of pain. They are also described as eminent in physics. There is unfortunately no school of Greek philosophy known to us which combined these two characteristics. Antisthenes, who was an enemy of pleasure, was not a physical philosopher; the atomists, who were physical philosophers, were not enemies of pleasure. Yet such a combination of opinions is far from being impossible. Plato's omission to mention them by name has created the same uncertainty respecting them which also occurs respecting the 'friends of the ideas' and the 'materialists' in the Sophist.

On the whole, this discussion is one of the least satisfactory in the dialogues of Plato. While the ethical nature of pleasure is scarcely considered, and the merely physical phenomenon imperfectly analysed, too much weight is given to ideas of measure and number, as the sole principle of good. The comparison of pleasure and knowledge is really a comparison of two elements, which have no common measure, and which cannot be excluded from each other. Feeling is not opposed to knowledge, and in all consciousness there is an element of both. The most abstract kinds of knowledge are inseparable from some pleasure or pain, which accompanies the acquisition or possession of them: the student is liable to grow weary of them, and soon discovers that continuous mental energy is not granted to men. The most sensual pleasure, on the other hand, is inseparable from the consciousness of pleasure; no man can be happy who, to borrow Plato's illustration, is leading the life of an oyster. Hence (by his own confession) the main thesis is not worth determining; the real interest lies in the incidental discussion. We can no more separate pleasure from knowledge in the *Philebus* than we can separate justice from happiness in the *Republic*.

IV. An interesting account is given in the *Philebus* of the rank and order of the sciences or arts, which agrees generally with the scheme of knowledge in the Sixth Book of the *Republic*. The chief difference is, that the position of the arts is more exactly defined. They are divided into an empirical part and a scientific part, of which the first

is mere guess-work, the second is determined by rule and measure. Of the more empirical arts, music is given as an example; this, although affirmed to be necessary to human life, is depreciated. Music is regarded from a point of view entirely opposite to that of the Republic, not as a sublime science, coordinate with astronomy, but as full of doubt and conjecture. According to the standard of accuracy which is here adopted, it is rightly placed lower in the scale than carpentering, because the latter is more capable of being reduced to measure.

The theoretical element of the arts may also become a purely abstract science, when separated from matter, and is then said to be pure and unmixed. The distinction which Plato here makes seems to be the same as that between pure and applied mathematics, and may be expressed in the modern formula — science is art theoretical, art is science practical. In the reason which he gives for the superiority of the pure science of number over the mixed or applied, we can only agree with him in part. He says that the numbers which the philosopher employs are always the same, whereas the numbers which are used in practice represent different sizes or quantities. He does not see that this power of expressing different quantities by the same symbol is the characteristic and not the defect of numbers, and is due to their abstract nature; — although we admit of course what Plato seems to feel in his distinctions between pure and impure knowledge, that the imperfection of matter enters into the applications of them.

Above the other sciences, as in the Republic, towers dialectic, which is the science of eternal Being, apprehended by the purest mind and reason. The lower sciences, including the mathematical, are akin to opinion rather than to reason, and are placed together in the fourth class of goods. The relation in which they stand to dialectic is obscure in the Republic, and is not cleared up in the *Philebus*.

V. Thus far we have only attained to the vestibule or ante-chamber of the good; for there is a good exceeding knowledge, exceeding essence, which, like Glaucon in the Republic, we find a difficulty in apprehending. This good is now to be exhibited to us under various aspects and gradations. The relative dignity of pleasure and

knowledge has been determined; but they have not yet received their exact position in the scale of goods. Some difficulties occur to us in the enumeration: First, how are we to distinguish the first from the second class of goods, or the second from the third? Secondly, why is there no mention of the supreme mind? Thirdly, the nature of the fourth class. Fourthly, the meaning of the allusion to a sixth class, which is not further investigated.

(I) Plato seems to proceed in his table of goods, from the more abstract to the less abstract; from the subjective to the objective; until at the lower end of the scale we fairly descend into the region of human action and feeling. To him, the greater the abstraction the greater the truth, and he is always tending to see abstractions within abstractions; which, like the ideas in the *Parmenides*, are always appearing one behind another. Hence we find a difficulty in following him into the sphere of thought which he is seeking to attain. First in his scale of goods he places measure, in which he finds the eternal nature: this would be more naturally expressed in modern language as eternal law, and seems to be akin both to the finite and to the mind or cause, which were two of the elements in the former table. Like the supreme nature in the *Timaeus*, like the ideal beauty in the *Symposium* or the *Phaedrus*, or like the ideal good in the *Republic*, this is the absolute and unapproachable being. But this being is manifested in symmetry and beauty everywhere, in the order of nature and of mind, in the relations of men to one another. For the word 'measure' he now substitutes the word 'symmetry,' as if intending to express measure conceived as relation. He then proceeds to regard the good no longer in an objective form, but as the human reason seeking to attain truth by the aid of dialectic; such at least we naturally infer to be his meaning, when we consider that both here and in the *Republic* the sphere of nous or mind is assigned to dialectic. (2) It is remarkable (see above) that this personal conception of mind is confined to the human mind, and not extended to the divine. (3) If we may be allowed to interpret one dialogue of Plato by another, the sciences of figure and number are probably classed with the arts and true opinions, because they proceed from hypotheses (compare *Republic*). (4) The sixth class, if a sixth class is to be added, is playfully set aside by a quotation from Orpheus: Plato

means to say that a sixth class, if there be such a class, is not worth considering, because pleasure, having only gained the fifth place in the scale of goods, is already out of the running.

VI. We may now endeavour to ascertain the relation of the *Philebus* to the other dialogues. Here Plato shows the same indifference to his own doctrine of Ideas which he has already manifested in the *Parmenides* and the *Sophist*. The principle of the one and many of which he here speaks, is illustrated by examples in the *Sophist* and *Statesman*. Notwithstanding the differences of style, many resemblances may be noticed between the *Philebus* and *Gorgias*. The theory of the simultaneousness of pleasure and pain is common to both of them (*Phil. Gorg.*); there is also a common tendency in them to take up arms against pleasure, although the view of the *Philebus*, which is probably the later of the two dialogues, is the more moderate. There seems to be an allusion to the passage in the *Gorgias*, in which Socrates dilates on the pleasures of itching and scratching. Nor is there any real discrepancy in the manner in which *Gorgias* and his art are spoken of in the two dialogues. For Socrates is far from implying that the art of rhetoric has a real sphere of practical usefulness: he only means that the refutation of the claims of *Gorgias* is not necessary for his present purpose. He is saying in effect: ‘Admit, if you please, that rhetoric is the greatest and usefullest of sciences: — this does not prove that dialectic is not the purest and most exact.’ From the *Sophist* and *Statesman* we know that his hostility towards the sophists and rhetoricians was not mitigated in later life; although both in the *Statesman* and *Laws* he admits of a higher use of rhetoric.

Reasons have been already given for assigning a late date to the *Philebus*. That the date is probably later than that of the *Republic*, may be further argued on the following grounds: — 1. The general resemblance to the later dialogues and to the *Laws*: 2. The more complete account of the nature of good and pleasure: 3. The distinction between perception, memory, recollection, and opinion which indicates a great progress in psychology; also between understanding and imagination, which is described under the figure of the scribe and the painter. A superficial notion may arise that Plato probably wrote shorter dialogues, such as the *Philebus*, the *Sophist*,

and the Statesman, as studies or preparations for longer ones. This view may be natural; but on further reflection is seen to be fallacious, because these three dialogues are found to make an advance upon the metaphysical conceptions of the Republic. And we can more easily suppose that Plato composed shorter writings after longer ones, than suppose that he lost hold of further points of view which he had once attained.

It is more easy to find traces of the Pythagoreans, Eleatics, Megarians, Cynics, Cyrenaics and of the ideas of Anaxagoras, in the *Philebus*, than to say how much is due to each of them. Had we fuller records of those old philosophers, we should probably find Plato in the midst of the fray attempting to combine Eleatic and Pythagorean doctrines, and seeking to find a truth beyond either Being or number; setting up his own concrete conception of good against the abstract practical good of the Cynics, or the abstract intellectual good of the Megarians, and his own idea of classification against the denial of plurality in unity which is also attributed to them; warring against the Eristics as destructive of truth, as he had formerly fought against the Sophists; taking up a middle position between the Cynics and Cyrenaics in his doctrine of pleasure; asserting with more consistency than Anaxagoras the existence of an intelligent mind and cause. Of the Heracliteans, whom he is said by Aristotle to have cultivated in his youth, he speaks in the *Philebus*, as in the *Theaetetus* and *Cratylus*, with irony and contempt. But we have not the knowledge which would enable us to pursue further the line of reflection here indicated; nor can we expect to find perfect clearness or order in the first efforts of mankind to understand the working of their own minds. The ideas which they are attempting to analyse, they are also in process of creating; the abstract universals of which they are seeking to adjust the relations have been already excluded by them from the category of relation.

...

The *Philebus*, like the *Cratylus*, is supposed to be the continuation of a previous discussion. An argument respecting the comparative claims of pleasure and wisdom to rank as the chief good has been already carried on between *Philebus* and Socrates. The argument is now transferred to Protarchus, the son of Callias, a noble Athenian

youth, sprung from a family which had spent 'a world of money' on the Sophists (compare Apol.; Crat.; Protag.). Philebus, who appears to be the teacher, or elder friend, and perhaps the lover, of Protarchus, takes no further part in the discussion beyond asserting in the strongest manner his adherence, under all circumstances, to the cause of pleasure.

Socrates suggests that they shall have a first and second palm of victory. For there may be a good higher than either pleasure or wisdom, and then neither of them will gain the first prize, but whichever of the two is more akin to this higher good will have a right to the second. They agree, and Socrates opens the game by enlarging on the diversity and opposition which exists among pleasures. For there are pleasures of all kinds, good and bad, wise and foolish — pleasures of the temperate as well as of the intemperate. Protarchus replies that although pleasures may be opposed in so far as they spring from opposite sources, nevertheless as pleasures they are alike. Yes, retorts Socrates, pleasure is like pleasure, as figure is like figure and colour like colour; yet we all know that there is great variety among figures and colours. Protarchus does not see the drift of this remark; and Socrates proceeds to ask how he can have a right to attribute a new predicate (i.e. 'good') to pleasures in general, when he cannot deny that they are different? What common property in all of them does he mean to indicate by the term 'good'? If he continues to assert that there is some trivial sense in which pleasure is one, Socrates may retort by saying that knowledge is one, but the result will be that such merely verbal and trivial conceptions, whether of knowledge or pleasure, will spoil the discussion, and will prove the incapacity of the two disputants. In order to avoid this danger, he proposes that they shall beat a retreat, and, before they proceed, come to an understanding about the 'high argument' of the one and the many.

Protarchus agrees to the proposal, but he is under the impression that Socrates means to discuss the common question — how a sensible object can be one, and yet have opposite attributes, such as 'great' and 'small,' 'light' and 'heavy,' or how there can be many members in one body, and the like wonders. Socrates has long ceased to see any wonder in these phenomena; his difficulties begin with the

application of number to abstract unities (e.g. 'man,' 'good') and with the attempt to divide them. For have these unities of idea any real existence? How, if imperishable, can they enter into the world of generation? How, as units, can they be divided and dispersed among different objects? Or do they exist in their entirety in each object? These difficulties are but imperfectly answered by Socrates in what follows.

We speak of a one and many, which is ever flowing in and out of all things, concerning which a young man often runs wild in his first metaphysical enthusiasm, talking about analysis and synthesis to his father and mother and the neighbours, hardly sparing even his dog. This 'one in many' is a revelation of the order of the world, which some Prometheus first made known to our ancestors; and they, who were better men and nearer the gods than we are, have handed it down to us. To know how to proceed by regular steps from one to many, and from many to one, is just what makes the difference between eristic and dialectic. And the right way of proceeding is to look for one idea or class in all things, and when you have found one to look for more than one, and for all that there are, and when you have found them all and regularly divided a particular field of knowledge into classes, you may leave the further consideration of individuals. But you must not pass at once either from unity to infinity, or from infinity to unity. In music, for example, you may begin with the most general notion, but this alone will not make you a musician: you must know also the number and nature of the intervals, and the systems which are framed out of them, and the rhythms of the dance which correspond to them. And when you have a similar knowledge of any other subject, you may be said to know that subject. In speech again there are infinite varieties of sound, and some one who was a wise man, or more than man, comprehended them all in the classes of mutes, vowels, and semivowels, and gave to each of them a name, and assigned them to the art of grammar.

'But whither, Socrates, are you going? And what has this to do with the comparative eligibility of pleasure and wisdom?' Socrates replies, that before we can adjust their respective claims, we want to know the number and kinds of both of them. What are they? He is requested to answer the question himself. That he will, if he may be

allowed to make one or two preliminary remarks. In the first place he has a dreamy recollection of hearing that neither pleasure nor knowledge is the highest good, for the good should be perfect and sufficient. But is the life of pleasure perfect and sufficient, when deprived of memory, consciousness, anticipation? Is not this the life of an oyster? Or is the life of mind sufficient, if devoid of any particle of pleasure? Must not the union of the two be higher and more eligible than either separately? And is not the element which makes this mixed life eligible more akin to mind than to pleasure? Thus pleasure is rejected and mind is rejected. And yet there may be a life of mind, not human but divine, which conquers still.

But, if we are to pursue this argument further, we shall require some new weapons; and by this, I mean a new classification of existence. (1) There is a finite element of existence, and (2) an infinite, and (3) the union of the two, and (4) the cause of the union. More may be added if they are wanted, but at present we can do without them. And first of the infinite or indefinite: — That is the class which is denoted by the terms more or less, and is always in a state of comparison. All words or ideas to which the words ‘gently,’ ‘extremely,’ and other comparative expressions are applied, fall under this class. The infinite would be no longer infinite, if limited or reduced to measure by number and quantity. The opposite class is the limited or finite, and includes all things which have number and quantity. And there is a third class of generation into essence by the union of the finite and infinite, in which the finite gives law to the infinite; — under this are comprehended health, strength, temperate seasons, harmony, beauty, and the like. The goddess of beauty saw the universal wantonness of all things, and gave law and order to be the salvation of the soul. But no effect can be generated without a cause, and therefore there must be a fourth class, which is the cause of generation; for the cause or agent is not the same as the patient or effect.

And now, having obtained our classes, we may determine in which our conqueror life is to be placed: Clearly in the third or mixed class, in which the finite gives law to the infinite. And in which is pleasure to find a place? As clearly in the infinite or indefinite, which alone, as Protarchus thinks (who seems to confuse the infinite with

the superlative), gives to pleasure the character of the absolute good. Yes, retorts Socrates, and also to pain the character of absolute evil. And therefore the infinite cannot be that which imparts to pleasure the nature of the good. But where shall we place mind? That is a very serious and awful question, which may be prefaced by another. Is mind or chance the lord of the universe? All philosophers will say the first, and yet, perhaps, they may be only magnifying themselves. And for this reason I should like to consider the matter a little more deeply, even though some lovers of disorder in the world should ridicule my attempt.

Now the elements earth, air, fire, water, exist in us, and they exist in the cosmos; but they are purer and fairer in the cosmos than they are in us, and they come to us from thence. And as we have a soul as well as a body, in like manner the elements of the finite, the infinite, the union of the two, and the cause, are found to exist in us. And if they, like the elements, exist in us, and the three first exist in the world, must not the fourth or cause which is the noblest of them, exist in the world? And this cause is wisdom or mind, the royal mind of Zeus, who is the king of all, as there are other gods who have other noble attributes. Observe how well this agrees with the testimony of men of old, who affirmed mind to be the ruler of the universe. And remember that mind belongs to the class which we term the cause, and pleasure to the infinite or indefinite class. We will examine the place and origin of both.

What is the origin of pleasure? Her natural seat is the mixed class, in which health and harmony were placed. Pain is the violation, and pleasure the restoration of limit. There is a natural union of finite and infinite, which in hunger, thirst, heat, cold, is impaired — this is painful, but the return to nature, in which the elements are restored to their normal proportions, is pleasant. Here is our first class of pleasures. And another class of pleasures and pains are hopes and fears; these are in the mind only. And inasmuch as the pleasures are unalloyed by pains and the pains by pleasures, the examination of them may show us whether all pleasure is to be desired, or whether this entire desirableness is not rather the attribute of another class. But if pleasures and pains consist in the violation and restoration of limit, may there not be a neutral state, in which there is neither

dissolution nor restoration? That is a further question, and admitting, as we must, the possibility of such a state, there seems to be no reason why the life of wisdom should not exist in this neutral state, which is, moreover, the state of the gods, who cannot, without indecency, be supposed to feel either joy or sorrow.

The second class of pleasures involves memory. There are affections which are extinguished before they reach the soul, and of these there is no consciousness, and therefore no memory. And there are affections which the body and soul feel together, and this feeling is termed consciousness. And memory is the preservation of consciousness, and reminiscence is the recovery of consciousness. Now the memory of pleasure, when a man is in pain, is the memory of the opposite of his actual bodily state, and is therefore not in the body, but in the mind. And there may be an intermediate state, in which a person is balanced between pleasure and pain; in his body there is want which is a cause of pain, but in his mind a sure hope of replenishment, which is pleasant. (But if the hope be converted into despair, he has two pains and not a balance of pain and pleasure.) Another question is raised: May not pleasures, like opinions, be true and false? In the sense of being real, both must be admitted to be true: nor can we deny that to both of them qualities may be attributed; for pleasures as well as opinions may be described as good or bad. And though we do not all of us allow that there are true and false pleasures, we all acknowledge that there are some pleasures associated with right opinion, and others with falsehood and ignorance. Let us endeavour to analyze the nature of this association.

Opinion is based on perception, which may be correct or mistaken. You may see a figure at a distance, and say first of all, 'This is a man,' and then say, 'No, this is an image made by the shepherds.' And you may affirm this in a proposition to your companion, or make the remark mentally to yourself. Whether the words are actually spoken or not, on such occasions there is a scribe within who registers them, and a painter who paints the images of the things which the scribe has written down in the soul, — at least that is my own notion of the process; and the words and images which are inscribed by them may be either true or false; and they may represent either past, present, or future. And, representing the future, they must

also represent the pleasures and pains of anticipation — the visions of gold and other fancies which are never wanting in the mind of man. Now these hopes, as they are termed, are propositions, which are sometimes true, and sometimes false; for the good, who are the friends of the gods, see true pictures of the future, and the bad false ones. And as there may be opinion about things which are not, were not, and will not be, which is opinion still, so there may be pleasure about things which are not, were not, and will not be, which is pleasure still, — that is to say, false pleasure; and only when false, can pleasure, like opinion, be vicious. Against this conclusion Protarchus reclaims.

Leaving his denial for the present, Socrates proceeds to show that some pleasures are false from another point of view. In desire, as we admitted, the body is divided from the soul, and hence pleasures and pains are often simultaneous. And we further admitted that both of them belonged to the infinite class. How, then, can we compare them? Are we not liable, or rather certain, as in the case of sight, to be deceived by distance and relation? In this case the pleasures and pains are not false because based upon false opinion, but are themselves false. And there is another illusion: pain has often been said by us to arise out of the derangement — pleasure out of the restoration — of our nature. But in passing from one to the other, do we not experience neutral states, which although they appear pleasureable or painful are really neither? For even if we admit, with the wise man whom Protarchus loves (and only a wise man could have ever entertained such a notion), that all things are in a perpetual flux, still these changes are often unconscious, and devoid either of pleasure or pain. We assume, then, that there are three states — pleasureable, painful, neutral; we may embellish a little by calling them gold, silver, and that which is neither.

But there are certain natural philosophers who will not admit a third state. Their instinctive dislike to pleasure leads them to affirm that pleasure is only the absence of pain. They are noble fellows, and, although we do not agree with them, we may use them as diviners who will indicate to us the right track. They will say, that the nature of anything is best known from the examination of extreme cases, e.g. the nature of hardness from the examination of the hardest

things; and that the nature of pleasure will be best understood from an examination of the most intense pleasures. Now these are the pleasures of the body, not of the mind; the pleasures of disease and not of health, the pleasures of the intemperate and not of the temperate. I am speaking, not of the frequency or continuance, but only of the intensity of such pleasures, and this is given them by contrast with the pain or sickness of body which precedes them. Their morbid nature is illustrated by the lesser instances of itching and scratching, respecting which I swear that I cannot tell whether they are a pleasure or a pain. (1) Some of these arise out of a transition from one state of the body to another, as from cold to hot; (2) others are caused by the contrast of an internal pain and an external pleasure in the body: sometimes the feeling of pain predominates, as in itching and tingling, when they are relieved by scratching; sometimes the feeling of pleasure: or the pleasure which they give may be quite overpowering, and is then accompanied by all sorts of unutterable feelings which have a death of delights in them. But there are also mixed pleasures which are in the mind only. For are not love and sorrow as well as anger ‘sweeter than honey,’ and also full of pain? Is there not a mixture of feelings in the spectator of tragedy? and of comedy also? ‘I do not understand that last.’ Well, then, with the view of lighting up the obscurity of these mixed feelings, let me ask whether envy is painful. ‘Yes.’ And yet the envious man finds something pleasing in the misfortunes of others? ‘True.’ And ignorance is a misfortune? ‘Certainly.’ And one form of ignorance is self-conceit — a man may fancy himself richer, fairer, better, wiser than he is? ‘Yes.’ And he who thus deceives himself may be strong or weak? ‘He may.’ And if he is strong we fear him, and if he is weak we laugh at him, which is a pleasure, and yet we envy him, which is a pain? These mixed feelings are the rationale of tragedy and comedy, and equally the rationale of the greater drama of human life. (There appears to be some confusion in this passage. There is no difficulty in seeing that in comedy, as in tragedy, the spectator may view the performance with mixed feelings of pain as well as of pleasure; nor is there any difficulty in understanding that envy is a mixed feeling, which rejoices not without pain at the misfortunes of others, and laughs at their ignorance of themselves.

But Plato seems to think further that he has explained the feeling of the spectator in comedy sufficiently by a theory which only applies to comedy in so far as in comedy we laugh at the conceit or weakness of others. He has certainly given a very partial explanation of the ridiculous.) Having shown how sorrow, anger, envy are feelings of a mixed nature, I will reserve the consideration of the remainder for another occasion.

Next follow the unmixed pleasures; which, unlike the philosophers of whom I was speaking, I believe to be real. These unmixed pleasures are: (1) The pleasures derived from beauty of form, colour, sound, smell, which are absolutely pure; and in general those which are unalloyed with pain: (2) The pleasures derived from the acquisition of knowledge, which in themselves are pure, but may be attended by an accidental pain of forgetting; this, however, arises from a subsequent act of reflection, of which we need take no account. At the same time, we admit that the latter pleasures are the property of a very few. To these pure and unmixed pleasures we ascribe measure, whereas all others belong to the class of the infinite, and are liable to every species of excess. And here several questions arise for consideration: — What is the meaning of pure and impure, of moderate and immoderate? We may answer the question by an illustration: Purity of white paint consists in the clearness or quality of the white, and this is distinct from the quantity or amount of white paint; a little pure white is fairer than a great deal which is impure. But there is another question: — Pleasure is affirmed by ingenious philosophers to be a generation; they say that there are two natures — one self-existent, the other dependent; the one noble and majestic, the other failing in both these qualities. ‘I do not understand.’ There are lovers and there are loves. ‘Yes, I know, but what is the application?’ The argument is in play, and desires to intimate that there are relatives and there are absolutes, and that the relative is for the sake of the absolute; and generation is for the sake of essence. Under relatives I class all things done with a view to generation; and essence is of the class of good. But if essence is of the class of good, generation must be of some other class; and our friends, who affirm that pleasure is a generation, would laugh at the notion that pleasure is a good; and at that other notion, that pleasure is produced by

generation, which is only the alternative of destruction. Who would prefer such an alternation to the equable life of pure thought? Here is one absurdity, and not the only one, to which the friends of pleasure are reduced. For is there not also an absurdity in affirming that good is of the soul only; or in declaring that the best of men, if he be in pain, is bad?

And now, from the consideration of pleasure, we pass to that of knowledge. Let us reflect that there are two kinds of knowledge — the one creative or productive, and the other educational and philosophical. Of the creative arts, there is one part purer or more akin to knowledge than the other. There is an element of guess-work and an element of number and measure in them. In music, for example, especially in flute-playing, the conjectural element prevails; while in carpentering there is more application of rule and measure. Of the creative arts, then, we may make two classes — the less exact and the more exact. And the exacter part of all of them is really arithmetic and mensuration. But arithmetic and mensuration again may be subdivided with reference either to their use in the concrete, or to their nature in the abstract — as they are regarded popularly in building and binding, or theoretically by philosophers. And, borrowing the analogy of pleasure, we may say that the philosophical use of them is purer than the other. Thus we have two arts of arithmetic, and two of mensuration. And truest of all in the estimation of every rational man is dialectic, or the science of being, which will forget and disown us, if we forget and disown her.

‘But, Socrates, I have heard Gorgias say that rhetoric is the greatest and usefulest of arts; and I should not like to quarrel either with him or you.’ Neither is there any inconsistency, Protarchus, with his statement in what I am now saying; for I am not maintaining that dialectic is the greatest or usefulest, but only that she is the truest of arts; my remark is not quantitative but qualitative, and refers not to the advantage or repetition of either, but to the degree of truth which they attain — here Gorgias will not care to compete; this is what we affirm to be possessed in the highest degree by dialectic. And do not let us appeal to Gorgias or Philebus or Socrates, but ask, on behalf of the argument, what are the highest truths which the soul has the power of attaining. And is not this the science which has a firmer

grasp of them than any other? For the arts generally are only occupied with matters of opinion, and with the production and action and passion of this sensible world. But the highest truth is that which is eternal and unchangeable. And reason and wisdom are concerned with the eternal; and these are the very claimants, if not for the first, at least for the second place, whom I propose as rivals to pleasure.

And now, having the materials, we may proceed to mix them — first recapitulating the question at issue.

Philebus affirmed pleasure to be the good, and assumed them to be one nature; I affirmed that they were two natures, and declared that knowledge was more akin to the good than pleasure. I said that the two together were more eligible than either taken singly; and to this we adhere. Reason intimates, as at first, that we should seek the good not in the unmixed life, but in the mixed.

The cup is ready, waiting to be mingled, and here are two fountains, one of honey, the other of pure water, out of which to make the fairest possible mixture. There are pure and impure pleasures — pure and impure sciences. Let us consider the sections of each which have the most of purity and truth; to admit them all indiscriminately would be dangerous. First we will take the pure sciences; but shall we mingle the impure — the art which uses the false rule and the false measure? That we must, if we are any of us to find our way home; man cannot live upon pure mathematics alone. And must I include music, which is admitted to be guess-work? ‘Yes, you must, if human life is to have any humanity.’ Well, then, I will open the door and let them all in; they shall mingle in an Homeric ‘meeting of the waters.’ And now we turn to the pleasures; shall I admit them? ‘Admit first of all the pure pleasures; secondly, the necessary.’ And what shall we say about the rest? First, ask the pleasures — they will be too happy to dwell with wisdom. Secondly, ask the arts and sciences — they reply that the excesses of intemperance are the ruin of them; and that they would rather only have the pleasures of health and temperance, which are the handmaidens of virtue. But still we want truth? That is now added; and so the argument is complete, and may be compared to an incorporeal law, which is to hold fair rule over a living body. And now we are at the vestibule of the good, in which there are three

chief elements — truth, symmetry, and beauty. These will be the criterion of the comparative claims of pleasure and wisdom.

Which has the greater share of truth? Surely wisdom; for pleasure is the veriest impostor in the world, and the perjuries of lovers have passed into a proverb.

Which of symmetry? Wisdom again; for nothing is more immoderate than pleasure.

Which of beauty? Once more, wisdom; for pleasure is often unseemly, and the greatest pleasures are put out of sight.

Not pleasure, then, ranks first in the scale of good, but measure, and eternal harmony.

Second comes the symmetrical and beautiful and perfect.

Third, mind and wisdom.

Fourth, sciences and arts and true opinions.

Fifth, painless pleasures.

Of a sixth class, I have no more to say. Thus, pleasure and mind may both renounce the claim to the first place. But mind is ten thousand times nearer to the chief good than pleasure. Pleasure ranks fifth and not first, even though all the animals in the world assert the contrary.

...

From the days of Aristippus and Epicurus to our own times the nature of pleasure has occupied the attention of philosophers. ‘Is pleasure an evil? a good? the only good?’ are the simple forms which the enquiry assumed among the Socratic schools. But at an early stage of the controversy another question was asked: ‘Do pleasures differ in kind? and are some bad, some good, and some neither bad nor good?’ There are bodily and there are mental pleasures, which were at first confused but afterwards distinguished. A distinction was also made between necessary and unnecessary pleasures; and again between pleasures which had or had not corresponding pains. The ancient philosophers were fond of asking, in the language of their age, ‘Is pleasure a “becoming” only, and therefore transient and relative, or do some pleasures partake of truth and Being?’ To these ancient speculations the moderns have added a further question:— ‘Whose pleasure? The pleasure of yourself, or of your neighbour, — of the individual, or of the world?’ This little addition has changed

the whole aspect of the discussion: the same word is now supposed to include two principles as widely different as benevolence and self-love. Some modern writers have also distinguished between pleasure the test, and pleasure the motive of actions. For the universal test of right actions (how I know them) may not always be the highest or best motive of them (why I do them).

Socrates, as we learn from the *Memorabilia* of Xenophon, first drew attention to the consequences of actions. Mankind were said by him to act rightly when they knew what they were doing, or, in the language of the *Gorgias*, 'did what they would.' He seems to have been the first who maintained that the good was the useful (*Mem.*). In his eagerness for generalization, seeking, as Aristotle says, for the universal in *Ethics* (*Metaph.*), he took the most obvious intellectual aspect of human action which occurred to him. He meant to emphasize, not pleasure, but the calculation of pleasure; neither is he arguing that pleasure is the chief good, but that we should have a principle of choice. He did not intend to oppose 'the useful' to some higher conception, such as the Platonic ideal, but to chance and caprice. The Platonic Socrates pursues the same vein of thought in the *Protagoras*, where he argues against the so-called sophist that pleasure and pain are the final standards and motives of good and evil, and that the salvation of human life depends upon a right estimate of pleasures greater or less when seen near and at a distance. The testimony of Xenophon is thus confirmed by that of Plato, and we are therefore justified in calling Socrates the first utilitarian; as indeed there is no side or aspect of philosophy which may not with reason be ascribed to him — he is Cynic and Cyrenaic, Platonist and Aristotelian in one. But in the *Phaedo* the Socratic has already passed into a more ideal point of view; and he, or rather Plato speaking in his person, expressly repudiates the notion that the exchange of a less pleasure for a greater can be an exchange of virtue. Such virtue is the virtue of ordinary men who live in the world of appearance; they are temperate only that they may enjoy the pleasures of intemperance, and courageous from fear of danger. Whereas the philosopher is seeking after wisdom and not after pleasure, whether near or distant: he is the mystic, the initiated, who has learnt to despise the body and is yearning all his life long for a truth which will hereafter be

revealed to him. In the Republic the pleasures of knowledge are affirmed to be superior to other pleasures, because the philosopher so estimates them; and he alone has had experience of both kinds. (Compare a similar argument urged by one of the latest defenders of Utilitarianism, Mill's Utilitarianism). In the Philebus, Plato, although he regards the enemies of pleasure with complacency, still further modifies the transcendentalism of the Phaedo. For he is compelled to confess, rather reluctantly, perhaps, that some pleasures, i.e. those which have no antecedent pains, claim a place in the scale of goods.

There have been many reasons why not only Plato but mankind in general have been unwilling to acknowledge that 'pleasure is the chief good.' Either they have heard a voice calling to them out of another world; or the life and example of some great teacher has cast their thoughts of right and wrong in another mould; or the word 'pleasure' has been associated in their mind with merely animal enjoyment. They could not believe that what they were always striving to overcome, and the power or principle in them which overcame, were of the same nature. The pleasure of doing good to others and of bodily self-indulgence, the pleasures of intellect and the pleasures of sense, are so different: — Why then should they be called by a common name? Or, if the equivocal or metaphorical use of the word is justified by custom (like the use of other words which at first referred only to the body, and then by a figure have been transferred to the mind), still, why should we make an ambiguous word the corner-stone of moral philosophy? To the higher thinker the Utilitarian or hedonist mode of speaking has been at variance with religion and with any higher conception both of politics and of morals. It has not satisfied their imagination; it has offended their taste. To elevate pleasure, 'the most fleeting of all things,' into a general idea seems to such men a contradiction. They do not desire to bring down their theory to the level of their practice. The simplicity of the 'greatest happiness' principle has been acceptable to philosophers, but the better part of the world has been slow to receive it.

Before proceeding, we may make a few admissions which will narrow the field of dispute; and we may as well leave behind a few prejudices, which intelligent opponents of Utilitarianism have by this

time 'agreed to discard'. We admit that Utility is coextensive with right, and that no action can be right which does not tend to the happiness of mankind; we acknowledge that a large class of actions are made right or wrong by their consequences only; we say further that mankind are not too mindful, but that they are far too regardless of consequences, and that they need to have the doctrine of utility habitually inculcated on them. We recognize the value of a principle which can supply a connecting link between Ethics and Politics, and under which all human actions are or may be included. The desire to promote happiness is no mean preference of expediency to right, but one of the highest and noblest motives by which human nature can be animated. Neither in referring actions to the test of utility have we to make a laborious calculation, any more than in trying them by other standards of morals. For long ago they have been classified sufficiently for all practical purposes by the thinker, by the legislator, by the opinion of the world. Whatever may be the hypothesis on which they are explained, or which in doubtful cases may be applied to the regulation of them, we are very rarely, if ever, called upon at the moment of performing them to determine their effect upon the happiness of mankind.

There is a theory which has been contrasted with Utility by Paley and others — the theory of a moral sense: Are our ideas of right and wrong innate or derived from experience? This, perhaps, is another of those speculations which intelligent men might 'agree to discard.' For it has been worn threadbare; and either alternative is equally consistent with a transcendental or with an eudaemonistic system of ethics, with a greatest happiness principle or with Kant's law of duty. Yet to avoid misconception, what appears to be the truth about the origin of our moral ideas may be shortly summed up as follows: — To each of us individually our moral ideas come first of all in childhood through the medium of education, from parents and teachers, assisted by the unconscious influence of language; they are impressed upon a mind which at first is like a waxen tablet, adapted to receive them; but they soon become fixed or set, and in after life are strengthened, or perhaps weakened by the force of public opinion. They may be corrected and enlarged by experience, they may be reasoned about, they may be brought home to us by the

circumstances of our lives, they may be intensified by imagination, by reflection, by a course of action likely to confirm them. Under the influence of religious feeling or by an effort of thought, any one beginning with the ordinary rules of morality may create out of them for himself ideals of holiness and virtue. They slumber in the minds of most men, yet in all of us there remains some tincture of affection, some desire of good, some sense of truth, some fear of the law. Of some such state or process each individual is conscious in himself, and if he compares his own experience with that of others he will find the witness of their consciences to coincide with that of his own. All of us have entered into an inheritance which we have the power of appropriating and making use of. No great effort of mind is required on our part; we learn morals, as we learn to talk, instinctively, from conversing with others, in an enlightened age, in a civilized country, in a good home. A well-educated child of ten years old already knows the essentials of morals: 'Thou shalt not steal,' 'thou shalt speak the truth,' 'thou shalt love thy parents,' 'thou shalt fear God.' What more does he want?

But whence comes this common inheritance or stock of moral ideas? Their beginning, like all other beginnings of human things, is obscure, and is the least important part of them. Imagine, if you will, that Society originated in the herding of brutes, in their parental instincts, in their rude attempts at self-preservation: — Man is not man in that he resembles, but in that he differs from them. We must pass into another cycle of existence, before we can discover in him by any evidence accessible to us even the germs of our moral ideas. In the history of the world, which viewed from within is the history of the human mind, they have been slowly created by religion, by poetry, by law, having their foundation in the natural affections and in the necessity of some degree of truth and justice in a social state; they have been deepened and enlarged by the efforts of great thinkers who have idealized and connected them — by the lives of saints and prophets who have taught and exemplified them. The schools of ancient philosophy which seem so far from us — Socrates, Plato, Aristotle, the Stoics, the Epicureans, and a few modern teachers, such as Kant and Bentham, have each of them supplied 'moments' of thought to the world. The life of Christ has embodied a divine love,

wisdom, patience, reasonableness. For his image, however imperfectly handed down to us, the modern world has received a standard more perfect in idea than the societies of ancient times, but also further removed from practice. For there is certainly a greater interval between the theory and practice of Christians than between the theory and practice of the Greeks and Romans; the ideal is more above us, and the aspiration after good has often lent a strange power to evil. And sometimes, as at the Reformation, or French Revolution, when the upper classes of a so-called Christian country have become corrupted by priestcraft, by casuistry, by licentiousness, by despotism, the lower have risen up and re-asserted the natural sense of religion and right.

We may further remark that our moral ideas, as the world grows older, perhaps as we grow older ourselves, unless they have been undermined in us by false philosophy or the practice of mental analysis, or infected by the corruption of society or by some moral disorder in the individual, are constantly assuming a more natural and necessary character. The habit of the mind, the opinion of the world, familiarizes them to us; and they take more and more the form of immediate intuition. The moral sense comes last and not first in the order of their development, and is the instinct which we have inherited or acquired, not the nobler effort of reflection which created them and which keeps them alive. We do not stop to reason about common honesty. Whenever we are not blinded by self-deceit, as for example in judging the actions of others, we have no hesitation in determining what is right and wrong. The principles of morality, when not at variance with some desire or worldly interest of our own, or with the opinion of the public, are hardly perceived by us; but in the conflict of reason and passion they assert their authority and are not overcome without remorse.

Such is a brief outline of the history of our moral ideas. We have to distinguish, first of all, the manner in which they have grown up in the world from the manner in which they have been communicated to each of us. We may represent them to ourselves as flowing out of the boundless ocean of language and thought in little rills, which convey them to the heart and brain of each individual. But neither must we confound the theories or aspects of morality with the origin of our

moral ideas. These are not the roots or ‘origines’ of morals, but the latest efforts of reflection, the lights in which the whole moral world has been regarded by different thinkers and successive generations of men. If we ask: Which of these many theories is the true one? we may answer: All of them — moral sense, innate ideas, a priori, a posteriori notions, the philosophy of experience, the philosophy of intuition — all of them have added something to our conception of Ethics; no one of them is the whole truth. But to decide how far our ideas of morality are derived from one source or another; to determine what history, what philosophy has contributed to them; to distinguish the original, simple elements from the manifold and complex applications of them, would be a long enquiry too far removed from the question which we are now pursuing.

Bearing in mind the distinction which we have been seeking to establish between our earliest and our most mature ideas of morality, we may now proceed to state the theory of Utility, not exactly in the words, but in the spirit of one of its ablest and most moderate supporters (Mill’s Utilitarianism):— ‘That which alone makes actions either right or desirable is their utility, or tendency to promote the happiness of mankind, or, in other words, to increase the sum of pleasure in the world. But all pleasures are not the same: they differ in quality as well as in quantity, and the pleasure which is superior in quality is incommensurable with the inferior. Neither is the pleasure or happiness, which we seek, our own pleasure, but that of others, — of our family, of our country, of mankind. The desire of this, and even the sacrifice of our own interest to that of other men, may become a passion to a rightly educated nature. The Utilitarian finds a place in his system for this virtue and for every other.’

Good or happiness or pleasure is thus regarded as the true and only end of human life. To this all our desires will be found to tend, and in accordance with this all the virtues, including justice, may be explained. Admitting that men rest for a time in inferior ends, and do not cast their eyes beyond them, these ends are really dependent on the greater end of happiness, and would not be pursued, unless in general they had been found to lead to it. The existence of such an end is proved, as in Aristotle’s time, so in our own, by the universal fact that men desire it. The obligation to promote it is based upon the

social nature of man; this sense of duty is shared by all of us in some degree, and is capable of being greatly fostered and strengthened. So far from being inconsistent with religion, the greatest happiness principle is in the highest degree agreeable to it. For what can be more reasonable than that God should will the happiness of all his creatures? and in working out their happiness we may be said to be 'working together with him.' Nor is it inconceivable that a new enthusiasm of the future, far stronger than any old religion, may be based upon such a conception.

But then for the familiar phrase of the 'greatest happiness principle,' it seems as if we ought now to read 'the noblest happiness principle,' 'the happiness of others principle' — the principle not of the greatest, but of the highest pleasure, pursued with no more regard to our own immediate interest than is required by the law of self-preservation. Transfer the thought of happiness to another life, dropping the external circumstances which form so large a part of our idea of happiness in this, and the meaning of the word becomes indistinguishable from holiness, harmony, wisdom, love. By the slight addition 'of others,' all the associations of the word are altered; we seem to have passed over from one theory of morals to the opposite. For allowing that the happiness of others is reflected on ourselves, and also that every man must live before he can do good to others, still the last limitation is a very trifling exception, and the happiness of another is very far from compensating for the loss of our own. According to Mr. Mill, he would best carry out the principle of utility who sacrificed his own pleasure most to that of his fellow-men. But if so, Hobbes and Butler, Shaftesbury and Hume, are not so far apart as they and their followers imagine. The thought of self and the thought of others are alike superseded in the more general notion of the happiness of mankind at large. But in this composite good, until society becomes perfected, the friend of man himself has generally the least share, and may be a great sufferer.

And now what objection have we to urge against a system of moral philosophy so beneficent, so enlightened, so ideal, and at the same time so practical, — so Christian, as we may say without exaggeration, — and which has the further advantage of resting morality on a principle intelligible to all capacities? Have we not

found that which Socrates and Plato ‘grew old in seeking’? Are we not desirous of happiness, at any rate for ourselves and our friends, if not for all mankind? If, as is natural, we begin by thinking of ourselves first, we are easily led on to think of others; for we cannot help acknowledging that what is right for us is the right and inheritance of others. We feel the advantage of an abstract principle wide enough and strong enough to override all the particularisms of mankind; which acknowledges a universal good, truth, right; which is capable of inspiring men like a passion, and is the symbol of a cause for which they are ready to contend to their life’s end.

And if we test this principle by the lives of its professors, it would certainly appear inferior to none as a rule of action. From the days of Eudoxus (Arist. Ethics) and Epicurus to our own, the votaries of pleasure have gained belief for their principles by their practice. Two of the noblest and most disinterested men who have lived in this century, Bentham and J. S. Mill, whose lives were a long devotion to the service of their fellows, have been among the most enthusiastic supporters of utility; while among their contemporaries, some who were of a more mystical turn of mind, have ended rather in aspiration than in action, and have been found unequal to the duties of life. Looking back on them now that they are removed from the scene, we feel that mankind has been the better for them. The world was against them while they lived; but this is rather a reason for admiring than for depreciating them. Nor can any one doubt that the influence of their philosophy on politics — especially on foreign politics, on law, on social life, has been upon the whole beneficial. Nevertheless, they will never have justice done to them, for they do not agree either with the better feeling of the multitude or with the idealism of more refined thinkers. Without Bentham, a great word in the history of philosophy would have remained unspoken. Yet to this day it is rare to hear his name received with any mark of respect such as would be freely granted to the ambiguous memory of some father of the Church. The odium which attached to him when alive has not been removed by his death. For he shocked his contemporaries by egotism and want of taste; and this generation which has reaped the benefit of his labours has inherited the feeling of the last. He was before his own age, and is hardly remembered in this.

While acknowledging the benefits which the greatest happiness principle has conferred upon mankind, the time appears to have arrived, not for denying its claims, but for criticizing them and comparing them with other principles which equally claim to lie at the foundation of ethics. Any one who adds a general principle to knowledge has been a benefactor to the world. But there is a danger that, in his first enthusiasm, he may not recognize the proportions or limitations to which his truth is subjected; he does not see how far he has given birth to a truism, or how that which is a truth to him is a truism to the rest of the world; or may degenerate in the next generation. He believes that to be the whole which is only a part, — to be the necessary foundation which is really only a valuable aspect of the truth. The systems of all philosophers require the criticism of ‘the morrow,’ when the heat of imagination which forged them has cooled, and they are seen in the temperate light of day. All of them have contributed to enrich the mind of the civilized world; none of them occupy that supreme or exclusive place which their authors would have assigned to them.

We may preface the criticism with a few preliminary remarks: —

Mr. Mill, Mr. Austin, and others, in their eagerness to maintain the doctrine of utility, are fond of repeating that we are in a lamentable state of uncertainty about morals. While other branches of knowledge have made extraordinary progress, in moral philosophy we are supposed by them to be no better than children, and with few exceptions — that is to say, Bentham and his followers — to be no further advanced than men were in the age of Socrates and Plato, who, in their turn, are deemed to be as backward in ethics as they necessarily were in physics. But this, though often asserted, is recanted almost in a breath by the same writers who speak thus depreciatingly of our modern ethical philosophy. For they are the first to acknowledge that we have not now to begin classifying actions under the head of utility; they would not deny that about the general conceptions of morals there is a practical agreement. There is no more doubt that falsehood is wrong than that a stone falls to the ground, although the first does not admit of the same ocular proof as the second. There is no greater uncertainty about the duty of obedience to parents and to the law of the land than about the

properties of triangles. Unless we are looking for a new moral world which has no marrying and giving in marriage, there is no greater disagreement in theory about the right relations of the sexes than about the composition of water. These and a few other simple principles, as they have endless applications in practice, so also may be developed in theory into counsels of perfection.

To what then is to be attributed this opinion which has been often entertained about the uncertainty of morals? Chiefly to this, — that philosophers have not always distinguished the theoretical and the casuistical uncertainty of morals from the practical certainty. There is an uncertainty about details, — whether, for example, under given circumstances such and such a moral principle is to be enforced, or whether in some cases there may not be a conflict of duties: these are the exceptions to the ordinary rules of morality, important, indeed, but not extending to the one thousandth or one ten-thousandth part of human actions. This is the domain of casuistry. Secondly, the aspects under which the most general principles of morals may be presented to us are many and various. The mind of man has been more than usually active in thinking about man. The conceptions of harmony, happiness, right, freedom, benevolence, self-love, have all of them seemed to some philosopher or other the truest and most comprehensive expression of morality. There is no difference, or at any rate no great difference, of opinion about the right and wrong of actions, but only about the general notion which furnishes the best explanation or gives the most comprehensive view of them. This, in the language of Kant, is the sphere of the metaphysic of ethics. But these two uncertainties at either end, *en tois malista katholou* and *en tois kath ekasta*, leave space enough for an intermediate principle which is practically certain.

The rule of human life is not dependent on the theories of philosophers: we know what our duties are for the most part before we speculate about them. And the use of speculation is not to teach us what we already know, but to inspire in our minds an interest about morals in general, to strengthen our conception of the virtues by showing that they confirm one another, to prove to us, as Socrates would have said, that they are not many, but one. There is the same kind of pleasure and use in reducing morals, as in reducing physics,

to a few very simple truths. And not unfrequently the more general principle may correct prejudices and misconceptions, and enable us to regard our fellow-men in a larger and more generous spirit.

The two qualities which seem to be most required in first principles of ethics are, (1) that they should afford a real explanation of the facts, (2) that they should inspire the mind, — should harmonize, strengthen, settle us. We can hardly estimate the influence which a simple principle such as ‘Act so as to promote the happiness of mankind,’ or ‘Act so that the rule on which thou actest may be adopted as a law by all rational beings,’ may exercise on the mind of an individual. They will often seem to open a new world to him, like the religious conceptions of faith or the spirit of God. The difficulties of ethics disappear when we do not suffer ourselves to be distracted between different points of view. But to maintain their hold on us, the general principles must also be psychologically true — they must agree with our experience, they must accord with the habits of our minds.

When we are told that actions are right or wrong only in so far as they tend towards happiness, we naturally ask what is meant by 'happiness.' For the term in the common use of language is only to a certain extent commensurate with moral good and evil. We should hardly say that a good man could be utterly miserable (Arist. Ethics), or place a bad man in the first rank of happiness. But yet, from various circumstances, the measure of a man's happiness may be out of all proportion to his desert. And if we insist on calling the good man alone happy, we shall be using the term in some new and transcendental sense, as synonymous with well-being. We have already seen that happiness includes the happiness of others as well as our own; we must now comprehend unconscious as well as conscious happiness under the same word. There is no harm in this extension of the meaning, but a word which admits of such an extension can hardly be made the basis of a philosophical system. The exactness which is required in philosophy will not allow us to comprehend under the same term two ideas so different as the subjective feeling of pleasure or happiness and the objective reality of a state which receives our moral approval.

Like Protarchus in the *Philebus*, we can give no answer to the question, 'What is that common quality which in all states of human life we call happiness? which includes the lower and the higher kind of happiness, and is the aim of the noblest, as well as of the meanest of mankind?' If we say 'Not pleasure, not virtue, not wisdom, nor yet any quality which we can abstract from these' — what then? After seeming to hover for a time on the verge of a great truth, we have gained only a truism.

Let us ask the question in another form. What is that which constitutes happiness, over and above the several ingredients of health, wealth, pleasure, virtue, knowledge, which are included under it? Perhaps we answer, 'The subjective feeling of them.' But this is very far from being coextensive with right. Or we may reply that happiness is the whole of which the above-mentioned are the parts. Still the question recurs, 'In what does the whole differ from all the parts?' And if we are unable to distinguish them, happiness will be the mere aggregate of the goods of life.

Again, while admitting that in all right action there is an element of happiness, we cannot help seeing that the utilitarian theory supplies a much easier explanation of some virtues than of others. Of many patriotic or benevolent actions we can give a straightforward account by their tendency to promote happiness. For the explanation of justice, on the other hand, we have to go a long way round. No man is indignant with a thief because he has not promoted the greatest happiness of the greatest number, but because he has done him a wrong. There is an immeasurable interval between a crime against property or life, and the omission of an act of charity or benevolence. Yet of this interval the utilitarian theory takes no cognizance. The greatest happiness principle strengthens our sense of positive duties towards others, but weakens our recognition of their rights. To promote in every way possible the happiness of others may be a counsel of perfection, but hardly seems to offer any ground for a theory of obligation. For admitting that our ideas of obligation are partly derived from religion and custom, yet they seem also to contain other essential elements which cannot be explained by the tendency of actions to promote happiness. Whence comes the necessity of them? Why are some actions rather than others which equally tend to the happiness of mankind imposed upon us with the authority of law? 'You ought' and 'you had better' are fundamental distinctions in human thought; and having such distinctions, why should we seek to efface and unsettle them?

Bentham and Mr. Mill are earnest in maintaining that happiness includes the happiness of others as well as of ourselves. But what two notions can be more opposed in many cases than these? Granting that in a perfect state of the world my own happiness and that of all other men would coincide, in the imperfect state they often diverge, and I cannot truly bridge over the difficulty by saying that men will always find pleasure in sacrificing themselves or in suffering for others. Upon the greatest happiness principle it is admitted that I am to have a share, and in consistency I should pursue my own happiness as impartially as that of my neighbour. But who can decide what proportion should be mine and what his, except on the principle that I am most likely to be deceived in my own favour, and had therefore better give the larger share, if not all, to him?

Further, it is admitted that utility and right coincide, not in particular instances, but in classes of actions. But is it not distracting to the conscience of a man to be told that in the particular case they are opposed? Happiness is said to be the ground of moral obligation, yet he must not do what clearly conduces to his own happiness if it is at variance with the good of the whole. Nay, further, he will be taught that when utility and right are in apparent conflict any amount of utility does not alter by a hair's-breadth the morality of actions, which cannot be allowed to deviate from established law or usage; and that the non-detection of an immoral act, say of telling a lie, which may often make the greatest difference in the consequences, not only to himself, but to all the world, makes none whatever in the act itself.

Again, if we are concerned not with particular actions but with classes of actions, is the tendency of actions to happiness a principle upon which we can classify them? There is a universal law which imperatively declares certain acts to be right or wrong: — can there be any universality in the law which measures actions by their tendencies towards happiness? For an act which is the cause of happiness to one person may be the cause of unhappiness to another; or an act which if performed by one person may increase the happiness of mankind may have the opposite effect if performed by another. Right can never be wrong, or wrong right, that there are no actions which tend to the happiness of mankind which may not under other circumstances tend to their unhappiness. Unless we say not only that all right actions tend to happiness, but that they tend to happiness in the same degree in which they are right (and in that case the word 'right' is plainer), we weaken the absoluteness of our moral standard; we reduce differences in kind to differences in degree; we obliterate the stamp which the authority of ages has set upon vice and crime.

Once more: turning from theory to practice we feel the importance of retaining the received distinctions of morality. Words such as truth, justice, honesty, virtue, love, have a simple meaning; they have become sacred to us,— 'the word of God' written on the human heart: to no other words can the same associations be attached. We cannot explain them adequately on principles of utility; in attempting

to do so we rob them of their true character. We give them a meaning often paradoxical and distorted, and generally weaker than their signification in common language. And as words influence men's thoughts, we fear that the hold of morality may also be weakened, and the sense of duty impaired, if virtue and vice are explained only as the qualities which do or do not contribute to the pleasure of the world. In that very expression we seem to detect a false ring, for pleasure is individual not universal; we speak of eternal and immutable justice, but not of eternal and immutable pleasure; nor by any refinement can we avoid some taint of bodily sense adhering to the meaning of the word.

Again: the higher the view which men take of life, the more they lose sight of their own pleasure or interest. True religion is not working for a reward only, but is ready to work equally without a reward. It is not 'doing the will of God for the sake of eternal happiness,' but doing the will of God because it is best, whether rewarded or unrewarded. And this applies to others as well as to ourselves. For he who sacrifices himself for the good of others, does not sacrifice himself that they may be saved from the persecution which he endures for their sakes, but rather that they in their turn may be able to undergo similar sufferings, and like him stand fast in the truth. To promote their happiness is not his first object, but to elevate their moral nature. Both in his own case and that of others there may be happiness in the distance, but if there were no happiness he would equally act as he does. We are speaking of the highest and noblest natures; and a passing thought naturally arises in our minds, 'Whether that can be the first principle of morals which is hardly regarded in their own case by the greatest benefactors of mankind?'

The admissions that pleasures differ in kind, and that actions are already classified; the acknowledgment that happiness includes the happiness of others, as well as of ourselves; the confusion (not made by Aristotle) between conscious and unconscious happiness, or between happiness the energy and happiness the result of the energy, introduce uncertainty and inconsistency into the whole enquiry. We reason readily and cheerfully from a greatest happiness principle. But we find that utilitarians do not agree among themselves about the

meaning of the word. Still less can they impart to others a common conception or conviction of the nature of happiness. The meaning of the word is always insensibly slipping away from us, into pleasure, out of pleasure, now appearing as the motive, now as the test of actions, and sometimes varying in successive sentences. And as in a mathematical demonstration an error in the original number disturbs the whole calculation which follows, this fundamental uncertainty about the word vitiates all the applications of it. Must we not admit that a notion so uncertain in meaning, so void of content, so at variance with common language and opinion, does not comply adequately with either of our two requirements? It can neither strike the imaginative faculty, nor give an explanation of phenomena which is in accordance with our individual experience. It is indefinite; it supplies only a partial account of human actions: it is one among many theories of philosophers. It may be compared with other notions, such as the chief good of Plato, which may be best expressed to us under the form of a harmony, or with Kant's obedience to law, which may be summed up under the word 'duty,' or with the Stoical 'Follow nature,' and seems to have no advantage over them. All of these present a certain aspect of moral truth. None of them are, or indeed profess to be, the only principle of morals.

And this brings us to speak of the most serious objection to the utilitarian system — its exclusiveness. There is no place for Kant or Hegel, for Plato and Aristotle alongside of it. They do not reject the greatest happiness principle, but it rejects them. Now the phenomena of moral action differ, and some are best explained upon one principle and some upon another: the virtue of justice seems to be naturally connected with one theory of morals, the virtues of temperance and benevolence with another. The characters of men also differ; and some are more attracted by one aspect of the truth, some by another. The firm stoical nature will conceive virtue under the conception of law, the philanthropist under that of doing good, the quietist under that of resignation, the enthusiast under that of faith or love. The upright man of the world will desire above all things that morality should be plain and fixed, and should use language in its ordinary sense. Persons of an imaginative temperament will generally be dissatisfied with the words 'utility' or

‘pleasure’: their principle of right is of a far higher character — what or where to be found they cannot always distinctly tell; — deduced from the laws of human nature, says one; resting on the will of God, says another; based upon some transcendental idea which animates more worlds than one, says a third:

on nomoi prokeintai upsipodes, ouranian
di aithera teknothentes.

To satisfy an imaginative nature in any degree, the doctrine of utility must be so transfigured that it becomes altogether different and loses all simplicity.

But why, since there are different characters among men, should we not allow them to envisage morality accordingly, and be thankful to the great men who have provided for all of us modes and instruments of thought? Would the world have been better if there had been no Stoics or Kantists, no Platonists or Cartesians? No more than if the other pole of moral philosophy had been excluded. All men have principles which are above their practice; they admit premises which, if carried to their conclusions, are a sufficient basis of morals. In asserting liberty of speculation we are not encouraging individuals to make right or wrong for themselves, but only conceding that they may choose the form under which they prefer to contemplate them. Nor do we say that one of these aspects is as true and good as another; but that they all of them, if they are not mere sophisms and illusions, define and bring into relief some part of the truth which would have been obscure without their light. Why should we endeavour to bind all men within the limits of a single metaphysical conception? The necessary imperfection of language seems to require that we should view the same truth under more than one aspect.

We are living in the second age of utilitarianism, when the charm of novelty and the fervour of the first disciples has passed away. The doctrine is no longer stated in the forcible paradoxical manner of Bentham, but has to be adapted to meet objections; its corners are rubbed off, and the meaning of its most characteristic expressions is softened. The array of the enemy melts away when we approach him. The greatest happiness of the greatest number was a great original idea when enunciated by Bentham, which leavened a generation and

has left its mark on thought and civilization in all succeeding times. His grasp of it had the intensity of genius. In the spirit of an ancient philosopher he would have denied that pleasures differed in kind, or that by happiness he meant anything but pleasure. He would perhaps have revolted us by his thoroughness. The 'guardianship of his doctrine' has passed into other hands; and now we seem to see its weak points, its ambiguities, its want of exactness while assuming the highest exactness, its one-sidedness, its paradoxical explanation of several of the virtues. No philosophy has ever stood this criticism of the next generation, though the founders of all of them have imagined that they were built upon a rock. And the utilitarian system, like others, has yielded to the inevitable analysis. Even in the opinion of 'her admirers she has been terribly damaged' (Phil.), and is no longer the only moral philosophy, but one among many which have contributed in various degrees to the intellectual progress of mankind.

But because the utilitarian philosophy can no longer claim 'the prize,' we must not refuse to acknowledge the great benefits conferred by it on the world. All philosophies are refuted in their turn, says the sceptic, and he looks forward to all future systems sharing the fate of the past. All philosophies remain, says the thinker; they have done a great work in their own day, and they supply posterity with aspects of the truth and with instruments of thought. Though they may be shorn of their glory, they retain their place in the organism of knowledge.

And still there remain many rules of morals which are better explained and more forcibly inculcated on the principle of utility than on any other. The question Will such and such an action promote the happiness of myself, my family, my country, the world? may check the rising feeling of pride or honour which would cause a quarrel, an estrangement, a war. 'How can I contribute to the greatest happiness of others?' is another form of the question which will be more attractive to the minds of many than a deduction of the duty of benevolence from a priori principles. In politics especially hardly any other argument can be allowed to have weight except the happiness of a people. All parties alike profess to aim at this, which though often used only as the disguise of self-interest has a great and real

influence on the minds of statesmen. In religion, again, nothing can more tend to mitigate superstition than the belief that the good of man is also the will of God. This is an easy test to which the prejudices and superstitions of men may be brought: — whatever does not tend to the good of men is not of God. And the ideal of the greatest happiness of mankind, especially if believed to be the will of God, when compared with the actual fact, will be one of the strongest motives to do good to others.

On the other hand, when the temptation is to speak falsely, to be dishonest or unjust, or in any way to interfere with the rights of others, the argument that these actions regarded as a class will not conduce to the happiness of mankind, though true enough, seems to have less force than the feeling which is already implanted in the mind by conscience and authority. To resolve this feeling into the greatest happiness principle takes away from its sacred and authoritative character. The martyr will not go to the stake in order that he may promote the happiness of mankind, but for the sake of the truth: neither will the soldier advance to the cannon's mouth merely because he believes military discipline to be for the good of mankind. It is better for him to know that he will be shot, that he will be disgraced, if he runs away — he has no need to look beyond military honour, patriotism, 'England expects every man to do his duty.' These are stronger motives than the greatest happiness of the greatest number, which is the thesis of a philosopher, not the watchword of an army. For in human actions men do not always require broad principles; duties often come home to us more when they are limited and defined, and sanctioned by custom and public opinion.

Lastly, if we turn to the history of ethics, we shall find that our moral ideas have originated not in utility but in religion, in law, in conceptions of nature, of an ideal good, and the like. And many may be inclined to think that this conclusively disproves the claim of utility to be the basis of morals. But the utilitarian will fairly reply (see above) that we must distinguish the origin of ethics from the principles of them — the historical germ from the later growth of reflection. And he may also truly add that for two thousand years and more, utility, if not the originating, has been the great corrective

principle in law, in politics, in religion, leading men to ask how evil may be diminished and good increased — by what course of policy the public interest may be promoted, and to understand that God wills the happiness, not of some of his creatures and in this world only, but of all of them and in every stage of their existence.

‘What is the place of happiness or utility in a system of moral philosophy?’ is analogous to the question asked in the *Philebus*, ‘What rank does pleasure hold in the scale of goods?’ Admitting the greatest happiness principle to be true and valuable, and the necessary foundation of that part of morals which relates to the consequences of actions, we still have to consider whether this or some other general notion is the highest principle of human life. We may try them in this comparison by three tests — definiteness, comprehensiveness, and motive power.

There are three subjective principles of morals, — sympathy, benevolence, self-love. But sympathy seems to rest morality on feelings which differ widely even in good men; benevolence and self-love torture one half of our virtuous actions into the likeness of the other. The greatest happiness principle, which includes both, has the advantage over all these in comprehensiveness, but the advantage is purchased at the expense of definiteness.

Again, there are the legal and political principles of morals — freedom, equality, rights of persons; ‘Every man to count for one and no man for more than one,’ ‘Every man equal in the eye of the law and of the legislator.’ There is also the other sort of political morality, which if not beginning with ‘*Might is right*,’ at any rate seeks to deduce our ideas of justice from the necessities of the state and of society. According to this view the greatest good of men is obedience to law: the best human government is a rational despotism, and the best idea which we can form of a divine being is that of a despot acting not wholly without regard to law and order. To such a view the present mixed state of the world, not wholly evil or wholly good, is supposed to be a witness. More we might desire to have, but are not permitted. Though a human tyrant would be intolerable, a divine tyrant is a very tolerable governor of the universe. This is the doctrine of *Thrasymachus* adapted to the public opinion of modern times.

There is yet a third view which combines the two: — freedom is obedience to the law, and the greatest order is also the greatest freedom; ‘Act so that thy action may be the law of every intelligent being.’ This view is noble and elevating; but it seems to err, like other transcendental principles of ethics, in being too abstract. For there is the same difficulty in connecting the idea of duty with particular duties as in bridging the gulf between phenomena and ontia; and when, as in the system of Kant, this universal idea or law is held to be independent of space and time, such a *matiaion eidos* becomes almost unmeaning.

Once more there are the religious principles of morals: — the will of God revealed in Scripture and in nature. No philosophy has supplied a sanction equal in authority to this, or a motive equal in strength to the belief in another life. Yet about these too we must ask What will of God? how revealed to us, and by what proofs? Religion, like happiness, is a word which has great influence apart from any consideration of its content: it may be for great good or for great evil. But true religion is the synthesis of religion and morality, beginning with divine perfection in which all human perfection is embodied. It moves among ideas of holiness, justice, love, wisdom, truth; these are to God, in whom they are personified, what the Platonic ideas are to the idea of good. It is the consciousness of the will of God that all men should be as he is. It lives in this world and is known to us only through the phenomena of this world, but it extends to worlds beyond. Ordinary religion which is alloyed with motives of this world may easily be in excess, may be fanatical, may be interested, may be the mask of ambition, may be perverted in a thousand ways. But of that religion which combines the will of God with our highest ideas of truth and right there can never be too much. This impossibility of excess is the note of divine moderation.

So then, having briefly passed in review the various principles of moral philosophy, we may now arrange our goods in order, though, like the reader of the *Philebus*, we have a difficulty in distinguishing the different aspects of them from one another, or defining the point at which the human passes into the divine.

First, the eternal will of God in this world and in another, — justice, holiness, wisdom, love, without succession of acts (such e

genesis proestin), which is known to us in part only, and revered by us as divine perfection.

Secondly, human perfection, or the fulfilment of the will of God in this world, and co-operation with his laws revealed to us by reason and experience, in nature, history, and in our own minds.

Thirdly, the elements of human perfection, — virtue, knowledge, and right opinion.

Fourthly, the external conditions of perfection, — health and the goods of life.

Fifthly, beauty and happiness, — the inward enjoyment of that which is best and fairest in this world and in the human soul.

...

The *Philebus* is probably the latest in time of the writings of Plato with the exception of the *Laws*. We have in it therefore the last development of his philosophy. The extreme and one-sided doctrines of the Cynics and Cyrenaics are included in a larger whole; the relations of pleasure and knowledge to each other and to the good are authoritatively determined; the Eleatic Being and the Heraclitean Flux no longer divide the empire of thought; the Mind of Anaxagoras has become the Mind of God and of the World. The great distinction between pure and applied science for the first time has a place in philosophy; the natural claim of dialectic to be the Queen of the Sciences is once more affirmed. This latter is the bond of union which pervades the whole or nearly the whole of the Platonic writings. And here as in several other dialogues (*Phaedrus*, *Republic*, etc.) it is presented to us in a manner playful yet also serious, and sometimes as if the thought of it were too great for human utterance and came down from heaven direct. It is the organization of knowledge wonderful to think of at a time when knowledge itself could hardly be said to exist. It is this more than any other element which distinguishes Plato, not only from the presocratic philosophers, but from Socrates himself.

We have not yet reached the confines of Aristotle, but we make a somewhat nearer approach to him in the *Philebus* than in the earlier Platonic writings. The germs of logic are beginning to appear, but they are not collected into a whole, or made a separate science or system. Many thinkers of many different schools have to be

interposed between the Parmenides or Philebus of Plato, and the Physics or Metaphysics of Aristotle. It is this interval upon which we have to fix our minds if we would rightly understand the character of the transition from one to the other. Plato and Aristotle do not dovetail into one another; nor does the one begin where the other ends; there is a gulf between them not to be measured by time, which in the fragmentary state of our knowledge it is impossible to bridge over. It follows that the one cannot be interpreted by the other. At any rate, it is not Plato who is to be interpreted by Aristotle, but Aristotle by Plato. Of all philosophy and of all art the true understanding is to be sought not in the afterthoughts of posterity, but in the elements out of which they have arisen. For the previous stage is a tendency towards the ideal at which they are aiming; the later is a declination or deviation from them, or even a perversion of them. No man's thoughts were ever so well expressed by his disciples as by himself.

But although Plato in the Philebus does not come into any close connexion with Aristotle, he is now a long way from himself and from the beginnings of his own philosophy. At the time of his death he left his system still incomplete; or he may be more truly said to have had no system, but to have lived in the successive stages or moments of metaphysical thought which presented themselves from time to time. The earlier discussions about universal ideas and definitions seem to have died away; the correlation of ideas has taken their place. The flowers of rhetoric and poetry have lost their freshness and charm; and a technical language has begun to supersede and overgrow them. But the power of thinking tends to increase with age, and the experience of life to widen and deepen. The good is summed up under categories which are not *summa genera*, but heads or gradations of thought. The question of pleasure and the relation of bodily pleasures to mental, which is hardly treated of elsewhere in Plato, is here analysed with great subtlety. The mean or measure is now made the first principle of good. Some of these questions reappear in Aristotle, as does also the distinction between metaphysics and mathematics. But there are many things in Plato which have been lost in Aristotle; and many things in Aristotle not to be found in Plato. The most remarkable deficiency in Aristotle is the disappearance of the Platonic dialectic, which in the Aristotelian

school is only used in a comparatively unimportant and trivial sense. The most remarkable additions are the invention of the Syllogism, the conception of happiness as the foundation of morals, the reference of human actions to the standard of the better mind of the world, or of the one 'sensible man' or 'superior person.' His conception of ousia, or essence, is not an advance upon Plato, but a return to the poor and meagre abstractions of the Eleatic philosophy. The dry attempt to reduce the presocratic philosophy by his own rather arbitrary standard of the four causes, contrasts unfavourably with Plato's general discussion of the same subject (Sophist). To attempt further to sum up the differences between the two great philosophers would be out of place here. Any real discussion of their relation to one another must be preceded by an examination into the nature and character of the Aristotelian writings and the form in which they have come down to us. This enquiry is not really separable from an investigation of Theophrastus as well as Aristotle and of the remains of other schools of philosophy as well as of the Peripatetics. But, without entering on this wide field, even a superficial consideration of the logical and metaphysical works which pass under the name of Aristotle, whether we suppose them to have come directly from his hand or to be the tradition of his school, is sufficient to show how great was the mental activity which prevailed in the latter half of the fourth century B.C.; what eddies and whirlpools of controversies were surging in the chaos of thought, what transformations of the old philosophies were taking place everywhere, what eclecticism and syncretism and realisms and nominalisms were affecting the mind of Hellas. The decline of philosophy during this period is no less remarkable than the loss of freedom; and the two are not unconnected with each other. But of the multitudinous sea of opinions which were current in the age of Aristotle we have no exact account. We know of them from allusions only. And we cannot with advantage fill up the void of our knowledge by conjecture: we can only make allowance for our ignorance.

There are several passages in the *Philebus* which are very characteristic of Plato, and which we shall do well to consider not only in their connexion, but apart from their connexion as inspired

sayings or oracles which receive their full interpretation only from the history of philosophy in later ages. The more serious attacks on traditional beliefs which are often veiled under an unusual simplicity or irony are of this kind. Such, for example, is the excessive and more than human awe which Socrates expresses about the names of the gods, which may be not unaptly compared with the importance attached by mankind to theological terms in other ages; for this also may be comprehended under the satire of Socrates. Let us observe the religious and intellectual enthusiasm which shines forth in the following, 'The power and faculty of loving the truth, and of doing all things for the sake of the truth': or, again, the singular acknowledgment which may be regarded as the anticipation of a new logic, that 'In going to war for mind I must have weapons of a different make from those which I used before, although some of the old ones may do again.' Let us pause awhile to reflect on a sentence which is full of meaning to reformers of religion or to the original thinker of all ages: 'Shall we then agree with them of old time, and merely reassert the notions of others without risk to ourselves; or shall we venture also to share in the risk and bear the reproach which will await us': i.e. if we assert mind to be the author of nature. Let us note the remarkable words, 'That in the divine nature of Zeus there is the soul and mind of a King, because there is in him the power of the cause,' a saying in which theology and philosophy are blended and reconciled; not omitting to observe the deep insight into human nature which is shown by the repetition of the same thought 'All philosophers are agreed that mind is the king of heaven and earth' with the ironical addition, 'in this way truly they magnify themselves.' Nor let us pass unheeded the indignation felt by the generous youth at the 'blasphemy' of those who say that Chaos and Chance Medley created the world; or the significance of the words 'those who said of old time that mind rules the universe'; or the pregnant observation that 'we are not always conscious of what we are doing or of what happens to us,' a chance expression to which if philosophers had attended they would have escaped many errors in psychology. We may contrast the contempt which is poured upon the verbal difficulty of the one and many, and the seriousness with the unity of opposites is regarded from the higher point of view of

abstract ideas: or compare the simple manner in which the question of cause and effect and their mutual dependence is regarded by Plato (to which modern science has returned in Mill and Bacon), and the cumbrous fourfold division of causes in the Physics and Metaphysics of Aristotle, for which it has puzzled the world to find a use in so many centuries. When we consider the backwardness of knowledge in the age of Plato, the boldness with which he looks forward into the distance, the many questions of modern philosophy which are anticipated in his writings, may we not truly describe him in his own words as a ‘spectator of all time and of all existence’?

PHILEBUS.

PERSONS OF THE DIALOGUE:

Socrates, Protarchus, Philebus.

SOCRATES: Observe, Protarchus, the nature of the position which you are now going to take from Philebus, and what the other position is which I maintain, and which, if you do not approve of it, is to be controverted by you. Shall you and I sum up the two sides?

PROTARCHUS: By all means.

SOCRATES: Philebus was saying that enjoyment and pleasure and delight, and the class of feelings akin to them, are a good to every living being, whereas I contend, that not these, but wisdom and intelligence and memory, and their kindred, right opinion and true reasoning, are better and more desirable than pleasure for all who are able to partake of them, and that to all such who are or ever will be they are the most advantageous of all things. Have I not given, Philebus, a fair statement of the two sides of the argument?

PHILEBUS: Nothing could be fairer, Socrates.

SOCRATES: And do you, Protarchus, accept the position which is assigned to you?

PROTARCHUS: I cannot do otherwise, since our excellent Philebus has left the field.

SOCRATES: Surely the truth about these matters ought, by all means, to be ascertained.

PROTARCHUS: Certainly.

SOCRATES: Shall we further agree —

PROTARCHUS: To what?

SOCRATES: That you and I must now try to indicate some state and disposition of the soul, which has the property of making all men

happy.

PROTARCHUS: Yes, by all means.

SOCRATES: And you say that pleasure, and I say that wisdom, is such a state?

PROTARCHUS: True.

SOCRATES: And what if there be a third state, which is better than either? Then both of us are vanquished — are we not? But if this life, which really has the power of making men happy, turn out to be more akin to pleasure than to wisdom, the life of pleasure may still have the advantage over the life of wisdom.

PROTARCHUS: True.

SOCRATES: Or suppose that the better life is more nearly allied to wisdom, then wisdom conquers, and pleasure is defeated; — do you agree?

PROTARCHUS: Certainly.

SOCRATES: And what do you say, Philebus?

PHILEBUS: I say, and shall always say, that pleasure is easily the conqueror; but you must decide for yourself, Protarchus.

PROTARCHUS: You, Philebus, have handed over the argument to me, and have no longer a voice in the matter?

PHILEBUS: True enough. Nevertheless I would clear myself and deliver my soul of you; and I call the goddess herself to witness that I now do so.

PROTARCHUS: You may appeal to us; we too will be the witnesses of your words. And now, Socrates, whether Philebus is pleased or displeased, we will proceed with the argument.

SOCRATES: Then let us begin with the goddess herself, of whom Philebus says that she is called Aphrodite, but that her real name is

Pleasure.

PROTARCHUS: Very good.

SOCRATES: The awe which I always feel, Protarchus, about the names of the gods is more than human — it exceeds all other fears. And now I would not sin against Aphrodite by naming her amiss; let her be called what she pleases. But Pleasure I know to be manifold, and with her, as I was just now saying, we must begin, and consider what her nature is. She has one name, and therefore you would imagine that she is one; and yet surely she takes the most varied and even unlike forms. For do we not say that the intemperate has pleasure, and that the temperate has pleasure in his very temperance, — that the fool is pleased when he is full of foolish fancies and hopes, and that the wise man has pleasure in his wisdom? and how foolish would any one be who affirmed that all these opposite pleasures are severally alike!

PROTARCHUS: Why, Socrates, they are opposed in so far as they spring from opposite sources, but they are not in themselves opposite. For must not pleasure be of all things most absolutely like pleasure, — that is, like itself?

SOCRATES: Yes, my good friend, just as colour is like colour; — in so far as colours are colours, there is no difference between them; and yet we all know that black is not only unlike, but even absolutely opposed to white: or again, as figure is like figure, for all figures are comprehended under one class; and yet particular figures may be absolutely opposed to one another, and there is an infinite diversity of them. And we might find similar examples in many other things; therefore do not rely upon this argument, which would go to prove the unity of the most extreme opposites. And I suspect that we shall find a similar opposition among pleasures.

PROTARCHUS: Very likely; but how will this invalidate the argument?

SOCRATES: Why, I shall reply, that dissimilar as they are, you apply to them a new predicate, for you say that all pleasant things are good;

now although no one can argue that pleasure is not pleasure, he may argue, as we are doing, that pleasures are oftener bad than good; but you call them all good, and at the same time are compelled, if you are pressed, to acknowledge that they are unlike. And so you must tell us what is the identical quality existing alike in good and bad pleasures, which makes you designate all of them as good.

PROTARCHUS: What do you mean, Socrates? Do you think that any one who asserts pleasure to be the good, will tolerate the notion that some pleasures are good and others bad?

SOCRATES: And yet you will acknowledge that they are different from one another, and sometimes opposed?

PROTARCHUS: Not in so far as they are pleasures.

SOCRATES: That is a return to the old position, Protarchus, and so we are to say (are we?) that there is no difference in pleasures, but that they are all alike; and the examples which have just been cited do not pierce our dull minds, but we go on arguing all the same, like the weakest and most inexperienced reasoners? (Probably corrupt.)

PROTARCHUS: What do you mean?

SOCRATES: Why, I mean to say, that in self-defence I may, if I like, follow your example, and assert boldly that the two things most unlike are most absolutely alike; and the result will be that you and I will prove ourselves to be very tyros in the art of disputing; and the argument will be blown away and lost. Suppose that we put back, and return to the old position; then perhaps we may come to an understanding with one another.

PROTARCHUS: How do you mean?

SOCRATES: Shall I, Protarchus, have my own question asked of me by you?

PROTARCHUS: What question?

SOCRATES: Ask me whether wisdom and science and mind, and

those other qualities which I, when asked by you at first what is the nature of the good, affirmed to be good, are not in the same case with the pleasures of which you spoke.

PROTARCHUS: What do you mean?

SOCRATES: The sciences are a numerous class, and will be found to present great differences. But even admitting that, like the pleasures, they are opposite as well as different, should I be worthy of the name of dialectician if, in order to avoid this difficulty, I were to say (as you are saying of pleasure) that there is no difference between one science and another; — would not the argument founder and disappear like an idle tale, although we might ourselves escape drowning by clinging to a fallacy?

PROTARCHUS: May none of this befall us, except the deliverance! Yet I like the even-handed justice which is applied to both our arguments. Let us assume, then, that there are many and diverse pleasures, and many and different sciences.

SOCRATES: And let us have no concealment, Protarchus, of the differences between my good and yours; but let us bring them to the light in the hope that, in the process of testing them, they may show whether pleasure is to be called the good, or wisdom, or some third quality; for surely we are not now simply contending in order that my view or that yours may prevail, but I presume that we ought both of us to be fighting for the truth.

PROTARCHUS: Certainly we ought.

SOCRATES: Then let us have a more definite understanding and establish the principle on which the argument rests.

PROTARCHUS: What principle?

SOCRATES: A principle about which all men are always in a difficulty, and some men sometimes against their will.

PROTARCHUS: Speak plainer.

SOCRATES: The principle which has just turned up, which is a marvel of nature; for that one should be many or many one, are wonderful propositions; and he who affirms either is very open to attack.

PROTARCHUS: Do you mean, when a person says that I, Protarchus, am by nature one and also many, dividing the single 'me' into many 'me's,' and even opposing them as great and small, light and heavy, and in ten thousand other ways?

SOCRATES: Those, Protarchus, are the common and acknowledged paradoxes about the one and many, which I may say that everybody has by this time agreed to dismiss as childish and obvious and detrimental to the true course of thought; and no more favour is shown to that other puzzle, in which a person proves the members and parts of anything to be divided, and then confessing that they are all one, says laughingly in disproof of his own words: Why, here is a miracle, the one is many and infinite, and the many are only one.

PROTARCHUS: But what, Socrates, are those other marvels connected with this subject which, as you imply, have not yet become common and acknowledged?

SOCRATES: When, my boy, the one does not belong to the class of things that are born and perish, as in the instances which we were giving, for in those cases, and when unity is of this concrete nature, there is, as I was saying, a universal consent that no refutation is needed; but when the assertion is made that man is one, or ox is one, or beauty one, or the good one, then the interest which attaches to these and similar unities and the attempt which is made to divide them gives birth to a controversy.

PROTARCHUS: Of what nature?

SOCRATES: In the first place, as to whether these unities have a real existence; and then how each individual unity, being always the same, and incapable either of generation or of destruction, but retaining a permanent individuality, can be conceived either as dispersed and multiplied in the infinity of the world of generation, or

as still entire and yet divided from itself, which latter would seem to be the greatest impossibility of all, for how can one and the same thing be at the same time in one and in many things? These, Protarchus, are the real difficulties, and this is the one and many to which they relate; they are the source of great perplexity if ill decided, and the right determination of them is very helpful.

PROTARCHUS: Then, Socrates, let us begin by clearing up these questions.

SOCRATES: That is what I should wish.

PROTARCHUS: And I am sure that all my other friends will be glad to hear them discussed; Philebus, fortunately for us, is not disposed to move, and we had better not stir him up with questions.

SOCRATES: Good; and where shall we begin this great and multifarious battle, in which such various points are at issue? Shall we begin thus?

PROTARCHUS: How?

SOCRATES: We say that the one and many become identified by thought, and that now, as in time past, they run about together, in and out of every word which is uttered, and that this union of them will never cease, and is not now beginning, but is, as I believe, an everlasting quality of thought itself, which never grows old. Any young man, when he first tastes these subtleties, is delighted, and fancies that he has found a treasure of wisdom; in the first enthusiasm of his joy he leaves no stone, or rather no thought unturned, now rolling up the many into the one, and kneading them together, now unfolding and dividing them; he puzzles himself first and above all, and then he proceeds to puzzle his neighbours, whether they are older or younger, or of his own age — that makes no difference; neither father nor mother does he spare; no human being who has ears is safe from him, hardly even his dog, and a barbarian would have no chance of escaping him, if an interpreter could only be found.

PROTARCHUS: Considering, Socrates, how many we are, and that all of us are young men, is there not a danger that we and Philebus may all set upon you, if you abuse us? We understand what you mean; but is there no charm by which we may dispel all this confusion, no more excellent way of arriving at the truth? If there is, we hope that you will guide us into that way, and we will do our best to follow, for the enquiry in which we are engaged, Socrates, is not unimportant.

SOCRATES: The reverse of unimportant, my boys, as Philebus calls you, and there neither is nor ever will be a better than my own favourite way, which has nevertheless already often deserted me and left me helpless in the hour of need.

PROTARCHUS: Tell us what that is.

SOCRATES: One which may be easily pointed out, but is by no means easy of application; it is the parent of all the discoveries in the arts.

PROTARCHUS: Tell us what it is.

SOCRATES: A gift of heaven, which, as I conceive, the gods tossed among men by the hands of a new Prometheus, and therewith a blaze of light; and the ancients, who were our betters and nearer the gods than we are, handed down the tradition, that whatever things are said to be are composed of one and many, and have the finite and infinite implanted in them: seeing, then, that such is the order of the world, we too ought in every enquiry to begin by laying down one idea of that which is the subject of enquiry; this unity we shall find in everything. Having found it, we may next proceed to look for two, if there be two, or, if not, then for three or some other number, subdividing each of these units, until at last the unity with which we began is seen not only to be one and many and infinite, but also a definite number; the infinite must not be suffered to approach the many until the entire number of the species intermediate between unity and infinity has been discovered, — then, and not till then, we may rest from division, and without further troubling ourselves about

the endless individuals may allow them to drop into infinity. This, as I was saying, is the way of considering and learning and teaching one another, which the gods have handed down to us. But the wise men of our time are either too quick or too slow in conceiving plurality in unity. Having no method, they make their one and many anyhow, and from unity pass at once to infinity; the intermediate steps never occur to them. And this, I repeat, is what makes the difference between the mere art of disputation and true dialectic.

PROTARCHUS: I think that I partly understand you Socrates, but I should like to have a clearer notion of what you are saying.

SOCRATES: I may illustrate my meaning by the letters of the alphabet, Protarchus, which you were made to learn as a child.

PROTARCHUS: How do they afford an illustration?

SOCRATES: The sound which passes through the lips whether of an individual or of all men is one and yet infinite.

PROTARCHUS: Very true.

SOCRATES: And yet not by knowing either that sound is one or that sound is infinite are we perfect in the art of speech, but the knowledge of the number and nature of sounds is what makes a man a grammarian.

PROTARCHUS: Very true.

SOCRATES: And the knowledge which makes a man a musician is of the same kind.

PROTARCHUS: How so?

SOCRATES: Sound is one in music as well as in grammar?

PROTARCHUS: Certainly.

SOCRATES: And there is a higher note and a lower note, and a note of equal pitch: — may we affirm so much?

PROTARCHUS: Yes.

SOCRATES: But you would not be a real musician if this was all that you knew; though if you did not know this you would know almost nothing of music.

PROTARCHUS: Nothing.

SOCRATES: But when you have learned what sounds are high and what low, and the number and nature of the intervals and their limits or proportions, and the systems compounded out of them, which our fathers discovered, and have handed down to us who are their descendants under the name of harmonies; and the affections corresponding to them in the movements of the human body, which when measured by numbers ought, as they say, to be called rhythms and measures; and they tell us that the same principle should be applied to every one and many; — when, I say, you have learned all this, then, my dear friend, you are perfect; and you may be said to understand any other subject, when you have a similar grasp of it. But the infinity of kinds and the infinity of individuals which there is in each of them, when not classified, creates in every one of us a state of infinite ignorance; and he who never looks for number in anything, will not himself be looked for in the number of famous men.

PROTARCHUS: I think that what Socrates is now saying is excellent, Philebus.

PHILEBUS: I think so too, but how do his words bear upon us and upon the argument?

SOCRATES: Philebus is right in asking that question of us, Protarchus.

PROTARCHUS: Indeed he is, and you must answer him.

SOCRATES: I will; but you must let me make one little remark first about these matters; I was saying, that he who begins with any individual unity, should proceed from that, not to infinity, but to a definite number, and now I say conversely, that he who has to begin

with infinity should not jump to unity, but he should look about for some number representing a certain quantity, and thus out of all end in one. And now let us return for an illustration of our principle to the case of letters.

PROTARCHUS: What do you mean?

SOCRATES: Some god or divine man, who in the Egyptian legend is said to have been Theuth, observing that the human voice was infinite, first distinguished in this infinity a certain number of vowels, and then other letters which had sound, but were not pure vowels (i.e., the semivowels); these too exist in a definite number; and lastly, he distinguished a third class of letters which we now call mutes, without voice and without sound, and divided these, and likewise the two other classes of vowels and semivowels, into the individual sounds, and told the number of them, and gave to each and all of them the name of letters; and observing that none of us could learn any one of them and not learn them all, and in consideration of this common bond which in a manner united them, he assigned to them all a single art, and this he called the art of grammar or letters.

PHILEBUS: The illustration, Protarchus, has assisted me in understanding the original statement, but I still feel the defect of which I just now complained.

SOCRATES: Are you going to ask, Philebus, what this has to do with the argument?

PHILEBUS: Yes, that is a question which Protarchus and I have been long asking.

SOCRATES: Assuredly you have already arrived at the answer to the question which, as you say, you have been so long asking?

PHILEBUS: How so?

SOCRATES: Did we not begin by enquiring into the comparative eligibility of pleasure and wisdom?

PHILEBUS: Certainly.

SOCRATES: And we maintain that they are each of them one?

PHILEBUS: True.

SOCRATES: And the precise question to which the previous discussion desires an answer is, how they are one and also many (i.e., how they have one genus and many species), and are not at once infinite, and what number of species is to be assigned to either of them before they pass into infinity (i.e. into the infinite number of individuals).

PROTARCHUS: That is a very serious question, Philebus, to which Socrates has ingeniously brought us round, and please to consider which of us shall answer him; there may be something ridiculous in my being unable to answer, and therefore imposing the task upon you, when I have undertaken the whole charge of the argument, but if neither of us were able to answer, the result methinks would be still more ridiculous. Let us consider, then, what we are to do: — Socrates, if I understood him rightly, is asking whether there are not kinds of pleasure, and what is the number and nature of them, and the same of wisdom.

SOCRATES: Most true, O son of Callias; and the previous argument showed that if we are not able to tell the kinds of everything that has unity, likeness, sameness, or their opposites, none of us will be of the smallest use in any enquiry.

PROTARCHUS: That seems to be very near the truth, Socrates. Happy would the wise man be if he knew all things, and the next best thing for him is that he should know himself. Why do I say so at this moment? I will tell you. You, Socrates, have granted us this opportunity of conversing with you, and are ready to assist us in determining what is the best of human goods. For when Philebus said that pleasure and delight and enjoyment and the like were the chief good, you answered — No, not those, but another class of goods; and we are constantly reminding ourselves of what you said, and very properly, in order that we may not forget to examine and compare the two. And these goods, which in your opinion are to be designated as

superior to pleasure, and are the true objects of pursuit, are mind and knowledge and understanding and art, and the like. There was a dispute about which were the best, and we playfully threatened that you should not be allowed to go home until the question was settled; and you agreed, and placed yourself at our disposal. And now, as children say, what has been fairly given cannot be taken back; cease then to fight against us in this way.

SOCRATES: In what way?

PHILEBUS: Do not perplex us, and keep asking questions of us to which we have not as yet any sufficient answer to give; let us not imagine that a general puzzling of us all is to be the end of our discussion, but if we are unable to answer, do you answer, as you have promised. Consider, then, whether you will divide pleasure and knowledge according to their kinds; or you may let the matter drop, if you are able and willing to find some other mode of clearing up our controversy.

SOCRATES: If you say that, I have nothing to apprehend, for the words 'if you are willing' dispel all my fear; and, moreover, a god seems to have recalled something to my mind.

PHILEBUS: What is that?

SOCRATES: I remember to have heard long ago certain discussions about pleasure and wisdom, whether awake or in a dream I cannot tell; they were to the effect that neither the one nor the other of them was the good, but some third thing, which was different from them, and better than either. If this be clearly established, then pleasure will lose the victory, for the good will cease to be identified with her: — Am I not right?

PROTARCHUS: Yes.

SOCRATES: And there will cease to be any need of distinguishing the kinds of pleasures, as I am inclined to think, but this will appear more clearly as we proceed.

PROTARCHUS: Capital, Socrates; pray go on as you propose.

SOCRATES: But, let us first agree on some little points.

PROTARCHUS: What are they?

SOCRATES: Is the good perfect or imperfect?

PROTARCHUS: The most perfect, Socrates, of all things.

SOCRATES: And is the good sufficient?

PROTARCHUS: Yes, certainly, and in a degree surpassing all other things.

SOCRATES: And no one can deny that all percipient beings desire and hunt after good, and are eager to catch and have the good about them, and care not for the attainment of anything which is not accompanied by good.

PROTARCHUS: That is undeniable.

SOCRATES: Now let us part off the life of pleasure from the life of wisdom, and pass them in review.

PROTARCHUS: How do you mean?

SOCRATES: Let there be no wisdom in the life of pleasure, nor any pleasure in the life of wisdom, for if either of them is the chief good, it cannot be supposed to want anything, but if either is shown to want anything, then it cannot really be the chief good.

PROTARCHUS: Impossible.

SOCRATES: And will you help us to test these two lives?

PROTARCHUS: Certainly.

SOCRATES: Then answer.

PROTARCHUS: Ask.

SOCRATES: Would you choose, Protarchus, to live all your life long in the enjoyment of the greatest pleasures?

PROTARCHUS: Certainly I should.

SOCRATES: Would you consider that there was still anything wanting to you if you had perfect pleasure?

PROTARCHUS: Certainly not.

SOCRATES: Reflect; would you not want wisdom and intelligence and forethought, and similar qualities? would you not at any rate want sight?

PROTARCHUS: Why should I? Having pleasure I should have all things.

SOCRATES: Living thus, you would always throughout your life enjoy the greatest pleasures?

PROTARCHUS: I should.

SOCRATES: But if you had neither mind, nor memory, nor knowledge, nor true opinion, you would in the first place be utterly ignorant of whether you were pleased or not, because you would be entirely devoid of intelligence.

PROTARCHUS: Certainly.

SOCRATES: And similarly, if you had no memory you would not recollect that you had ever been pleased, nor would the slightest recollection of the pleasure which you feel at any moment remain with you; and if you had no true opinion you would not think that you were pleased when you were; and if you had no power of calculation you would not be able to calculate on future pleasure, and your life would be the life, not of a man, but of an oyster or ‘pulmo marinus.’ Could this be otherwise?

PROTARCHUS: No.

SOCRATES: But is such a life eligible?

PROTARCHUS: I cannot answer you, Socrates; the argument has taken away from me the power of speech.

SOCRATES: We must keep up our spirits; — let us now take the life of mind and examine it in turn.

PROTARCHUS: And what is this life of mind?

SOCRATES: I want to know whether any one of us would consent to live, having wisdom and mind and knowledge and memory of all things, but having no sense of pleasure or pain, and wholly unaffected by these and the like feelings?

PROTARCHUS: Neither life, Socrates, appears eligible to me, nor is likely, as I should imagine, to be chosen by any one else.

SOCRATES: What would you say, Protarchus, to both of these in one, or to one that was made out of the union of the two?

PROTARCHUS: Out of the union, that is, of pleasure with mind and wisdom?

SOCRATES: Yes, that is the life which I mean.

PROTARCHUS: There can be no difference of opinion; not some but all would surely choose this third rather than either of the other two, and in addition to them.

SOCRATES: But do you see the consequence?

PROTARCHUS: To be sure I do. The consequence is, that two out of the three lives which have been proposed are neither sufficient nor eligible for man or for animal.

SOCRATES: Then now there can be no doubt that neither of them has the good, for the one which had would certainly have been sufficient and perfect and eligible for every living creature or thing that was able to live such a life; and if any of us had chosen any other, he would have chosen contrary to the nature of the truly eligible, and not of his own free will, but either through ignorance or from some unhappy necessity.

PROTARCHUS: Certainly that seems to be true.

SOCRATES: And now have I not sufficiently shown that Philebus' goddess is not to be regarded as identical with the good?

PHILEBUS: Neither is your 'mind' the good, Socrates, for that will be open to the same objections.

SOCRATES: Perhaps, Philebus, you may be right in saying so of my 'mind'; but of the true, which is also the divine mind, far otherwise. However, I will not at present claim the first place for mind as against the mixed life; but we must come to some understanding about the second place. For you might affirm pleasure and I mind to be the cause of the mixed life; and in that case although neither of them would be the good, one of them might be imagined to be the cause of the good. And I might proceed further to argue in opposition to Philebus, that the element which makes this mixed life eligible and good, is more akin and more similar to mind than to pleasure. And if this is true, pleasure cannot be truly said to share either in the first or second place, and does not, if I may trust my own mind, attain even to the third.

PROTARCHUS: Truly, Socrates, pleasure appears to me to have had a fall; in fighting for the palm, she has been smitten by the argument, and is laid low. I must say that mind would have fallen too, and may therefore be thought to show discretion in not putting forward a similar claim. And if pleasure were deprived not only of the first but of the second place, she would be terribly damaged in the eyes of her admirers, for not even to them would she still appear as fair as before.

SOCRATES: Well, but had we not better leave her now, and not pain her by applying the crucial test, and finally detecting her?

PROTARCHUS: Nonsense, Socrates.

SOCRATES: Why? because I said that we had better not pain pleasure, which is an impossibility?

PROTARCHUS: Yes, and more than that, because you do not seem to be aware that none of us will let you go home until you have

finished the argument.

SOCRATES: Heavens! Protarchus, that will be a tedious business, and just at present not at all an easy one. For in going to war in the cause of mind, who is aspiring to the second prize, I ought to have weapons of another make from those which I used before; some, however, of the old ones may do again. And must I then finish the argument?

PROTARCHUS: Of course you must.

SOCRATES: Let us be very careful in laying the foundation.

PROTARCHUS: What do you mean?

SOCRATES: Let us divide all existing things into two, or rather, if you do not object, into three classes.

PROTARCHUS: Upon what principle would you make the division?

SOCRATES: Let us take some of our newly-found notions.

PROTARCHUS: Which of them?

SOCRATES: Were we not saying that God revealed a finite element of existence, and also an infinite?

PROTARCHUS: Certainly.

SOCRATES: Let us assume these two principles, and also a third, which is compounded out of them; but I fear that I am ridiculously clumsy at these processes of division and enumeration.

PROTARCHUS: What do you mean, my good friend?

SOCRATES: I say that a fourth class is still wanted.

PROTARCHUS: What will that be?

SOCRATES: Find the cause of the third or compound, and add this as a fourth class to the three others.

PROTARCHUS: And would you like to have a fifth class or cause of

resolution as well as a cause of composition?

SOCRATES: Not, I think, at present; but if I want a fifth at some future time you shall allow me to have it.

PROTARCHUS: Certainly.

SOCRATES: Let us begin with the first three; and as we find two out of the three greatly divided and dispersed, let us endeavour to reunite them, and see how in each of them there is a one and many.

PROTARCHUS: If you would explain to me a little more about them, perhaps I might be able to follow you.

SOCRATES: Well, the two classes are the same which I mentioned before, one the finite, and the other the infinite; I will first show that the infinite is in a certain sense many, and the finite may be hereafter discussed.

PROTARCHUS: I agree.

SOCRATES: And now consider well; for the question to which I invite your attention is difficult and controverted. When you speak of hotter and colder, can you conceive any limit in those qualities? Does not the more and less, which dwells in their very nature, prevent their having any end? for if they had an end, the more and less would themselves have an end.

PROTARCHUS: That is most true.

SOCRATES: Ever, as we say, into the hotter and the colder there enters a more and a less.

PROTARCHUS: Yes.

SOCRATES: Then, says the argument, there is never any end of them, and being endless they must also be infinite.

PROTARCHUS: Yes, Socrates, that is exceedingly true.

SOCRATES: Yes, my dear Protarchus, and your answer reminds me

that such an expression as ‘exceedingly,’ which you have just uttered, and also the term ‘gently,’ have the same significance as more or less; for whenever they occur they do not allow of the existence of quantity — they are always introducing degrees into actions, instituting a comparison of a more or a less excessive or a more or a less gentle, and at each creation of more or less, quantity disappears. For, as I was just now saying, if quantity and measure did not disappear, but were allowed to intrude in the sphere of more and less and the other comparatives, these last would be driven out of their own domain. When definite quantity is once admitted, there can be no longer a ‘hotter’ or a ‘colder’ (for these are always progressing, and are never in one stay); but definite quantity is at rest, and has ceased to progress. Which proves that comparatives, such as the hotter and the colder, are to be ranked in the class of the infinite.

PROTARCHUS: Your remark certainly has the look of truth, Socrates; but these subjects, as you were saying, are difficult to follow at first. I think however, that if I could hear the argument repeated by you once or twice, there would be a substantial agreement between us.

SOCRATES: Yes, and I will try to meet your wish; but, as I would rather not waste time in the enumeration of endless particulars, let me know whether I may not assume as a note of the infinite —

PROTARCHUS: What?

SOCRATES: I want to know whether such things as appear to us to admit of more or less, or are denoted by the words ‘exceedingly,’ ‘gently,’ ‘extremely,’ and the like, may not be referred to the class of the infinite, which is their unity, for, as was asserted in the previous argument, all things that were divided and dispersed should be brought together, and have the mark or seal of some one nature, if possible, set upon them — do you remember?

PROTARCHUS: Yes.

SOCRATES: And all things which do not admit of more or less, but

admit their opposites, that is to say, first of all, equality, and the equal, or again, the double, or any other ratio of number and measure — all these may, I think, be rightly reckoned by us in the class of the limited or finite; what do you say?

PROTARCHUS: Excellent, Socrates.

SOCRATES: And now what nature shall we ascribe to the third or compound kind?

PROTARCHUS: You, I think, will have to tell me that.

SOCRATES: Rather God will tell you, if there be any God who will listen to my prayers.

PROTARCHUS: Offer up a prayer, then, and think.

SOCRATES: I am thinking, Protarchus, and I believe that some God has befriended us.

PROTARCHUS: What do you mean, and what proof have you to offer of what you are saying?

SOCRATES: I will tell you, and do you listen to my words.

PROTARCHUS: Proceed.

SOCRATES: Were we not speaking just now of hotter and colder?

PROTARCHUS: True.

SOCRATES: Add to them drier, wetter, more, less, swifter, slower, greater, smaller, and all that in the preceding argument we placed under the unity of more and less.

PROTARCHUS: In the class of the infinite, you mean?

SOCRATES: Yes; and now mingle this with the other.

PROTARCHUS: What is the other.

SOCRATES: The class of the finite which we ought to have brought together as we did the infinite; but, perhaps, it will come to the same

thing if we do so now; — when the two are combined, a third will appear.

PROTARCHUS: What do you mean by the class of the finite?

SOCRATES: The class of the equal and the double, and any class which puts an end to difference and opposition, and by introducing number creates harmony and proportion among the different elements.

PROTARCHUS: I understand; you seem to me to mean that the various opposites, when you mingle with them the class of the finite, takes certain forms.

SOCRATES: Yes, that is my meaning.

PROTARCHUS: Proceed.

SOCRATES: Does not the right participation in the finite give health — in disease, for instance?

PROTARCHUS: Certainly.

SOCRATES: And whereas the high and low, the swift and the slow are infinite or unlimited, does not the addition of the principles aforesaid introduce a limit, and perfect the whole frame of music?

PROTARCHUS: Yes, certainly.

SOCRATES: Or, again, when cold and heat prevail, does not the introduction of them take away excess and indefiniteness, and infuse moderation and harmony?

PROTARCHUS: Certainly.

SOCRATES: And from a like admixture of the finite and infinite come the seasons, and all the delights of life?

PROTARCHUS: Most true.

SOCRATES: I omit ten thousand other things, such as beauty and health and strength, and the many beauties and high perfections of

the soul: O my beautiful Philebus, the goddess, methinks, seeing the universal wantonness and wickedness of all things, and that there was in them no limit to pleasures and self-indulgence, devised the limit of law and order, whereby, as you say, Philebus, she torments, or as I maintain, delivers the soul. — What think you, Protarchus?

PROTARCHUS: Her ways are much to my mind, Socrates.

SOCRATES: You will observe that I have spoken of three classes?

PROTARCHUS: Yes, I think that I understand you: you mean to say that the infinite is one class, and that the finite is a second class of existences; but what you would make the third I am not so certain.

SOCRATES: That is because the amazing variety of the third class is too much for you, my dear friend; but there was not this difficulty with the infinite, which also comprehended many classes, for all of them were sealed with the note of more and less, and therefore appeared one.

PROTARCHUS: True.

SOCRATES: And the finite or limit had not many divisions, and we readily acknowledged it to be by nature one?

PROTARCHUS: Yes.

SOCRATES: Yes, indeed; and when I speak of the third class, understand me to mean any offspring of these, being a birth into true being, effected by the measure which the limit introduces.

PROTARCHUS: I understand.

SOCRATES: Still there was, as we said, a fourth class to be investigated, and you must assist in the investigation; for does not everything which comes into being, of necessity come into being through a cause?

PROTARCHUS: Yes, certainly; for how can there be anything which has no cause?

SOCRATES: And is not the agent the same as the cause in all except name; the agent and the cause may be rightly called one?

PROTARCHUS: Very true.

SOCRATES: And the same may be said of the patient, or effect; we shall find that they too differ, as I was saying, only in name — shall we not?

PROTARCHUS: We shall.

SOCRATES: The agent or cause always naturally leads, and the patient or effect naturally follows it?

PROTARCHUS: Certainly.

SOCRATES: Then the cause and what is subordinate to it in generation are not the same, but different?

PROTARCHUS: True.

SOCRATES: Did not the things which were generated, and the things out of which they were generated, furnish all the three classes?

PROTARCHUS: Yes.

SOCRATES: And the creator or cause of them has been satisfactorily proven to be distinct from them, — and may therefore be called a fourth principle?

PROTARCHUS: So let us call it.

SOCRATES: Quite right; but now, having distinguished the four, I think that we had better refresh our memories by recapitulating each of them in order.

PROTARCHUS: By all means.

SOCRATES: Then the first I will call the infinite or unlimited, and the second the finite or limited; then follows the third, an essence compound and generated; and I do not think that I shall be far wrong in speaking of the cause of mixture and generation as the fourth.

PROTARCHUS: Certainly not.

SOCRATES: And now what is the next question, and how came we hither? Were we not enquiring whether the second place belonged to pleasure or wisdom?

PROTARCHUS: We were.

SOCRATES: And now, having determined these points, shall we not be better able to decide about the first and second place, which was the original subject of dispute?

PROTARCHUS: I dare say.

SOCRATES: We said, if you remember, that the mixed life of pleasure and wisdom was the conqueror — did we not?

PROTARCHUS: True.

SOCRATES: And we see what is the place and nature of this life and to what class it is to be assigned?

PROTARCHUS: Beyond a doubt.

SOCRATES: This is evidently comprehended in the third or mixed class; which is not composed of any two particular ingredients, but of all the elements of infinity, bound down by the finite, and may therefore be truly said to comprehend the conqueror life.

PROTARCHUS: Most true.

SOCRATES: And what shall we say, Philebus, of your life which is all sweetness; and in which of the aforesaid classes is that to be placed? Perhaps you will allow me to ask you a question before you answer?

PHILEBUS: Let me hear.

SOCRATES: Have pleasure and pain a limit, or do they belong to the class which admits of more and less?

PHILEBUS: They belong to the class which admits of more,

Socrates; for pleasure would not be perfectly good if she were not infinite in quantity and degree.

SOCRATES: Nor would pain, Philebus, be perfectly evil. And therefore the infinite cannot be that element which imparts to pleasure some degree of good. But now — admitting, if you like, that pleasure is of the nature of the infinite — in which of the aforesaid classes, O Protarchus and Philebus, can we without irreverence place wisdom and knowledge and mind? And let us be careful, for I think that the danger will be very serious if we err on this point.

PHILEBUS: You magnify, Socrates, the importance of your favourite god.

SOCRATES: And you, my friend, are also magnifying your favourite goddess; but still I must beg you to answer the question.

PROTARCHUS: Socrates is quite right, Philebus, and we must submit to him.

PHILEBUS: And did not you, Protarchus, propose to answer in my place?

PROTARCHUS: Certainly I did; but I am now in a great strait, and I must entreat you, Socrates, to be our spokesman, and then we shall not say anything wrong or disrespectful of your favourite.

SOCRATES: I must obey you, Protarchus; nor is the task which you impose a difficult one; but did I really, as Philebus implies, disconcert you with my playful solemnity, when I asked the question to what class mind and knowledge belong?

PROTARCHUS: You did, indeed, Socrates.

SOCRATES: Yet the answer is easy, since all philosophers assert with one voice that mind is the king of heaven and earth — in reality they are magnifying themselves. And perhaps they are right. But still I should like to consider the class of mind, if you do not object, a little more fully.

PHILEBUS: Take your own course, Socrates, and never mind length; we shall not tire of you.

SOCRATES: Very good; let us begin then, Protarchus, by asking a question.

PROTARCHUS: What question?

SOCRATES: Whether all this which they call the universe is left to the guidance of unreason and chance medley, or, on the contrary, as our fathers have declared, ordered and governed by a marvellous intelligence and wisdom.

PROTARCHUS: Wide asunder are the two assertions, illustrious Socrates, for that which you were just now saying to me appears to be blasphemy; but the other assertion, that mind orders all things, is worthy of the aspect of the world, and of the sun, and of the moon, and of the stars and of the whole circle of the heavens; and never will I say or think otherwise.

SOCRATES: Shall we then agree with them of old time in maintaining this doctrine, — not merely reasserting the notions of others, without risk to ourselves, — but shall we share in the danger, and take our part of the reproach which will await us, when an ingenious individual declares that all is disorder?

PROTARCHUS: That would certainly be my wish.

SOCRATES: Then now please to consider the next stage of the argument.

PROTARCHUS: Let me hear.

SOCRATES: We see that the elements which enter into the nature of the bodies of all animals, fire, water, air, and, as the storm-tossed sailor cries, ‘land’ (i.e., earth), reappear in the constitution of the world.

PROTARCHUS: The proverb may be applied to us; for truly the storm gathers over us, and we are at our wit’s end.

SOCRATES: There is something to be remarked about each of these elements.

PROTARCHUS: What is it?

SOCRATES: Only a small fraction of any one of them exists in us, and that of a mean sort, and not in any way pure, or having any power worthy of its nature. One instance will prove this of all of them; there is fire within us, and in the universe.

PROTARCHUS: True.

SOCRATES: And is not our fire small and weak and mean? But the fire in the universe is wonderful in quantity and beauty, and in every power that fire has.

PROTARCHUS: Most true.

SOCRATES: And is the fire in the universe nourished and generated and ruled by the fire in us, or is the fire in you and me, and in other animals, dependent on the universal fire?

PROTARCHUS: That is a question which does not deserve an answer.

SOCRATES: Right; and you would say the same, if I am not mistaken, of the earth which is in animals and the earth which is in the universe, and you would give a similar reply about all the other elements?

PROTARCHUS: Why, how could any man who gave any other be deemed in his senses?

SOCRATES: I do not think that he could — but now go on to the next step. When we saw those elements of which we have been speaking gathered up in one, did we not call them a body?

PROTARCHUS: We did.

SOCRATES: And the same may be said of the cosmos, which for the same reason may be considered to be a body, because made up of the

same elements.

PROTARCHUS: Very true.

SOCRATES: But is our body nourished wholly by this body, or is this body nourished by our body, thence deriving and having the qualities of which we were just now speaking?

PROTARCHUS: That again, Socrates, is a question which does not deserve to be asked.

SOCRATES: Well, tell me, is this question worth asking?

PROTARCHUS: What question?

SOCRATES: May our body be said to have a soul?

PROTARCHUS: Clearly.

SOCRATES: And whence comes that soul, my dear Protarchus, unless the body of the universe, which contains elements like those in our bodies but in every way fairer, had also a soul? Can there be another source?

PROTARCHUS: Clearly, Socrates, that is the only source.

SOCRATES: Why, yes, Protarchus; for surely we cannot imagine that of the four classes, the finite, the infinite, the composition of the two, and the cause, the fourth, which enters into all things, giving to our bodies souls, and the art of self-management, and of healing disease, and operating in other ways to heal and organize, having too all the attributes of wisdom; — we cannot, I say, imagine that whereas the self-same elements exist, both in the entire heaven and in great provinces of the heaven, only fairer and purer, this last should not also in that higher sphere have designed the noblest and fairest things?

PROTARCHUS: Such a supposition is quite unreasonable.

SOCRATES: Then if this be denied, should we not be wise in adopting the other view and maintaining that there is in the universe

a mighty infinite and an adequate limit, of which we have often spoken, as well as a presiding cause of no mean power, which orders and arranges years and seasons and months, and may be justly called wisdom and mind?

PROTARCHUS: Most justly.

SOCRATES: And wisdom and mind cannot exist without soul?

PROTARCHUS: Certainly not.

SOCRATES: And in the divine nature of Zeus would you not say that there is the soul and mind of a king, because there is in him the power of the cause? And other gods have other attributes, by which they are pleased to be called.

PROTARCHUS: Very true.

SOCRATES: Do not then suppose that these words are rashly spoken by us, O Protarchus, for they are in harmony with the testimony of those who said of old time that mind rules the universe.

PROTARCHUS: True.

SOCRATES: And they furnish an answer to my enquiry; for they imply that mind is the parent of that class of the four which we called the cause of all; and I think that you now have my answer.

PROTARCHUS: I have indeed, and yet I did not observe that you had answered.

SOCRATES: A jest is sometimes refreshing, Protarchus, when it interrupts earnest.

PROTARCHUS: Very true.

SOCRATES: I think, friend, that we have now pretty clearly set forth the class to which mind belongs and what is the power of mind.

PROTARCHUS: True.

SOCRATES: And the class to which pleasure belongs has also been

long ago discovered?

PROTARCHUS: Yes.

SOCRATES: And let us remember, too, of both of them, (1) that mind was akin to the cause and of this family; and (2) that pleasure is infinite and belongs to the class which neither has, nor ever will have in itself, a beginning, middle, or end of its own.

PROTARCHUS: I shall be sure to remember.

SOCRATES: We must next examine what is their place and under what conditions they are generated. And we will begin with pleasure, since her class was first examined; and yet pleasure cannot be rightly tested apart from pain.

PROTARCHUS: If this is the road, let us take it.

SOCRATES: I wonder whether you would agree with me about the origin of pleasure and pain.

PROTARCHUS: What do you mean?

SOCRATES: I mean to say that their natural seat is in the mixed class.

PROTARCHUS: And would you tell me again, sweet Socrates, which of the aforesaid classes is the mixed one?

SOCRATES: I will, my fine fellow, to the best of my ability.

PROTARCHUS: Very good.

SOCRATES: Let us then understand the mixed class to be that which we placed third in the list of four.

PROTARCHUS: That which followed the infinite and the finite; and in which you ranked health, and, if I am not mistaken, harmony.

SOCRATES: Capital; and now will you please to give me your best attention?

PROTARCHUS: Proceed; I am attending.

SOCRATES: I say that when the harmony in animals is dissolved, there is also a dissolution of nature and a generation of pain.

PROTARCHUS: That is very probable.

SOCRATES: And the restoration of harmony and return to nature is the source of pleasure, if I may be allowed to speak in the fewest and shortest words about matters of the greatest moment.

PROTARCHUS: I believe that you are right, Socrates; but will you try to be a little plainer?

SOCRATES: Do not obvious and every-day phenomena furnish the simplest illustration?

PROTARCHUS: What phenomena do you mean?

SOCRATES: Hunger, for example, is a dissolution and a pain.

PROTARCHUS: True.

SOCRATES: Whereas eating is a replenishment and a pleasure?

PROTARCHUS: Yes.

SOCRATES: Thirst again is a destruction and a pain, but the effect of moisture replenishing the dry place is a pleasure: once more, the unnatural separation and dissolution caused by heat is painful, and the natural restoration and refrigeration is pleasant.

PROTARCHUS: Very true.

SOCRATES: And the unnatural freezing of the moisture in an animal is pain, and the natural process of resolution and return of the elements to their original state is pleasure. And would not the general proposition seem to you to hold, that the destroying of the natural union of the finite and infinite, which, as I was observing before, make up the class of living beings, is pain, and that the process of return of all things to their own nature is pleasure?

PROTARCHUS: Granted; what you say has a general truth.

SOCRATES: Here then is one kind of pleasures and pains originating severally in the two processes which we have described?

PROTARCHUS: Good.

SOCRATES: Let us next assume that in the soul herself there is an antecedent hope of pleasure which is sweet and refreshing, and an expectation of pain, fearful and anxious.

PROTARCHUS: Yes; this is another class of pleasures and pains, which is of the soul only, apart from the body, and is produced by expectation.

SOCRATES: Right; for in the analysis of these, pure, as I suppose them to be, the pleasures being unalloyed with pain and the pains with pleasure, methinks that we shall see clearly whether the whole class of pleasure is to be desired, or whether this quality of entire desirableness is not rather to be attributed to another of the classes which have been mentioned; and whether pleasure and pain, like heat and cold, and other things of the same kind, are not sometimes to be desired and sometimes not to be desired, as being not in themselves good, but only sometimes and in some instances admitting of the nature of good.

PROTARCHUS: You say most truly that this is the track which the investigation should pursue.

SOCRATES: Well, then, assuming that pain ensues on the dissolution, and pleasure on the restoration of the harmony, let us now ask what will be the condition of animated beings who are neither in process of restoration nor of dissolution. And mind what you say: I ask whether any animal who is in that condition can possibly have any feeling of pleasure or pain, great or small?

PROTARCHUS: Certainly not.

SOCRATES: Then here we have a third state, over and above that of pleasure and of pain?

PROTARCHUS: Very true.

SOCRATES: And do not forget that there is such a state; it will make a great difference in our judgment of pleasure, whether we remember this or not. And I should like to say a few words about it.

PROTARCHUS: What have you to say?

SOCRATES: Why, you know that if a man chooses the life of wisdom, there is no reason why he should not live in this neutral state.

PROTARCHUS: You mean that he may live neither rejoicing nor sorrowing?

SOCRATES: Yes; and if I remember rightly, when the lives were compared, no degree of pleasure, whether great or small, was thought to be necessary to him who chose the life of thought and wisdom.

PROTARCHUS: Yes, certainly, we said so.

SOCRATES: Then he will live without pleasure; and who knows whether this may not be the most divine of all lives?

PROTARCHUS: If so, the gods, at any rate, cannot be supposed to have either joy or sorrow.

SOCRATES: Certainly not — there would be a great impropriety in the assumption of either alternative. But whether the gods are or are not indifferent to pleasure is a point which may be considered hereafter if in any way relevant to the argument, and whatever is the conclusion we will place it to the account of mind in her contest for the second place, should she have to resign the first.

PROTARCHUS: Just so.

SOCRATES: The other class of pleasures, which as we were saying is purely mental, is entirely derived from memory.

PROTARCHUS: What do you mean?

SOCRATES: I must first of all analyze memory, or rather perception which is prior to memory, if the subject of our discussion is ever to be properly cleared up.

PROTARCHUS: How will you proceed?

SOCRATES: Let us imagine affections of the body which are extinguished before they reach the soul, and leave her unaffected; and again, other affections which vibrate through both soul and body, and impart a shock to both and to each of them.

PROTARCHUS: Granted.

SOCRATES: And the soul may be truly said to be oblivious of the first but not of the second?

PROTARCHUS: Quite true.

SOCRATES: When I say oblivious, do not suppose that I mean forgetfulness in a literal sense; for forgetfulness is the exit of memory, which in this case has not yet entered; and to speak of the loss of that which is not yet in existence, and never has been, is a contradiction; do you see?

PROTARCHUS: Yes.

SOCRATES: Then just be so good as to change the terms.

PROTARCHUS: How shall I change them?

SOCRATES: Instead of the oblivion of the soul, when you are describing the state in which she is unaffected by the shocks of the body, say unconsciousness.

PROTARCHUS: I see.

SOCRATES: And the union or communion of soul and body in one feeling and motion would be properly called consciousness?

PROTARCHUS: Most true.

SOCRATES: Then now we know the meaning of the word?

PROTARCHUS: Yes.

SOCRATES: And memory may, I think, be rightly described as the preservation of consciousness?

PROTARCHUS: Right.

SOCRATES: But do we not distinguish memory from recollection?

PROTARCHUS: I think so.

SOCRATES: And do we not mean by recollection the power which the soul has of recovering, when by herself, some feeling which she experienced when in company with the body?

PROTARCHUS: Certainly.

SOCRATES: And when she recovers of herself the lost recollection of some consciousness or knowledge, the recovery is termed recollection and reminiscence?

PROTARCHUS: Very true.

SOCRATES: There is a reason why I say all this.

PROTARCHUS: What is it?

SOCRATES: I want to attain the plainest possible notion of pleasure and desire, as they exist in the mind only, apart from the body; and the previous analysis helps to show the nature of both.

PROTARCHUS: Then now, Socrates, let us proceed to the next point.

SOCRATES: There are certainly many things to be considered in discussing the generation and whole complexion of pleasure. At the outset we must determine the nature and seat of desire.

PROTARCHUS: Ay; let us enquire into that, for we shall lose nothing.

SOCRATES: Nay, Protarchus, we shall surely lose the puzzle if we

find the answer.

PROTARCHUS: A fair retort; but let us proceed.

SOCRATES: Did we not place hunger, thirst, and the like, in the class of desires?

PROTARCHUS: Certainly.

SOCRATES: And yet they are very different; what common nature have we in view when we call them by a single name?

PROTARCHUS: By heavens, Socrates, that is a question which is not easily answered; but it must be answered.

SOCRATES: Then let us go back to our examples.

PROTARCHUS: Where shall we begin?

SOCRATES: Do we mean anything when we say 'a man thirsts'?

PROTARCHUS: Yes.

SOCRATES: We mean to say that he 'is empty'?

PROTARCHUS: Of course.

SOCRATES: And is not thirst desire?

PROTARCHUS: Yes, of drink.

SOCRATES: Would you say of drink, or of replenishment with drink?

PROTARCHUS: I should say, of replenishment with drink.

SOCRATES: Then he who is empty desires, as would appear, the opposite of what he experiences; for he is empty and desires to be full?

PROTARCHUS: Clearly so.

SOCRATES: But how can a man who is empty for the first time,

attain either by perception or memory to any apprehension of replenishment, of which he has no present or past experience?

PROTARCHUS: Impossible.

SOCRATES: And yet he who desires, surely desires something?

PROTARCHUS: Of course.

SOCRATES: He does not desire that which he experiences, for he experiences thirst, and thirst is emptiness; but he desires replenishment?

PROTARCHUS: True.

SOCRATES: Then there must be something in the thirsty man which in some way apprehends replenishment?

PROTARCHUS: There must.

SOCRATES: And that cannot be the body, for the body is supposed to be emptied?

PROTARCHUS: Yes.

SOCRATES: The only remaining alternative is that the soul apprehends the replenishment by the help of memory; as is obvious, for what other way can there be?

PROTARCHUS: I cannot imagine any other.

SOCRATES: But do you see the consequence?

PROTARCHUS: What is it?

SOCRATES: That there is no such thing as desire of the body.

PROTARCHUS: Why so?

SOCRATES: Why, because the argument shows that the endeavour of every animal is to the reverse of his bodily state.

PROTARCHUS: Yes.

SOCRATES: And the impulse which leads him to the opposite of what he is experiencing proves that he has a memory of the opposite state.

PROTARCHUS: True.

SOCRATES: And the argument, having proved that memory attracts us towards the objects of desire, proves also that the impulses and the desires and the moving principle in every living being have their origin in the soul.

PROTARCHUS: Most true.

SOCRATES: The argument will not allow that our body either hungers or thirsts or has any similar experience.

PROTARCHUS: Quite right.

SOCRATES: Let me make a further observation; the argument appears to me to imply that there is a kind of life which consists in these affections.

PROTARCHUS: Of what affections, and of what kind of life, are you speaking?

SOCRATES: I am speaking of being emptied and replenished, and of all that relates to the preservation and destruction of living beings, as well as of the pain which is felt in one of these states and of the pleasure which succeeds to it.

PROTARCHUS: True.

SOCRATES: And what would you say of the intermediate state?

PROTARCHUS: What do you mean by 'intermediate'?

SOCRATES: I mean when a person is in actual suffering and yet remembers past pleasures which, if they would only return, would relieve him; but as yet he has them not. May we not say of him, that he is in an intermediate state?

PROTARCHUS: Certainly.

SOCRATES: Would you say that he was wholly pained or wholly pleased?

PROTARCHUS: Nay, I should say that he has two pains; in his body there is the actual experience of pain, and in his soul longing and expectation.

SOCRATES: What do you mean, Protarchus, by the two pains? May not a man who is empty have at one time a sure hope of being filled, and at other times be quite in despair?

PROTARCHUS: Very true.

SOCRATES: And has he not the pleasure of memory when he is hoping to be filled, and yet in that he is empty is he not at the same time in pain?

PROTARCHUS: Certainly.

SOCRATES: Then man and the other animals have at the same time both pleasure and pain?

PROTARCHUS: I suppose so.

SOCRATES: But when a man is empty and has no hope of being filled, there will be the double experience of pain. You observed this and inferred that the double experience was the single case possible.

PROTARCHUS: Quite true, Socrates.

SOCRATES: Shall the enquiry into these states of feeling be made the occasion of raising a question?

PROTARCHUS: What question?

SOCRATES: Whether we ought to say that the pleasures and pains of which we are speaking are true or false? or some true and some false?

PROTARCHUS: But how, Socrates, can there be false pleasures and

pains?

SOCRATES: And how, Protarchus, can there be true and false fears, or true and false expectations, or true and false opinions?

PROTARCHUS: I grant that opinions may be true or false, but not pleasures.

SOCRATES: What do you mean? I am afraid that we are raising a very serious enquiry.

PROTARCHUS: There I agree.

SOCRATES: And yet, my boy, for you are one of Philebus' boys, the point to be considered, is, whether the enquiry is relevant to the argument.

PROTARCHUS: Surely.

SOCRATES: No tedious and irrelevant discussion can be allowed; what is said should be pertinent.

PROTARCHUS: Right.

SOCRATES: I am always wondering at the question which has now been raised.

PROTARCHUS: How so?

SOCRATES: Do you deny that some pleasures are false, and others true?

PROTARCHUS: To be sure I do.

SOCRATES: Would you say that no one ever seemed to rejoice and yet did not rejoice, or seemed to feel pain and yet did not feel pain, sleeping or waking, mad or lunatic?

PROTARCHUS: So we have always held, Socrates.

SOCRATES: But were you right? Shall we enquire into the truth of your opinion?

PROTARCHUS: I think that we should.

SOCRATES: Let us then put into more precise terms the question which has arisen about pleasure and opinion. Is there such a thing as opinion?

PROTARCHUS: Yes.

SOCRATES: And such a thing as pleasure?

PROTARCHUS: Yes.

SOCRATES: And an opinion must be of something?

PROTARCHUS: True.

SOCRATES: And a man must be pleased by something?

PROTARCHUS: Quite correct.

SOCRATES: And whether the opinion be right or wrong, makes no difference; it will still be an opinion?

PROTARCHUS: Certainly.

SOCRATES: And he who is pleased, whether he is rightly pleased or not, will always have a real feeling of pleasure?

PROTARCHUS: Yes; that is also quite true.

SOCRATES: Then, how can opinion be both true and false, and pleasure true only, although pleasure and opinion are both equally real?

PROTARCHUS: Yes; that is the question.

SOCRATES: You mean that opinion admits of truth and falsehood, and hence becomes not merely opinion, but opinion of a certain quality; and this is what you think should be examined?

PROTARCHUS: Yes.

SOCRATES: And further, even if we admit the existence of qualities

in other objects, may not pleasure and pain be simple and devoid of quality?

PROTARCHUS: Clearly.

SOCRATES: But there is no difficulty in seeing that pleasure and pain as well as opinion have qualities, for they are great or small, and have various degrees of intensity; as was indeed said long ago by us.

PROTARCHUS: Quite true.

SOCRATES: And if badness attaches to any of them, Protarchus, then we should speak of a bad opinion or of a bad pleasure?

PROTARCHUS: Quite true, Socrates.

SOCRATES: And if rightness attaches to any of them, should we not speak of a right opinion or right pleasure; and in like manner of the reverse of rightness?

PROTARCHUS: Certainly.

SOCRATES: And if the thing opined be erroneous, might we not say that the opinion, being erroneous, is not right or rightly opined?

PROTARCHUS: Certainly.

SOCRATES: And if we see a pleasure or pain which errs in respect of its object, shall we call that right or good, or by any honourable name?

PROTARCHUS: Not if the pleasure is mistaken; how could we?

SOCRATES: And surely pleasure often appears to accompany an opinion which is not true, but false?

PROTARCHUS: Certainly it does; and in that case, Socrates, as we were saying, the opinion is false, but no one could call the actual pleasure false.

SOCRATES: How eagerly, Protarchus, do you rush to the defence of pleasure!

PROTARCHUS: Nay, Socrates, I only repeat what I hear.

SOCRATES: And is there no difference, my friend, between that pleasure which is associated with right opinion and knowledge, and that which is often found in all of us associated with falsehood and ignorance?

PROTARCHUS: There must be a very great difference, between them.

SOCRATES: Then, now let us proceed to contemplate this difference.

PROTARCHUS: Lead, and I will follow.

SOCRATES: Well, then, my view is —

PROTARCHUS: What is it?

SOCRATES: We agree — do we not? — that there is such a thing as false, and also such a thing as true opinion?

PROTARCHUS: Yes.

SOCRATES: And pleasure and pain, as I was just now saying, are often consequent upon these — upon true and false opinion, I mean.

PROTARCHUS: Very true.

SOCRATES: And do not opinion and the endeavour to form an opinion always spring from memory and perception?

PROTARCHUS: Certainly.

SOCRATES: Might we imagine the process to be something of this nature?

PROTARCHUS: Of what nature?

SOCRATES: An object may be often seen at a distance not very clearly, and the seer may want to determine what it is which he sees.

PROTARCHUS: Very likely.

SOCRATES: Soon he begins to interrogate himself.

PROTARCHUS: In what manner?

SOCRATES: He asks himself— ‘What is that which appears to be standing by the rock under the tree?’ This is the question which he may be supposed to put to himself when he sees such an appearance.

PROTARCHUS: True.

SOCRATES: To which he may guess the right answer, saying as if in a whisper to himself— ‘It is a man.’

PROTARCHUS: Very good.

SOCRATES: Or again, he may be misled, and then he will say— ‘No, it is a figure made by the shepherds.’

PROTARCHUS: Yes.

SOCRATES: And if he has a companion, he repeats his thought to him in articulate sounds, and what was before an opinion, has now become a proposition.

PROTARCHUS: Certainly.

SOCRATES: But if he be walking alone when these thoughts occur to him, he may not unfrequently keep them in his mind for a considerable time.

PROTARCHUS: Very true.

SOCRATES: Well, now, I wonder whether you would agree in my explanation of this phenomenon.

PROTARCHUS: What is your explanation?

SOCRATES: I think that the soul at such times is like a book.

PROTARCHUS: How so?

SOCRATES: Memory and perception meet, and they and their attendant feelings seem to almost to write down words in the soul,

and when the inscribing feeling writes truly, then true opinion and true propositions which are the expressions of opinion come into our souls — but when the scribe within us writes falsely, the result is false.

PROTARCHUS: I quite assent and agree to your statement.

SOCRATES: I must bespeak your favour also for another artist, who is busy at the same time in the chambers of the soul.

PROTARCHUS: Who is he?

SOCRATES: The painter, who, after the scribe has done his work, draws images in the soul of the things which he has described.

PROTARCHUS: But when and how does he do this?

SOCRATES: When a man, besides receiving from sight or some other sense certain opinions or statements, sees in his mind the images of the subjects of them; — is not this a very common mental phenomenon?

PROTARCHUS: Certainly.

SOCRATES: And the images answering to true opinions and words are true, and to false opinions and words false; are they not?

PROTARCHUS: They are.

SOCRATES: If we are right so far, there arises a further question.

PROTARCHUS: What is it?

SOCRATES: Whether we experience the feeling of which I am speaking only in relation to the present and the past, or in relation to the future also?

PROTARCHUS: I should say in relation to all times alike.

SOCRATES: Have not purely mental pleasures and pains been described already as in some cases anticipations of the bodily ones; from which we may infer that anticipatory pleasures and pains have

to do with the future?

PROTARCHUS: Most true.

SOCRATES: And do all those writings and paintings which, as we were saying a little while ago, are produced in us, relate to the past and present only, and not to the future?

PROTARCHUS: To the future, very much.

SOCRATES: When you say, 'Very much,' you mean to imply that all these representations are hopes about the future, and that mankind are filled with hopes in every stage of existence?

PROTARCHUS: Exactly.

SOCRATES: Answer me another question.

PROTARCHUS: What question?

SOCRATES: A just and pious and good man is the friend of the gods; is he not?

PROTARCHUS: Certainly he is.

SOCRATES: And the unjust and utterly bad man is the reverse?

PROTARCHUS: True.

SOCRATES: And all men, as we were saying just now, are always filled with hopes?

PROTARCHUS: Certainly.

SOCRATES: And these hopes, as they are termed, are propositions which exist in the minds of each of us?

PROTARCHUS: Yes.

SOCRATES: And the fancies of hope are also pictured in us; a man may often have a vision of a heap of gold, and pleasures ensuing, and in the picture there may be a likeness of himself mightily rejoicing over his good fortune.

PROTARCHUS: True.

SOCRATES: And may we not say that the good, being friends of the gods, have generally true pictures presented to them, and the bad false pictures?

PROTARCHUS: Certainly.

SOCRATES: The bad, too, have pleasures painted in their fancy as well as the good; but I presume that they are false pleasures.

PROTARCHUS: They are.

SOCRATES: The bad then commonly delight in false pleasures, and the good in true pleasures?

PROTARCHUS: Doubtless.

SOCRATES: Then upon this view there are false pleasures in the souls of men which are a ludicrous imitation of the true, and there are pains of a similar character?

PROTARCHUS: There are.

SOCRATES: And did we not allow that a man who had an opinion at all had a real opinion, but often about things which had no existence either in the past, present, or future?

PROTARCHUS: Quite true.

SOCRATES: And this was the source of false opinion and opining; am I not right?

PROTARCHUS: Yes.

SOCRATES: And must we not attribute to pleasure and pain a similar real but illusory character?

PROTARCHUS: How do you mean?

SOCRATES: I mean to say that a man must be admitted to have real pleasure who is pleased with anything or anyhow; and he may be

pleased about things which neither have nor have ever had any real existence, and, more often than not, are never likely to exist.

PROTARCHUS: Yes, Socrates, that again is undeniable.

SOCRATES: And may not the same be said about fear and anger and the like; are they not often false?

PROTARCHUS: Quite so.

SOCRATES: And can opinions be good or bad except in as far as they are true or false?

PROTARCHUS: In no other way.

SOCRATES: Nor can pleasures be conceived to be bad except in so far as they are false.

PROTARCHUS: Nay, Socrates, that is the very opposite of truth; for no one would call pleasures and pains bad because they are false, but by reason of some other great corruption to which they are liable.

SOCRATES: Well, of pleasures which are corrupt and caused by corruption we will hereafter speak, if we care to continue the enquiry; for the present I would rather show by another argument that there are many false pleasures existing or coming into existence in us, because this may assist our final decision.

PROTARCHUS: Very true; that is to say, if there are such pleasures.

SOCRATES: I think that there are, Protarchus; but this is an opinion which should be well assured, and not rest upon a mere assertion.

PROTARCHUS: Very good.

SOCRATES: Then now, like wrestlers, let us approach and grasp this new argument.

PROTARCHUS: Proceed.

SOCRATES: We were maintaining a little while since, that when desires, as they are termed, exist in us, then the body has separate

feelings apart from the soul — do you remember?

PROTARCHUS: Yes, I remember that you said so.

SOCRATES: And the soul was supposed to desire the opposite of the bodily state, while the body was the source of any pleasure or pain which was experienced.

PROTARCHUS: True.

SOCRATES: Then now you may infer what happens in such cases.

PROTARCHUS: What am I to infer?

SOCRATES: That in such cases pleasures and pains come simultaneously; and there is a juxtaposition of the opposite sensations which correspond to them, as has been already shown.

PROTARCHUS: Clearly.

SOCRATES: And there is another point to which we have agreed.

PROTARCHUS: What is it?

SOCRATES: That pleasure and pain both admit of more and less, and that they are of the class of infinites.

PROTARCHUS: Certainly, we said so.

SOCRATES: But how can we rightly judge of them?

PROTARCHUS: How can we?

SOCRATES: Is it our intention to judge of their comparative importance and intensity, measuring pleasure against pain, and pain against pain, and pleasure against pleasure?

PROTARCHUS: Yes, such is our intention, and we shall judge of them accordingly.

SOCRATES: Well, take the case of sight. Does not the nearness or distance of magnitudes obscure their true proportions, and make us opine falsely; and do we not find the same illusion happening in the

case of pleasures and pains?

PROTARCHUS: Yes, Socrates, and in a degree far greater.

SOCRATES: Then what we are now saying is the opposite of what we were saying before.

PROTARCHUS: What was that?

SOCRATES: Then the opinions were true and false, and infected the pleasures and pains with their own falsity.

PROTARCHUS: Very true.

SOCRATES: But now it is the pleasures which are said to be true and false because they are seen at various distances, and subjected to comparison; the pleasures appear to be greater and more vehement when placed side by side with the pains, and the pains when placed side by side with the pleasures.

PROTARCHUS: Certainly, and for the reason which you mention.

SOCRATES: And suppose you part off from pleasures and pains the element which makes them appear to be greater or less than they really are: you will acknowledge that this element is illusory, and you will never say that the corresponding excess or defect of pleasure or pain is real or true.

PROTARCHUS: Certainly not.

SOCRATES: Next let us see whether in another direction we may not find pleasures and pains existing and appearing in living beings, which are still more false than these.

PROTARCHUS: What are they, and how shall we find them?

SOCRATES: If I am not mistaken, I have often repeated that pains and aches and suffering and uneasiness of all sorts arise out of a corruption of nature caused by concretions, and dissolutions, and repletions, and evacuations, and also by growth and decay?

PROTARCHUS: Yes, that has been often said.

SOCRATES: And we have also agreed that the restoration of the natural state is pleasure?

PROTARCHUS: Right.

SOCRATES: But now let us suppose an interval of time at which the body experiences none of these changes.

PROTARCHUS: When can that be, Socrates?

SOCRATES: Your question, Protarchus, does not help the argument.

PROTARCHUS: Why not, Socrates?

SOCRATES: Because it does not prevent me from repeating mine.

PROTARCHUS: And what was that?

SOCRATES: Why, Protarchus, admitting that there is no such interval, I may ask what would be the necessary consequence if there were?

PROTARCHUS: You mean, what would happen if the body were not changed either for good or bad?

SOCRATES: Yes.

PROTARCHUS: Why then, Socrates, I should suppose that there would be neither pleasure nor pain.

SOCRATES: Very good; but still, if I am not mistaken, you do assert that we must always be experiencing one of them; that is what the wise tell us; for, say they, all things are ever flowing up and down.

PROTARCHUS: Yes, and their words are of no mean authority.

SOCRATES: Of course, for they are no mean authorities themselves; and I should like to avoid the brunt of their argument. Shall I tell you how I mean to escape from them? And you shall be the partner of my flight.

PROTARCHUS: How?

SOCRATES: To them we will say: ‘Good; but are we, or living things in general, always conscious of what happens to us — for example, of our growth, or the like? Are we not, on the contrary, almost wholly unconscious of this and similar phenomena?’ You must answer for them.

PROTARCHUS: The latter alternative is the true one.

SOCRATES: Then we were not right in saying, just now, that motions going up and down cause pleasures and pains?

PROTARCHUS: True.

SOCRATES: A better and more unexceptionable way of speaking will be —

PROTARCHUS: What?

SOCRATES: If we say that the great changes produce pleasures and pains, but that the moderate and lesser ones do neither.

PROTARCHUS: That, Socrates, is the more correct mode of speaking.

SOCRATES: But if this be true, the life to which I was just now referring again appears.

PROTARCHUS: What life?

SOCRATES: The life which we affirmed to be devoid either of pain or of joy.

PROTARCHUS: Very true.

SOCRATES: We may assume then that there are three lives, one pleasant, one painful, and the third which is neither; what say you?

PROTARCHUS: I should say as you do that there are three of them.

SOCRATES: But if so, the negation of pain will not be the same with

pleasure.

PROTARCHUS: Certainly not.

SOCRATES: Then when you hear a person saying, that always to live without pain is the pleasantest of all things, what would you understand him to mean by that statement?

PROTARCHUS: I think that by pleasure he must mean the negative of pain.

SOCRATES: Let us take any three things; or suppose that we embellish a little and call the first gold, the second silver, and there shall be a third which is neither.

PROTARCHUS: Very good.

SOCRATES: Now, can that which is neither be either gold or silver?

PROTARCHUS: Impossible.

SOCRATES: No more can that neutral or middle life be rightly or reasonably spoken or thought of as pleasant or painful.

PROTARCHUS: Certainly not.

SOCRATES: And yet, my friend, there are, as we know, persons who say and think so.

PROTARCHUS: Certainly.

SOCRATES: And do they think that they have pleasure when they are free from pain?

PROTARCHUS: They say so.

SOCRATES: And they must think or they would not say that they have pleasure.

PROTARCHUS: I suppose not.

SOCRATES: And yet if pleasure and the negation of pain are of distinct natures, they are wrong.

PROTARCHUS: But they are undoubtedly of distinct natures.

SOCRATES: Then shall we take the view that they are three, as we were just now saying, or that they are two only — the one being a state of pain, which is an evil, and the other a cessation of pain, which is of itself a good, and is called pleasant?

PROTARCHUS: But why, Socrates, do we ask the question at all? I do not see the reason.

SOCRATES: You, Protarchus, have clearly never heard of certain enemies of our friend Philebus.

PROTARCHUS: And who may they be?

SOCRATES: Certain persons who are reputed to be masters in natural philosophy, who deny the very existence of pleasure.

PROTARCHUS: Indeed!

SOCRATES: They say that what the school of Philebus calls pleasures are all of them only avoidances of pain.

PROTARCHUS: And would you, Socrates, have us agree with them?

SOCRATES: Why, no, I would rather use them as a sort of diviners, who divine the truth, not by rules of art, but by an instinctive repugnance and extreme detestation which a noble nature has of the power of pleasure, in which they think that there is nothing sound, and her seductive influence is declared by them to be witchcraft, and not pleasure. This is the use which you may make of them. And when you have considered the various grounds of their dislike, you shall hear from me what I deem to be true pleasures. Having thus examined the nature of pleasure from both points of view, we will bring her up for judgment.

PROTARCHUS: Well said.

SOCRATES: Then let us enter into an alliance with these philosophers and follow in the track of their dislike. I imagine that

they would say something of this sort; they would begin at the beginning, and ask whether, if we wanted to know the nature of any quality, such as hardness, we should be more likely to discover it by looking at the hardest things, rather than at the least hard? You, Protarchus, shall answer these severe gentlemen as you answer me.

PROTARCHUS: By all means, and I reply to them, that you should look at the greatest instances.

SOCRATES: Then if we want to see the true nature of pleasures as a class, we should not look at the most diluted pleasures, but at the most extreme and most vehement?

PROTARCHUS: In that every one will agree.

SOCRATES: And the obvious instances of the greatest pleasures, as we have often said, are the pleasures of the body?

PROTARCHUS: Certainly.

SOCRATES: And are they felt by us to be or become greater, when we are sick or when we are in health? And here we must be careful in our answer, or we shall come to grief.

PROTARCHUS: How will that be?

SOCRATES: Why, because we might be tempted to answer, ‘When we are in health.’

PROTARCHUS: Yes, that is the natural answer.

SOCRATES: Well, but are not those pleasures the greatest of which mankind have the greatest desires?

PROTARCHUS: True.

SOCRATES: And do not people who are in a fever, or any similar illness, feel cold or thirst or other bodily affections more intensely? Am I not right in saying that they have a deeper want and greater pleasure in the satisfaction of their want?

PROTARCHUS: That is obvious as soon as it is said.

SOCRATES: Well, then, shall we not be right in saying, that if a person would wish to see the greatest pleasures he ought to go and look, not at health, but at disease? And here you must distinguish: — do not imagine that I mean to ask whether those who are very ill have more pleasures than those who are well, but understand that I am speaking of the magnitude of pleasure; I want to know where pleasures are found to be most intense. For, as I say, we have to discover what is pleasure, and what they mean by pleasure who deny her very existence.

PROTARCHUS: I think I follow you.

SOCRATES: You will soon have a better opportunity of showing whether you do or not, Protarchus. Answer now, and tell me whether you see, I will not say more, but more intense and excessive pleasures in wantonness than in temperance? Reflect before you speak.

PROTARCHUS: I understand you, and see that there is a great difference between them; the temperate are restrained by the wise man's aphorism of 'Never too much,' which is their rule, but excess of pleasure possessing the minds of fools and wantons becomes madness and makes them shout with delight.

SOCRATES: Very good, and if this be true, then the greatest pleasures and pains will clearly be found in some vicious state of soul and body, and not in a virtuous state.

PROTARCHUS: Certainly.

SOCRATES: And ought we not to select some of these for examination, and see what makes them the greatest?

PROTARCHUS: To be sure we ought.

SOCRATES: Take the case of the pleasures which arise out of certain disorders.

PROTARCHUS: What disorders?

SOCRATES: The pleasures of unseemly disorders, which our severe friends utterly detest.

PROTARCHUS: What pleasures?

SOCRATES: Such, for example, as the relief of itching and other ailments by scratching, which is the only remedy required. For what in Heaven's name is the feeling to be called which is thus produced in us? — Pleasure or pain?

PROTARCHUS: A villainous mixture of some kind, Socrates, I should say.

SOCRATES: I did not introduce the argument, O Protarchus, with any personal reference to Philebus, but because, without the consideration of these and similar pleasures, we shall not be able to determine the point at issue.

PROTARCHUS: Then we had better proceed to analyze this family of pleasures.

SOCRATES: You mean the pleasures which are mingled with pain?

PROTARCHUS: Exactly.

SOCRATES: There are some mixtures which are of the body, and only in the body, and others which are of the soul, and only in the soul; while there are other mixtures of pleasures with pains, common both to soul and body, which in their composite state are called sometimes pleasures and sometimes pains.

PROTARCHUS: How is that?

SOCRATES: Whenever, in the restoration or in the derangement of nature, a man experiences two opposite feelings; for example, when he is cold and is growing warm, or again, when he is hot and is becoming cool, and he wants to have the one and be rid of the other; — the sweet has a bitter, as the common saying is, and both together fasten upon him and create irritation and in time drive him to

distraction.

PROTARCHUS: That description is very true to nature.

SOCRATES: And in these sorts of mixtures the pleasures and pains are sometimes equal, and sometimes one or other of them predominates?

PROTARCHUS: True.

SOCRATES: Of cases in which the pain exceeds the pleasure, an example is afforded by itching, of which we were just now speaking, and by the tingling which we feel when the boiling and fiery element is within, and the rubbing and motion only relieves the surface, and does not reach the parts affected; then if you put them to the fire, and as a last resort apply cold to them, you may often produce the most intense pleasure or pain in the inner parts, which contrasts and mingles with the pain or pleasure, as the case may be, of the outer parts; and this is due to the forcible separation of what is united, or to the union of what is separated, and to the juxtaposition of pleasure and pain.

PROTARCHUS: Quite so.

SOCRATES: Sometimes the element of pleasure prevails in a man, and the slight undercurrent of pain makes him tingle, and causes a gentle irritation; or again, the excessive infusion of pleasure creates an excitement in him, — he even leaps for joy, he assumes all sorts of attitudes, he changes all manner of colours, he gasps for breath, and is quite amazed, and utters the most irrational exclamations.

PROTARCHUS: Yes, indeed.

SOCRATES: He will say of himself, and others will say of him, that he is dying with these delights; and the more dissipated and good-for-nothing he is, the more vehemently he pursues them in every way; of all pleasures he declares them to be the greatest; and he reckons him who lives in the most constant enjoyment of them to be the happiest of mankind.

PROTARCHUS: That, Socrates, is a very true description of the opinions of the majority about pleasures.

SOCRATES: Yes, Protarchus, quite true of the mixed pleasures, which arise out of the communion of external and internal sensations in the body; there are also cases in which the mind contributes an opposite element to the body, whether of pleasure or pain, and the two unite and form one mixture. Concerning these I have already remarked, that when a man is empty he desires to be full, and has pleasure in hope and pain in vacuity. But now I must further add what I omitted before, that in all these and similar emotions in which body and mind are opposed (and they are innumerable), pleasure and pain coalesce in one.

PROTARCHUS: I believe that to be quite true.

SOCRATES: There still remains one other sort of admixture of pleasures and pains.

PROTARCHUS: What is that?

SOCRATES: The union which, as we were saying, the mind often experiences of purely mental feelings.

PROTARCHUS: What do you mean?

SOCRATES: Why, do we not speak of anger, fear, desire, sorrow, love, emulation, envy, and the like, as pains which belong to the soul only?

PROTARCHUS: Yes.

SOCRATES: And shall we not find them also full of the most wonderful pleasures? need I remind you of the anger

‘Which stirs even a wise man to violence, And is sweeter than honey and the honeycomb?’

And you remember how pleasures mingle with pains in lamentation and bereavement?

PROTARCHUS: Yes, there is a natural connexion between them.

SOCRATES: And you remember also how at the sight of tragedies the spectators smile through their tears?

PROTARCHUS: Certainly I do.

SOCRATES: And are you aware that even at a comedy the soul experiences a mixed feeling of pain and pleasure?

PROTARCHUS: I do not quite understand you.

SOCRATES: I admit, Protarchus, that there is some difficulty in recognizing this mixture of feelings at a comedy.

PROTARCHUS: There is, I think.

SOCRATES: And the greater the obscurity of the case the more desirable is the examination of it, because the difficulty in detecting other cases of mixed pleasures and pains will be less.

PROTARCHUS: Proceed.

SOCRATES: I have just mentioned envy; would you not call that a pain of the soul?

PROTARCHUS: Yes.

SOCRATES: And yet the envious man finds something in the misfortunes of his neighbours at which he is pleased?

PROTARCHUS: Certainly.

SOCRATES: And ignorance, and what is termed clownishness, are surely an evil?

PROTARCHUS: To be sure.

SOCRATES: From these considerations learn to know the nature of the ridiculous.

PROTARCHUS: Explain.

SOCRATES: The ridiculous is in short the specific name which is used to describe the vicious form of a certain habit; and of vice in general it is that kind which is most at variance with the inscription at Delphi.

PROTARCHUS: You mean, Socrates, 'Know thyself.'

SOCRATES: I do; and the opposite would be, 'Know not thyself.'

PROTARCHUS: Certainly.

SOCRATES: And now, O Protarchus, try to divide this into three.

PROTARCHUS: Indeed I am afraid that I cannot.

SOCRATES: Do you mean to say that I must make the division for you?

PROTARCHUS: Yes, and what is more, I beg that you will.

SOCRATES: Are there not three ways in which ignorance of self may be shown?

PROTARCHUS: What are they?

SOCRATES: In the first place, about money; the ignorant may fancy himself richer than he is.

PROTARCHUS: Yes, that is a very common error.

SOCRATES: And still more often he will fancy that he is taller or fairer than he is, or that he has some other advantage of person which he really has not.

PROTARCHUS: Of course.

SOCRATES: And yet surely by far the greatest number err about the goods of the mind; they imagine themselves to be much better men than they are.

PROTARCHUS: Yes, that is by far the commonest delusion.

SOCRATES: And of all the virtues, is not wisdom the one which the

mass of mankind are always claiming, and which most arouses in them a spirit of contention and lying conceit of wisdom?

PROTARCHUS: Certainly.

SOCRATES: And may not all this be truly called an evil condition?

PROTARCHUS: Very evil.

SOCRATES: But we must pursue the division a step further, Protarchus, if we would see in envy of the childish sort a singular mixture of pleasure and pain.

PROTARCHUS: How can we make the further division which you suggest?

SOCRATES: All who are silly enough to entertain this lying conceit of themselves may of course be divided, like the rest of mankind, into two classes — one having power and might; and the other the reverse.

PROTARCHUS: Certainly.

SOCRATES: Let this, then, be the principle of division; those of them who are weak and unable to revenge themselves, when they are laughed at, may be truly called ridiculous, but those who can defend themselves may be more truly described as strong and formidable; for ignorance in the powerful is hateful and horrible, because hurtful to others both in reality and in fiction, but powerless ignorance may be reckoned, and in truth is, ridiculous.

PROTARCHUS: That is very true, but I do not as yet see where is the admixture of pleasures and pains.

SOCRATES: Well, then, let us examine the nature of envy.

PROTARCHUS: Proceed.

SOCRATES: Is not envy an unrighteous pleasure, and also an unrighteous pain?

PROTARCHUS: Most true.

SOCRATES: There is nothing envious or wrong in rejoicing at the misfortunes of enemies?

PROTARCHUS: Certainly not.

SOCRATES: But to feel joy instead of sorrow at the sight of our friends' misfortunes — is not that wrong?

PROTARCHUS: Undoubtedly.

SOCRATES: Did we not say that ignorance was always an evil?

PROTARCHUS: True.

SOCRATES: And the three kinds of vain conceit in our friends which we enumerated — the vain conceit of beauty, of wisdom, and of wealth, are ridiculous if they are weak, and detestable when they are powerful: May we not say, as I was saying before, that our friends who are in this state of mind, when harmless to others, are simply ridiculous?

PROTARCHUS: They are ridiculous.

SOCRATES: And do we not acknowledge this ignorance of theirs to be a misfortune?

PROTARCHUS: Certainly.

SOCRATES: And do we feel pain or pleasure in laughing at it?

PROTARCHUS: Clearly we feel pleasure.

SOCRATES: And was not envy the source of this pleasure which we feel at the misfortunes of friends?

PROTARCHUS: Certainly.

SOCRATES: Then the argument shows that when we laugh at the folly of our friends, pleasure, in mingling with envy, mingles with pain, for envy has been acknowledged by us to be mental pain, and laughter is pleasant; and so we envy and laugh at the same instant.

PROTARCHUS: True.

SOCRATES: And the argument implies that there are combinations of pleasure and pain in lamentations, and in tragedy and comedy, not only on the stage, but on the greater stage of human life; and so in endless other cases.

PROTARCHUS: I do not see how any one can deny what you say, Socrates, however eager he may be to assert the opposite opinion.

SOCRATES: I mentioned anger, desire, sorrow, fear, love, emulation, envy, and similar emotions, as examples in which we should find a mixture of the two elements so often named; did I not?

PROTARCHUS: Yes.

SOCRATES: We may observe that our conclusions hitherto have had reference only to sorrow and envy and anger.

PROTARCHUS: I see.

SOCRATES: Then many other cases still remain?

PROTARCHUS: Certainly.

SOCRATES: And why do you suppose me to have pointed out to you the admixture which takes place in comedy? Why but to convince you that there was no difficulty in showing the mixed nature of fear and love and similar affections; and I thought that

when I had given you the illustration, you would have let me off, and have acknowledged as a general truth that the body without the soul, and the soul without the body, as well as the two united, are susceptible of all sorts of admixtures of pleasures and pains; and so further discussion would have been unnecessary. And now I want to know whether I may depart; or will you keep me here until midnight? I fancy that I may obtain my release without many words; — if I promise that to-morrow I will give you an account of all these cases. But at present I would rather sail in another direction, and go to other matters which remain to be settled, before the judgment can be given which Philebus demands.

PROTARCHUS: Very good, Socrates; in what remains take your own course.

SOCRATES: Then after the mixed pleasures the unmixed should have their turn; this is the natural and necessary order.

PROTARCHUS: Excellent.

SOCRATES: These, in turn, then, I will now endeavour to indicate; for with the maintainers of the opinion that all pleasures are a cessation of pain, I do not agree, but, as I was saying, I use them as witnesses, that there are pleasures which seem only and are not, and there are others again which have great power and appear in many forms, yet are intermingled with pains, and are partly alleviations of agony and distress, both of body and mind.

PROTARCHUS: Then what pleasures, Socrates, should we be right in conceiving to be true?

SOCRATES: True pleasures are those which are given by beauty of colour and form, and most of those which arise from smells; those of sound, again, and in general those of which the want is painless and unconscious, and of which the fruition is palpable to sense and pleasant and unalloyed with pain.

PROTARCHUS: Once more, Socrates, I must ask what you mean.

SOCRATES: My meaning is certainly not obvious, and I will

endeavour to be plainer. I do not mean by beauty of form such beauty as that of animals or pictures, which the many would suppose to be my meaning; but, says the argument, understand me to mean straight lines and circles, and the plane or solid figures which are formed out of them by turning-lathes and rulers and measurers of angles; for these I affirm to be not only relatively beautiful, like other things, but they are eternally and absolutely beautiful, and they have peculiar pleasures, quite unlike the pleasures of scratching. And there are colours which are of the same character, and have similar pleasures; now do you understand my meaning?

PROTARCHUS: I am trying to understand, Socrates, and I hope that you will try to make your meaning clearer.

SOCRATES: When sounds are smooth and clear, and have a single pure tone, then I mean to say that they are not relatively but absolutely beautiful, and have natural pleasures associated with them.

PROTARCHUS: Yes, there are such pleasures.

SOCRATES: The pleasures of smell are of a less ethereal sort, but they have no necessary admixture of pain; and all pleasures, however and wherever experienced, which are unattended by pains, I assign to an analogous class. Here then are two kinds of pleasures.

PROTARCHUS: I understand.

SOCRATES: To these may be added the pleasures of knowledge, if no hunger of knowledge and no pain caused by such hunger precede them.

PROTARCHUS: And this is the case.

SOCRATES: Well, but if a man who is full of knowledge loses his knowledge, are there not pains of forgetting?

PROTARCHUS: Not necessarily, but there may be times of reflection, when he feels grief at the loss of his knowledge.

SOCRATES: Yes, my friend, but at present we are enumerating only the natural perceptions, and have nothing to do with reflection.

PROTARCHUS: In that case you are right in saying that the loss of knowledge is not attended with pain.

SOCRATES: These pleasures of knowledge, then, are unmixed with pain; and they are not the pleasures of the many but of a very few.

PROTARCHUS: Quite true.

SOCRATES: And now, having fairly separated the pure pleasures and those which may be rightly termed impure, let us further add to our description of them, that the pleasures which are in excess have no measure, but that those which are not in excess have measure; the great, the excessive, whether more or less frequent, we shall be right in referring to the class of the infinite, and of the more and less, which pours through body and soul alike; and the others we shall refer to the class which has measure.

PROTARCHUS: Quite right, Socrates.

SOCRATES: Still there is something more to be considered about pleasures.

PROTARCHUS: What is it?

SOCRATES: When you speak of purity and clearness, or of excess, abundance, greatness and sufficiency, in what relation do these terms stand to truth?

PROTARCHUS: Why do you ask, Socrates?

SOCRATES: Because, Protarchus, I should wish to test pleasure and knowledge in every possible way, in order that if there be a pure and impure element in either of them, I may present the pure element for judgment, and then they will be more easily judged of by you and by me and by all of us.

PROTARCHUS: Most true.

SOCRATES: Let us investigate all the pure kinds; first selecting for consideration a single instance.

PROTARCHUS: What instance shall we select?

SOCRATES: Suppose that we first of all take whiteness.

PROTARCHUS: Very good.

SOCRATES: How can there be purity in whiteness, and what purity? Is that purest which is greatest or most in quantity, or that which is most unadulterated and freest from any admixture of other colours?

PROTARCHUS: Clearly that which is most unadulterated.

SOCRATES: True, Protarchus; and so the purest white, and not the greatest or largest in quantity, is to be deemed truest and most beautiful?

PROTARCHUS: Right.

SOCRATES: And we shall be quite right in saying that a little pure white is whiter and fairer and truer than a great deal that is mixed.

PROTARCHUS: Perfectly right.

SOCRATES: There is no need of adducing many similar examples in illustration of the argument about pleasure; one such is sufficient to prove to us that a small pleasure or a small amount of pleasure, if pure or unalloyed with pain, is always pleasanter and truer and fairer than a great pleasure or a great amount of pleasure of another kind.

PROTARCHUS: Assuredly; and the instance you have given is quite sufficient.

SOCRATES: But what do you say of another question: — have we not heard that pleasure is always a generation, and has no true being? Do not certain ingenious philosophers teach this doctrine, and ought not we to be grateful to them?

PROTARCHUS: What do they mean?

SOCRATES: I will explain to you, my dear Protarchus, what they mean, by putting a question.

PROTARCHUS: Ask, and I will answer.

SOCRATES: I assume that there are two natures, one self-existent, and the other ever in want of something.

PROTARCHUS: What manner of natures are they?

SOCRATES: The one majestic ever, the other inferior.

PROTARCHUS: You speak riddles.

SOCRATES: You have seen loves good and fair, and also brave lovers of them.

PROTARCHUS: I should think so.

SOCRATES: Search the universe for two terms which are like these two and are present everywhere.

PROTARCHUS: Yet a third time I must say, Be a little plainer, Socrates.

SOCRATES: There is no difficulty, Protarchus; the argument is only in play, and insinuates that some things are for the sake of something else (relatives), and that other things are the ends to which the former class subserve (absolutes).

PROTARCHUS: Your many repetitions make me slow to understand.

SOCRATES: As the argument proceeds, my boy, I dare say that the meaning will become clearer.

PROTARCHUS: Very likely.

SOCRATES: Here are two new principles.

PROTARCHUS: What are they?

SOCRATES: One is the generation of all things, and the other is

essence.

PROTARCHUS: I readily accept from you both generation and essence.

SOCRATES: Very right; and would you say that generation is for the sake of essence, or essence for the sake of generation?

PROTARCHUS: You want to know whether that which is called essence is, properly speaking, for the sake of generation?

SOCRATES: Yes.

PROTARCHUS: By the gods, I wish that you would repeat your question.

SOCRATES: I mean, O my Protarchus, to ask whether you would tell me that ship-building is for the sake of ships, or ships for the sake of ship-building? and in all similar cases I should ask the same question.

PROTARCHUS: Why do you not answer yourself, Socrates?

SOCRATES: I have no objection, but you must take your part.

PROTARCHUS: Certainly.

SOCRATES: My answer is, that all things instrumental, remedial, material, are given to us with a view to generation, and that each generation is relative to, or for the sake of, some being or essence, and that the whole of generation is relative to the whole of essence.

PROTARCHUS: Assuredly.

SOCRATES: Then pleasure, being a generation, must surely be for the sake of some essence?

PROTARCHUS: True.

SOCRATES: And that for the sake of which something else is done must be placed in the class of good, and that which is done for the sake of something else, in some other class, my good friend.

PROTARCHUS: Most certainly.

SOCRATES: Then pleasure, being a generation, will be rightly placed in some other class than that of good?

PROTARCHUS: Quite right.

SOCRATES: Then, as I said at first, we ought to be very grateful to him who first pointed out that pleasure was a generation only, and had no true being at all; for he is clearly one who laughs at the notion of pleasure being a good.

PROTARCHUS: Assuredly.

SOCRATES: And he would surely laugh also at those who make generation their highest end.

PROTARCHUS: Of whom are you speaking, and what do they mean?

SOCRATES: I am speaking of those who when they are cured of hunger or thirst or any other defect by some process of generation are delighted at the process as if it were pleasure; and they say that they would not wish to live without these and other feelings of a like kind which might be mentioned.

PROTARCHUS: That is certainly what they appear to think.

SOCRATES: And is not destruction universally admitted to be the opposite of generation?

PROTARCHUS: Certainly.

SOCRATES: Then he who chooses thus, would choose generation and destruction rather than that third sort of life, in which, as we were saying, was neither pleasure nor pain, but only the purest possible thought.

PROTARCHUS: He who would make us believe pleasure to be a good is involved in great absurdities, Socrates.

SOCRATES: Great, indeed; and there is yet another of them.

PROTARCHUS: What is it?

SOCRATES: Is there not an absurdity in arguing that there is nothing good or noble in the body, or in anything else, but that good is in the soul only, and that the only good of the soul is pleasure; and that courage or temperance or understanding, or any other good of the soul, is not really a good? — and is there not yet a further absurdity in our being compelled to say that he who has a feeling of pain and not of pleasure is bad at the time when he is suffering pain, even though he be the best of men; and again, that he who has a feeling of pleasure, in so far as he is pleased at the time when he is pleased, in that degree excels in virtue?

PROTARCHUS: Nothing, Socrates, can be more irrational than all this.

SOCRATES: And now, having subjected pleasure to every sort of test, let us not appear to be too sparing of mind and knowledge: let us ring their metal bravely, and see if there be unsoundness in any part, until we have found out what in them is of the purest nature; and then the truest elements both of pleasure and knowledge may be brought up for judgment.

PROTARCHUS: Right.

SOCRATES: Knowledge has two parts, — the one productive, and the other educational?

PROTARCHUS: True.

SOCRATES: And in the productive or handicraft arts, is not one part more akin to knowledge, and the other less; and may not the one part be regarded as the pure, and the other as the impure?

PROTARCHUS: Certainly.

SOCRATES: Let us separate the superior or dominant elements in each of them.

PROTARCHUS: What are they, and how do you separate them?

SOCRATES: I mean to say, that if arithmetic, mensuration, and weighing be taken away from any art, that which remains will not be much.

PROTARCHUS: Not much, certainly.

SOCRATES: The rest will be only conjecture, and the better use of the senses which is given by experience and practice, in addition to a certain power of guessing, which is commonly called art, and is perfected by attention and pains.

PROTARCHUS: Nothing more, assuredly.

SOCRATES: Music, for instance, is full of this empiricism; for sounds are harmonized, not by measure, but by skilful conjecture; the music of the flute is always trying to guess the pitch of each vibrating note, and is therefore mixed up with much that is doubtful and has little which is certain.

PROTARCHUS: Most true.

SOCRATES: And the same will be found to hold good of medicine and husbandry and piloting and generalship.

PROTARCHUS: Very true.

SOCRATES: The art of the builder, on the other hand, which uses a number of measures and instruments, attains by their help to a greater degree of accuracy than the other arts.

PROTARCHUS: How is that?

SOCRATES: In ship-building and house-building, and in other branches of the art of carpentering, the builder has his rule, lathe, compass, line, and a most ingenious machine for straightening wood.

PROTARCHUS: Very true, Socrates.

SOCRATES: Then now let us divide the arts of which we were

speaking into two kinds, — the arts which, like music, are less exact in their results, and those which, like carpentering, are more exact.

PROTARCHUS: Let us make that division.

SOCRATES: Of the latter class, the most exact of all are those which we just now spoke of as primary.

PROTARCHUS: I see that you mean arithmetic, and the kindred arts of weighing and measuring.

SOCRATES: Certainly, Protarchus; but are not these also distinguishable into two kinds?

PROTARCHUS: What are the two kinds?

SOCRATES: In the first place, arithmetic is of two kinds, one of which is popular, and the other philosophical.

PROTARCHUS: How would you distinguish them?

SOCRATES: There is a wide difference between them, Protarchus; some arithmeticians reckon unequal units; as for example, two armies, two oxen, two very large things or two very small things. The party who are opposed to them insist that every unit in ten thousand must be the same as every other unit.

PROTARCHUS: Undoubtedly there is, as you say, a great difference among the votaries of the science; and there may be reasonably supposed to be two sorts of arithmetic.

SOCRATES: And when we compare the art of mensuration which is used in building with philosophical geometry, or the art of computation which is used in trading with exact calculation, shall we say of either of the pairs that it is one or two?

PROTARCHUS: On the analogy of what has preceded, I should be of opinion that they were severally two.

SOCRATES: Right; but do you understand why I have discussed the subject?

PROTARCHUS: I think so, but I should like to be told by you.

SOCRATES: The argument has all along been seeking a parallel to pleasure, and true to that original design, has gone on to ask whether one sort of knowledge is purer than another, as one pleasure is purer than another.

PROTARCHUS: Clearly; that was the intention.

SOCRATES: And has not the argument in what has preceded, already shown that the arts have different provinces, and vary in their degrees of certainty?

PROTARCHUS: Very true.

SOCRATES: And just now did not the argument first designate a particular art by a common term, thus making us believe in the unity of that art; and then again, as if speaking of two different things, proceed to enquire whether the art as pursued by philosophers, or as pursued by non-philosophers, has more of certainty and purity?

PROTARCHUS: That is the very question which the argument is asking.

SOCRATES: And how, Protarchus, shall we answer the enquiry?

PROTARCHUS: O Socrates, we have reached a point at which the difference of clearness in different kinds of knowledge is enormous.

SOCRATES: Then the answer will be the easier.

PROTARCHUS: Certainly; and let us say in reply, that those arts into which arithmetic and mensuration enter, far surpass all others; and that of these the arts or sciences which are animated by the pure philosophic impulse are infinitely superior in accuracy and truth.

SOCRATES: Then this is your judgment; and this is the answer which, upon your authority, we will give to all masters of the art of misinterpretation?

PROTARCHUS: What answer?

SOCRATES: That there are two arts of arithmetic, and two of mensuration; and also several other arts which in like manner have this double nature, and yet only one name.

PROTARCHUS: Let us boldly return this answer to the masters of whom you speak, Socrates, and hope for good luck.

SOCRATES: We have explained what we term the most exact arts or sciences.

PROTARCHUS: Very good.

SOCRATES: And yet, Protarchus, dialectic will refuse to acknowledge us, if we do not award to her the first place.

PROTARCHUS: And pray, what is dialectic?

SOCRATES: Clearly the science which has to do with all that knowledge of which we are now speaking; for I am sure that all men who have a grain of intelligence will admit that the knowledge which has to do with being and reality, and sameness and unchangeableness, is by far the truest of all. But how would you decide this question, Protarchus?

PROTARCHUS: I have often heard Gorgias maintain, Socrates, that the art of persuasion far surpassed every other; this, as he says, is by far the best of them all, for to it all things submit, not by compulsion, but of their own free will. Now, I should not like to quarrel either with you or with him.

SOCRATES: You mean to say that you would like to desert, if you were not ashamed?

PROTARCHUS: As you please.

SOCRATES: May I not have led you into a misapprehension?

PROTARCHUS: How?

SOCRATES: Dear Protarchus, I never asked which was the greatest or best or usefulest of arts or sciences, but which had clearness and

accuracy, and the greatest amount of truth, however humble and little useful an art. And as for Gorgias, if you do not deny that his art has the advantage in usefulness to mankind, he will not quarrel with you for saying that the study of which I am speaking is superior in this particular of essential truth; as in the comparison of white colours, a little whiteness, if that little be only pure, was said to be superior in truth to a great mass which is impure. And now let us give our best attention and consider well, not the comparative use or reputation of the sciences, but the power or faculty, if there be such, which the soul has of loving the truth, and of doing all things for the sake of it; let us search into the pure element of mind and intelligence, and then we shall be able to say whether the science of which I have been speaking is most likely to possess the faculty, or whether there be some other which has higher claims.

PROTARCHUS: Well, I have been considering, and I can hardly think that any other science or art has a firmer grasp of the truth than this.

SOCRATES: Do you say so because you observe that the arts in general and those engaged in them make use of opinion, and are resolutely engaged in the investigation of matters of opinion? Even he who supposes himself to be occupied with nature is really occupied with the things of this world, how created, how acting or acted upon. Is not this the sort of enquiry in which his life is spent?

PROTARCHUS: True.

SOCRATES: He is labouring, not after eternal being, but about things which are becoming, or which will or have become.

PROTARCHUS: Very true.

SOCRATES: And can we say that any of these things which neither are nor have been nor will be unchangeable, when judged by the strict rule of truth ever become certain?

PROTARCHUS: Impossible.

SOCRATES: How can anything fixed be concerned with that which

has no fixedness?

PROTARCHUS: How indeed?

SOCRATES: Then mind and science when employed about such changing things do not attain the highest truth?

PROTARCHUS: I should imagine not.

SOCRATES: And now let us bid farewell, a long farewell, to you or me or Philebus or Gorgias, and urge on behalf of the argument a single point.

PROTARCHUS: What point?

SOCRATES: Let us say that the stable and pure and true and unalloyed has to do with the things which are eternal and unchangeable and unmixed, or if not, at any rate what is most akin to them has; and that all other things are to be placed in a second or inferior class.

PROTARCHUS: Very true.

SOCRATES: And of the names expressing cognition, ought not the fairest to be given to the fairest things?

PROTARCHUS: That is natural.

SOCRATES: And are not mind and wisdom the names which are to be honoured most?

PROTARCHUS: Yes.

SOCRATES: And these names may be said to have their truest and most exact application when the mind is engaged in the contemplation of true being?

PROTARCHUS: Certainly.

SOCRATES: And these were the names which I adduced of the rivals of pleasure?

PROTARCHUS: Very true, Socrates.

SOCRATES: In the next place, as to the mixture, here are the ingredients, pleasure and wisdom, and we may be compared to artists who have their materials ready to their hands.

PROTARCHUS: Yes.

SOCRATES: And now we must begin to mix them?

PROTARCHUS: By all means.

SOCRATES: But had we not better have a preliminary word and refresh our memories?

PROTARCHUS: Of what?

SOCRATES: Of that which I have already mentioned. Well says the proverb, that we ought to repeat twice and even thrice that which is good.

PROTARCHUS: Certainly.

SOCRATES: Well then, by Zeus, let us proceed, and I will make what I believe to be a fair summary of the argument.

PROTARCHUS: Let me hear.

SOCRATES: Philebus says that pleasure is the true end of all living beings, at which all ought to aim, and moreover that it is the chief good of all, and that the two names 'good' and 'pleasant' are correctly given to one thing and one nature; Socrates, on the other hand, begins by denying this, and further says, that in nature as in name they are two, and that wisdom partakes more than pleasure of the good. Is not and was not this what we were saying, Protarchus?

PROTARCHUS: Certainly.

SOCRATES: And is there not and was there not a further point which was conceded between us?

PROTARCHUS: What was it?

SOCRATES: That the good differs from all other things.

PROTARCHUS: In what respect?

SOCRATES: In that the being who possesses good always everywhere and in all things has the most perfect sufficiency, and is never in need of anything else.

PROTARCHUS: Exactly.

SOCRATES: And did we not endeavour to make an imaginary separation of wisdom and pleasure, assigning to each a distinct life, so that pleasure was wholly excluded from wisdom, and wisdom in like manner had no part whatever in pleasure?

PROTARCHUS: We did.

SOCRATES: And did we think that either of them alone would be sufficient?

PROTARCHUS: Certainly not.

SOCRATES: And if we erred in any point, then let any one who will, take up the enquiry again and set us right; and assuming memory and wisdom and knowledge and true opinion to belong to the same class, let him consider whether he would desire to possess or acquire, — I will not say pleasure, however abundant or intense, if he has no real perception that he is pleased, nor any consciousness of what he feels, nor any recollection, however momentary, of the feeling, — but would he desire to have anything at all, if these faculties were wanting to him? And about wisdom I ask the same question; can you conceive that any one would choose to have all wisdom absolutely devoid of pleasure, rather than with a certain degree of pleasure, or all pleasure devoid of wisdom, rather than with a certain degree of wisdom?

PROTARCHUS: Certainly not, Socrates; but why repeat such questions any more?

SOCRATES: Then the perfect and universally eligible and entirely

good cannot possibly be either of them?

PROTARCHUS: Impossible.

SOCRATES: Then now we must ascertain the nature of the good more or less accurately, in order, as we were saying, that the second place may be duly assigned.

PROTARCHUS: Right.

SOCRATES: Have we not found a road which leads towards the good?

PROTARCHUS: What road?

SOCRATES: Supposing that a man had to be found, and you could discover in what house he lived, would not that be a great step towards the discovery of the man himself?

PROTARCHUS: Certainly.

SOCRATES: And now reason intimates to us, as at our first beginning, that we should seek the good, not in the unmixed life but in the mixed.

PROTARCHUS: True.

SOCRATES: There is greater hope of finding that which we are seeking in the life which is well mixed than in that which is not?

PROTARCHUS: Far greater.

SOCRATES: Then now let us mingle, Protarchus, at the same time offering up a prayer to Dionysus or Hephaestus, or whoever is the god who presides over the ceremony of mingling.

PROTARCHUS: By all means.

SOCRATES: Are not we the cup-bearers? and here are two fountains which are flowing at our side: one, which is pleasure, may be likened to a fountain of honey; the other, wisdom, a sober draught in which no wine mingles, is of water unpleasant but healthful; out of these we

must seek to make the fairest of all possible mixtures.

PROTARCHUS: Certainly.

SOCRATES: Tell me first; — should we be most likely to succeed if we mingled every sort of pleasure with every sort of wisdom?

PROTARCHUS: Perhaps we might.

SOCRATES: But I should be afraid of the risk, and I think that I can show a safer plan.

PROTARCHUS: What is it?

SOCRATES: One pleasure was supposed by us to be truer than another, and one art to be more exact than another.

PROTARCHUS: Certainly.

SOCRATES: There was also supposed to be a difference in sciences; some of them regarding only the transient and perishing, and others the permanent and imperishable and everlasting and immutable; and when judged by the standard of truth, the latter, as we thought, were truer than the former.

PROTARCHUS: Very good and right.

SOCRATES: If, then, we were to begin by mingling the sections of each class which have the most of truth, will not the union suffice to give us the loveliest of lives, or shall we still want some elements of another kind?

PROTARCHUS: I think that we ought to do what you suggest.

SOCRATES: Let us suppose a man who understands justice, and has reason as well as understanding about the true nature of this and of all other things.

PROTARCHUS: We will suppose such a man.

SOCRATES: Will he have enough of knowledge if he is acquainted only with the divine circle and sphere, and knows nothing of our

human spheres and circles, but uses only divine circles and measures in the building of a house?

PROTARCHUS: The knowledge which is only superhuman, Socrates, is ridiculous in man.

SOCRATES: What do you mean? Do you mean that you are to throw into the cup and mingle the impure and uncertain art which uses the false measure and the false circle?

PROTARCHUS: Yes, we must, if any of us is ever to find his way home.

SOCRATES: And am I to include music, which, as I was saying just now, is full of guesswork and imitation, and is wanting in purity?

PROTARCHUS: Yes, I think that you must, if human life is to be a life at all.

SOCRATES: Well, then, suppose that I give way, and, like a doorkeeper who is pushed and overborne by the mob, I open the door wide, and let knowledge of every sort stream in, and the pure mingle with the impure?

PROTARCHUS: I do not know, Socrates, that any great harm would come of having them all, if only you have the first sort.

SOCRATES: Well, then, shall I let them all flow into what Homer poetically terms 'a meeting of the waters'?

PROTARCHUS: By all means.

SOCRATES: There — I have let them in, and now I must return to the fountain of pleasure. For we were not permitted to begin by mingling in a single stream the true portions of both according to our original intention; but the love of all knowledge constrained us to let all the sciences flow in together before the pleasures.

PROTARCHUS: Quite true.

SOCRATES: And now the time has come for us to consider about

the pleasures also, whether we shall in like manner let them go all at once, or at first only the true ones.

PROTARCHUS: It will be by far the safer course to let flow the true ones first.

SOCRATES: Let them flow, then; and now, if there are any necessary pleasures, as there were arts and sciences necessary, must we not mingle them?

PROTARCHUS: Yes; the necessary pleasures should certainly be allowed to mingle.

SOCRATES: The knowledge of the arts has been admitted to be innocent and useful always; and if we say of pleasures in like manner that all of them are good and innocent for all of us at all times, we must let them all mingle?

PROTARCHUS: What shall we say about them, and what course shall we take?

SOCRATES: Do not ask me, Protarchus; but ask the daughters of pleasure and wisdom to answer for themselves.

PROTARCHUS: How?

SOCRATES: Tell us, O beloved — shall we call you pleasures or by some other name? — would you rather live with or without wisdom? I am of opinion that they would certainly answer as follows:

PROTARCHUS: How?

SOCRATES: They would answer, as we said before, that for any single class to be left by itself pure and isolated is not good, nor altogether possible; and that if we are to make comparisons of one class with another and choose, there is no better companion than knowledge of things in general, and likewise the perfect knowledge, if that may be, of ourselves in every respect.

PROTARCHUS: And our answer will be: — In that ye have spoken well.

SOCRATES: Very true. And now let us go back and interrogate wisdom and mind: Would you like to have any pleasures in the mixture? And they will reply:— ‘What pleasures do you mean?’

PROTARCHUS: Likely enough.

SOCRATES: And we shall take up our parable and say: Do you wish to have the greatest and most vehement pleasures for your companions in addition to the true ones? ‘Why, Socrates,’ they will say, ‘how can we? seeing that they are the source of ten thousand hindrances to us; they trouble the souls of men, which are our habitation, with their madness; they prevent us from coming to the birth, and are commonly the ruin of the children which are born to us, causing them to be forgotten and unheeded; but the true and pure pleasures, of which you spoke, know to be of our family, and also those pleasures which accompany health and temperance, and which every Virtue, like a goddess, has in her train to follow her about wherever she goes, — mingle these and not the others; there would be great want of sense in any one who desires to see a fair and perfect mixture, and to find in it what is the highest good in man and in the universe, and to divine what is the true form of good — there would be great want of sense in his allowing the pleasures, which are always in the company of folly and vice, to mingle with mind in the cup.’ — Is not this a very rational and suitable reply, which mind has made, both on her own behalf, as well as on the behalf of memory and true opinion?

PROTARCHUS: Most certainly.

SOCRATES: And still there must be something more added, which is a necessary ingredient in every mixture.

PROTARCHUS: What is that?

SOCRATES: Unless truth enter into the composition, nothing can truly be created or subsist.

PROTARCHUS: Impossible.

SOCRATES: Quite impossible; and now you and Philebus must tell

me whether anything is still wanting in the mixture, for to my way of thinking the argument is now completed, and may be compared to an incorporeal law, which is going to hold fair rule over a living body.

PROTARCHUS: I agree with you, Socrates.

SOCRATES: And may we not say with reason that we are now at the vestibule of the habitation of the good?

PROTARCHUS: I think that we are.

SOCRATES: What, then, is there in the mixture which is most precious, and which is the principal cause why such a state is universally beloved by all? When we have discovered it, we will proceed to ask whether this omnipresent nature is more akin to pleasure or to mind.

PROTARCHUS: Quite right; in that way we shall be better able to judge.

SOCRATES: And there is no difficulty in seeing the cause which renders any mixture either of the highest value or of none at all.

PROTARCHUS: What do you mean?

SOCRATES: Every man knows it.

PROTARCHUS: What?

SOCRATES: He knows that any want of measure and symmetry in any mixture whatever must always of necessity be fatal, both to the elements and to the mixture, which is then not a mixture, but only a confused medley which brings confusion on the possessor of it.

PROTARCHUS: Most true.

SOCRATES: And now the power of the good has retired into the region of the beautiful; for measure and symmetry are beauty and virtue all the world over.

PROTARCHUS: True.

SOCRATES: Also we said that truth was to form an element in the mixture.

PROTARCHUS: Certainly.

SOCRATES: Then, if we are not able to hunt the good with one idea only, with three we may catch our prey; Beauty, Symmetry, Truth are the three, and these taken together we may regard as the single cause of the mixture, and the mixture as being good by reason of the infusion of them.

PROTARCHUS: Quite right.

SOCRATES: And now, Protarchus, any man could decide well enough whether pleasure or wisdom is more akin to the highest good, and more honourable among gods and men.

PROTARCHUS: Clearly, and yet perhaps the argument had better be pursued to the end.

SOCRATES: We must take each of them separately in their relation to pleasure and mind, and pronounce upon them; for we ought to see to which of the two they are severally most akin.

PROTARCHUS: You are speaking of beauty, truth, and measure?

SOCRATES: Yes, Protarchus, take truth first, and, after passing in review mind, truth, pleasure, pause awhile and make answer to yourself — as to whether pleasure or mind is more akin to truth.

PROTARCHUS: There is no need to pause, for the difference between them is palpable; pleasure is the veriest impostor in the world; and it is said that in the pleasures of love, which appear to be the greatest, perjury is excused by the gods; for pleasures, like children, have not the least particle of reason in them; whereas mind is either the same as truth, or the most like truth, and the truest.

SOCRATES: Shall we next consider measure, in like manner, and ask whether pleasure has more of this than wisdom, or wisdom than pleasure?

PROTARCHUS: Here is another question which may be easily answered; for I imagine that nothing can ever be more immoderate than the transports of pleasure, or more in conformity with measure than mind and knowledge.

SOCRATES: Very good; but there still remains the third test: Has mind a greater share of beauty than pleasure, and is mind or pleasure the fairer of the two?

PROTARCHUS: No one, Socrates, either awake or dreaming, ever saw or imagined mind or wisdom to be in aught unseemly, at any time, past, present, or future.

SOCRATES: Right.

PROTARCHUS: But when we see some one indulging in pleasures, perhaps in the greatest of pleasures, the ridiculous or disgraceful nature of the action makes us ashamed; and so we put them out of sight, and consign them to darkness, under the idea that they ought not to meet the eye of day.

SOCRATES: Then, Protarchus, you will proclaim everywhere, by word of mouth to this company, and by messengers bearing the tidings far and wide, that pleasure is not the first of possessions, nor yet the second, but that in measure, and the mean, and the suitable, and the like, the eternal nature has been found.

PROTARCHUS: Yes, that seems to be the result of what has been now said.

SOCRATES: In the second class is contained the symmetrical and beautiful and perfect or sufficient, and all which are of that family.

PROTARCHUS: True.

SOCRATES: And if you reckon in the third class mind and wisdom, you will not be far wrong, if I divine aright.

PROTARCHUS: I dare say.

SOCRATES: And would you not put in the fourth class the goods

which we were affirming to appertain specially to the soul — sciences and arts and true opinions as we called them? These come after the third class, and form the fourth, as they are certainly more akin to good than pleasure is.

PROTARCHUS: Surely.

SOCRATES: The fifth class are the pleasures which were defined by us as painless, being the pure pleasures of the soul herself, as we termed them, which accompany, some the sciences, and some the senses.

PROTARCHUS: Perhaps.

SOCRATES: And now, as Orpheus says,

‘With the sixth generation cease the glory of my song.’

Here, at the sixth award, let us make an end; all that remains is to set the crown on our discourse.

PROTARCHUS: True.

SOCRATES: Then let us sum up and reassert what has been said, thus offering the third libation to the saviour Zeus.

PROTARCHUS: How?

SOCRATES: Philebus affirmed that pleasure was always and absolutely the good.

PROTARCHUS: I understand; this third libation, Socrates, of which you spoke, meant a recapitulation.

SOCRATES: Yes, but listen to the sequel; convinced of what I have just been saying, and feeling indignant at the doctrine, which is maintained, not by Philebus only, but by thousands of others, I affirmed that mind was far better and far more excellent, as an element of human life, than pleasure.

PROTARCHUS: True.

SOCRATES: But, suspecting that there were other things which were also better, I went on to say that if there was anything better than either, then I would claim the second place for mind over pleasure, and pleasure would lose the second place as well as the first.

PROTARCHUS: You did.

SOCRATES: Nothing could be more satisfactorily shown than the unsatisfactory nature of both of them.

PROTARCHUS: Very true.

SOCRATES: The claims both of pleasure and mind to be the absolute good have been entirely disproven in this argument, because they are both wanting in self-sufficiency and also in adequacy and perfection.

PROTARCHUS: Most true.

SOCRATES: But, though they must both resign in favour of another, mind is ten thousand times nearer and more akin to the nature of the conqueror than pleasure.

PROTARCHUS: Certainly.

SOCRATES: And, according to the judgment which has now been given, pleasure will rank fifth.

PROTARCHUS: True.

SOCRATES: But not first; no, not even if all the oxen and horses and animals in the world by their pursuit of enjoyment proclaim her to be so; — although the many trusting in them, as diviners trust in birds, determine that pleasures make up the good of life, and deem the lusts of animals to be better witnesses than the inspirations of divine philosophy.

PROTARCHUS: And now, Socrates, we tell you that the truth of what you have been saying is approved by the judgment of all of us.

SOCRATES: And will you let me go?

PROTARCHUS: There is a little which yet remains, and I will remind you of it, for I am sure that you will not be the first to go away from an argument.

LAWS

Translated by Benjamin Jowett

This is Plato's last and longest dialogue, which concerns a debate on laws and the men who are credited with making laws. It is generally believed that Plato wrote this dialogue as an older man, having failed in his effort in Syracuse to guide a tyrant's rule, having been thrown in prison.

Unlike most of Plato's dialogues, Socrates does not appear in *Laws*. This is fitting as the dialogue takes place on the island of Crete, and Socrates appears outside of Athens in Plato's writings only twice, in the *Phaedrus*, where he is just outside the city's walls, and in *The Republic*, where he goes down to the seaport Piraeus five miles outside of Athens. Instead of Socrates we have the Athenian Stranger, 'xenos' in Greek, two other old men, an ordinary Spartan citizen and a Cretan politician and lawgiver from Knossos.

The Athenian Stranger, who is said to be similar to Socrates but whose name is never mentioned, joins the other two on their religious pilgrimage to the cave of Zeus. The entire dialogue takes place during this journey, which mimics the action of Minos, who is said by the Cretans to have made their ancient laws, who walked this path every nine years in order to receive instruction from Zeus on lawgiving. It is also said to be the longest day of the year, allowing for a densely-packed twelve chapters.

Knossos, Crete — the main setting of the dialogue

INTRODUCTION AND ANALYSIS.

The genuineness of the Laws is sufficiently proved (1) by more than twenty citations of them in the writings of Aristotle, who was residing at Athens during the last twenty years of the life of Plato, and who, having left it after his death (B.C. 347), returned thither twelve years later (B.C. 335); (2) by the allusion of Isocrates

(Oratio ad Philippum missa, p.84: To men tais paneguresin enochlein kai pros apantas legein tous sunprechontas en autais pros oudena legein estin, all omoios oi toioutoi ton logon (sc. speeches in the assembly) akuroi tugchanousin ontes tois nomois kai tais politeiais tais upo ton sophiston gegrammenais.) — writing 346 B.C., a year after the death of Plato, and probably not more than three or four years after the composition of the Laws — who speaks of the Laws and Republics written by philosophers (upo ton sophiston); (3) by the reference (Athen.) of the comic poet Alexis, a younger contemporary of Plato (fl. B.C 356-306), to the enactment about prices, which occurs in Laws xi., viz that the same goods should not be offered at two prices on the same day

(Ou gegone kreitton nomothetes tou plousiou
Aristonikou tithesi gar nuni nomon,
ton ichthuopolon ostis an polon tini
ichthun upotimesas apodot elattonos
es eipe times, eis to desmoterion
euthus apagesthai touton, ina dedoikotes
tes axias agaposin, e tes esperas
saprois apantas apopherosin oikade.

Meineke, Frag. Com. Graec.); (4) by the unanimous voice of later antiquity and the absence of any suspicion among ancient writers worth speaking of to the contrary; for it is not said of Philippus of Opus that he composed any part of the Laws, but only that he copied them out of the waxen tablets, and was thought by some to have written the Epinomis (Diog. Laert.) That the longest and one of the best writings bearing the name of Plato should be a forgery, even if its genuineness were unsupported by external testimony, would be a

singular phenomenon in ancient literature; and although the critical worth of the consensus of late writers is generally not to be compared with the express testimony of contemporaries, yet a somewhat greater value may be attributed to their consent in the present instance, because the admission of the Laws is combined with doubts about the *Epinomis*, a spurious writing, which is a kind of epilogue to the larger work probably of a much later date. This shows that the reception of the Laws was not altogether indiscriminating.

The suspicion which has attached to the Laws of Plato in the judgment of some modern writers appears to rest partly (1) on differences in the style and form of the work, and (2) on differences of thought and opinion which they observe in them. Their suspicion is increased by the fact that these differences are accompanied by resemblances as striking to passages in other Platonic writings. They are sensible of a want of point in the dialogue and a general inferiority in the ideas, plan, manners, and style. They miss the poetical flow, the dramatic verisimilitude, the life and variety of the characters, the dialectic subtlety, the Attic purity, the luminous order, the exquisite urbanity; instead of which they find tautology, obscurity, self-sufficiency, sermonizing, rhetorical declamation, pedantry, egotism, uncouth forms of sentences, and peculiarities in the use of words and idioms. They are unable to discover any unity in the patched, irregular structure. The speculative element both in government and education is superseded by a narrow economical or religious vein. The grace and cheerfulness of Athenian life have disappeared; and a spirit of moroseness and religious intolerance has taken their place. The charm of youth is no longer there; the mannerism of age makes itself unpleasantly felt. The connection is often imperfect; and there is a want of arrangement, exhibited especially in the enumeration of the laws towards the end of the work. The Laws are full of flaws and repetitions. The Greek is in places very ungrammatical and intractable. A cynical levity is displayed in some passages, and a tone of disappointment and lamentation over human things in others. The critics seem also to observe in them bad imitations of thoughts which are better expressed in Plato's other writings. Lastly, they wonder how the mind which conceived the *Republic* could have left the *Critias*,

Hermocrates, and Philosophus incomplete or unwritten, and have devoted the last years of life to the Laws.

The questions which have been thus indirectly suggested may be considered by us under five or six heads: I, the characters; II, the plan; III, the style; IV, the imitations of other writings of Plato; V, the more general relation of the Laws to the Republic and the other dialogues; and VI, to the existing Athenian and Spartan states.

I. Already in the *Philebus* the distinctive character of Socrates has disappeared; and in the *Timaeus*, *Sophist*, and *Statesman* his function of chief speaker is handed over to the Pythagorean philosopher *Timaeus*, and to the Eleatic Stranger, at whose feet he sits, and is silent. More and more Plato seems to have felt in his later writings that the character and method of Socrates were no longer suited to be the vehicle of his own philosophy. He is no longer interrogative but dogmatic; not 'a hesitating enquirer,' but one who speaks with the authority of a legislator. Even in the *Republic* we have seen that the argument which is carried on by Socrates in the old style with *Thrasymachus* in the first book, soon passes into the form of exposition. In the *Laws* he is nowhere mentioned. Yet so completely in the tradition of antiquity is Socrates identified with Plato, that in the criticism of the *Laws* which we find in the so-called *Politics* of Aristotle he is supposed by the writer still to be playing his part of the chief speaker (compare *Pol.*).

The *Laws* are discussed by three representatives of Athens, Crete, and Sparta. The Athenian, as might be expected, is the protagonist or chief speaker, while the second place is assigned to the Cretan, who, as one of the leaders of a new colony, has a special interest in the conversation. At least four-fifths of the answers are put into his mouth. The Spartan is every inch a soldier, a man of few words himself, better at deeds than words. The Athenian talks to the two others, although they are his equals in age, in the style of a master discoursing to his scholars; he frequently praises himself; he entertains a very poor opinion of the understanding of his companions. Certainly the boastfulness and rudeness of the *Laws* is the reverse of the refined irony and courtesy which characterize the earlier dialogues. We are no longer in such good company as in the *Phaedrus* and *Symposium*. Manners are lost sight of in the

earnestness of the speakers, and dogmatic assertions take the place of poetical fancies.

The scene is laid in Crete, and the conversation is held in the course of a walk from Cnosus to the cave and temple of Zeus, which takes place on one of the longest and hottest days of the year. The companions start at dawn, and arrive at the point in their conversation which terminates the fourth book, about noon. The God to whose temple they are going is the lawgiver of Crete, and this may be supposed to be the very cave at which he gave his oracles to Minos. But the externals of the scene, which are briefly and inartistically described, soon disappear, and we plunge abruptly into the subject of the dialogue. We are reminded by contrast of the higher art of the *Phaedrus*, in which the summer's day, and the cool stream, and the chirping of the grasshoppers, and the fragrance of the agnus castus, and the legends of the place are present to the imagination throughout the discourse.

The typical Athenian apologizes for the tendency of his countrymen 'to spin a long discussion out of slender materials,' and in a similar spirit the Lacedaemonian Megillus apologizes for the Spartan brevity (compare *Thucyd.*), acknowledging at the same time that there may be occasions when long discourses are necessary. The family of Megillus is the proxenus of Athens at Sparta; and he pays a beautiful compliment to the Athenian, significant of the character of the work, which, though borrowing many elements from Sparta, is also pervaded by an Athenian spirit. A good Athenian, he says, is more than ordinarily good, because he is inspired by nature and not manufactured by law. The love of listening which is attributed to the Timocrat in the *Republic* is also exhibited in him. The Athenian on his side has a pleasure in speaking to the Lacedaemonian of the struggle in which their ancestors were jointly engaged against the Persians. A connexion with Athens is likewise intimated by the Cretan Cleinias. He is the relative of Epimenides, whom, by an anachronism of a century, — perhaps arising as Zeller suggests (*Plat. Stud.*) out of a confusion of the visit of Epimenides and Diotima (*Symp.*), — he describes as coming to Athens, not after the attempt of Cylon, but ten years before the Persian war. The Cretan and Lacedaemonian hardly contribute at all to the argument

of which the Athenian is the expounder; they only supply information when asked about the institutions of their respective countries. A kind of simplicity or stupidity is ascribed to them. At first, they are dissatisfied with the free criticisms which the Athenian passes upon the laws of Minos and Lycurgus, but they acquiesce in his greater experience and knowledge of the world. They admit that there can be no objection to the enquiry; for in the spirit of the legislator himself, they are discussing his laws when there are no young men present to listen. They are unwilling to allow that the Spartan and Cretan lawgivers can have been mistaken in honouring courage as the first part of virtue, and are puzzled at hearing for the first time that 'Goods are only evil to the evil.' Several times they are on the point of quarrelling, and by an effort learn to restrain their natural feeling (compare Shakespeare, *Henry V*, act iii. sc. 2). In Book vii., the Lacedaemonian expresses a momentary irritation at the accusation which the Athenian brings against the Spartan institutions, of encouraging licentiousness in their women, but he is reminded by the Cretan that the permission to criticize them freely has been given, and cannot be retracted. His only criterion of truth is the authority of the Spartan lawgiver; he is 'interested,' in the novel speculations of the Athenian, but inclines to prefer the ordinances of Lycurgus.

The three interlocutors all of them speak in the character of old men, which forms a pleasant bond of union between them. They have the feelings of old age about youth, about the state, about human things in general. Nothing in life seems to be of much importance to them; they are spectators rather than actors, and men in general appear to the Athenian speaker to be the playthings of the Gods and of circumstances. Still they have a fatherly care of the young, and are deeply impressed by sentiments of religion. They would give confidence to the aged by an increasing use of wine, which, as they get older, is to unloose their tongues and make them sing. The prospect of the existence of the soul after death is constantly present to them; though they can hardly be said to have the cheerful hope and resignation which animates Socrates in the *Phaedo* or Cephalus in the *Republic*. Plato appears to be expressing his own feelings in remarks of this sort. For at the time of writing the first book of the *Laws* he was at least seventy-four years of age, if we suppose him to allude to

the victory of the Syracusans under Dionysius the Younger over the Locrians, which occurred in the year 356. Such a sadness was the natural effect of declining years and failing powers, which make men ask, 'After all, what profit is there in life?' They feel that their work is beginning to be over, and are ready to say, 'All the world is a stage;' or, in the actual words of Plato, 'Let us play as good plays as we can,' though 'we must be sometimes serious, which is not agreeable, but necessary.' These are feelings which have crossed the minds of reflective persons in all ages, and there is no reason to connect the *Laws* any more than other parts of Plato's writings with the very uncertain narrative of his life, or to imagine that this melancholy tone is attributable to disappointment at having failed to convert a Sicilian tyrant into a philosopher.

II. The plan of the *Laws* is more irregular and has less connexion than any other of the writings of Plato. As Aristotle says in the *Politics*, 'The greater part consists of laws'; in Books v, vi, xi, xii the dialogue almost entirely disappears. Large portions of them are rather the materials for a work than a finished composition which may rank with the other Platonic dialogues. To use his own image, 'Some stones are regularly inserted in the building; others are lying on the ground ready for use.' There is probably truth in the tradition that the *Laws* were not published until after the death of Plato. We can easily believe that he has left imperfections, which would have been removed if he had lived a few years longer. The arrangement might have been improved; the connexion of the argument might have been made plainer, and the sentences more accurately framed. Something also may be attributed to the feebleness of old age. Even a rough sketch of the *Phaedrus* or *Symposium* would have had a very different look. There is, however, an interest in possessing one writing of Plato which is in the process of creation.

We must endeavour to find a thread of order which will carry us through this comparative disorder. The first four books are described by Plato himself as the preface or preamble. Having arrived at the conclusion that each law should have a preamble, the lucky thought occurs to him at the end of the fourth book that the preceding discourse is the preamble of the whole. This preamble or introduction may be abridged as follows: —

The institutions of Sparta and Crete are admitted by the Lacedaemonian and Cretan to have one aim only: they were intended by the legislator to inspire courage in war. To this the Athenian objects that the true lawgiver should frame his laws with a view to all the virtues and not to one only. Better is he who has temperance as well as courage, than he who has courage only; better is he who is faithful in civil broils, than he who is a good soldier only. Better, too, is peace than war; the reconciliation than the defeat of an enemy. And he who would attain all virtue should be trained amid pleasures as well as pains. Hence there should be convivial intercourse among the citizens, and a man's temperance should be tested in his cups, as we test his courage amid dangers. He should have a fear of the right sort, as well as a courage of the right sort.

At the beginning of the second book the subject of pleasure leads to education, which in the early years of life is wholly a discipline imparted by the means of pleasure and pain. The discipline of pleasure is implanted chiefly by the practice of the song and the dance. Of these the forms should be fixed, and not allowed to depend on the fickle breath of the multitude. There will be choruses of boys, girls, and grown-up persons, and all will be heard repeating the same strain, that 'virtue is happiness.' One of them will give the law to the rest; this will be the chorus of aged minstrels, who will sing the most beautiful and the most useful of songs. They will require a little wine, to mellow the austerity of age, and make them amenable to the laws.

After having laid down as the first principle of politics, that peace, and not war, is the true aim of the legislator, and briefly discussed music and festive intercourse, at the commencement of the third book Plato makes a digression, in which he speaks of the origin of society. He describes, first of all, the family; secondly, the patriarchal stage, which is an aggregation of families; thirdly, the founding of regular cities, like Ilium; fourthly, the establishment of a military and political system, like that of Sparta, with which he identifies Argos and Messene, dating from the return of the Heraclidae. But the aims of states should be good, or else, like the prayer of Theseus, they may be ruinous to themselves. This was the case in two out of three of the Heracleid kingdoms. They did not understand that the powers

in a state should be balanced. The balance of powers saved Sparta, while the excess of tyranny in Persia and the excess of liberty at Athens have been the ruin of both...This discourse on politics is suddenly discovered to have an immediate practical use; for Cleinias the Cretan is about to give laws to a new colony.

At the beginning of the fourth book, after enquiring into the circumstances and situation of the colony, the Athenian proceeds to make further reflections. Chance, and God, and the skill of the legislator, all co-operate in the formation of states. And the most favourable condition for the foundation of a new one is when the government is in the hands of a virtuous tyrant who has the good fortune to be the contemporary of a great legislator. But a virtuous tyrant is a contradiction in terms; we can at best only hope to have magistrates who are the servants of reason and the law. This leads to the enquiry, what is to be the polity of our new state. And the answer is, that we are to fear God, and honour our parents, and to cultivate virtue and justice; these are to be our first principles. Laws must be definite, and we should create in the citizens a predisposition to obey them. The legislator will teach as well as command; and with this view he will prefix preambles to his principal laws.

The fifth book commences in a sort of dithyramb with another and higher preamble about the honour due to the soul, whence are deduced the duties of a man to his parents and his friends, to the suppliant and stranger. He should be true and just, free from envy and excess of all sorts, forgiving to crimes which are not incurable and are partly involuntary; and he should have a true taste. The noblest life has the greatest pleasures and the fewest pains...Having finished the preamble, and touched on some other preliminary considerations, we proceed to the Laws, beginning with the constitution of the state. This is not the best or ideal state, having all things common, but only the second-best, in which the land and houses are to be distributed among 5040 citizens divided into four classes. There is to be no gold or silver among them, and they are to have moderate wealth, and to respect number and numerical order in all things.

In the first part of the sixth book, Plato completes his sketch of the constitution by the appointment of officers. He explains the manner

in which guardians of the law, generals, priests, wardens of town and country, ministers of education, and other magistrates are to be appointed; and also in what way courts of appeal are to be constituted, and omissions in the law to be supplied. Next — and at this point the Laws strictly speaking begin — there follow enactments respecting marriage and the procreation of children, respecting property in slaves as well as of other kinds, respecting houses, married life, common tables for men and women. The question of age in marriage suggests the consideration of a similar question about the time for holding offices, and for military service, which had been previously omitted.

Resuming the order of the discussion, which was indicated in the previous book, from marriage and birth we proceed to education in the seventh book. Education is to begin at or rather before birth; to be continued for a time by mothers and nurses under the supervision of the state; finally, to comprehend music and gymnastics. Under music is included reading, writing, playing on the lyre, arithmetic, geometry, and a knowledge of astronomy sufficient to preserve the minds of the citizens from impiety in after-life. Gymnastics are to be practised chiefly with a view to their use in war. The discussion of education, which was lightly touched upon in Book ii, is here completed.

The eighth book contains regulations for civil life, beginning with festivals, games, and contests, military exercises and the like. On such occasions Plato seems to see young men and maidens meeting together, and hence he is led into discussing the relations of the sexes, the evil consequences which arise out of the indulgence of the passions, and the remedies for them. Then he proceeds to speak of agriculture, of arts and trades, of buying and selling, and of foreign commerce.

The remaining books of the Laws, ix-xii, are chiefly concerned with criminal offences. In the first class are placed offences against the Gods, especially sacrilege or robbery of temples: next follow offences against the state, — conspiracy, treason, theft. The mention of thefts suggests a distinction between voluntary and involuntary, curable and incurable offences. Proceeding to the greater crime of homicide, Plato distinguishes between mere homicide, manslaughter,

which is partly voluntary and partly involuntary, and murder, which arises from avarice, ambition, fear. He also enumerates murders by kindred, murders by slaves, wounds with or without intent to kill, wounds inflicted in anger, crimes of or against slaves, insults to parents. To these, various modes of purification or degrees of punishment are assigned, and the terrors of another world are also invoked against them.

At the beginning of Book x, all acts of violence, including sacrilege, are summed up in a single law. The law is preceded by an admonition, in which the offenders are informed that no one ever did an unholy act or said an unlawful word while he retained his belief in the existence of the Gods; but either he denied their existence, or he believed that they took no care of man, or that they might be turned from their course by sacrifices and prayers. The remainder of the book is devoted to the refutation of these three classes of unbelievers, and concludes with the means to be taken for their reformation, and the announcement of their punishments if they continue obstinate and impenitent.

The eleventh book is taken up with laws and with admonitions relating to individuals, which follow one another without any exact order. There are laws concerning deposits and the finding of treasure; concerning slaves and freedmen; concerning retail trade, bequests, divorces, enchantments, poisonings, magical arts, and the like. In the twelfth book the same subjects are continued. Laws are passed concerning violations of military discipline, concerning the high office of the examiners and their burial; concerning oaths and the violation of them, and the punishments of those who neglect their duties as citizens. Foreign travel is then discussed, and the permission to be accorded to citizens of journeying in foreign parts; the strangers who may come to visit the city are also spoken of, and the manner in which they are to be received. Laws are added respecting sureties, searches for property, right of possession by prescription, abduction of witnesses, theatrical competition, waging of private warfare, and bribery in offices. Rules are laid down respecting taxation, respecting economy in sacred rites, respecting judges, their duties and sentences, and respecting sepulchral places and ceremonies. Here the Laws end. Lastly, a Nocturnal Council is

instituted for the preservation of the state, consisting of older and younger members, who are to exhibit in their lives that virtue which is the basis of the state, to know the one in many, and to be educated in divine and every other kind of knowledge which will enable them to fulfil their office.

III. The style of the *Laws* differs in several important respects from that of the other dialogues of Plato: (1) in the want of character, power, and lively illustration; (2) in the frequency of mannerisms (compare Introduction to the *Philebus*); (3) in the form and rhythm of the sentences; (4) in the use of words. On the other hand, there are many passages (5) which are characterized by a sort of ethical grandeur; and (6) in which, perhaps, a greater insight into human nature, and a greater reach of practical wisdom is shown, than in any other of Plato's writings.

1. The discourse of the three old men is described by themselves as an old man's game of play. Yet there is little of the liveliness of a game in their mode of treating the subject. They do not throw the ball to and fro, but two out of the three are listeners to the third, who is constantly asserting his superior wisdom and opportunities of knowledge, and apologizing (not without reason) for his own want of clearness of speech. He will 'carry them over the stream;' he will answer for them when the argument is beyond their comprehension; he is afraid of their ignorance of mathematics, and thinks that gymnastic is likely to be more intelligible to them; — he has repeated his words several times, and yet they cannot understand him. The subject did not properly take the form of dialogue, and also the literary vigour of Plato had passed away. The old men speak as they might be expected to speak, and in this there is a touch of dramatic truth. Plato has given the *Laws* that form or want of form which indicates the failure of natural power. There is no regular plan — none of that consciousness of what has preceded and what is to follow, which makes a perfect style, — but there are several attempts at a plan; the argument is 'pulled up,' and frequent explanations are offered why a particular topic was introduced.

The fictions of the *Laws* have no longer the verisimilitude which is characteristic of the *Phaedrus* and the *Timaeus*, or even of the *Statesman*. We can hardly suppose that an educated Athenian would

have placed the visit of Epimenides to Athens ten years before the Persian war, or have imagined that a war with Messene prevented the Lacedaemonians from coming to the rescue of Hellas. The narrative of the origin of the Dorian institutions, which are said to have been due to a fear of the growing power of the Assyrians, is a plausible invention, which may be compared with the tale of the island of Atlantis and the poem of Solon, but is not accredited by similar arts of deception. The other statement that the Dorians were Achaeon exiles assembled by Dorieus, and the assertion that Troy was included in the Assyrian Empire, have some foundation (compare for the latter point, Diod. Sicul.). Nor is there anywhere in the Laws that lively enargeia, that vivid mise en scene, which is as characteristic of Plato as of some modern novelists.

The old men are afraid of the ridicule which ‘will fall on their heads more than enough,’ and they do not often indulge in a joke. In one of the few which occur, the book of the Laws, if left incomplete, is compared to a monster wandering about without a head. But we no longer breathe the atmosphere of humour which pervades the Symposium and the Euthydemus, in which we pass within a few sentences from the broadest Aristophanic joke to the subtlest refinement of wit and fancy; instead of this, in the Laws an impression of baldness and feebleness is often left upon our minds. Some of the most amusing descriptions, as, for example, of children roaring for the first three years of life; or of the Athenians walking into the country with fighting-cocks under their arms; or of the slave doctor who knocks about his patients finely; and the gentleman doctor who courteously persuades them; or of the way of keeping order in the theatre, ‘by a hint from a stick,’ are narrated with a commonplace gravity; but where we find this sort of dry humour we shall not be far wrong in thinking that the writer intended to make us laugh. The seriousness of age takes the place of the jollity of youth. Life should have holidays and festivals; yet we rebuke ourselves when we laugh, and take our pleasures sadly. The irony of the earlier dialogues, of which some traces occur in the tenth book, is replaced by a severity which hardly condescends to regard human things. ‘Let us say, if you please, that man is of some account, but I was speaking of him in comparison with God.’

The imagery and illustrations are poor in themselves, and are not assisted by the surrounding phraseology. We have seen how in the *Republic*, and in the earlier dialogues, figures of speech such as 'the wave,' 'the drone,' 'the chase,' 'the bride,' appear and reappear at intervals. Notes are struck which are repeated from time to time, as in a strain of music. There is none of this subtle art in the *Laws*. The illustrations, such as the two kinds of doctors, 'the three kinds of funerals,' the fear potion, the puppet, the painter leaving a successor to restore his picture, the 'person stopping to consider where three ways meet,' the 'old laws about water of which he will not divert the course,' can hardly be said to do much credit to Plato's invention. The citations from the poets have lost that fanciful character which gave them their charm in the earlier dialogues. We are tired of images taken from the arts of navigation, or archery, or weaving, or painting, or medicine, or music. Yet the comparisons of life to a tragedy, or of the working of mind to the revolution of the self-moved, or of the aged parent to the image of a God dwelling in the house, or the reflection that 'man is made to be the plaything of God, and that this rightly considered is the best of him,' have great beauty.

2. The clumsiness of the style is exhibited in frequent mannerisms and repetitions. The perfection of the Platonic dialogue consists in the accuracy with which the question and answer are fitted into one another, and the regularity with which the steps of the argument succeed one another. This finish of style is no longer discernible in the *Laws*. There is a want of variety in the answers; nothing can be drawn out of the respondents but 'Yes' or 'No,' 'True,' 'To be sure,' etc.; the insipid forms, 'What do you mean?' 'To what are you referring?' are constantly returning. Again and again the speaker is charged, or charges himself, with obscurity; and he repeats again and again that he will explain his views more clearly. The process of thought which should be latent in the mind of the writer appears on the surface. In several passages the Athenian praises himself in the most unblushing manner, very unlike the irony of the earlier dialogues, as when he declares that 'the laws are a divine work given by some inspiration of the Gods,' and that 'youth should commit them to memory instead of the compositions of the poets.' The *prosopopoeia* which is adopted by Plato in the *Protagoras* and other

dialogues is repeated until we grow weary of it. The legislator is always addressing the speakers or the youth of the state, and the speakers are constantly making addresses to the legislator. A tendency to a paradoxical manner of statement is also observable. 'We must have drinking,' 'we must have a virtuous tyrant' — this is too much for the duller wits of the Lacedaemonian and Cretan, who at first start back in surprise. More than in any other writing of Plato the tone is hortatory; the laws are sermons as well as laws; they are considered to have a religious sanction, and to rest upon a religious sentiment in the mind of the citizens. The words of the Athenian are attributed to the Lacedaemonian and Cretan, who are supposed to have made them their own, after the manner of the earlier dialogues. Resumptions of subjects which have been half disposed of in a previous passage constantly occur: the arrangement has neither the clearness of art nor the freedom of nature. Irrelevant remarks are made here and there, or illustrations used which are not properly fitted in. The dialogue is generally weak and laboured, and is in the later books fairly given up, apparently, because unsuited to the subject of the work. The long speeches or sermons of the Athenian, often extending over several pages, have never the grace and harmony which are exhibited in the earlier dialogues. For Plato is incapable of sustained composition; his genius is dramatic rather than oratorical; he can converse, but he cannot make a speech. Even the *Timaeus*, which is one of his most finished works, is full of abrupt transitions. There is the same kind of difference between the dialogue and the continuous discourse of Plato as between the narrative and speeches of Thucydides.

3. The perfection of style is variety in unity, freedom, ease, clearness, the power of saying anything, and of striking any note in the scale of human feelings without impropriety; and such is the divine gift of language possessed by Plato in the *Symposium* and *Phaedrus*. From this there are many fallings-off in the *Laws*: first, in the structure of the sentences, which are rhythmical and monotonous, — the formal and sophistical manner of the age is superseding the natural genius of Plato: secondly, many of them are of enormous length, and the latter end often forgets the beginning of them, — they seem never to have received the second thoughts of the author; either

the emphasis is wrongly placed, or there is a want of point in a clause; or an absolute case occurs which is not properly separated from the rest of the sentence; or words are aggregated in a manner which fails to show their relation to one another; or the connecting particles are omitted at the beginning of sentences; the uses of the relative and antecedent are more indistinct, the changes of person and number more frequent, examples of pleonasm, tautology, and periphrasis, antitheses of positive and negative, false emphasis, and other affectations, are more numerous than in the other writings of Plato; there is also a more common and sometimes unmeaning use of qualifying formulae, *os epos eipein*, *kata dunamin*, and of double expressions, *pante pantos*, *oudame oudamos*, *opos kai ope* — these are too numerous to be attributed to errors in the text; again, there is an over-curious adjustment of verb and participle, noun and epithet, and other artificial forms of cadence and expression take the place of natural variety: thirdly, the absence of metaphorical language is remarkable — the style is not devoid of ornament, but the ornament is of a debased rhetorical kind, patched on to instead of growing out of the subject; there is a great command of words, and a laboured use of them; forced attempts at metaphor occur in several passages, — e.g. *parocheteuein logois*; *ta men os tithemena ta d os paratithemena*; *oinos kolazomenos upo nephontos eterou theou*; the plays on the word *nomos* = *nou dianome*, *ode etara*: fourthly, there is a foolish extravagance of language in other passages,— ‘the swinish ignorance of arithmetic;’ ‘the justice and suitableness of the discourse on laws;’ over-emphasis; ‘best of Greeks,’ said of all the Greeks, and the like: fifthly, poor and insipid illustrations are also common: sixthly, we may observe an excessive use of climax and hyperbole, *aischron legein chre pros autous doulon te kai doulēn kai paida kai ei pos oion te olen ten oikian*: *dokei touto to epitedeuma kata phusin tas peri ta aphrodisia edonas ou monon anthropon alla kai therion diephtharkenai*.

4. The peculiarities in the use of words which occur in the Laws have been collected by Zeller (*Platonische Studien*) and Stallbaum (*Legg.*): first, in the use of nouns, such as *allodemia*, *apeniautesis*, *glukuthumia*, *diatheter*, *thrasuxenia*, *koros*, *megalonoia*, *paidourgia*: secondly, in the use of adjectives, such as *aistor*, *biodotes*,

echthodopos, eitheos, chronios, and of adverbs, such as aniditi, anatei, nepoivei: thirdly, in the use of verbs, such as athurein, aissein (aixeien eipein), euthemoneisthai, parapodizesthai, sebein, temelein, tetan. These words however, as Stallbaum remarks, are formed according to analogy, and nearly all of them have the support of some poetical or other authority.

Zeller and Stallbaum have also collected forms of words in the Laws, differing from the forms of the same words which occur in other places: e.g. blabos for blabe, abios for abiotos, acharistos for acharis, douleios for doulikos, paidelos for paidikos, exagrio for exagriaino, ileoumai for ilaskomai, and the Ionic word sophronistus, meaning 'correction.' Zeller has noted a fondness for substantives ending in -ma and -sis, such as georgema, diapauma, epithumema, zemiona, komodema, omilema; blapsis, loidoresis, paraggelsis, and others; also a use of substantives in the plural, which are commonly found only in the singular, maniai, atheotetes, phthonoi, phoboi, phuseis; also, a peculiar use of prepositions in composition, as in eneirgo, apoblpto, dianomotheteo, dieiretai, dieulabeisthai, and other words; also, a frequent occurrence of the Ionic datives plural in -aisi and -oisi, perhaps used for the sake of giving an ancient or archaic effect.

To these peculiarities of words he has added a list of peculiar expressions and constructions. Among the most characteristic are the following: athuta pallakon spermata; amorphoi edrai; osa axiomata pros archontas; oi kata polin kairoi; muthos, used in several places of 'the discourse about laws;' and connected with this the frequent use of paramuthion and paramutheisthai in the general sense of 'address,' 'addressing'; aimulos eros; ataphoi praxeis; muthos akephalos; ethos euthuporon. He remarks also on the frequent employment of the abstract for the concrete; e.g. uperesia for uperetai, phugai for phugades, mechanai in the sense of 'contrivers,' douleia for douloi, basileiai for basileis, mainomena kedeumata for ganaika mainomenen; e chreia ton paidon in the sense of 'indigent children,' and paidon ikanotes; to ethos tes apeirias for e eiothuia apeiria; kupariton upse te kai kalle thaumasias for kuparittoi mala upselai kai kalai. He further notes some curious uses of the genitive case, e.g. philias omologiai, maniai orges, laimargiai edones, cheimonon

anupodesiai, anosioi plegon tolmai; and of the dative, omiliai echthrois, nomothesiai, anosioi plegon tolmai; and of the dative omiliai echthrois, nomothesiai epitropois; and also some rather uncommon periphrases, thremmata Neilou, xuggennetor teknon for alochos, Mouses lexis for poiesis, zographon paides, anthropon spermata and the like; the fondness for particles of limitation, especially tis and ge, sun tisi charisi, tois ge dunamenois and the like; the pleonastic use of tanun, of os, of os eros eipein, of ekastote; and the periphrastic use of the preposition peri. Lastly, he observes the tendency to hyperbata or transpositions of words, and to rhythmical uniformity as well as grammatical irregularity in the structure of the sentences.

For nearly all the expressions which are adduced by Zeller as arguments against the genuineness of the Laws, Stallbaum finds some sort of authority. There is no real ground for doubting that the work was written by Plato, merely because several words occur in it which are not found in his other writings. An imitator may preserve the usual phraseology of a writer better than he would himself. But, on the other hand, the fact that authorities may be quoted in support of most of these uses of words, does not show that the diction is not peculiar. Several of them seem to be poetical or dialectical, and exhibit an attempt to enlarge the limits of Greek prose by the introduction of Homeric and tragic expressions. Most of them do not appear to have retained any hold on the later language of Greece. Like several experiments in language of the writers of the Elizabethan age, they were afterwards lost; and though occasionally found in Plutarch and imitators of Plato, they have not been accepted by Aristotle or passed into the common dialect of Greece.

5. Unequal as the Laws are in style, they contain a few passages which are very grand and noble. For example, the address to the poets: 'Best of strangers, we also are poets of the best and noblest tragedy; for our whole state is an imitation of the best and noblest life, which we affirm to be indeed the very truth of tragedy.' Or again, the sight of young men and maidens in friendly intercourse with one another, suggesting the dangers to which youth is liable from the violence of passion; or the eloquent denunciation of unnatural lusts in the same passage; or the charming thought that the

best legislator ‘orders war for the sake of peace and not peace for the sake of war;’ or the pleasant allusion, ‘O Athenian — inhabitant of Attica, I will not say, for you seem to me worthy to be named after the Goddess Athene because you go back to first principles;’ or the pithy saying, ‘Many a victory has been and will be suicidal to the victors, but education is never suicidal;’ or the fine expression that ‘the walls of a city should be allowed to sleep in the earth, and that we should not attempt to disinter them;’ or the remark that ‘God is the measure of all things in a sense far higher than any man can be;’ or that ‘a man should be from the first a partaker of the truth, that he may live a true man as long as possible;’ or the principle repeatedly laid down, that ‘the sins of the fathers are not to be visited on the children;’ or the description of the funeral rites of those priestly sages who depart in innocence; or the noble sentiment, that we should do more justice to slaves than to equals; or the curious observation, founded, perhaps, on his own experience, that there are a few ‘divine men in every state however corrupt, whose conversation is of inestimable value;’ or the acute remark, that public opinion is to be respected, because the judgments of mankind about virtue are better than their practice; or the deep religious and also modern feeling which pervades the tenth book (whatever may be thought of the arguments); the sense of the duty of living as a part of a whole, and in dependence on the will of God, who takes care of the least things as well as the greatest; and the picture of parents praying for their children — not as we may say, slightly altering the words of Plato, as if there were no truth or reality in the Gentile religions, but as if there were the greatest — are very striking to us. We must remember that the Laws, unlike the Republic, do not exhibit an ideal state, but are supposed to be on the level of human motives and feelings; they are also on the level of the popular religion, though elevated and purified: hence there is an attempt made to show that the pleasant is also just. But, on the other hand, the priority of the soul to the body, and of God to the soul, is always insisted upon as the true incentive to virtue; especially with great force and eloquence at the commencement of Book v. And the work of legislation is carried back to the first principles of morals.

6. No other writing of Plato shows so profound an insight into the

world and into human nature as the Laws. That ‘cities will never cease from ill until they are better governed,’ is the text of the Laws as well as of the Statesman and Republic. The principle that the balance of power preserves states; the reflection that no one ever passed his whole life in disbelief of the Gods; the remark that the characters of men are best seen in convivial intercourse; the observation that the people must be allowed to share not only in the government, but in the administration of justice; the desire to make laws, not with a view to courage only, but to all virtue; the clear perception that education begins with birth, or even, as he would say, before birth; the attempt to purify religion; the modern reflections, that punishment is not vindictive, and that limits must be set to the power of bequest; the impossibility of undeceiving the victims of quacks and jugglers; the provision for water, and for other requirements of health, and for concealing the bodies of the dead with as little hurt as possible to the living; above all, perhaps, the distinct consciousness that under the actual circumstances of mankind the ideal cannot be carried out, and yet may be a guiding principle — will appear to us, if we remember that we are still in the dawn of politics, to show a great depth of political wisdom.

IV. The Laws of Plato contain numerous passages which closely resemble other passages in his writings. And at first sight a suspicion arises that the repetition shows the unequal hand of the imitator. For why should a writer say over again, in a more imperfect form, what he had already said in his most finished style and manner? And yet it may be urged on the other side that an author whose original powers are beginning to decay will be very liable to repeat himself, as in conversation, so in books. He may have forgotten what he had written before; he may be unconscious of the decline of his own powers. Hence arises a question of great interest, bearing on the genuineness of ancient writers. Is there any criterion by which we can distinguish the genuine resemblance from the spurious, or, in other words, the repetition of a thought or passage by an author himself from the appropriation of it by another? The question has, perhaps, never been fully discussed; and, though a real one, does not admit of a precise answer. A few general considerations on the subject may be offered: —

(a) Is the difference such as might be expected to arise at different times of life or under different circumstances? — There would be nothing surprising in a writer, as he grew older, losing something of his own originality, and falling more and more under the spirit of his age. ‘What a genius I had when I wrote that book!’ was the pathetic exclamation of a famous English author, when in old age he chanced to take up one of his early works. There would be nothing surprising again in his losing somewhat of his powers of expression, and becoming less capable of framing language into a harmonious whole. There would also be a strong presumption that if the variation of style was uniform, it was attributable to some natural cause, and not to the arts of the imitator. The inferiority might be the result of feebleness and of want of activity of mind. But the natural weakness of a great author would commonly be different from the artificial weakness of an imitator; it would be continuous and uniform. The latter would be apt to fill his work with irregular patches, sometimes taken verbally from the writings of the author whom he personated, but rarely acquiring his spirit. His imitation would be obvious, irregular, superficial. The patches of purple would be easily detected among his threadbare and tattered garments. He would rarely take the pains to put the same thought into other words. There were many forgeries in English literature which attained a considerable degree of success 50 or 100 years ago; but it is doubtful whether attempts such as these could now escape detection, if there were any writings of the same author or of the same age to be compared with them. And ancient forgers were much less skilful than modern; they were far from being masters in the art of deception, and had rarely any motive for being so.

(b) But, secondly, the imitator will commonly be least capable of understanding or imitating that part of a great writer which is most characteristic of him. In every man’s writings there is something like himself and unlike others, which gives individuality. To appreciate this latent quality would require a kindred mind, and minute study and observation. There are a class of similarities which may be called undesigned coincidences, which are so remote as to be incapable of being borrowed from one another, and yet, when they are compared, find a natural explanation in their being the work of the same mind.

The imitator might copy the turns of style — he might repeat images or illustrations, but he could not enter into the inner circle of Platonic philosophy. He would understand that part of it which became popular in the next generation, as for example, the doctrine of ideas or of numbers: he might approve of communism. But the higher flights of Plato about the science of dialectic, or the unity of virtue, or a person who is above the law, would be unintelligible to him.

(c) The argument from imitation assumes a different character when the supposed imitations are associated with other passages having the impress of original genius. The strength of the argument from undesigned coincidences of style is much increased when they are found side by side with thoughts and expressions which can only have come from a great original writer. The great excellence, not only of the whole, but even of the parts of writings, is a strong proof of their genuineness — for although the great writer may fall below, the forger or imitator cannot rise much above himself. Whether we can attribute the worst parts of a work to a forger and the best to a great writer, — as for example, in the case of some of Shakespeare's plays, — depends upon the probability that they have been interpolated, or have been the joint work of two writers; and this can only be established either by express evidence or by a comparison of other writings of the same class. If the interpolation or double authorship of Greek writings in the time of Plato could be shown to be common, then a question, perhaps insoluble, would arise, not whether the whole, but whether parts of the Platonic dialogues are genuine, and, if parts only, which parts. Hebrew prophecies and Homeric poems and Laws of Manu may have grown together in early times, but there is no reason to think that any of the dialogues of Plato is the result of a similar process of accumulation. It is therefore rash to say with Oncken (*Die Staatslehre des Aristoteles*) that the form in which Aristotle knew the Laws of Plato must have been different from that in which they have come down to us.

It must be admitted that these principles are difficult of application. Yet a criticism may be worth making which rests only on probabilities or impressions. Great disputes will arise about the merits of different passages, about what is truly characteristic and original or trivial and borrowed. Many have thought the Laws to be

one of the greatest of Platonic writings, while in the judgment of Mr. Grote they hardly rise above the level of the forged epistles. The manner in which a writer would or would not have written at a particular time of life must be acknowledged to be a matter of conjecture. But enough has been said to show that similarities of a certain kind, whether criticism is able to detect them or not, may be such as must be attributed to an original writer, and not to a mere imitator.

(d) Applying these principles to the case of the *Laws*, we have now to point out that they contain the class of refined or unconscious similarities which are indicative of genuineness. The parallelisms are like the repetitions of favourite thoughts into which every one is apt to fall unawares in conversation or in writing. They are found in a work which contains many beautiful and remarkable passages. We may therefore begin by claiming this presumption in their favour. Such undesigned coincidences, as we may venture to call them, are the following. The conception of justice as the union of temperance, wisdom, courage (*Laws*; *Republic*): the latent idea of dialectic implied in the notion of dividing laws after the kinds of virtue (*Laws*); the approval of the method of looking at one idea gathered from many things, 'than which a truer was never discovered by any man' (compare *Republic*): or again the description of the *Laws* as parents (*Laws*; *Republic*): the assumption that religion has been already settled by the oracle of Delphi (*Laws*; *Republic*), to which an appeal is also made in special cases (*Laws*): the notion of the battle with self, a paradox for which Plato in a manner apologizes both in the *Laws* and the *Republic*: the remark (*Laws*) that just men, even when they are deformed in body, may still be perfectly beautiful in respect of the excellent justice of their minds (compare *Republic*): the argument that ideals are none the worse because they cannot be carried out (*Laws*; *Republic*): the near approach to the idea of good in 'the principle which is common to all the four virtues,' a truth which the guardians must be compelled to recognize (*Laws*; compare *Republic*): or again the recognition by reason of the right pleasure and pain, which had previously been matter of habit (*Laws*; *Republic*): or the blasphemy of saying that the excellency of music is to give pleasure (*Laws*; *Republic*): again the story of the Sidonian

Cadmus (Laws), which is a variation of the Phoenician tale of the earth-born men (Republic): the comparison of philosophy to a yelping she-dog, both in the Republic and in the Laws: the remark that no man can practise two trades (Laws; Republic): or the advantage of the middle condition (Laws; Republic): the tendency to speak of principles as moulds or forms; compare the ekmageia of song (Laws), and the tupoi of religion (Republic): or the remark (Laws) that ‘the relaxation of justice makes many cities out of one,’ which may be compared with the Republic: or the description of lawlessness ‘creeping in little by little in the fashions of music and overturning all things,’ — to us a paradox, but to Plato’s mind a fixed idea, which is found in the Laws as well as in the Republic: or the figure of the parts of the human body under which the parts of the state are described (Laws; Republic): the apology for delay and diffuseness, which occurs not unfrequently in the Republic, is carried to an excess in the Laws (compare Theaet.): the remarkable thought (Laws) that the soul of the sun is better than the sun, agrees with the relation in which the idea of good stands to the sun in the Republic, and with the substitution of mind for the idea of good in the Philebus: the passage about the tragic poets (Laws) agrees generally with the treatment of them in the Republic, but is more finely conceived, and worked out in a nobler spirit. Some lesser similarities of thought and manner should not be omitted, such as the mention of the thirty years’ old students in the Republic, and the fifty years’ old choristers in the Laws; or the making of the citizens out of wax (Laws) compared with the other image (Republic); or the number of the tyrant (729), which is NEARLY equal with the number of days and nights in the year (730), compared with the ‘slight correction’ of the sacred number 5040, which is divisible by all the numbers from 1 to 12 except 11, and divisible by 11, if two families be deducted; or once more, we may compare the ignorance of solid geometry of which he complains in the Republic and the puzzle about fractions with the difficulty in the Laws about commensurable and incommensurable quantities — and the malicious emphasis on the word gunaikeios (Laws) with the use of the same word (Republic). These and similar passages tend to show that the author of the Republic is also the author of the Laws. They are echoes of the same

voice, expressions of the same mind, coincidences too subtle to have been invented by the ingenuity of any imitator. The force of the argument is increased, if we remember that no passage in the *Laws* is exactly copied, — nowhere do five or six words occur together which are found together elsewhere in Plato's writings.

In other dialogues of Plato, as well as in the *Republic*, there are to be found parallels with the *Laws*. Such resemblances, as we might expect, occur chiefly (but not exclusively) in the dialogues which, on other grounds, we may suppose to be of later date. The punishment of evil is to be like evil men (*Laws*), as he says also in the *Theaetetus*. Compare again the dependence of tragedy and comedy on one another, of which he gives the reason in the *Laws*— 'For serious things cannot be understood without laughable, nor opposites at all without opposites, if a man is really to have intelligence of either'; here he puts forward the principle which is the groundwork of the thesis of Socrates in the *Symposium*, 'that the genius of tragedy is the same as that of comedy, and that the writer of comedy ought to be a writer of tragedy also.' There is a truth and right which is above Law (*Laws*), as we learn also from the *Statesman*. That men are the possession of the Gods (*Laws*), is a reflection which likewise occurs in the *Phaedo*. The remark, whether serious or ironical (*Laws*), that 'the sons of the Gods naturally believed in the Gods, because they had the means of knowing about them,' is found in the *Timaeus*. The reign of Cronos, who is the divine ruler (*Laws*), is a reminiscence of the *Statesman*. It is remarkable that in the *Sophist* and *Statesman* (*Soph.*), Plato, speaking in the character of the Eleatic Stranger, has already put on the old man. The madness of the poets, again, is a favourite notion of Plato's, which occurs also in the *Laws*, as well as in the *Phaedrus*, *Ion*, and elsewhere. There are traces in the *Laws* of the same desire to base speculation upon history which we find in the *Critias*. Once more, there is a striking parallel with the paradox of the *Gorgias*, that 'if you do evil, it is better to be punished than to be unpunished,' in the *Laws*: 'To live having all goods without justice and virtue is the greatest of evils if life be immortal, but not so great if the bad man lives but a short time.'

The point to be considered is whether these are the kind of parallels which would be the work of an imitator. Would a forger

have had the wit to select the most peculiar and characteristic thoughts of Plato; would he have caught the spirit of his philosophy; would he, instead of openly borrowing, have half concealed his favourite ideas; would he have formed them into a whole such as the Laws; would he have given another the credit which he might have obtained for himself; would he have remembered and made use of other passages of the Platonic writings and have never deviated into the phraseology of them? Without pressing such arguments as absolutely certain, we must acknowledge that such a comparison affords a new ground of real weight for believing the Laws to be a genuine writing of Plato.

V. The relation of the Republic to the Laws is clearly set forth by Plato in the Laws. The Republic is the best state, the Laws is the best possible under the existing conditions of the Greek world. The Republic is the ideal, in which no man calls anything his own, which may or may not have existed in some remote clime, under the rule of some God, or son of a God (who can say?), but is, at any rate, the pattern of all other states and the exemplar of human life. The Laws distinctly acknowledge what the Republic partly admits, that the ideal is inimitable by us, but that we should 'lift up our eyes to the heavens' and try to regulate our lives according to the divine image. The citizens are no longer to have wives and children in common, and are no longer to be under the government of philosophers. But the spirit of communism or communion is to continue among them, though reverence for the sacredness of the family, and respect of children for parents, not promiscuous hymeneals, are now the foundation of the state; the sexes are to be as nearly on an equality as possible; they are to meet at common tables, and to share warlike pursuits (if the women will consent), and to have a common education. The legislator has taken the place of the philosopher, but a council of elders is retained, who are to fulfil the duties of the legislator when he has passed out of life. The addition of younger persons to this council by co-optation is an improvement on the governing body of the Republic. The scheme of education in the Laws is of a far lower kind than that which Plato had conceived in the Republic. There he would have his rulers trained in all knowledge meeting in the idea of good, of which the different

branches of mathematical science are but the hand-maidens or ministers; here he treats chiefly of popular education, stopping short with the preliminary sciences, — these are to be studied partly with a view to their practical usefulness, which in the Republic he holds cheap, and even more with a view to avoiding impiety, of which in the Republic he says nothing; he touches very lightly on dialectic, which is still to be retained for the rulers. Yet in the Laws there remain traces of the old educational ideas. He is still for banishing the poets; and as he finds the works of prose writers equally dangerous, he would substitute for them the study of his own laws. He insists strongly on the importance of mathematics as an educational instrument. He is no more reconciled to the Greek mythology than in the Republic, though he would rather say nothing about it out of a reverence for antiquity; and he is equally willing to have recourse to fictions, if they have a moral tendency. His thoughts recur to a golden age in which the sanctity of oaths was respected and in which men living nearer the Gods were more disposed to believe in them; but we must legislate for the world as it is, now that the old beliefs have passed away. Though he is no longer fired with dialectical enthusiasm, he would compel the guardians to ‘look at one idea gathered from many things,’ and to ‘perceive the principle which is the same in all the four virtues.’ He still recognizes the enormous influence of music, in which every youth is to be trained for three years; and he seems to attribute the existing degeneracy of the Athenian state and the laxity of morals partly to musical innovation, manifested in the unnatural divorce of the instrument and the voice, of the rhythm from the words, and partly to the influence of the mob who ruled at the theatres. He assimilates the education of the two sexes, as far as possible, both in music and gymnastic, and, as in the Republic, he would give to gymnastic a purely military character. In marriage, his object is still to produce the finest children for the state. As in the Statesman, he would unite in wedlock dissimilar natures — the passionate with the dull, the courageous with the gentle. And the virtuous tyrant of the Statesman, who has no place in the Republic, again appears. In this, as in all his writings, he has the strongest sense of the degeneracy and incapacity of the rulers of his own time.

In the *Laws*, the philosophers, if not banished, like the poets, are at least ignored; and religion takes the place of philosophy in the regulation of human life. It must however be remembered that the religion of Plato is co-extensive with morality, and is that purified religion and mythology of which he speaks in the second book of the *Republic*. There is no real discrepancy in the two works. In a practical treatise, he speaks of religion rather than of philosophy; just as he appears to identify virtue with pleasure, and rather seeks to find the common element of the virtues than to maintain his old paradoxical theses that they are one, or that they are identical with knowledge. The dialectic and the idea of good, which even Glaucon in the *Republic* could not understand, would be out of place in a less ideal work. There may also be a change in his own mind, the purely intellectual aspect of philosophy having a diminishing interest to him in his old age.

Some confusion occurs in the passage in which Plato speaks of the *Republic*, occasioned by his reference to a third state, which he proposes (D.V.) hereafter to expound. Like many other thoughts in the *Laws*, the allusion is obscure from not being worked out. Aristotle (*Polit.*) speaks of a state which is neither the best absolutely, nor the best under existing conditions, but an imaginary state, inferior to either, destitute, as he supposes, of the necessities of life — apparently such a beginning of primitive society as is described in *Laws* iii. But it is not clear that by this the third state of Plato is intended. It is possible that Plato may have meant by his third state an historical sketch, bearing the same relation to the *Laws* which the unfinished *Critias* would have borne to the *Republic*; or he may, perhaps, have intended to describe a state more nearly approximating than the *Laws* to existing Greek states.

The *Statesman* is a mere fragment when compared with the *Laws*, yet combining a second interest of dialectic as well as politics, which is wanting in the larger work. Several points of similarity and contrast may be observed between them. In some respects the *Statesman* is even more ideal than the *Republic*, looking back to a former state of paradisiacal life, in which the Gods ruled over mankind, as the *Republic* looks forward to a coming kingdom of philosophers. Of this kingdom of Cronos there is also mention in the

Laws. Again, in the Statesman, the Eleatic Stranger rises above law to the conception of the living voice of the lawgiver, who is able to provide for individual cases. A similar thought is repeated in the Laws: 'If in the order of nature, and by divine destiny, a man were able to apprehend the truth about these things, he would have no need of laws to rule over him; for there is no law or order above knowledge, nor can mind without impiety be deemed the subject or slave of any, but rather the lord of all.' The union of opposite natures, who form the warp and the woof of the political web, is a favourite thought which occurs in both dialogues (Laws; Statesman).

The Laws are confessedly a Second-best, an inferior Ideal, to which Plato has recourse, when he finds that the city of Philosophers is no longer 'within the horizon of practical politics.' But it is curious to observe that the higher Ideal is always returning (compare Arist. Polit.), and that he is not much nearer the actual fact, nor more on the level of ordinary life in the Laws than in the Republic. It is also interesting to remark that the new Ideal is always falling away, and that he hardly supposes the one to be more capable of being realized than the other. Human beings are troublesome to manage; and the legislator cannot adapt his enactments to the infinite variety of circumstances; after all he must leave the administration of them to his successors; and though he would have liked to make them as permanent as they are in Egypt, he cannot escape from the necessity of change. At length Plato is obliged to institute a Nocturnal Council which is supposed to retain the mind of the legislator, and of which some of the members are even supposed to go abroad and inspect the institutions of foreign countries, as a foundation for changes in their own. The spirit of such changes, though avoiding the extravagance of a popular assembly, being only so much change as the conservative temper of old members is likely to allow, is nevertheless inconsistent with the fixedness of Egypt which Plato wishes to impress upon Hellenic institutions. He is inconsistent with himself as the truth begins to dawn upon him that 'in the execution things for the most part fall short of our conception of them' (Republic).

And is not this true of ideals of government in general? We are always disappointed in them. Nothing great can be accomplished in the short space of human life; wherefore also we look forward to

another (Republic). As we grow old, we are sensible that we have no power actively to pursue our ideals any longer. We have had our opportunity and do not aspire to be more than men: we have received our 'wages and are going home.' Neither do we despair of the future of mankind, because we have been able to do so little in comparison of the whole. We look in vain for consistency either in men or things. But we have seen enough of improvement in our own time to justify us in the belief that the world is worth working for and that a good man's life is not thrown away. Such reflections may help us to bring home to ourselves by inward sympathy the language of Plato in the *Laws*, and to combine into something like a whole his various and at first sight inconsistent utterances.

VI. The Republic may be described as the Spartan constitution appended to a government of philosophers. But in the *Laws* an Athenian element is also introduced. Many enactments are taken from the Athenian; the four classes are borrowed from the constitution of Cleisthenes, which Plato regards as the best form of Athenian government, and the guardians of the law bear a certain resemblance to the archons. In the constitution of the *Laws* nearly all officers are elected by a vote more or less popular and by lot. But the assembly only exists for the purposes of election, and has no legislative or executive powers. The Nocturnal Council, which is the highest body in the state, has several of the functions of the ancient Athenian Areopagus, after which it appears to be modelled. Life is to wear, as at Athens, a joyous and festive look; there are to be Bacchic choruses, and men of mature age are encouraged in moderate potations. On the other hand, the common meals, the public education, the *crypteia* are borrowed from Sparta and not from Athens, and the superintendence of private life, which was to be practised by the governors, has also its prototype in Sparta. The extravagant dislike which Plato shows both to a naval power and to extreme democracy is the reverse of Athenian.

The best-governed Hellenic states traced the origin of their laws to individual lawgivers. These were real persons, though we are uncertain how far they originated or only modified the institutions which are ascribed to them. But the lawgiver, though not a myth, was a fixed idea in the mind of the Greek, — as fixed as the Trojan war

or the earth-born Cadmus. 'This was what Solon meant or said' — was the form in which the Athenian expressed his own conception of right and justice, or argued a disputed point of law. And the constant reference in the Laws of Plato to the lawgiver is altogether in accordance with Greek modes of thinking and speaking.

There is also, as in the Republic, a Pythagorean element. The highest branch of education is arithmetic; to know the order of the heavenly bodies, and to reconcile the apparent contradiction of their movements, is an important part of religion; the lives of the citizens are to have a common measure, as also their vessels and coins; the great blessing of the state is the number 5040. Plato is deeply impressed by the antiquity of Egypt, and the unchangeableness of her ancient forms of song and dance. And he is also struck by the progress which the Egyptians had made in the mathematical sciences — in comparison of them the Greeks appeared to him to be little better than swine. Yet he censures the Egyptian meanness and inhospitality to strangers. He has traced the growth of states from their rude beginnings in a philosophical spirit; but of any life or growth of the Hellenic world in future ages he is silent. He has made the reflection that past time is the maker of states (Book iii.); but he does not argue from the past to the future, that the process is always going on, or that the institutions of nations are relative to their stage of civilization. If he could have stamped indelibly upon Hellenic states the will of the legislator, he would have been satisfied. The utmost which he expects of future generations is that they should supply the omissions, or correct the errors which younger statesmen detect in his enactments. When institutions have been once subjected to this process of criticism, he would have them fixed for ever.

THE PREAMBLE.

BOOK I. Strangers, let me ask a question of you — Was a God or a man the author of your laws? 'A God, Stranger. In Crete, Zeus is said to have been the author of them; in Sparta, as Megillus will tell you, Apollo.' You Cretans believe, as Homer says, that Minos went every ninth year to converse with his Olympian sire, and gave you laws which he brought from him. 'Yes; and there was Rhadamanthus, his brother, who is reputed among us to have been a most righteous judge.' That is a reputation worthy of the son of Zeus. And as you

and Megillus have been trained under these laws, I may ask you to give me an account of them. We can talk about them in our walk from Cnosus to the cave and temple of Zeus. I am told that the distance is considerable, but probably there are shady places under the trees, where, being no longer young, we may often rest and converse. 'Yes, Stranger, a little onward there are beautiful groves of cypresses, and green meadows in which we may repose.'

My first question is, Why has the law ordained that you should have common meals, and practise gymnastics, and bear arms? 'My answer is, that all our institutions are of a military character. We lead the life of the camp even in time of peace, keeping up the organization of an army, and having meals in common; and as our country, owing to its ruggedness, is ill-suited for heavy-armed cavalry or infantry, our soldiers are archers, equipped with bows and arrows. The legislator was under the idea that war was the natural state of all mankind, and that peace is only a pretence; he thought that no possessions had any value which were not secured against enemies.' And do you think that superiority in war is the proper aim of government? 'Certainly I do, and my Spartan friend will agree with me.' And are there wars, not only of state against state, but of village against village, of family against family, of individual against individual? 'Yes.' And is a man his own enemy? 'There you come to first principles, like a true votary of the goddess Athene; and this is all the better, for you will the sooner recognize the truth of what I am saying — that all men everywhere are the enemies of all, and each individual of every other and of himself; and, further, that there is a victory and defeat — the best and the worst — which each man sustains, not at the hands of another, but of himself.' And does this extend to states and villages as well as to individuals? 'Certainly; there is a better in them which conquers or is conquered by the worse.' Whether the worse ever really conquers the better, is a question which may be left for the present; but your meaning is, that bad citizens do sometimes overcome the good, and that the state is then conquered by herself, and that when they are defeated the state is victorious over herself. Or, again, in a family there may be several brothers, and the bad may be a majority; and when the bad majority conquer the good minority, the family are worse than themselves.

The use of the terms 'better or worse than himself or themselves' may be doubtful, but about the thing meant there can be no dispute. 'Very true.' Such a struggle might be determined by a judge. And which will be the better judge — he who destroys the worse and lets the better rule, or he who lets the better rule and makes the others voluntarily obey; or, thirdly, he who destroys no one, but reconciles the two parties? 'The last, clearly.' But the object of such a judge or legislator would not be war. 'True.' And as there are two kinds of war, one without and one within a state, of which the internal is by far the worse, will not the legislator chiefly direct his attention to this latter? He will reconcile the contending factions, and unite them against their external enemies. 'Certainly.' Every legislator will aim at the greatest good, and the greatest good is not victory in war, whether civil or external, but mutual peace and good-will, as in the body health is preferable to the purgation of disease. He who makes war his object instead of peace, or who pursues war except for the sake of peace, is not a true statesman. 'And yet, Stranger, the laws both of Crete and Sparta aim entirely at war.' Perhaps so; but do not let us quarrel about your legislators — let us be gentle; they were in earnest quite as much as we are, and we must try to discover their meaning. The poet Tyrtaeus (you know his poems in Crete, and my Lacedaemonian friend is only too familiar with them) — he was an Athenian by birth, and a Spartan citizen:— 'Well,' he says, 'I sing not, I care not about any man, however rich or happy, unless he is brave in war.' Now I should like, in the name of us all, to ask the poet a question. Oh Tyrtaeus, I would say to him, we agree with you in praising those who excel in war, but which kind of war do you mean? — that dreadful war which is termed civil, or the milder sort which is waged against foreign enemies? You say that you abominate 'those who are not eager to taste their enemies' blood,' and you seem to mean chiefly their foreign enemies. 'Certainly he does.' But we contend that there are men better far than your heroes, Tyrtaeus, concerning whom another poet, Theognis the Sicilian, says that 'in a civil broil they are worth their weight in gold and silver.' For in a civil war, not only courage, but justice and temperance and wisdom are required, and all virtue is better than a part. The mercenary soldier is ready to die at his post; yet he is commonly a violent,

senseless creature. And the legislator, whether inspired or uninspired, will make laws with a view to the highest virtue; and this is not brute courage, but loyalty in the hour of danger. The virtue of Tyrtaeus, although needful enough in his own time, is really of a fourth-rate description. 'You are degrading our legislator to a very low level.' Nay, we degrade not him, but ourselves, if we believe that the laws of Lycurgus and Minos had a view to war only. A divine lawgiver would have had regard to all the different kinds of virtue, and have arranged his laws in corresponding classes, and not in the modern fashion, which only makes them after the want of them is felt, — about inheritances and heiresses and assaults, and the like. As you truly said, virtue is the business of the legislator; but you went wrong when you referred all legislation to a part of virtue, and to an inferior part. For the object of laws, whether the Cretan or any other, is to make men happy. Now happiness or good is of two kinds — there are divine and there are human goods. He who has the divine has the human added to him; but he who has lost the greater is deprived of both. The lesser goods are health, beauty, strength, and, lastly, wealth; not the blind God, Pluto, but one who has eyes to see and follow wisdom. For mind or wisdom is the most divine of all goods; and next comes temperance, and justice springs from the union of wisdom and temperance with courage, which is the fourth or last. These four precede other goods, and the legislator will arrange all his ordinances accordingly, the human going back to the divine, and the divine to their leader mind. There will be enactments about marriage, about education, about all the states and feelings and experiences of men and women, at every age, in weal and woe, in war and peace; upon all the law will fix a stamp of praise and blame. There will also be regulations about property and expenditure, about contracts, about rewards and punishments, and finally about funeral rites and honours of the dead. The lawgiver will appoint guardians to preside over these things; and mind will harmonize his ordinances, and show them to be in agreement with temperance and justice. Now I want to know whether the same principles are observed in the laws of Lycurgus and Minos, or, as I should rather say, of Apollo and Zeus. We must go through the virtues, beginning with courage, and then we will show that what has preceded has relation to virtue.

‘I wish,’ says the Lacedaemonian, ‘that you, Stranger, would first criticize Cleinias and the Cretan laws.’ Yes, is the reply, and I will criticize you and myself, as well as him. Tell me, Megillus, were not the common meals and gymnastic training instituted by your legislator with a view to war? ‘Yes; and next in the order of importance comes hunting, and fourth the endurance of pain in boxing contests, and in the beatings which are the punishment of theft. There is, too, the so-called Crypteia or secret service, in which our youth wander about the country night and day unattended, and even in winter go unshod and have no beds to lie on. Moreover they wrestle and exercise under a blazing sun, and they have many similar customs.’ Well, but is courage only a combat against fear and pain, and not against pleasure and flattery? ‘Against both, I should say.’ And which is worse, — to be overcome by pain, or by pleasure? ‘The latter.’ But did the lawgivers of Crete and Sparta legislate for a courage which is lame of one leg, — able to meet the attacks of pain but not those of pleasure, or for one which can meet both? ‘For a courage which can meet both, I should say.’ But if so, where are the institutions which train your citizens to be equally brave against pleasure and pain, and superior to enemies within as well as without? ‘We confess that we have no institutions worth mentioning which are of this character.’ I am not surprised, and will therefore only request forbearance on the part of us all, in case the love of truth should lead any of us to censure the laws of the others. Remember that I am more in the way of hearing criticisms of your laws than you can be; for in well-ordered states like Crete and Sparta, although an old man may sometimes speak of them in private to a ruler or elder, a similar liberty is not allowed to the young. But now being alone we shall not offend your legislator by a friendly examination of his laws. ‘Take any freedom which you like.’

My first observation is, that your lawgiver ordered you to endure hardships, because he thought that those who had not this discipline would run away from those who had. But he ought to have considered further, that those who had never learned to resist pleasure would be equally at the mercy of those who had, and these are often among the worst of mankind. Pleasure, like fear, would overcome them and take away their courage and freedom. ‘Perhaps;

but I must not be hasty in giving my assent.’

Next as to temperance: what institutions have you which are adapted to promote temperance? ‘There are the common meals and gymnastic exercises.’ These are partly good and partly bad, and, as in medicine, what is good at one time and for one person, is bad at another time and for another person. Now although gymnastics and common meals do good, they are also a cause of evil in civil troubles, and they appear to encourage unnatural love, as has been shown at Miletus, in Boeotia, and at Thurii. And the Cretans are said to have invented the tale of Zeus and Ganymede in order to justify their evil practices by the example of the God who was their lawgiver. Leaving the story, we may observe that all law has to do with pleasure and pain; these are two fountains which are ever flowing in human nature, and he who drinks of them when and as much as he ought, is happy, and he who indulges in them to excess, is miserable. ‘You may be right, but I still incline to think that the Lacedaemonian lawgiver did well in forbidding pleasure, if I may judge from the result. For there is no drunken revelry in Sparta, and any one found in a state of intoxication is severely punished; he is not excused as an Athenian would be at Athens on account of a festival. I myself have seen the Athenians drunk at the Dionysia — and at our colony, Tarentum, on a similar occasion, I have beheld the whole city in a state of intoxication.’ I admit that these festivals should be properly regulated. Yet I might reply, ‘Yes, Spartans, that is not your vice; but look at home and remember the licentiousness of your women.’ And to all such accusations every one of us may reply in turn:— ‘Wonder not, Stranger; there are different customs in different countries.’ Now this may be a sufficient answer; but we are speaking about the wisdom of lawgivers and not about the customs of men. To return to the question of drinking: shall we have total abstinence, as you have, or hard drinking, like the Scythians and Thracians, or moderate potations like the Persians? ‘Give us arms, and we send all these nations flying before us.’ My good friend, be modest; victories and defeats often arise from unknown causes, and afford no proof of the goodness or badness of institutions. The stronger overcomes the weaker, as the Athenians have overcome the Carians, or the Syracusans the Locrians, who are, perhaps, the best

governed state in that part of the world. People are apt to praise or censure practices without enquiring into the nature of them. This is the way with drink: one person brings many witnesses, who sing the praises of wine; another declares that sober men defeat drunkards in battle; and he again is refuted in turn. I should like to conduct the argument on some other method; for if you regard numbers, there are two cities on one side, and ten thousand on the other. 'I am ready to pursue any method which is likely to lead us to the truth.' Let me put the matter thus: Somebody praises the useful qualities of a goat; another has seen goats running about wild in a garden, and blames a goat or any other animal which happens to be without a keeper. 'How absurd!' Would a pilot who is sea-sick be a good pilot? 'No.' Or a general who is sick and drunk with fear and ignorant of war a good general? 'A general of old women he ought to be.' But can any one form an estimate of any society, which is intended to have a ruler, and which he only sees in an unruly and lawless state? 'No.' There is a convivial form of society — is there not? 'Yes.' And has this convivial society ever been rightly ordered? Of course you Spartans and Cretans have never seen anything of the kind, but I have had wide experience, and made many enquiries about such societies, and have hardly ever found anything right or good in them. 'We acknowledge our want of experience, and desire to learn of you.' Will you admit that in all societies there must be a leader? 'Yes.' And in time of war he must be a man of courage and absolutely devoid of fear, if this be possible? 'Certainly.' But we are talking now of a general who shall preside at meetings of friends — and as these have a tendency to be uproarious, they ought above all others to have a governor. 'Very good.' He should be a sober man and a man of the world, who will keep, make, and increase the peace of the society; a drunkard in charge of drunkards would be singularly fortunate if he avoided doing a serious mischief. 'Indeed he would.' Suppose a person to censure such meetings — he may be right, but also he may have known them only in their disorderly state, under a drunken master of the feast; and a drunken general or pilot cannot save his army or his ships. 'True; but although I see the advantage of an army having a good general, I do not equally see the good of a feast being well managed.' If you mean to ask what good accrues to the state

from the right training of a single youth or a single chorus, I should reply, 'Not much'; but if you ask what is the good of education in general, I answer, that education makes good men, and that good men act nobly and overcome their enemies in battle. Victory is often suicidal to the victors, because it creates forgetfulness of education, but education itself is never suicidal. 'You imply that the regulation of convivial meetings is a part of education; how will you prove this?' I will tell you. But first let me offer a word of apology. We Athenians are always thought to be fond of talking, whereas the Lacedaemonian is celebrated for brevity, and the Cretan is considered to be sagacious and reserved. Now I fear that I may be charged with spinning a long discourse out of slender materials. For drinking cannot be rightly ordered without correct principles of music, and music runs up into education generally, and to discuss all these matters may be tedious; if you like, therefore, we will pass on to another part of our subject. 'Are you aware, Athenian, that our family is your proxenus at Sparta, and that from my boyhood I have regarded Athens as a second country, and having often fought your battles in my youth, I have become attached to you, and love the sound of the Attic dialect? The saying is true, that the best Athenians are more than ordinarily good, because they are good by nature; therefore, be assured that I shall be glad to hear you talk as much as you please.' 'I, too,' adds Cleinias, 'have a tie which binds me to you. You know that Epimenides, the Cretan prophet, came and offered sacrifices in your city by the command of an oracle ten years before the Persian war. He told the Athenians that the Persian host would not come for ten years, and would go away again, having suffered more harm than they had inflicted. Now Epimenides was of my family, and when he visited Athens he entered into friendship with your forefathers.' I see that you are willing to listen, and I have the will to speak, if I had only the ability. But, first, I must define the nature and power of education, and by this road we will travel on to the God Dionysus. The man who is to be good at anything must have early training; — the future builder must play at building, and the husbandman at digging; the soldier must learn to ride, and the carpenter to measure and use the rule, — all the thoughts and pleasures of children should bear on their after-profession. — Do you

agree with me? 'Certainly.' And we must remember further that we are speaking of the education, not of a trainer, or of the captain of a ship, but of a perfect citizen who knows how to rule and how to obey; and such an education aims at virtue, and not at wealth or strength or mere cleverness. To the good man, education is of all things the most precious, and is also in constant need of renovation. 'We agree.' And we have before agreed that good men are those who are able to control themselves, and bad men are those who are not. Let me offer you an illustration which will assist our argument. Man is one; but in one and the same man are two foolish counsellors who contend within him — pleasure and pain, and of either he has expectations which we call hope and fear; and he is able to reason about good and evil, and reason, when affirmed by the state, becomes law. 'We cannot follow you.' Let me put the matter in another way: Every creature is a puppet of the Gods — whether he is a mere plaything or has any serious use we do not know; but this we do know, that he is drawn different ways by cords and strings. There is a soft golden cord which draws him towards virtue — this is the law of the state; and there are other cords made of iron and hard materials drawing him other ways. The golden reasoning influence has nothing of the nature of force, and therefore requires ministers in order to vanquish the other principles. This explains the doctrine that cities and citizens both conquer and are conquered by themselves. The individual follows reason, and the city law, which is embodied reason, either derived from the Gods or from the legislator. When virtue and vice are thus distinguished, education will be better understood, and in particular the relation of education to convivial intercourse. And now let us set wine before the puppet. You admit that wine stimulates the passions? 'Yes.' And does wine equally stimulate the reasoning faculties? 'No; it brings the soul back to a state of childhood.' In such a state a man has the least control over himself, and is, therefore, worst. 'Very true.' Then how can we believe that drinking should be encouraged? 'You seem to think that it ought to be.' And I am ready to maintain my position. 'We should like to hear you prove that a man ought to make a beast of himself.' You are speaking of the degradation of the soul: but how about the body? Would any man willingly degrade or weaken that? 'Certainly

not.' And yet if he goes to a doctor or a gymnastic master, does he not make himself ill in the hope of getting well? for no one would like to be always taking medicine, or always to be in training. 'True.' And may not convivial meetings have a similar remedial use? And if so, are they not to be preferred to other modes of training because they are painless? 'But have they any such use?' Let us see: Are there not two kinds of fear — fear of evil and fear of an evil reputation? 'There are.' The latter kind of fear is opposed both to the fear of pain and to the love of pleasure. This is called by the legislator reverence, and is greatly honoured by him and by every good man; whereas confidence, which is the opposite quality, is the worst fault both of individuals and of states. This sort of fear or reverence is one of the two chief causes of victory in war, fearlessness of enemies being the other. 'True.' Then every one should be both fearful and fearless? 'Yes.' The right sort of fear is infused into a man when he comes face to face with shame, or cowardice, or the temptations of pleasure, and has to conquer them. He must learn by many trials to win the victory over himself, if he is ever to be made perfect. 'That is reasonable enough.' And now, suppose that the Gods had given mankind a drug, of which the effect was to exaggerate every sort of evil and danger, so that the bravest man entirely lost his presence of mind and became a coward for a time: — would such a drug have any value? 'But is there such a drug?' No; but suppose that there were; might not the legislator use such a mode of testing courage and cowardice? 'To be sure.' The legislator would induce fear in order to implant fearlessness; and would give rewards or punishments to those who behaved well or the reverse, under the influence of the drug? 'Certainly.' And this mode of training, whether practised in the case of one or many, whether in solitude or in the presence of a large company — if a man have sufficient confidence in himself to drink the potion amid his boon companions, leaving off in time and not taking too much, — would be an equally good test of temperance? 'Very true.' Let us return to the lawgiver and say to him, 'Well, lawgiver, no such fear-producing potion has been given by God or invented by man, but there is a potion which will make men fearless.' 'You mean wine.' Yes; has not wine an effect the contrary of that which I was just now describing,

— first mellowing and humanizing a man, and then filling him with confidence, making him ready to say or do anything? ‘Certainly.’ Let us not forget that there are two qualities which should be cultivated in the soul — first, the greatest fearlessness, and, secondly, the greatest fear, which are both parts of reverence. Courage and fearlessness are trained amid dangers; but we have still to consider how fear is to be trained. We desire to attain fearlessness and confidence without the insolence and boldness which commonly attend them. For do not love, ignorance, avarice, wealth, beauty, strength, while they stimulate courage, also madden and intoxicate the soul? What better and more innocent test of character is there than festive intercourse? Would you make a bargain with a man in order to try whether he is honest? Or would you ascertain whether he is licentious by putting your wife or daughter into his hands? No one would deny that the test proposed is fairer, speedier, and safer than any other. And such a test will be particularly useful in the political science, which desires to know human natures and characters. ‘Very true.’

BOOK II. And are there any other uses of well-ordered potations? There are; but in order to explain them, I must repeat what I mean by right education; which, if I am not mistaken, depends on the due regulation of convivial intercourse. ‘A high assumption.’ I believe that virtue and vice are originally present to the mind of children in the form of pleasure and pain; reason and fixed principles come later, and happy is he who acquires them even in declining years; for he who possesses them is the perfect man. When pleasure and pain, and love and hate, are rightly implanted in the yet unconscious soul, and after the attainment of reason are discovered to be in harmony with her, this harmony of the soul is virtue, and the preparatory stage, anticipating reason, I call education. But the finer sense of pleasure and pain is apt to be impaired in the course of life; and therefore the Gods, pitying the toils and sorrows of mortals, have allowed them to have holidays, and given them the Muses and Apollo and Dionysus for leaders and playfellows. All young creatures love motion and frolic, and utter sounds of delight; but man only is capable of taking pleasure in rhythmical and harmonious movements. With these education begins; and the uneducated is he who has never known the

discipline of the chorus, and the educated is he who has. The chorus is partly dance and partly song, and therefore the well-educated must sing and dance well. But when we say, 'He sings and dances well,' we mean that he sings and dances what is good. And if he thinks that to be good which is really good, he will have a much higher music and harmony in him, and be a far greater master of imitation in sound and gesture than he who is not of this opinion. 'True.' Then, if we know what is good and bad in song and dance, we shall know what education is? 'Very true.' Let us now consider the beauty of figure, melody, song, and dance. Will the same figures or sounds be equally well adapted to the manly and the cowardly when they are in trouble? 'How can they be, when the very colours of their faces are different?' Figures and melodies have a rhythm and harmony which are adapted to the expression of different feelings (I may remark, by the way, that the term 'colour,' which is a favourite word of music-masters, is not really applicable to music). And one class of harmonies is akin to courage and all virtue, the other to cowardice and all vice. 'We agree.' And do all men equally like all dances? 'Far otherwise.' Do some figures, then, appear to be beautiful which are not? For no one will admit that the forms of vice are more beautiful than the forms of virtue, or that he prefers the first kind to the second. And yet most persons say that the merit of music is to give pleasure. But this is impiety. There is, however, a more plausible account of the matter given by others, who make their likes or dislikes the criterion of excellence. Sometimes nature crosses habit, or conversely, and then they say that such and such fashions or gestures are pleasant, but they do not like to exhibit them before men of sense, although they enjoy them in private. 'Very true.' And do vicious measures and strains do any harm, or good measures any good to the lovers of them? 'Probably.' Say, rather 'Certainly': for the gentle indulgence which we often show to vicious men inevitably makes us become like them. And what can be worse than this? 'Nothing.' Then in a well-administered city, the poet will not be allowed to make the songs of the people just as he pleases, or to train his choruses without regard to virtue and vice. 'Certainly not.' And yet he may do this anywhere except in Egypt; for there ages ago they discovered the great truth which I am now asserting, that the young

should be educated in forms and strains of virtue. These they fixed and consecrated in their temples; and no artist or musician is allowed to deviate from them. They are literally the same which they were ten thousand years ago. And this practice of theirs suggests the reflection that legislation about music is not an impossible thing. But the particular enactments must be the work of God or of some God-inspired man, as in Egypt their ancient chants are said to be the composition of the goddess Isis. The melodies which have a natural truth and correctness should be embodied in a law, and then the desire of novelty is not strong enough to change the old fashions. Is not the origin of music as follows? We rejoice when we think that we prosper, and we think that we prosper when we rejoice, and at such times we cannot rest, but our young men dance dances and sing songs, and our old men, who have lost the elasticity of youth, regale themselves with the memory of the past, while they contemplate the life and activity of the young. 'Most true.' People say that he who gives us most pleasure at such festivals is to win the palm: are they right? 'Possibly.' Let us not be hasty in deciding, but first imagine a festival at which the lord of the festival, having assembled the citizens, makes a proclamation that he shall be crowned victor who gives the most pleasure, from whatever source derived. We will further suppose that there are exhibitions of rhapsodists and musicians, tragic and comic poets, and even marionette-players — which of the pleasure-makers will win? Shall I answer for you? — the marionette-players will please the children; youths will decide for comedy; young men, educated women, and people in general will prefer tragedy; we old men are lovers of Homer and Hesiod. Now which of them is right? If you and I are asked, we shall certainly say that the old men's way of thinking ought to prevail. 'Very true.' So far I agree with the many that the excellence of music is to be measured by pleasure; but then the pleasure must be that of the good and educated, or better still, of one supremely virtuous and educated man. The true judge must have both wisdom and courage. For he must lead the multitude and not be led by them, and must not weakly yield to the uproar of the theatre, nor give false judgment out of that mouth which has just appealed to the Gods. The ancient custom of Hellas, which still prevails in Italy and Sicily, left the judgment to the

spectators, but this custom has been the ruin of the poets, who seek only to please their patrons, and has degraded the audience by the representation of inferior characters. What is the inference? The same which we have often drawn, that education is the training of the young idea in what the law affirms and the elders approve. And as the soul of a child is too young to be trained in earnest, a kind of education has been invented which tempts him with plays and songs, as the sick are tempted by pleasant meats and drinks. And the wise legislator will compel the poet to express in his poems noble thoughts in fitting words and rhythms. 'But is this the practice elsewhere than in Crete and Lacedaemon? In other states, as far as I know, dances and music are constantly changed at the pleasure of the hearers.' I am afraid that I misled you; not liking to be always finding fault with mankind as they are, I described them as they ought to be. But let me understand: you say that such customs exist among the Cretans and Lacedaemonians, and that the rest of the world would be improved by adopting them? 'Much improved.' And you compel your poets to declare that the righteous are happy, and that the wicked man, even if he be as rich as Midas, is unhappy? Or, in the words of Tyrtaeus, 'I sing not, I care not about him' who is a great warrior not having justice; if he be unjust, 'I would not have him look calmly upon death or be swifter than the wind'; and may he be deprived of every good — that is, of every true good. For even if he have the goods which men regard, these are not really goods: first health; beauty next; thirdly wealth; and there are others. A man may have every sense purged and improved; he may be a tyrant, and do what he likes, and live for ever: but you and I will maintain that all these things are goods to the just, but to the unjust the greatest of evils, if life be immortal; not so great if he live for a short time only. If a man had health and wealth, and power, and was insolent and unjust, his life would still be miserable; he might be fair and rich, and do what he liked, but he would live basely, and if basely evilly, and if evilly painfully. 'There I cannot agree with you.' Then may heaven give us the spirit of agreement, for I am as convinced of the truth of what I say as that Crete is an island; and, if I were a lawgiver, I would exercise a censorship over the poets, and I would punish them if they said that the wicked are happy, or that injustice is profitable.

And these are not the only matters in which I should make my citizens talk in a different way to the world in general. If I asked Zeus and Apollo, the divine legislators of Crete and Sparta,— ‘Are the just and pleasant life the same or not the same?’ — and they replied,— ‘Not the same’; and I asked again— ‘Which is the happier?’ And they said— ‘The pleasant life,’ this is an answer not fit for a God to utter, and therefore I ought rather to put the same question to some legislator. And if he replies ‘The pleasant,’ then I should say to him, ‘O my father, did you not tell me that I should live as justly as possible?’ and if to be just is to be happy, what is that principle of happiness or good which is superior to pleasure? Is the approval of gods and men to be deemed good and honourable, but unpleasant, and their disapproval the reverse? Or is the neither doing nor suffering evil good and honourable, although not pleasant? But you cannot make men like what is not pleasant, and therefore you must make them believe that the just is pleasant. The business of the legislator is to clear up this confusion. He will show that the just and the unjust are identical with the pleasurable and the painful, from the point of view of the just man, of the unjust the reverse. And which is the truer judgment? Surely that of the better soul. For if not the truth, it is the best and most moral of fictions; and the legislator who desires to propagate this useful lie, may be encouraged by remarking that mankind have believed the story of Cadmus and the dragon’s teeth, and therefore he may be assured that he can make them believe anything, and need only consider what fiction will do the greatest good. That the happiest is also the holiest, this shall be our strain, which shall be sung by all three choruses alike. First will enter the choir of children, who will lift up their voices on high; and after them the young men, who will pray the God Paean to be gracious to the youth, and to testify to the truth of their words; then will come the chorus of elder men, between thirty and sixty; and, lastly, there will be the old men, and they will tell stories enforcing the same virtues, as with the voice of an oracle. ‘Whom do you mean by the third chorus?’ You remember how I spoke at first of the restless nature of young creatures, who jumped about and called out in a disorderly manner, and I said that no other animal attained any perception of rhythm; but that to us the Gods gave Apollo and the Muses and

Dionysus to be our playfellows. Of the two first choruses I have already spoken, and I have now to speak of the third, or Dionysian chorus, which is composed of those who are between thirty and sixty years old. 'Let us hear.' We are agreed (are we not?) that men, women, and children should be always charming themselves with strains of virtue, and that there should be a variety in the strains, that they may not weary of them? Now the fairest and most useful of strains will be uttered by the elder men, and therefore we cannot let them off. But how can we make them sing? For a discreet elderly man is ashamed to hear the sound of his own voice in private, and still more in public. The only way is to give them drink; this will mellow the sourness of age. No one should be allowed to taste wine until they are eighteen; from eighteen to thirty they may take a little; but when they have reached forty years, they may be initiated into the mystery of drinking. Thus they will become softer and more impressible; and when a man's heart is warm within him, he will be more ready to charm himself and others with song. And what songs shall he sing? 'At Crete and Lacedaemon we only know choral songs.' Yes; that is because your way of life is military. Your young men are like wild colts feeding in a herd together; no one takes the individual colt and trains him apart, and tries to give him the qualities of a statesman as well as of a soldier. He who was thus trained would be a greater warrior than those of whom Tyrtaeus speaks, for he would be courageous, and yet he would know that courage was only fourth in the scale of virtue. 'Once more, I must say, Stranger, that you run down our lawgivers.' Not intentionally, my good friend, but whither the argument leads I follow; and I am trying to find some style of poetry suitable for those who dislike the common sort. 'Very good.' In all things which have a charm, either this charm is their good, or they have some accompanying truth or advantage. For example, in eating and drinking there is pleasure and also profit, that is to say, health; and in learning there is a pleasure and also truth. There is a pleasure or charm, too, in the imitative arts, as well as a law of proportion or equality; but the pleasure which they afford, however innocent, is not the criterion of their truth. The test of pleasure cannot be applied except to that which has no other good or evil, no truth or falsehood. But that which has truth must be judged

of by the standard of truth, and therefore imitation and proportion are to be judged of by their truth alone. 'Certainly.' And as music is imitative, it is not to be judged by the criterion of pleasure, and the Muse whom we seek is the muse not of pleasure but of truth, for imitation has a truth. 'Doubtless.' And if so, the judge must know what is being imitated before he decides on the quality of the imitation, and he who does not know what is true will not know what is good. 'He will not.' Will any one be able to imitate the human body, if he does not know the number, proportion, colour, or figure of the limbs? 'How can he?' But suppose we know some picture or figure to be an exact resemblance of a man, should we not also require to know whether the picture is beautiful or not? 'Quite right.' The judge of the imitation is required to know, therefore, first the original, secondly the truth, and thirdly the merit of the execution? 'True.' Then let us not weary in the attempt to bring music to the standard of the Muses and of truth. The Muses are not like human poets; they never spoil or mix rhythms or scales, or mingle instruments and human voices, or confuse the manners and strains of men and women, or of freemen and slaves, or of rational beings and brute animals. They do not practise the baser sorts of musical arts, such as the 'matured judgments,' of whom Orpheus speaks, would ridicule. But modern poets separate metre from music, and melody and rhythm from words, and use the instrument alone without the voice. The consequence is, that the meaning of the rhythm and of the time are not understood. I am endeavouring to show how our fifty-year-old choristers are to be trained, and what they are to avoid. The opinion of the multitude about these matters is worthless; they who are only made to step in time by sheer force cannot be critics of music. 'Impossible.' Then our newly-appointed minstrels must be trained in music sufficiently to understand the nature of rhythms and systems; and they should select such as are suitable to men of their age, and will enable them to give and receive innocent pleasure. This is a knowledge which goes beyond that either of the poets or of their auditors in general. For although the poet must understand rhythm and music, he need not necessarily know whether the imitation is good or not, which was the third point required in a judge; but our chorus of elders must know all three, if they are to be the instructors

of youth.

And now we will resume the original argument, which may be summed up as follows: A convivial meeting is apt to grow tumultuous as the drinking proceeds; every man becomes light-headed, and fancies that he can rule the whole world. 'Doubtless.' And did we not say that the souls of the drinkers, when subdued by wine, are made softer and more malleable at the hand of the legislator? the docility of childhood returns to them. At times however they become too valiant and disorderly, drinking out of their turn, and interrupting one another. And the business of the legislator is to infuse into them that divine fear, which we call shame, in opposition to this disorderly boldness. But in order to discipline them there must be guardians of the law of drinking, and sober generals who shall take charge of the private soldiers; they are as necessary in drinking as in fighting, and he who disobeys these Dionysiac commanders will be equally disgraced. 'Very good.' If a drinking festival were well regulated, men would go away, not as they now do, greater enemies, but better friends. Of the greatest gift of Dionysus I hardly like to speak, lest I should be misunderstood. 'What is that?' According to tradition Dionysus was driven mad by his stepmother Here, and in order to revenge himself he inspired mankind with Bacchic madness. But these are stories which I would rather not repeat. However I do acknowledge that all men are born in an imperfect state, and are at first restless, irrational creatures: this, as you will remember, has been already said by us. 'I remember.' And that Apollo and the Muses and Dionysus gave us harmony and rhythm? 'Very true.' The other story implies that wine was given to punish us and make us mad; but we contend that wine is a balm and a cure; a spring of modesty in the soul, and of health and strength in the body. Again, the work of the chorus is co-extensive with the work of education; rhythm and melody answer to the voice, and the motions of the body correspond to all three, and the sound enters in and educates the soul in virtue. 'Yes.' And the movement which, when pursued as an amusement, is termed dancing, when studied with a view to the improvement of the body, becomes gymnastic. Shall we now proceed to speak of this? 'What Cretan or Lacedaemonian would approve of your omitting gymnastic?' Your

question implies assent; and you will easily understand a subject which is familiar to you. Gymnastic is based on the natural tendency of every animal to rapid motion; and man adds a sense of rhythm, which is awakened by music; music and dancing together form the choral art. But before proceeding I must add a crowning word about drinking. Like other pleasures, it has a lawful use; but if a state or an individual is inclined to drink at will, I cannot allow them. I would go further than Crete or Lacedaemon and have the law of the Carthaginians, that no slave of either sex should drink wine at all, and no soldier while he is on a campaign, and no magistrate or officer while he is on duty, and that no one should drink by daylight or on a bridal night. And there are so many other occasions on which wine ought to be prohibited, that there will not be many vines grown or vineyards required in the state.

BOOK III. If a man wants to know the origin of states and societies, he should behold them from the point of view of time. Thousands of cities have come into being and have passed away again in infinite ages, every one of them having had endless forms of government; and if we can ascertain the cause of these changes in states, that will probably explain their origin. What do you think of ancient traditions about deluges and destructions of mankind, and the preservation of a remnant? 'Every one believes in them.' Then let us suppose the world to have been destroyed by a deluge. The survivors would be hill-shepherds, small sparks of the human race, dwelling in isolation, and unacquainted with the arts and vices of civilization. We may further suppose that the cities on the plain and on the coast have been swept away, and that all inventions, and every sort of knowledge, have perished. 'Why, if all things were as they now are, nothing would have ever been invented. All our famous discoveries have been made within the last thousand years, and many of them are but of yesterday.' Yes, Cleinias, and you must not forget Epimenides, who was really of yesterday; he practised the lesson of moderation and abstinence which Hesiod only preached. 'True.' After the great destruction we may imagine that the earth was a desert, in which there were a herd or two of oxen and a few goats, hardly enough to support those who tended them; while of politics and governments the survivors would know nothing. And out of this state of things

have arisen arts and laws, and a great deal of virtue and a great deal of vice; little by little the world has come to be what it is. At first, the few inhabitants would have had a natural fear of descending into the plains; although they would want to have intercourse with one another, they would have a difficulty in getting about, having lost the arts, and having no means of extracting metals from the earth, or of felling timber; for even if they had saved any tools, these would soon have been worn out, and they could get no more until the art of metallurgy had been again revived. Faction and war would be extinguished among them, for being solitary they would incline to be friendly; and having abundance of pasture and plenty of milk and flesh, they would have nothing to quarrel about. We may assume that they had also dwellings, clothes, pottery, for the weaving and plastic arts do not require the use of metals. In those days they were neither poor nor rich, and there was no insolence or injustice among them; for they were of noble natures, and lived up to their principles, and believed what they were told; knowing nothing of land or naval warfare, or of legal practices or party conflicts, they were simpler and more temperate, and also more just than the men of our day. 'Very true.' I am showing whence the need of lawgivers arises, for in primitive ages they neither had nor wanted them. Men lived according to the customs of their fathers, in a simple manner, under a patriarchal government, such as still exists both among Hellenes and barbarians, and is described in Homer as prevailing among the Cyclopes: —

'They have no laws, and they dwell in rocks or on the tops of mountains, and every one is the judge of his wife and children, and they do not trouble themselves about one another.'

'That is a charming poet of yours, though I know little of him, for in Crete foreign poets are not much read.' 'But he is well known in Sparta, though he describes Ionian rather than Dorian manners, and he seems to take your view of primitive society.' May we not suppose that government arose out of the union of single families who survived the destruction, and were under the rule of patriarchs, because they had originally descended from a single father and mother? 'That is very probable.' As time went on, men increased in number, and tilled the ground, living in a common habitation, which

they protected by walls against wild beasts; but the several families retained the laws and customs which they separately received from their first parents. They would naturally like their own laws better than any others, and would be already formed by them when they met in a common society: thus legislation imperceptibly began among them. For in the next stage the associated families would appoint plenipotentiaries, who would select and present to the chiefs those of all their laws which they thought best. The chiefs in turn would make a further selection, and would thus become the lawgivers of the state, which they would form into an aristocracy or a monarchy. 'Probably.' In the third stage various other forms of government would arise. This state of society is described by Homer in speaking of the foundation of Dardania, which, he says,

'was built at the foot of many-fountained Ida, for Ilium,
the city of the plain, as yet was not.'

Here, as also in the account of the Cyclopes, the poet by some divine inspiration has attained truth. But to proceed with our tale. Ilium was built in a wide plain, on a low hill, which was surrounded by streams descending from Ida. This shows that many ages must have passed; for the men who remembered the deluge would never have placed their city at the mercy of the waters. When mankind began to multiply, many other cities were built in similar situations. These cities carried on a ten years' war against Troy, by sea as well as land, for men were ceasing to be afraid of the sea, and, in the meantime, while the chiefs of the army were at Troy, their homes fell into confusion. The youth revolted and refused to receive their own fathers; deaths, murders, exiles ensued. Under the new name of Dorians, which they received from their chief Dorieus, the exiles returned: the rest of the story is part of the history of Sparta.

Thus, after digressing from the subject of laws into music and drinking, we return to the settlement of Sparta, which in laws and institutions is the sister of Crete. We have seen the rise of a first, second, and third state, during the lapse of ages; and now we arrive at a fourth state, and out of the comparison of all four we propose to gather the nature of laws and governments, and the changes which may be desirable in them. 'If,' replies the Spartan, 'our new discussion is likely to be as good as the last, I would think the

longest day too short for such an employment.'

Let us imagine the time when Lacedaemon, and Argos, and Messene were all subject, Megillus, to your ancestors. Afterwards, they distributed the army into three portions, and made three cities — Argos, Messene, Lacedaemon. 'Yes.' Temenus was the king of Argos, Cresphontes of Messene, Procles and Eurysthenes ruled at Lacedaemon. 'Just so.' And they all swore to assist any one of their number whose kingdom was subverted. 'Yes.' But did we not say that kingdoms or governments can only be subverted by themselves? 'That is true.' Yes, and the truth is now proved by facts: there were certain conditions upon which the three kingdoms were to assist one another; the government was to be mild and the people obedient, and the kings and people were to unite in assisting either of the two others when they were wronged. This latter condition was a great security. 'Clearly.' Such a provision is in opposition to the common notion that the lawgiver should make only such laws as the people like; but we say that he should rather be like a physician, prepared to effect a cure even at the cost of considerable suffering. 'Very true.' The early lawgivers had another great advantage — they were saved from the reproach which attends a division of land and the abolition of debts. No one could quarrel with the Dorians for dividing the territory, and they had no debts of long standing. 'They had not.' Then what was the reason why their legislation signally failed? For there were three kingdoms, two of them quickly lost their original constitution. That is a question which we cannot refuse to answer, if we mean to proceed with our old man's game of enquiring into laws and institutions. And the Dorian institutions are more worthy of consideration than any other, having been evidently intended to be a protection not only to the Peloponnese, but to all the Hellenes against the Barbarians. For the capture of Troy by the Achaeans had given great offence to the Assyrians, of whose empire it then formed part, and they were likely to retaliate. Accordingly the royal Heraclid brothers devised their military constitution, which was organised on a far better plan than the old Trojan expedition; and the Dorians themselves were far superior to the Achaeans, who had taken part in that expedition, and had been conquered by them. Such a scheme, undertaken by men who had shared with one another toils and

dangers, sanctioned by the Delphian oracle, under the guidance of the Heraclidae, seemed to have a promise of permanence. 'Naturally.' Yet this has not proved to be the case. Instead of the three being one, they have always been at war; had they been united, in accordance with the original intention, they would have been invincible.

And what caused their ruin? Did you ever observe that there are beautiful things of which men often say, 'What wonders they would have effected if rightly used?' and yet, after all, this may be a mistake. And so I say of the Heraclidae and their expedition, which I may perhaps have been justified in admiring, but which nevertheless suggests to me the general reflection,— 'What wonders might not strength and military resources have accomplished, if the possessor had only known how to use them!' For consider: if the generals of the army had only known how to arrange their forces, might they not have given their subjects everlasting freedom, and the power of doing what they would in all the world? 'Very true.' Suppose a person to express his admiration of wealth or rank, does he not do so under the idea that by the help of these he can attain his desires? All men wish to obtain the control of all things, and they are always praying for what they desire. 'Certainly.' And we ask for our friends what they ask for themselves. 'Yes.' Dear is the son to the father, and yet the son, if he is young and foolish, will often pray to obtain what the father will pray that he may not obtain. 'True.' And when the father, in the heat of youth or the dotage of age, makes some rash prayer, the son, like Hippolytus, may have reason to pray that the word of his father may be ineffectual. 'You mean that a man should pray to have right desires, before he prays that his desires may be fulfilled; and that wisdom should be the first object of our prayers?' Yes; and you will remember my saying that wisdom should be the principal aim of the legislator; but you said that defence in war came first. And I replied, that there were four virtues, whereas you acknowledged one only — courage, and not wisdom which is the guide of all the rest. And I repeat — in jest if you like, but I am willing that you should receive my words in earnest — that 'the prayer of a fool is full of danger.' I will prove to you, if you will allow me, that the ruin of those states was not caused by cowardice

or ignorance in war, but by ignorance of human affairs. 'Pray proceed: our attention will show better than compliments that we prize your words.' I maintain that ignorance is, and always has been, the ruin of states; wherefore the legislator should seek to banish it from the state; and the greatest ignorance is the love of what is known to be evil, and the hatred of what is known to be good; this is the last and greatest conflict of pleasure and reason in the soul. I say the greatest, because affecting the greater part of the soul; for the passions are in the individual what the people are in a state. And when they become opposed to reason or law, and instruction no longer avails — that is the last and greatest ignorance of states and men. 'I agree.' Let this, then, be our first principle: — That the citizen who does not know how to choose between good and evil must not have authority, although he possess great mental gifts, and many accomplishments; for he is really a fool. On the other hand, he who has this knowledge may be unable either to read or swim; nevertheless, he shall be counted wise and permitted to rule. For how can there be wisdom where there is no harmony? — the wise man is the saviour, and he who is devoid of wisdom is the destroyer of states and households. There are rulers and there are subjects in states. And the first claim to rule is that of parents to rule over their children; the second, that of the noble to rule over the ignoble; thirdly, the elder must govern the younger; in the fourth place, the slave must obey his master; fifthly, there is the power of the stronger, which the poet Pindar declares to be according to nature; sixthly, there is the rule of the wiser, which is also according to nature, as I must inform Pindar, if he does not know, and is the rule of law over obedient subjects. 'Most true.' And there is a seventh kind of rule which the Gods love, — in this the ruler is elected by lot.

Then, now, we playfully say to him who fancies that it is easy to make laws: — You see, legislator, the many and inconsistent claims to authority; here is a spring of troubles which you must stay. And first of all you must help us to consider how the kings of Argos and Messene in olden days destroyed their famous empire — did they forget the saying of Hesiod, that 'the half is better than the whole'? And do we suppose that the ignorance of this truth is less fatal to kings than to peoples? 'Probably the evil is increased by their way of

life.' The kings of those days transgressed the laws and violated their oaths. Their deeds were not in harmony with their words, and their folly, which seemed to them wisdom, was the ruin of the state. And how could the legislator have prevented this evil? — the remedy is easy to see now, but was not easy to foresee at the time. 'What is the remedy?' The institutions of Sparta may teach you, Megillus. Wherever there is excess, whether the vessel has too large a sail, or the body too much food, or the mind too much power, there destruction is certain. And similarly, a man who possesses arbitrary power is soon corrupted, and grows hateful to his dearest friends. In order to guard against this evil, the God who watched over Sparta gave you two kings instead of one, that they might balance one another; and further to lower the pulse of your body politic, some human wisdom, mingled with divine power, tempered the strength and self-sufficiency of youth with the moderation of age in the institution of your senate. A third saviour bridled your rising and swelling power by ephors, whom he assimilated to officers elected by lot: and thus the kingly power was preserved, and became the preserver of all the rest. Had the constitution been arranged by the original legislators, not even the portion of Aristodemus would have been saved; for they had no political experience, and imagined that a youthful spirit invested with power could be restrained by oaths. Now that God has instructed us in the arts of legislation, there is no merit in seeing all this, or in learning wisdom after the event. But if the coming danger could have been foreseen, and the union preserved, then no Persian or other enemy would have dared to attack Hellas; and indeed there was not so much credit to us in defeating the enemy, as discredit in our disloyalty to one another. For of the three cities one only fought on behalf of Hellas; and of the two others, Argos refused her aid; and Messenia was actually at war with Sparta: and if the Lacedaemonians and Athenians had not united, the Hellenes would have been absorbed in the Persian empire, and dispersed among the barbarians. We make these reflections upon past and present legislators because we desire to find out what other course could have been followed. We were saying just now, that a state can only be free and wise and harmonious when there is a balance of powers. There are many words by which we express the

aims of the legislator, — temperance, wisdom, friendship; but we need not be disturbed by the variety of expression, — these words have all the same meaning. ‘I should like to know at what in your opinion the legislator should aim.’ Hear me, then. There are two mother forms of states — one monarchy, and the other democracy: the Persians have the first in the highest form, and the Athenians the second; and no government can be well administered which does not include both. There was a time when both the Persians and Athenians had more the character of a constitutional state than they now have. In the days of Cyrus the Persians were freemen as well as lords of others, and their soldiers were free and equal, and the kings used and honoured all the talent which they could find, and so the nation waxed great, because there was freedom and friendship and communion of soul. But Cyrus, though a wise general, never troubled himself about the education of his family. He was a soldier from his youth upward, and left his children who were born in the purple to be educated by women, who humoured and spoilt them. ‘A rare education, truly!’ Yes, such an education as princesses who had recently grown rich might be expected to give them in a country where the men were solely occupied with warlike pursuits. ‘Likely enough.’ Their father had possessions of men and animals, and never considered that the race to whom he was about to make them over had been educated in a very different school, not like the Persian shepherd, who was well able to take care of himself and his own. He did not see that his children had been brought up in the Median fashion, by women and eunuchs. The end was that one of the sons of Cyrus slew the other, and lost the kingdom by his own folly. Observe, again, that Darius, who restored the kingdom, had not received a royal education. He was one of the seven chiefs, and when he came to the throne he divided the empire into seven provinces; and he made equal laws, and implanted friendship among the people. Hence his subjects were greatly attached to him, and cheerfully helped him to extend his empire. Next followed Xerxes, who had received the same royal education as Cambyses, and met with a similar fate. The reflection naturally occurs to us — How could Darius, with all his experience, have made such a mistake! The ruin of Xerxes was not a mere accident, but the evil life which is

generally led by the sons of very rich and royal persons; and this is what the legislator has seriously to consider. Justly may the Lacedaemonians be praised for not giving special honour to birth or wealth; for such advantages are not to be highly esteemed without virtue, and not even virtue is to be esteemed unless it be accompanied by temperance. 'Explain.' No one would like to live in the same house with a courageous man who had no control over himself, nor with a clever artist who was a rogue. Nor can justice and wisdom ever be separated from temperance. But considering these qualities with reference to the honour and dishonour which is to be assigned to them in states, would you say, on the other hand, that temperance, if existing without the other virtues in the soul, is worth anything or nothing? 'I cannot tell.' You have answered well. It would be absurd to speak of temperance as belonging to the class of honourable or of dishonourable qualities, because all other virtues in their various classes require temperance to be added to them; having the addition, they are honoured not in proportion to that, but to their own excellence. And ought not the legislator to determine these classes? 'Certainly.' Suppose then that, without going into details, we make three great classes of them. Most honourable are the goods of the soul, always assuming temperance as a condition of them; secondly, those of the body; thirdly, external possessions. The legislator who puts them in another order is doing an unholy and unpatriotic thing.

These remarks were suggested by the history of the Persian kings; and to them I will now return. The ruin of their empire was caused by the loss of freedom and the growth of despotism; all community of feeling disappeared. Hatred and spoliation took the place of friendship; the people no longer fought heartily for their masters; the rulers, finding their myriads useless on the field of battle, resorted to mercenaries as their only salvation, and were thus compelled by their circumstances to proclaim the stupidest of falsehoods — that virtue is a trifle in comparison of money.

But enough of the Persians: a different lesson is taught by the Athenians, whose example shows that a limited freedom is far better than an unlimited. Ancient Athens, at the time of the Persian invasion, had such a limited freedom. The people were divided into

four classes, according to the amount of their property, and the universal love of order, as well as the fear of the approaching host, made them obedient and willing citizens. For Darius had sent Datis and Artaphernes, commanding them under pain of death to subjugate the Eretrians and Athenians. A report, whether true or not, came to Athens that all the Eretrians had been 'netted'; and the Athenians in terror sent all over Hellas for assistance. None came to their relief except the Lacedaemonians, and they arrived a day too late, when the battle of Marathon had been already fought. In process of time Xerxes came to the throne, and the Athenians heard of nothing but the bridge over the Hellespont, and the canal of Athos, and the innumerable host and fleet. They knew that these were intended to avenge the defeat of Marathon. Their case seemed desperate, for there was no Hellene likely to assist them by land, and at sea they were attacked by more than a thousand vessels; — their only hope, however slender, was in victory; so they relied upon themselves and upon the Gods. Their common danger, and the influence of their ancient constitution, greatly tended to promote harmony among them. Reverence and fear — that fear which the coward never knows — made them fight for their altars and their homes, and saved them from being dispersed all over the world. 'Your words, Athenian, are worthy of your country.' And you Megillus, who have inherited the virtues of your ancestors, are worthy to hear them. Let me ask you to take the moral of my tale. The Persians have lost their liberty in absolute slavery, and we in absolute freedom. In ancient times the Athenian people were not the masters, but the servants of the laws. 'Of what laws?' In the first place, there were laws about music, and the music was of various kinds: there was one kind which consisted of hymns, another of lamentations; there was also the paean and the dithyramb, and the so-called 'laws' (nomoi) or strains, which were played upon the harp. The regulation of such matters was not left to the whistling and clapping of the crowd; there was silence while the judges decided, and the boys, and the audience in general, were kept in order by raps of a stick. But after a while there arose a new race of poets, men of genius certainly, however careless of musical truth and propriety, who made pleasure the only criterion of excellence. That was a test which the spectators could apply for themselves; the whole

audience, instead of being mute, became vociferous, and a theatrocracy took the place of an aristocracy. Could the judges have been free, there would have been no great harm done; a musical democracy would have been well enough — but conceit has been our ruin. Everybody knows everything, and is ready to say anything; the age of reverence is gone, and the age of irreverence and licentiousness has succeeded. ‘Most true.’ And with this freedom comes disobedience to rulers, parents, elders, — in the latter days to the law also; the end returns to the beginning, and the old Titanic nature reappears — men have no regard for the Gods or for oaths; and the evils of the human race seem as if they would never cease. Whither are we running away? Once more we must pull up the argument with bit and curb, lest, as the proverb says, we should fall off our ass. ‘Good.’ Our purpose in what we have been saying is to prove that the legislator ought to aim at securing for a state three things — freedom, friendship, wisdom. And we chose two states; — one was the type of freedom, and the other of despotism; and we showed that when in a mean they attained their highest perfection. In a similar spirit we spoke of the Dorian expedition, and of the settlement on the hills and in the plains of Troy; and of music, and the use of wine, and of all that preceded.

And now, has our discussion been of any use? ‘Yes, stranger; for by a singular coincidence the Cretans are about to send out a colony, of which the settlement has been confided to the Cnosians. Ten commissioners, of whom I am one, are to give laws to the colonists, and we may give any which we please — Cretan or foreign. And therefore let us make a selection from what has been said, and then proceed with the construction of the state.’ Very good: I am quite at your service. ‘And I too,’ says Megillus.

BOOK IV. And now, what is this city? I do not want to know what is to be the name of the place (for some accident, — a river or a local deity, will determine that), but what the situation is, whether maritime or inland. ‘The city will be about eleven miles from the sea.’ Are there harbours? ‘Excellent.’ And is the surrounding country self-supporting? ‘Almost.’ Any neighbouring states? ‘No; and that is the reason for choosing the place, which has been deserted from time immemorial.’ And is there a fair proportion of hill and plain and

wood? 'Like Crete in general, more hill than plain.' Then there is some hope for your citizens; had the city been on the sea, and dependent for support on other countries, no human power could have preserved you from corruption. Even the distance of eleven miles is hardly enough. For the sea, although an agreeable, is a dangerous companion, and a highway of strange morals and manners as well as of commerce. But as the country is only moderately fertile there will be no great export trade and no great returns of gold and silver, which are the ruin of states. Is there timber for ship-building? 'There is no pine, nor much cypress; and very little stone-pine or plane wood for the interior of ships.' That is good. 'Why?' Because the city will not be able to imitate the bad ways of her enemies. 'What is the bearing of that remark?' To explain my meaning, I would ask you to remember what we said about the Cretan laws, that they had an eye to war only; whereas I maintained that they ought to have included all virtue. And I hope that you in your turn will retaliate upon me if I am false to my own principle. For I consider that the lawgiver should go straight to the mark of virtue and justice, and disregard wealth and every other good when separated from virtue. What further I mean, when I speak of the imitation of enemies, I will illustrate by the story of Minos, if our Cretan friend will allow me to mention it. Minos, who was a great sea-king, imposed upon the Athenians a cruel tribute, for in those days they were not a maritime power; they had no timber for ship-building, and therefore they could not 'imitate their enemies'; and better far, as I maintain, would it have been for them to have lost many times over the lives which they devoted to the tribute than to have turned soldiers into sailors. Naval warfare is not a very praiseworthy art; men should not be taught to leap on shore, and then again to hurry back to their ships, or to find specious excuses for throwing away their arms; bad customs ought not to be gilded with fine words. And retreat is always bad, as we are taught in Homer, when he introduces Odysseus, setting forth to Agamemnon the danger of ships being at hand when soldiers are disposed to fly. An army of lions trained in such ways would fly before a herd of deer. Further, a city which owes its preservation to a crowd of pilots and oarsmen and other undeserving persons, cannot bestow rewards of honour properly; and

this is the ruin of states. 'Still, in Crete we say that the battle of Salamis was the salvation of Hellas.' Such is the prevailing opinion. But I and Megillus say that the battle of Marathon began the deliverance, and that the battle of Plataea completed it; for these battles made men better, whereas the battles of Salamis and Artemisium made them no better. And we further affirm that mere existence is not the great political good of individuals or states, but the continuance of the best existence. 'Certainly.' Let us then endeavour to follow this principle in colonization and legislation.

And first, let me ask you who are to be the colonists? May any one come from any city of Crete? For you would surely not send a general invitation to all Hellas. Yet I observe that in Crete there are people who have come from Argos and Aegina and other places. 'Our recruits will be drawn from all Crete, and of other Hellenes we should prefer Peloponnesians. As you observe, there are Argives among the Cretans; moreover the Gortynians, who are the best of all Cretans, have come from Gortys in Peloponnesus.'

Colonization is in some ways easier when the colony goes out in a swarm from one country, owing to the pressure of population, or revolution, or war. In this case there is the advantage that the new colonists have a community of race, language, and laws. But then again, they are less obedient to the legislator; and often they are anxious to keep the very laws and customs which caused their ruin at home. A mixed multitude, on the other hand, is more tractable, although there is a difficulty in making them pull together. There is nothing, however, which perfects men's virtue more than legislation and colonization. And yet I have a word to say which may seem to be depreciatory of legislators. 'What is that?'

I was going to make the saddening reflection, that accidents of all sorts are the true legislators, — wars and pestilences and famines and the frequent recurrence of bad seasons. The observer will be inclined to say that almost all human things are chance; and this is certainly true about navigation and medicine, and the art of the general. But there is another thing which may equally be said. 'What is it?' That God governs all things, and that chance and opportunity co-operate with Him. And according to yet a third view, art has part with them, for surely in a storm it is well to have a pilot? And the same is true of

legislation: even if circumstances are favourable, a skilful lawgiver is still necessary. 'Most true.' All artists would pray for certain conditions under which to exercise their art: and would not the legislator do the same? 'Certainly?' Come, legislator, let us say to him, and what are the conditions which you would have? He will answer, Grant me a city which is ruled by a tyrant; and let the tyrant be young, mindful, teachable, courageous, magnanimous; and let him have the inseparable condition of all virtue, which is temperance — not prudence, but that natural temperance which is the gift of children and animals, and is hardly reckoned among goods — with this he must be endowed, if the state is to acquire the form most conducive to happiness in the speediest manner. And I must add one other condition: the tyrant must be fortunate, and his good fortune must consist in his having the co-operation of a great legislator. When God has done all this, He has done the best which He can for a state; not so well if He has given them two legislators instead of one, and less and less well if He has given them a great many. An orderly tyranny most easily passes into the perfect state; in the second degree, a monarchy; in the third degree, a democracy; an oligarchy is worst of all. 'I do not understand.' I suppose that you have never seen a city which is subject to a tyranny? 'I have no desire to see one.' You would have seen what I am describing, if you ever had. The tyrant can speedily change the manners of a state, and affix the stamp of praise or blame on any action which he pleases; for the citizens readily follow the example which he sets. There is no quicker way of making changes; but there is a counterbalancing difficulty. It is hard to find the divine love of temperance and justice existing in any powerful form of government, whether in a monarchy or an oligarchy. In olden days there were chiefs like Nestor, who was the most eloquent and temperate of mankind, but there is no one his equal now. If such an one ever arises among us, blessed will he be, and blessed they who listen to his words. For where power and wisdom and temperance meet in one, there are the best laws and constitutions. I am endeavouring to show you how easy under the conditions supposed, and how difficult under any other, is the task of giving a city good laws. 'How do you mean?' Let us old men attempt to mould in words a constitution for your new state, as children make

figures out of wax. 'Proceed. What constitution shall we give — democracy, oligarchy, or aristocracy?' To which of these classes, Megillus, do you refer your own state? 'The Spartan constitution seems to me to contain all these elements. Our state is a democracy and also an aristocracy; the power of the Ephors is tyrannical, and we have an ancient monarchy.' 'Much the same,' adds Cleinias, 'may be said of Cnosus.' The reason is that you have polities, but other states are mere aggregations of men dwelling together, which are named after their several ruling powers; whereas a state, if an 'ocracy' at all, should be called a theocracy. A tale of old will explain my meaning. There is a tradition of a golden age, in which all things were spontaneous and abundant. Cronos, then lord of the world, knew that no mortal nature could endure the temptations of power, and therefore he appointed demons or demi-gods, who are of a superior race, to have dominion over man, as man has dominion over the animals. They took care of us with great ease and pleasure to themselves, and no less to us; and the tradition says that only when God, and not man, is the ruler, can the human race cease from ill. This was the manner of life which prevailed under Cronos, and which we must strive to follow so far as the principle of immortality still abides in us and we live according to law and the dictates of right reason. But in an oligarchy or democracy, when the governing principle is athirst for pleasure, the laws are trampled under foot, and there is no possibility of salvation. Is it not often said that there are as many forms of laws as there are governments, and that they have no concern either with any one virtue or with all virtue, but are relative to the will of the government? Which is as much as to say that 'might makes right.' 'What do you mean?' I mean that governments enact their own laws, and that every government makes self-preservation its principal aim. He who transgresses the laws is regarded as an evil-doer, and punished accordingly. This was one of the unjust principles of government which we mentioned when speaking of the different claims to rule. We were agreed that parents should rule their children, the elder the younger, the noble the ignoble. But there were also several other principles, and among them Pindar's 'law of violence.' To whom then is our state to be entrusted? For many a government is only a victorious faction which has a monopoly of power, and refuses

any share to the conquered, lest when they get into office they should remember their wrongs. Such governments are not politics, but parties; nor are any laws good which are made in the interest of particular classes only, and not of the whole. And in our state I mean to protest against making any man a ruler because he is rich, or strong, or noble. But those who are obedient to the laws, and who win the victory of obedience, shall be promoted to the service of the Gods according to the degree of their obedience. When I call the ruler the servant or minister of the law, this is not a mere paradox, but I mean to say that upon a willingness to obey the law the existence of the state depends. 'Truly, Stranger, you have a keen vision.' Why, yes; every man when he is old has his intellectual vision most keen. And now shall we call in our colonists and make a speech to them? Friends, we say to them, God holds in His hand the beginning, middle, and end of all things, and He moves in a straight line towards the accomplishment of His will. Justice always bears Him company, and punishes those who fall short of His laws. He who would be happy follows humbly in her train; but he who is lifted up with pride, or wealth, or honour, or beauty, is soon deserted by God, and, being deserted, he lives in confusion and disorder. To many he seems a great man; but in a short time he comes to utter destruction. Wherefore, seeing these things, what ought we to do or think? 'Every man ought to follow God.' What life, then, is pleasing to God? There is an old saying that 'like agrees with like, measure with measure,' and God ought to be our measure in all things. The temperate man is the friend of God because he is like Him, and the intemperate man is not His friend, because he is not like Him. And the conclusion is, that the best of all things for a good man is to pray and sacrifice to the Gods; but the bad man has a polluted soul; and therefore his service is wasted upon the Gods, while the good are accepted of them. I have told you the mark at which we ought to aim. You will say, How, and with what weapons? In the first place we affirm, that after the Olympian Gods and the Gods of the state, honour should be given to the Gods below, and to them should be offered everything in even numbers and of the second choice; the auspicious odd numbers and everything of the first choice are reserved for the Gods above. Next demi-gods or spirits must be

honoured, and then heroes, and after them family gods, who will be worshipped at their local seats according to law. Further, the honour due to parents should not be forgotten; children owe all that they have to them, and the debt must be repaid by kindness and attention in old age. No unbecoming word must be uttered before them; for there is an avenging angel who hears them when they are angry, and the child should consider that the parent when he has been wronged has a right to be angry. After their death let them have a moderate funeral, such as their fathers have had before them; and there shall be an annual commemoration of them. Living on this wise, we shall be accepted of the Gods, and shall pass our days in good hope. The law will determine all our various duties towards relatives and friends and other citizens, and the whole state will be happy and prosperous. But if the legislator would persuade as well as command, he will add prefaces to his laws which will predispose the citizens to virtue. Even a little accomplished in the way of gaining the hearts of men is of great value. For most men are in no particular haste to become good. As Hesiod says:

‘Long and steep is the first half of the way to virtue, But when you have reached the top the rest is easy.’

‘Those are excellent words.’ Yes; but may I tell you the effect which the preceding discourse has had upon me? I will express my meaning in an address to the lawgiver: — O lawgiver, if you know what we ought to do and say, you can surely tell us; — you are not like the poet, who, as you were just now saying, does not know the effect of his own words. And the poet may reply, that when he sits down on the tripod of the Muses he is not in his right mind, and that being a mere imitator he may be allowed to say all sorts of opposite things, and cannot tell which of them is true. But this licence cannot be allowed to the lawgiver. For example, there are three kinds of funerals; one of them is excessive, another mean, a third moderate, and you say that the last is right. Now if I had a rich wife, and she told me to bury her, and I were to sing of her burial, I should praise the extravagant kind; a poor man would commend a funeral of the meaner sort, and a man of moderate means would prefer a moderate funeral. But you, as legislator, would have to say exactly what you meant by ‘moderate.’ ‘Very true.’ And is our lawgiver to have no

preamble or interpretation of his laws, never offering a word of advice to his subjects, after the manner of some doctors? For of doctors are there not two kinds? The one gentle and the other rough, doctors who are freemen and learn themselves and teach their pupils scientifically, and doctor's assistants who get their knowledge empirically by attending on their masters? 'Of course there are.' And did you ever observe that the gentlemen doctors practise upon freemen, and that slave doctors confine themselves to slaves? The latter go about the country or wait for the slaves at the dispensaries. They hold no parley with their patients about their diseases or the remedies of them; they practise by the rule of thumb, and give their decrees in the most arbitrary manner. When they have doctored one patient they run off to another, whom they treat with equal assurance, their duty being to relieve the master of the care of his sick slaves. But the other doctor, who practises on freemen, proceeds in quite a different way. He takes counsel with his patient and learns from him, and never does anything until he has persuaded him of what he is doing. He trusts to influence rather than force. Now is not the use of both methods far better than the use of either alone? And both together may be advantageously employed by us in legislation.

We may illustrate our proposal by an example. The laws relating to marriage naturally come first, and therefore we may begin with them. The simple law would be as follows: — A man shall marry between the ages of thirty and thirty-five; if he do not, he shall be fined or deprived of certain privileges. The double law would add the reason why: Forasmuch as man desires immortality, which he attains by the procreation of children, no one should deprive himself of his share in this good. He who obeys the law is blameless, but he who disobeys must not be a gainer by his celibacy; and therefore he shall pay a yearly fine, and shall not be allowed to receive honour from the young. That is an example of what I call the double law, which may enable us to judge how far the addition of persuasion to threats is desirable. 'Lacedaemonians in general, Stranger, are in favour of brevity; in this case, however, I prefer length. But Cleinias is the real lawgiver, and he ought to be first consulted.' 'Thank you, Megillus.' Whether words are to be many or few, is a foolish question: — the best and not the shortest forms are always to be approved. And

legislators have never thought of the advantages which they might gain by using persuasion as well as force, but trust to force only. And I have something else to say about the matter. Here have we been from early dawn until noon, discoursing about laws, and all that we have been saying is only the preamble of the laws which we are about to give. I tell you this, because I want you to observe that songs and strains have all of them preludes, but that laws, though called by the same name (*nomoi*), have never any prelude. Now I am disposed to give preludes to laws, dividing them into two parts — one containing the despotic command, which I described under the image of the slave doctor — the other the persuasive part, which I term the preamble. The legislator should give preludes or preambles to his laws. ‘That shall be the way in my colony.’ I am glad that you agree with me; this is a matter which it is important to remember. A preamble is not always necessary to a law: the lawgiver must determine when it is needed, as the musician determines when there is to be a prelude to a song. ‘Most true: and now, having a preamble, let us recommence our discourse.’ Enough has been said of Gods and parents, and we may proceed to consider what relates to the citizens — their souls, bodies, properties, — their occupations and amusements; and so arrive at the nature of education.

The first word of the Laws somewhat abruptly introduces the thought which is present to the mind of Plato throughout the work, namely, that Law is of divine origin. In the words of a great English writer— ‘Her seat is the bosom of God, her voice the harmony of the world.’ Though the particular laws of Sparta and Crete had a narrow and imperfect aim, this is not true of divine laws, which are based upon the principles of human nature, and not framed to meet the exigencies of the moment. They have their natural divisions, too, answering to the kinds of virtue; very unlike the discordant enactments of an Athenian assembly or of an English Parliament. Yet we may observe two inconsistencies in Plato’s treatment of the subject: first, a lesser, inasmuch as he does not clearly distinguish the Cretan and Spartan laws, of which the exclusive aim is war, from those other laws of Zeus and Apollo which are said to be divine, and to comprehend all virtue. Secondly, we may retort on him his own complaint against Sparta and Crete, that he has himself given us a

code of laws, which for the most part have a military character; and that we cannot point to 'obvious examples of similar institutions which are concerned with pleasure;' at least there is only one such, that which relates to the regulation of convivial intercourse. The military spirit which is condemned by him in the beginning of the *Laws*, reappears in the seventh and eighth books.

The mention of Minos the great lawgiver, and of Rhadamanthus the righteous administrator of the law, suggests the two divisions of the laws into enactments and appointments of officers. The legislator and the judge stand side by side, and their functions cannot be wholly distinguished. For the judge is in some sort a legislator, at any rate in small matters; and his decisions growing into precedents, must determine the innumerable details which arise out of the conflict of circumstances. These Plato proposes to leave to a younger generation of legislators. The action of courts of law in making law seems to have escaped him, probably because the Athenian law-courts were popular assemblies; and, except in a mythical form, he can hardly be said to have had before his eyes the ideal of a judge. In reading the *Laws* of Plato, or any other ancient writing about *Laws*, we should consider how gradual the process is by which not only a legal system, but the administration of a court of law, becomes perfected.

There are other subjects on which Plato breaks ground, as his manner is, early in the work. First, he gives a sketch of the subject of laws; they are to comprehend the whole of human life, from infancy to age, and from birth to death, although the proposed plan is far from being regularly executed in the books which follow, partly owing to the necessity of describing the constitution as well as the laws of his new colony. Secondly, he touches on the power of music, which may exercise so great an influence on the character of men for good or evil; he refers especially to the great offence — which he mentions again, and which he had condemned in the *Republic* — of varying the modes and rhythms, as well as to that of separating the words from the music. Thirdly, he reprobates the prevalence of unnatural loves in Sparta and Crete, which he attributes to the practice of *syssitia* and gymnastic exercises, and considers to be almost inseparable from them. To this subject he again returns in the eighth book. Fourthly, the virtues are affirmed to be inseparable from

one another, even if not absolutely one; this, too, is a principle which he reasserts at the conclusion of the work. As in the beginnings of Plato's other writings, we have here several 'notes' struck, which form the preludes of longer discussions, although the hint is less ingeniously given, and the promise more imperfectly fulfilled than in the earlier dialogues.

The distinction between ethics and politics has not yet dawned upon Plato's mind. To him, law is still floating in a region between the two. He would have desired that all the acts and laws of a state should have regard to all virtue. But he did not see that politics and law are subject to their own conditions, and are distinguished from ethics by natural differences. The actions of which politics take cognisance are necessarily collective or representative; and law is limited to external acts which affect others as well as the agents. Ethics, on the other hand, include the whole duty of man in relation both to himself and others. But Plato has never reflected on these differences. He fancies that the life of the state can be as easily fashioned as that of the individual. He is favourable to a balance of power, but never seems to have considered that power might be so balanced as to produce an absolute immobility in the state. Nor is he alive to the evils of confounding vice and crime; or to the necessity of governments abstaining from excessive interference with their subjects.

Yet this confusion of ethics and politics has also a better and a truer side. If unable to grasp some important distinctions, Plato is at any rate seeking to elevate the lower to the higher; he does not pull down the principles of men to their practice, or narrow the conception of the state to the immediate necessities of politics. Political ideals of freedom and equality, of a divine government which has been or will be in some other age or country, have greatly tended to educate and ennoble the human race. And if not the first author of such ideals (for they are as old as Hesiod), Plato has done more than any other writer to impress them on the world. To those who censure his idealism we may reply in his own words— 'He is not the worse painter who draws a perfectly beautiful figure, because no such figure of a man could ever have existed' (Republic).

A new thought about education suddenly occurs to him, and for a

time exercises a sort of fascination over his mind, though in the later books of the *Laws* it is forgotten or overlooked. As true courage is allied to temperance, so there must be an education which shall train mankind to resist pleasure as well as to endure pain. No one can be on his guard against that of which he has no experience. The perfectly trained citizen should have been accustomed to look his enemy in the face, and to measure his strength against her. This education in pleasure is to be given, partly by festive intercourse, but chiefly by the song and dance. Youth are to learn music and gymnastics; their elders are to be trained and tested at drinking parties. According to the old proverb, *in vino veritas*, they will then be open and visible to the world in their true characters; and also they will be more amenable to the laws, and more easily moulded by the hand of the legislator. The first reason is curious enough, though not important; the second can hardly be thought deserving of much attention. Yet if Plato means to say that society is one of the principal instruments of education in after-life, he has expressed in an obscure fashion a principle which is true, and to his contemporaries was also new. That at a banquet a degree of moral discipline might be exercised is an original thought, but Plato has not yet learnt to express his meaning in an abstract form. He is sensible that moderation is better than total abstinence, and that asceticism is but a one-sided training. He makes the sagacious remark, that ‘those who are able to resist pleasure may often be among the worst of mankind.’ He is as much aware as any modern utilitarian that the love of pleasure is the great motive of human action. This cannot be eradicated, and must therefore be regulated, — the pleasure must be of the right sort. Such reflections seem to be the real, though imperfectly expressed, groundwork of the discussion. As in the juxtaposition of the Bacchic madness and the great gift of Dionysus, or where he speaks of the different senses in which pleasure is and is not the object of imitative art, or in the illustration of the failure of the Dorian institutions from the prayer of Theseus, we have to gather his meaning as well as we can from the connexion.

The feeling of old age is discernible in this as well as in several other passages of the *Laws*. Plato has arrived at the time when men sit still and look on at life; and he is willing to allow himself and

others the few pleasures which remain to them. Wine is to cheer them now that their limbs are old and their blood runs cold. They are the best critics of dancing and music, but cannot be induced to join in song unless they have been enlivened by drinking. Youth has no need of the stimulus of wine, but age can only be made young again by its invigorating influence. Total abstinence for the young, moderate and increasing potations for the old, is Plato's principle. The fire, of which there is too much in the one, has to be brought to the other. Drunkenness, like madness, had a sacredness and mystery to the Greek; if, on the one hand, as in the case of the Tarentines, it degraded a whole population, it was also a mode of worshipping the god Dionysus, which was to be practised on certain occasions. Moreover, the intoxication produced by the fruit of the vine was very different from the grosser forms of drunkenness which prevail among some modern nations.

The physician in modern times would restrict the old man's use of wine within narrow limits. He would tell us that you cannot restore strength by a stimulus. Wine may call back the vital powers in disease, but cannot reinvigorate old age. In his maxims of health and longevity, though aware of the importance of a simple diet, Plato has omitted to dwell on the perfect rule of moderation. His commendation of wine is probably a passing fancy, and may have arisen out of his own habits or tastes. If so, he is not the only philosopher whose theory has been based upon his practice.

Plato's denial of wine to the young and his approval of it for their elders has some points of view which may be illustrated by the temperance controversy of our own times. Wine may be allowed to have a religious as well as a festive use; it is commended both in the Old and New Testament; it has been sung of by nearly all poets; and it may be truly said to have a healing influence both on body and mind. Yet it is also very liable to excess and abuse, and for this reason is prohibited by Mahometans, as well as of late years by many Christians, no less than by the ancient Spartans; and to sound its praises seriously seems to partake of the nature of a paradox. But we may rejoin with Plato that the abuse of a good thing does not take away the use of it. Total abstinence, as we often say, is not the best rule, but moderate indulgence; and it is probably true that a

temperate use of wine may contribute some elements of character to social life which we can ill afford to lose. It draws men out of their reserve; it helps them to forget themselves and to appear as they by nature are when not on their guard, and therefore to make them more human and greater friends to their fellow-men. It gives them a new experience; it teaches them to combine self-control with a measure of indulgence; it may sometimes restore to them the simplicity of childhood. We entirely agree with Plato in forbidding the use of wine to the young; but when we are of mature age there are occasions on which we derive refreshment and strength from moderate potations. It is well to make abstinence the rule, but the rule may sometimes admit of an exception. We are in a higher, as well as in a lower sense, the better for the use of wine. The question runs up into wider ones — What is the general effect of asceticism on human nature? and, Must there not be a certain proportion between the aspirations of man and his powers? — questions which have been often discussed both by ancient and modern philosophers. So by comparing things old and new we may sometimes help to realize to ourselves the meaning of Plato in the altered circumstances of our own life.

Like the importance which he attaches to festive entertainments, his depreciation of courage to the fourth place in the scale of virtue appears to be somewhat rhetorical and exaggerated. But he is speaking of courage in the lower sense of the term, not as including loyalty or temperance. He does not insist in this passage, as in the Protagoras, on the unity of the virtues; or, as in the Laches, on the identity of wisdom and courage. But he says that they all depend upon their leader mind, and that, out of the union of wisdom and temperance with courage, springs justice. Elsewhere he is disposed to regard temperance rather as a condition of all virtue than as a particular virtue. He generalizes temperance, as in the Republic he generalizes justice. The nature of the virtues is to run up into one another, and in many passages Plato makes but a faint effort to distinguish them. He still quotes the poets, somewhat enlarging, as his manner is, or playing with their meaning. The martial poet Tyrtæus, and the oligarch Theognis, furnish him with happy illustrations of the two sorts of courage. The fear of fear, the division of goods into human and divine, the acknowledgment that peace and

reconciliation are better than the appeal to the sword, the analysis of temperance into resistance of pleasure as well as endurance of pain, the distinction between the education which is suitable for a trade or profession, and for the whole of life, are important and probably new ethical conceptions. Nor has Plato forgotten his old paradox (Gorgias) that to be punished is better than to be unpunished, when he says, that to the bad man death is the only mitigation of his evil. He is not less ideal in many passages of the Laws than in the Gorgias or Republic. But his wings are heavy, and he is unequal to any sustained flight.

There is more attempt at dramatic effect in the first book than in the later parts of the work. The outburst of martial spirit in the Lacedaemonian, 'O best of men'; the protest which the Cretan makes against the supposed insult to his lawgiver; the cordial acknowledgment on the part of both of them that laws should not be discussed publicly by those who live under their rule; the difficulty which they alike experience in following the speculations of the Athenian, are highly characteristic.

In the second book, Plato pursues further his notion of educating by a right use of pleasure. He begins by conceiving an endless power of youthful life, which is to be reduced to rule and measure by harmony and rhythm. Men differ from the lower animals in that they are capable of musical discipline. But music, like all art, must be truly imitative, and imitative of what is true and good. Art and morality agree in rejecting pleasure as the criterion of good. True art is inseparable from the highest and most ennobling ideas. Plato only recognizes the identity of pleasure and good when the pleasure is of the higher kind. He is the enemy of 'songs without words,' which he supposes to have some confusing or enervating effect on the mind of the hearer; and he is also opposed to the modern degeneracy of the drama, which he would probably have illustrated, like Aristophanes, from Euripides and Agathon. From this passage may be gathered a more perfect conception of art than from any other of Plato's writings. He understands that art is at once imitative and ideal, an exact representation of truth, and also a representation of the highest truth. The same double view of art may be gathered from a comparison of the third and tenth books of the Republic, but is here

more clearly and pointedly expressed.

We are inclined to suspect that both here and in the Republic Plato exaggerates the influence really exercised by the song and the dance. But we must remember also the susceptible nature of the Greek, and the perfection to which these arts were carried by him. Further, the music had a sacred and Pythagorean character; the dance too was part of a religious festival. And only at such festivals the sexes mingled in public, and the youths passed under the eyes of their elders.

At the beginning of the third book, Plato abruptly asks the question, What is the origin of states? The answer is, Infinite time. We have already seen — in the Theaetetus, where he supposes that in the course of ages every man has had numberless progenitors, kings and slaves, Greeks and barbarians; and in the Critias, where he says that nine thousand years have elapsed since the island of Atlantis fought with Athens — that Plato is no stranger to the conception of long periods of time. He imagines human society to have been interrupted by natural convulsions; and beginning from the last of these, he traces the steps by which the family has grown into the state, and the original scattered society, becoming more and more civilised, has finally passed into military organizations like those of Crete and Sparta. His conception of the origin of states is far truer in the Laws than in the Republic; but it must be remembered that here he is giving an historical, there an ideal picture of the growth of society.

Modern enquirers, like Plato, have found in infinite ages the explanation not only of states, but of languages, men, animals, the world itself; like him, also, they have detected in later institutions the vestiges of a patriarchal state still surviving. Thus far Plato speaks as ‘the spectator of all time and all existence,’ who may be thought by some divine instinct to have guessed at truths which were hereafter to be revealed. He is far above the vulgar notion that Hellas is the civilized world (Statesman), or that civilization only began when the Hellenes appeared on the scene. But he has no special knowledge of ‘the days before the flood’; and when he approaches more historical times, in preparing the way for his own theory of mixed government, he argues partially and erroneously. He is desirous of showing that

unlimited power is ruinous to any state, and hence he is led to attribute a tyrannical spirit to the first Dorian kings. The decay of Argos and the destruction of Messene are adduced by him as a manifest proof of their failure; and Sparta, he thinks, was only preserved by the limitations which the wisdom of successive legislators introduced into the government. But there is no more reason to suppose that the Dorian rule of life which was followed at Sparta ever prevailed in Argos and Messene, than to assume that Dorian institutions were framed to protect the Greeks against the power of Assyria; or that the empire of Assyria was in any way affected by the Trojan war; or that the return of the Heraclidae was only the return of Achaean exiles, who received a new name from their leader Dorieus. Such fancies were chiefly based, as far as they had any foundation, on the use of analogy, which played a great part in the dawn of historical and geographical research. Because there was a Persian empire which was the natural enemy of the Greek, there must also have been an Assyrian empire, which had a similar hostility; and not only the fable of the island of Atlantis, but the Trojan war, in Plato's mind derived some features from the Persian struggle. So Herodotus makes the Nile answer to the Ister, and the valley of the Nile to the Red Sea. In the Republic, Plato is flying in the air regardless of fact and possibility — in the Laws, he is making history by analogy. In the former, he appears to be like some modern philosophers, absolutely devoid of historical sense; in the latter, he is on a level, not with Thucydides, or the critical historians of Greece, but with Herodotus, or even with Ctesias.

The chief object of Plato in tracing the origin of society is to show the point at which regular government superseded the patriarchal authority, and the separate customs of different families were systematized by legislators, and took the form of laws consented to by them all. According to Plato, the only sound principle on which any government could be based was a mixture or balance of power. The balance of power saved Sparta, when the two other Heraclid states fell into disorder. Here is probably the first trace of a political idea, which has exercised a vast influence both in ancient and modern times. And yet we might fairly ask, a little parodying the language of Plato — O legislator, is unanimity only 'the struggle for

existence'; or is the balance of powers in a state better than the harmony of them?

In the fourth book we approach the realities of politics, and Plato begins to ascend to the height of his great argument. The reign of Cronos has passed away, and various forms of government have succeeded, which are all based on self-interest and self-preservation. Right and wrong, instead of being measured by the will of God, are created by the law of the state. The strongest assertions are made of the purely spiritual nature of religion— 'Without holiness no man is accepted of God'; and of the duty of filial obedience,— 'Honour thy parents.' The legislator must teach these precepts as well as command them. He is to be the educator as well as the lawgiver of future ages, and his laws are themselves to form a part of the education of the state. Unlike the poet, he must be definite and rational; he cannot be allowed to say one thing at one time, and another thing at another — he must know what he is about. And yet legislation has a poetical or rhetorical element, and must find words which will wing their way to the hearts of men. Laws must be promulgated before they are put in execution, and mankind must be reasoned with before they are punished. The legislator, when he promulgates a particular law, will courteously entreat those who are willing to hear his voice. Upon the rebellious only does the heavy blow descend. A sermon and a law in one, blending the secular punishment with the religious sanction, appeared to Plato a new idea which might have a great result in reforming the world. The experiment had never been tried of reasoning with mankind; the laws of others had never had any preambles, and Plato seems to have great pleasure in contemplating his discovery.

In these quaint forms of thought and language, great principles of morals and legislation are enunciated by him for the first time. They all go back to mind and God, who holds the beginning, middle, and end of all things in His hand. The adjustment of the divine and human elements in the world is conceived in the spirit of modern popular philosophy, differing not much in the mode of expression. At first sight the legislator appears to be impotent, for all things are the sport of chance. But we admit also that God governs all things, and that chance and opportunity co-operate with Him (compare the

saying, that chance is the name of the unknown cause). Lastly, while we acknowledge that God and chance govern mankind and provide the conditions of human action, experience will not allow us to deny a place to art. We know that there is a use in having a pilot, though the storm may overwhelm him; and a legislator is required to provide for the happiness of a state, although he will pray for favourable conditions under which he may exercise his art.

BOOK V. Hear now, all ye who heard the laws about Gods and ancestors: Of all human possessions the soul is most divine, and most truly a man's own. For in every man there are two parts — a better which rules, and an inferior which serves; and the ruler is to be preferred to the servant. Wherefore I bid every one next after the Gods to honour his own soul, and he can only honour her by making her better. A man does not honour his soul by flattery, or gifts, or self-indulgence, or conceit of knowledge, nor when he blames others for his own errors; nor when he indulges in pleasure or refuses to bear pain; nor when he thinks that life at any price is a good, because he fears the world below, which, far from being an evil, may be the greatest good; nor when he prefers beauty to virtue — not reflecting that the soul, which came from heaven, is more honourable than the body, which is earth-born; nor when he covets dishonest gains, of which no amount is equal in value to virtue; — in a word, when he counts that which the legislator pronounces evil to be good, he degrades his soul, which is the divinest part of him. He does not consider that the real punishment of evil-doing is to grow like evil men, and to shun the conversation of the good: and that he who is joined to such men must do and suffer what they by nature do and say to one another, which suffering is not justice but retribution. For justice is noble, but retribution is only the companion of injustice. And whether a man escapes punishment or not, he is equally miserable; for in the one case he is not cured, and in the other case he perishes that the rest may be saved.

The glory of man is to follow the better and improve the inferior. And the soul is that part of man which is most inclined to avoid the evil and dwell with the good. Wherefore also the soul is second only to the Gods in honour, and in the third place the body is to be esteemed, which often has a false honour. For honour is not to be

given to the fair or the strong, or the swift or the tall, or to the healthy, any more than to their opposites, but to the mean states of all these habits; and so of property and external goods. No man should heap up riches that he may leave them to his children. The best condition for them as for the state is a middle one, in which there is a freedom without luxury. And the best inheritance of children is modesty. But modesty cannot be implanted by admonition only — the elders must set the example. He who would train the young must first train himself.

He who honours his kindred and family may fairly expect that the Gods will give him children. He who would have friends must think much of their favours to him, and little of his to them. He who prefers to an Olympic, or any other victory, to win the palm of obedience to the laws, serves best both the state and his fellow-citizens. Engagements with strangers are to be deemed most sacred, because the stranger, having neither kindred nor friends, is immediately under the protection of Zeus, the God of strangers. A prudent man will not sin against the stranger; and still more carefully will he avoid sinning against the suppliant, which is an offence never passed over by the Gods.

I will now speak of those particulars which are matters of praise and blame only, and which, although not enforced by the law, greatly affect the disposition to obey the law. Truth has the first place among the gifts of Gods and men, for truth begets trust; but he is not to be trusted who loves voluntary falsehood, and he who loves involuntary falsehood is a fool. Neither the ignorant nor the untrustworthy man is happy; for they have no friends in life, and die unlamented and untended. Good is he who does no injustice — better who prevents others from doing any — best of all who joins the rulers in punishing injustice. And this is true of goods and virtues in general; he who has and communicates them to others is the man of men; he who would, if he could, is second-best; he who has them and is jealous of imparting them to others is to be blamed, but the good or virtue which he has is to be valued still. Let every man contend in the race without envy; for the unenvious man increases the strength of the city; himself foremost in the race, he harms no one with calumny. Whereas the envious man is weak himself, and drives his rivals to

despair with his slanders, thus depriving the whole city of incentives to the exercise of virtue, and tarnishing her glory. Every man should be gentle, but also passionate; for he must have the spirit to fight against incurable and malignant evil. But the evil which is remediable should be dealt with more in sorrow than anger. He who is unjust is to be pitied in any case; for no man voluntarily does evil or allows evil to exist in his soul. And therefore he who deals with the curable sort must be long-suffering and forbearing; but the incurable shall have the vials of our wrath poured out upon him. The greatest of all evils is self-love, which is thought to be natural and excusable, and is enforced as a duty, and yet is the cause of many errors. The lover is blinded about the beloved, and prefers his own interests to truth and right; but the truly great man seeks justice before all things. Self-love is the source of that ignorant conceit of knowledge which is always doing and never succeeding. Wherefore let every man avoid self-love, and follow the guidance of those who are better than himself. There are lesser matters which a man should recall to mind; for wisdom is like a stream, ever flowing in and out, and recollection flows in when knowledge is failing. Let no man either laugh or grieve overmuch; but let him control his feelings in the day of good- or ill-fortune, believing that the Gods will diminish the evils and increase the blessings of the righteous. These are thoughts which should ever occupy a good man's mind; he should remember them both in lighter and in more serious hours, and remind others of them.

So much of divine matters and the relation of man to God. But man is man, and dependent on pleasure and pain; and therefore to acquire a true taste respecting either is a great matter. And what is a true taste? This can only be explained by a comparison of one life with another. Pleasure is an object of desire, pain of avoidance; and the absence of pain is to be preferred to pain, but not to pleasure. There are infinite kinds and degrees of both of them, and we choose the life which has more pleasure and avoid that which has less; but we do not choose that life in which the elements of pleasure are either feeble or equally balanced with pain. All the lives which we desire are pleasant; the choice of any others is due to inexperience.

Now there are four lives — the temperate, the rational, the

courageous, the healthful; and to these let us oppose four others — the intemperate, the foolish, the cowardly, the diseased. The temperate life has gentle pains and pleasures and placid desires, the intemperate life has violent delights, and still more violent desires. And the pleasures of the temperate exceed the pains, while the pains of the intemperate exceed the pleasures. But if this is true, none are voluntarily intemperate, but all who lack temperance are either ignorant or wanting in self-control: for men always choose the life which (as they think) exceeds in pleasure. The wise, the healthful, the courageous life have a similar advantage — they also exceed their opposites in pleasure. And, generally speaking, the life of virtue is far more pleasurable and honourable, fairer and happier far, than the life of vice. Let this be the preamble of our laws; the strain will follow.

As in a web the warp is stronger than the woof, so should the rulers be stronger than their half-educated subjects. Let us suppose, then, that in the constitution of a state there are two parts, the appointment of the rulers, and the laws which they have to administer. But, before going further, there are some preliminary matters which have to be considered.

As of animals, so also of men, a selection must be made; the bad breed must be got rid of, and the good retained. The legislator must purify them, and if he be not a despot he will find this task to be a difficult one. The severer kinds of purification are practised when great offenders are punished by death or exile, but there is a milder process which is necessary when the poor show a disposition to attack the property of the rich, for then the legislator will send them off to another land, under the name of a colony. In our case, however, we shall only need to purify the streams before they meet. This is often a troublesome business, but in theory we may suppose the operation performed, and the desired purity attained. Evil men we will hinder from coming, and receive the good as friends.

Like the old Heraclid colony, we are fortunate in escaping the abolition of debts and the distribution of land, which are difficult and dangerous questions. But, perhaps, now that we are speaking of the subject, we ought to say how, if the danger existed, the legislator should try to avert it. He would have recourse to prayers, and trust to

the healing influence of time. He would create a kindly spirit between creditors and debtors: those who have should give to those who have not, and poverty should be held to be rather the increase of a man's desires than the diminution of his property. Good-will is the only safe and enduring foundation of the political society; and upon this our city shall be built. The lawgiver, if he is wise, will not proceed with the arrangement of the state until all disputes about property are settled. And for him to introduce fresh grounds of quarrel would be madness.

Let us now proceed to the distribution of our state, and determine the size of the territory and the number of the allotments. The territory should be sufficient to maintain the citizens in moderation, and the population should be numerous enough to defend themselves, and sometimes to aid their neighbours. We will fix the number of citizens at 5040, to which the number of houses and portions of land shall correspond. Let the number be divided into two parts and then into three; for it is very convenient for the purposes of distribution, and is capable of fifty-nine divisions, ten of which proceed without interval from one to ten. Here are numbers enough for war and peace, and for all contracts and dealings. These properties of numbers are true, and should be ascertained with a view to use.

In carrying out the distribution of the land, a prudent legislator will be careful to respect any provision for religious worship which has been sanctioned by ancient tradition or by the oracles of Delphi, Dodona, or Ammon. All sacrifices, and altars, and temples, whatever may be their origin, should remain as they are. Every division should have a patron God or hero; to these a portion of the domain should be appropriated, and at their temples the inhabitants of the districts should meet together from time to time, for the sake of mutual help and friendship. All the citizens of a state should be known to one another; for where men are in the dark about each other's characters, there can be no justice or right administration. Every man should be true and single-minded, and should not allow himself to be deceived by others.

And now the game opens, and we begin to move the pieces. At first sight, our constitution may appear singular and ill-adapted to a

legislator who has not despotic power; but on second thoughts will be deemed to be, if not the very best, the second best. For there are three forms of government, a first, a second, and a third best, out of which Cleinias has now to choose. The first and highest form is that in which friends have all things in common, including wives and property, — in which they have common fears, hopes, desires, and do not even call their eyes or their hands their own. This is the ideal state; than which there never can be a truer or better — a state, whether inhabited by Gods or sons of Gods, which will make the dwellers therein blessed. Here is the pattern on which we must ever fix our eyes; but we are now concerned with another, which comes next to it, and we will afterwards proceed to a third.

Inasmuch as our citizens are not fitted either by nature or education to receive the saying, Friends have all things in common, let them retain their houses and private property, but use them in the service of their country, who is their God and parent, and of the Gods and demigods of the land. Their first care should be to preserve the number of their lots. This may be secured in the following manner: when the possessor of a lot dies, he shall leave his lot to his best-beloved child, who will become the heir of all duties and interests, and will minister to the Gods and to the family, to the living and to the dead. Of the remaining children, the females must be given in marriage according to the law to be hereafter enacted; the males may be assigned to citizens who have no children of their own. How to equalize families and allotments will be one of the chief cares of the guardians of the laws. When parents have too many children they may give to those who have none, or couples may abstain from having children, or, if there is a want of offspring, special care may be taken to obtain them; or if the number of citizens becomes excessive, we may send away the surplus to found a colony. If, on the other hand, a war or plague diminishes the number of inhabitants, new citizens must be introduced; and these ought not, if possible, to be men of low birth or inferior training; but even God, it is said, cannot always fight against necessity.

Wherefore we will thus address our citizens: — Good friends, honour order and equality, and above all the number 5040. Secondly, respect the original division of the lots, which must not be infringed

by buying and selling, for the law says that the land which a man has is sacred and is given to him by God. And priests and priestesses will offer frequent sacrifices and pray that he who alienates either house or lot may receive the punishment which he deserves, and their prayers shall be inscribed on tablets of cypress-wood for the instruction of posterity. The guardians will keep a vigilant watch over the citizens, and they will punish those who disobey God and the law.

To appreciate the benefit of such an institution a man requires to be well educated; for he certainly will not make a fortune in our state, in which all illiberal occupations are forbidden to freemen. The law also provides that no private person shall have gold or silver, except a little coin for daily use, which will not pass current in other countries. The state must also possess a common Hellenic currency, but this is only to be used in defraying the expenses of expeditions, or of embassies, or while a man is on foreign travels; but in the latter case he must deliver up what is over, when he comes back, to the treasury in return for an equal amount of local currency, on pain of losing the sum in question; and he who does not inform against an offender is to be mulcted in a like sum. No money is to be given or taken as a dowry, or to be lent on interest. The law will not protect a man in recovering either interest or principal. All these regulations imply that the aim of the legislator is not to make the city as rich or as mighty as possible, but the best and happiest. Now men can hardly be at the same time very virtuous and very rich. And why? Because he who makes twice as much and saves twice as much as he ought, receiving where he ought not and not spending where he ought, will be at least twice as rich as he who makes money where he ought, and spends where he ought. On the other hand, an utterly bad man is generally profligate and poor, while he who acquires honestly, and spends what he acquires on noble objects, can hardly be very rich. A very rich man is therefore not a good man, and therefore not a happy one. But the object of our laws is to make the citizens as friendly and happy as possible, which they cannot be if they are always at law and injuring each other in the pursuit of gain. And therefore we say that there is to be no silver or gold in the state, nor usury, nor the rearing of the meaner kinds of live-stock, but only agriculture, and only so

much of this as will not lead men to neglect that for the sake of which money is made, first the soul and afterwards the body; neither of which are good for much without music and gymnastic. Money is to be held in honour last or third; the highest interests being those of the soul, and in the second class are to be ranked those of the body. This is the true order of legislation, which would be inverted by placing health before temperance, and wealth before health.

It might be well if every man could come to the colony having equal property; but equality is impossible, and therefore we must avoid causes of offence by having property valued and by equalizing taxation. To this end, let us make four classes in which the citizens may be placed according to the measure of their original property, and the changes of their fortune. The greatest of evils is revolution; and this, as the law will say, is caused by extremes of poverty or wealth. The limit of poverty shall be the lot, which must not be diminished, and may be increased fivefold, but not more. He who exceeds the limit must give up the excess to the state; but if he does not, and is informed against, the surplus shall be divided between the informer and the Gods, and he shall pay a sum equal to the surplus out of his own property. All property other than the lot must be inscribed in a register, so that any disputes which arise may be easily determined.

The city shall be placed in a suitable situation, as nearly as possible in the centre of the country, and shall be divided into twelve wards. First, we will erect an acropolis, encircled by a wall, within which shall be placed the temples of Hestia, and Zeus, and Athene. From this shall be drawn lines dividing the city, and also the country, into twelve sections, and the country shall be subdivided into 5040 lots. Each lot shall contain two parts, one at a distance, the other near the city; and the distance of one part shall be compensated by the nearness of the other, the badness and goodness by the greater or less size. Twelve lots will be assigned to twelve Gods, and they will give their names to the tribes. The divisions of the city shall correspond to those of the country; and every man shall have two habitations, one near the centre of the country, the other at the extremity.

The objection will naturally arise, that all the advantages of which we have been speaking will never concur. The citizens will not

tolerate a settlement in which they are deprived of gold and silver, and have the number of their families regulated, and the sites of their houses fixed by law. It will be said that our city is a mere image of wax. And the legislator will answer: 'I know it, but I maintain that we ought to set forth an ideal which is as perfect as possible. If difficulties arise in the execution of the plan, we must avoid them and carry out the remainder. But the legislator must first be allowed to complete his idea without interruption.'

The number twelve, which we have chosen for the number of division, must run through all parts of the state, — phratries, villages, ranks of soldiers, coins, and measures wet and dry, which are all to be made commensurable with one another. There is no meanness in requiring that the smallest vessels should have a common measure; for the divisions of number are useful in measuring height and depth, as well as sounds and motions, upwards or downwards, or round and round. The legislator should impress on his citizens the value of arithmetic. No instrument of education has so much power; nothing more tends to sharpen and inspire the dull intellect. But the legislator must be careful to instil a noble and generous spirit into the students, or they will tend to become cunning rather than wise. This may be proved by the example of the Egyptians and Phoenicians, who, notwithstanding their knowledge of arithmetic, are degraded in their general character; whether this defect in them is due to some natural cause or to a bad legislator. For it is clear that there are great differences in the power of regions to produce good men: heat and cold, and water and food, have great effects both on body and soul; and those spots are peculiarly fortunate in which the air is holy, and the Gods are pleased to dwell. To all this the legislator must attend, so far as in him lies.

BOOK VI. And now we are about to consider (1) the appointment of magistrates; (2) the laws which they will have to administer must be determined. I may observe by the way that laws, however good, are useless and even injurious unless the magistrates are capable of executing them. And therefore (1) the intended rulers of our imaginary state should be tested from their youth upwards until the time of their election; and (2) those who are to elect them ought to be trained in habits of law, that they may form a right judgment of good

and bad men. But uneducated colonists, who are unacquainted with each other, will not be likely to choose well. What, then, shall we do? I will tell you: The colony will have to be intrusted to the ten commissioners, of whom you are one, and I will help you and them, which is my reason for inventing this romance. And I cannot bear that the tale should go wandering about the world without a head, — it will be such an ugly monster. ‘Very good.’ Yes; and I will be as good as my word, if God be gracious and old age permit. But let us not forget what a courageously mad creation this our city is. ‘What makes you say so?’ Why, surely our courage is shown in imagining that the new colonists will quietly receive our laws? For no man likes to receive laws when they are first imposed: could we only wait until those who had been educated under them were grown up, and of an age to vote in the public elections, there would be far greater reason to expect permanence in our institutions. ‘Very true.’ The Cnosian founders should take the utmost pains in the matter of the colony, and in the election of the higher officers, particularly of the guardians of the law. The latter should be appointed in this way: The Cnosians, who take the lead in the colony, together with the colonists, will choose thirty-seven persons, of whom nineteen will be colonists, and the remaining eighteen Cnosians — you must be one of the eighteen yourself, and become a citizen of the new state. ‘Why do not you and Megillus join us?’ Athens is proud, and Sparta too; and they are both a long way off. But let me proceed with my scheme. When the state is permanently established, the mode of election will be as follows: All who are serving, or have served, in the army will be electors; and the election will be held in the most sacred of the temples. The voter will place on the altar a tablet, inscribing thereupon the name of the candidate whom he prefers, and of his father, tribe, and ward, writing at the side of them his own name in like manner; and he may take away any tablet which does not appear written to his mind, and place it in the Agora for thirty days. The 300 who obtain the greatest number of votes will be publicly announced, and out of them there will be a second election of 100; and out of the 100 a third and final election of thirty-seven, accompanied by the solemnity of the electors passing through victims. But then who is to arrange all this? There is a common saying, that the beginning is half the whole; and I

should say a good deal more than half. 'Most true.' The only way of making a beginning is from the parent city; and though in after ages the tie may be broken, and quarrels may arise between them, yet in early days the child naturally looks to the mother for care and education. And, as I said before, the Cnosians ought to take an interest in the colony, and select 100 elders of their own citizens, to whom shall be added 100 of the colonists, to arrange and supervise the first elections and scrutinies; and when the colony has been started, the Cnosians may return home and leave the colonists to themselves.

The thirty-seven magistrates who have been elected in the manner described, shall have the following duties: first, they shall be guardians of the law; secondly, of the registers of property in the four classes — not including the one, two, three, four minae, which are allowed as a surplus. He who is found to possess what is not entered in the registers, in addition to the confiscation of such property shall be proceeded against by law, and if he be cast he shall lose his share in the public property and in distributions of money; and his sentence shall be inscribed in some public place. The guardians are to continue in office twenty years only, and to commence holding office at fifty years, or if elected at sixty they are not to remain after seventy.

Generals have now to be elected, and commanders of horse and brigadiers of foot. The generals shall be natives of the city, proposed by the guardians of the law, and elected by those who are or have been of the age for military service. Any one may challenge the person nominated and start another candidate, whom he affirms upon oath to be better qualified. The three who obtain the greatest number of votes shall be elected. The generals thus elected shall propose the taxiarchs or brigadiers, and the challenge may be made, and the voting shall take place, in the same manner as before. The elective assembly will be presided over in the first instance, and until the prytanes and council come into being, by the guardians of the law in some holy place; and they shall divide the citizens into three divisions, — hoplites, cavalry, and the rest of the army — placing each of them by itself. All are to vote for generals and cavalry officers. The brigadiers are to be voted for only by the hoplites. Next,

the cavalry are to choose phylarchs for the generals; but captains of archers and other irregular troops are to be appointed by the generals themselves. The cavalry-officers shall be proposed and voted upon by the same persons who vote for the generals. The two who have the greatest number of votes shall be leaders of all the horse. Disputes about the voting may be raised once or twice, but, if a third time, the presiding officers shall decide.

The council shall consist of 360, who may be conveniently divided into four sections, making ninety councillors of each class. In the first place, all the citizens shall select candidates from the first class; and they shall be compelled to vote under pain of a fine. This shall be the business of the first day. On the second day a similar selection shall be made from the second class under the same conditions. On the third day, candidates shall be selected from the third class; but the compulsion to vote shall only extend to the voters of the first three classes. On the fourth day, members of the council shall be selected from the fourth class; they shall be selected by all, but the compulsion to vote shall only extend to the second class, who, if they do not vote, shall pay a fine of triple the amount which was exacted at first, and to the first class, who shall pay a quadruple fine. On the fifth day, the names shall be exhibited, and out of them shall be chosen by all the citizens 180 of each class: these are severally to be reduced by lot to ninety, and 90×4 will form the council for the year.

The mode of election which has been described is a mean between monarchy and democracy, and such a mean should ever be observed in the state. For servants and masters cannot be friends, and, although equality makes friendship, we must remember that there are two sorts of equality. One of them is the rule of number and measure; but there is also a higher equality, which is the judgment of Zeus. Of this he grants but little to mortal men; yet that little is the source of the greatest good to cities and individuals. It is proportioned to the nature of each man; it gives more to the better and less to the inferior, and is the true political justice; to this we in our state desire to look, as every legislator should, not to the interests either of tyrants or mobs. But justice cannot always be strictly enforced, and then equity and mercy have to be substituted: and for a similar reason, when true

justice will not be endured, we must have recourse to the rougher justice of the lot, which God must be entreated to guide.

These are the principal means of preserving the state, but perpetual care will also be required. When a ship is sailing on the sea, vigilance must not be relaxed night or day; and the vessel of state is tossing in a political sea, and therefore watch must continually succeed watch, and rulers must join hands with rulers. A small body will best perform this duty, and therefore the greater part of the 360 senators may be permitted to go and manage their own affairs, but a twelfth portion must be set aside in each month for the administration of the state. Their business will be to receive information and answer embassies; also they must endeavour to prevent or heal internal disorders; and with this object they must have the control of all assemblies of the citizens.

Besides the council, there must be wardens of the city and of the agora, who will superintend houses, ways, harbours, markets, and fountains, in the city and the suburbs, and prevent any injury being done to them by man or beast. The temples, also, will require priests and priestesses. Those who hold the priestly office by hereditary tenure shall not be disturbed; but as there will probably be few or none such in a new colony, priests and priestesses shall be appointed for the Gods who have no servants. Some of these officers shall be elected by vote, some by lot; and all classes shall mingle in a friendly manner at the elections. The appointment of priests should be left to God, — that is, to the lot; but the person elected must prove that he is himself sound in body and of legitimate birth, and that his family has been free from homicide or any other stain of impurity. Priests and priestesses are to be not less than sixty years of age, and shall hold office for a year only. The laws which are to regulate matters of religion shall be brought from Delphi, and interpreters appointed to superintend their execution. These shall be elected in the following manner: — The twelve tribes shall be formed into three bodies of four, each of which shall select four candidates, and this shall be done three times: of each twelve thus selected the three who receive the largest number of votes, nine in all, after undergoing a scrutiny shall go to Delphi, in order that the God may elect one out of each triad. They shall be appointed for life; and when any of them dies,

another shall be elected by the four tribes who made the original appointment. There shall also be treasurers of the temples; three for the greater temples, two for the lesser, and one for those of least importance.

The defence of the city should be committed to the generals and other officers of the army, and to the wardens of the city and agora. The defence of the country shall be on this wise: — The twelve tribes shall allot among themselves annually the twelve divisions of the country, and each tribe shall appoint five wardens and commanders of the watch. The five wardens in each division shall choose out of their own tribe twelve guards, who are to be between twenty-five and thirty years of age. Both the wardens and the guards are to serve two years; and they shall make a round of the divisions, staying a month in each. They shall go from West to East during the first year, and back from East to West during the second. Thus they will gain a perfect knowledge of the country at every season of the year.

While on service, their first duty will be to see that the country is well protected by means of fortifications and entrenchments; they will use the beasts of burden and the labourers whom they find on the spot, taking care however not to interfere with the regular course of agriculture. But while they thus render the country as inaccessible as possible to enemies, they will also make it as accessible as possible to friends by constructing and maintaining good roads. They will restrain and preserve the rain which comes down from heaven, making the barren places fertile, and the wet places dry. They will ornament the fountains with plantations and buildings, and provide water for irrigation at all seasons of the year. They will lead the streams to the temples and groves of the Gods; and in such spots the youth shall make gymnasia for themselves, and warm baths for the aged; there the rustic worn with toil will receive a kindly welcome, and be far better treated than at the hands of an unskilful doctor.

These works will be both useful and ornamental; but the sixty wardens must not fail to give serious attention to other duties. For they must watch over the districts assigned to them, and also act as judges. In small matters the five commanders shall decide: in greater matters up to three minae, the five commanders and the twelve guards. Like all other judges, except those who have the final

decision, they shall be liable to give an account. If the wardens impose unjust tasks on the villagers, or take by force their crops or implements, or yield to flattery or bribes in deciding suits, let them be publicly dishonoured. In regard to any other wrong-doing, if the question be of a mina, let the neighbours decide; but if the accused person will not submit, trusting that his monthly removals will enable him to escape payment, and also in suits about a larger amount, the injured party may have recourse to the common court; in the former case, if successful, he may exact a double penalty.

The wardens and guards, while on their two years' service, shall live and eat together, and the guard who is absent from the daily meals without permission or sleeps out at night, shall be regarded as a deserter, and may be punished by any one who meets him. If any of the commanders is guilty of such an irregularity, the whole sixty shall have him punished; and he of them who screens him shall suffer a still heavier penalty than the offender himself. Now by service a man learns to rule; and he should pride himself upon serving well the laws and the Gods all his life, and upon having served ancient and honourable men in his youth. The twelve and the five should be their own servants, and use the labour of the villagers only for the good of the public. Let them search the country through, and acquire a perfect knowledge of every locality; with this view, hunting and field sports should be encouraged.

Next we have to speak of the elections of the wardens of the agora and of the city. The wardens of the city shall be three in number, and they shall have the care of the streets, roads, buildings, and also of the water-supply. They shall be chosen out of the highest class, and when the number of candidates has been reduced to six who have the greatest number of votes, three out of the six shall be taken by lot, and, after a scrutiny, shall be admitted to their office. The wardens of the agora shall be five in number — ten are to be first elected, and every one shall vote for all the vacant places; the ten shall be afterwards reduced to five by lot, as in the former election. The first and second class shall be compelled to go to the assembly, but not the third and fourth, unless they are specially summoned. The wardens of the agora shall have the care of the temples and fountains which are in the agora, and shall punish those who injure them by

stripes and bonds, if they be slaves or strangers; and by fines, if they be citizens. And the wardens of the city shall have a similar power of inflicting punishment and fines in their own department.

In the next place, there must be directors of music and gymnastic; one class of them superintending gymnasia and schools, and the attendance and lodging of the boys and girls — the other having to do with contests of music and gymnastic. In musical contests there shall be one kind of judges of solo singing or playing, who will judge of rhapsodists, flute-players, harp-players and the like, and another of choruses. There shall be choruses of men and boys and maidens — one director will be enough to introduce them all, and he should not be less than forty years of age; secondly, of solos also there shall be one director, aged not less than thirty years; he will introduce the competitors and give judgment upon them. The director of the choruses is to be elected in an assembly at which all who take an interest in music are compelled to attend, and no one else. Candidates must only be proposed for their fitness, and opposed on the ground of unfitness. Ten are to be elected by vote, and the one of these on whom the lot falls shall be director for a year. Next shall be elected out of the second and third classes the judges of gymnastic contests, who are to be three in number, and are to be tested, after being chosen by lot out of twenty who have been elected by the three highest classes — these being compelled to attend at the election.

One minister remains, who will have the general superintendence of education. He must be not less than fifty years old, and be himself the father of children born in wedlock. His office must be regarded by all as the highest in the state. For the right growth of the first shoot in plants and animals is the chief cause of matured perfection. Man is supposed to be a tame animal, but he becomes either the gentlest or the fiercest of creatures, accordingly as he is well or ill educated. Wherefore he who is elected to preside over education should be the best man possible. He shall hold office for five years, and shall be elected out of the guardians of the law, by the votes of the other magistrates with the exception of the senate and prytanes; and the election shall be held by ballot in the temple of Apollo.

When a magistrate dies before his term of office has expired, another shall be elected in his place; and, if the guardian of an orphan

dies, the relations shall appoint another within ten days, or be fined a drachma a day for neglect.

The city which has no courts of law will soon cease to be a city; and a judge who sits in silence and leaves the enquiry to the litigants, as in arbitrations, is not a good judge. A few judges are better than many, but the few must be good. The matter in dispute should be clearly elicited; time and examination will find out the truth. Causes should first be tried before a court of neighbours: if the decision is unsatisfactory, let them be referred to a higher court; or, if necessary, to a higher still, of which the decision shall be final.

Every magistrate is a judge, and every judge is a magistrate, on the day on which he is deciding the suit. This will therefore be an appropriate place to speak of judges and their functions. The supreme tribunal will be that on which the litigants agree; and let there be two other tribunals, one for public and the other for private causes. The high court of appeal shall be composed as follows: — All the officers of state shall meet on the last day but one of the year in some temple, and choose for a judge the best man out of every magistracy: and those who are elected, after they have undergone a scrutiny, shall be judges of appeal. They shall give their decisions openly, in the presence of the magistrates who have elected them; and the public may attend. If anybody charges one of them with having intentionally decided wrong, he shall lay his accusation before the guardians of the law, and if the judge be found guilty he shall pay damages to the extent of half the injury, unless the guardians of the law deem that he deserves a severer punishment, in which case the judges shall assess the penalty.

As the whole people are injured by offences against the state, they should share in the trial of them. Such causes should originate with the people and be decided by them: the enquiry shall take place before any three of the highest magistrates upon whom the defendant and plaintiff can agree. Also in private suits all should judge as far as possible, and therefore there should be a court of law in every ward; for he who has no share in the administration of justice, believes that he has no share in the state. The judges in these courts shall be elected by lot and give their decision at once. The final judgment in all cases shall rest with the court of appeal. And so, having done with

the appointment of courts and the election of officers, we will now make our laws.

‘Your way of proceeding, Stranger, is admirable.’

Then so far our old man’s game of play has gone off well.

‘Say, rather, our serious and noble pursuit.’

Perhaps; but let me ask you whether you have ever observed the manner in which painters put in and rub out colour: yet their endless labour will last but a short time, unless they leave behind them some successor who will restore the picture and remove its defects. ‘Certainly.’ And have we not a similar object at the present moment? We are old ourselves, and therefore we must leave our work of legislation to be improved and perfected by the next generation; not only making laws for our guardians, but making them lawgivers. ‘We must at least do our best.’ Let us address them as follows. Beloved saviours of the laws, we give you an outline of legislation which you must fill up, according to a rule which we will prescribe for you. Megillus and Cleinias and I are agreed, and we hope that you will agree with us in thinking, that the whole energies of a man should be devoted to the attainment of manly virtue, whether this is to be gained by study, or habit, or desire, or opinion. And rather than accept institutions which tend to degrade and enslave him, he should fly his country and endure any hardship. These are our principles, and we would ask you to judge of our laws, and praise or blame them, accordingly as they are or are not capable of improving our citizens.

And first of laws concerning religion. We have already said that the number 5040 has many convenient divisions: and we took a twelfth part of this (420), which is itself divisible by twelve, for the number of the tribe. Every divisor is a gift of God, and corresponds to the months of the year and to the revolution of the universe. All cities have a number, but none is more fortunate than our own, which can be divided by all numbers up to 12, with the exception of 11, and even by 11, if two families are deducted. And now let us divide the state, assigning to each division some God or demigod, who shall have altars raised to them, and sacrifices offered twice a month; and assemblies shall be held in their honour, twelve for the tribes, and twelve for the city, corresponding to their divisions. The object of

them will be first to promote religion, secondly to encourage friendship and intercourse between families; for families must be acquainted before they marry into one another, or great mistakes will occur. At these festivals there shall be innocent dances of young men and maidens, who may have the opportunity of seeing one another in modest undress. To the details of all this the masters of choruses and the guardians will attend, embodying in laws the results of their experience; and, after ten years, making the laws permanent, with the consent of the legislator, if he be alive, or, if he be not alive, of the guardians of the law, who shall perfect them and settle them once for all. At least, if any further changes are required, the magistrates must take the whole people into counsel, and obtain the sanction of all the oracles.

Whenever any one who is between the ages of twenty-five and thirty-five wants to marry, let him do so; but first let him hear the strain which we will address to him: —

My son, you ought to marry, but not in order to gain wealth or to avoid poverty; neither should you, as men are wont to do, choose a wife who is like yourself in property and character. You ought to consult the interests of the state rather than your own pleasure; for by equal marriages a society becomes unequal. And yet to enact a law that the rich and mighty shall not marry the rich and mighty, that the quick shall be united to the slow, and the slow to the quick, will arouse anger in some persons and laughter in others; for they do not understand that opposite elements ought to be mingled in the state, as wine should be mingled with water. The object at which we aim must therefore be left to the influence of public opinion. And do not forget our former precept, that every one should seek to attain immortality and raise up a fair posterity to serve God. — Let this be the prelude of the law about the duty of marriage. But if a man will not listen, and at thirty-five years of age is still unmarried, he shall pay an annual fine: if he be of the first class, 100 drachmas; if of the second, 70; if of the third, 60; and if of the fourth, 30. This fine shall be sacred to Here; and if he refuse to pay, a tenfold penalty shall be exacted by the treasurer of Here, who shall be responsible for the payment. Further, the unmarried man shall receive no honour or obedience from the young, and he shall not retain the right of

punishing others. A man is neither to give nor receive a dowry beyond a certain fixed sum; in our state, for his consolation, if he be poor, let him know that he need neither receive nor give one, for every citizen is provided with the necessities of life. Again, if the woman is not rich, her husband will not be her humble servant. He who disobeys this law shall pay a fine according to his class, which shall be exacted by the treasurers of Here and Zeus.

The betrothal of the parties shall be made by the next of kin, or if there are none, by the guardians. The offerings and ceremonies of marriage shall be determined by the interpreters of sacred rites. Let the wedding party be moderate; five male and five female friends, and a like number of kinsmen, will be enough. The expense should not exceed, for the first class, a mina; and for the second, half a mina; and should be in like proportion for the other classes. Extravagance is to be regarded as vulgarity and ignorance of nuptial proprieties. Much wine is only to be drunk at the festivals of Dionysus, and certainly not on the occasion of a marriage. The bride and bridegroom, who are taking a great step in life, ought to have all their wits about them; they should be especially careful of the night on which God may give them increase, and which this will be none can say. Their bodies and souls should be in the most temperate condition; they should abstain from all that partakes of the nature of disease or vice, which will otherwise become hereditary. There is an original divinity in man which preserves all things, if used with proper respect. He who marries should make one of the two houses on the lot the nest and nursery of his young; he should leave his father and mother, and then his affection for them will be only increased by absence. He will go forth as to a colony, and will there rear up his offspring, handing on the torch of life to another generation.

About property in general there is little difficulty, with the exception of property in slaves, which is an institution of a very doubtful character. The slavery of the Helots is approved by some and condemned by others; and there is some doubt even about the slavery of the Mariandynians at Heraclea and of the Thessalian Penestae. This makes us ask, What shall we do about slaves? To which every one would agree in replying, — Let us have the best and

most attached whom we can get. All of us have heard stories of slaves who have been better to their masters than sons or brethren. Yet there is an opposite doctrine, that slaves are never to be trusted; as Homer says, 'Slavery takes away half a man's understanding.' And different persons treat them in different ways: there are some who never trust them, and beat them like dogs, until they make them many times more slavish than they were before; and others pursue the opposite plan. Man is a troublesome animal, as has been often shown, Megillus, notably in the revolts of the Messenians; and great mischiefs have arisen in countries where there are large bodies of slaves of one nationality. Two rules may be given for their management: first that they should not, if possible, be of the same country or have a common language; and secondly, that they should be treated by their master with more justice even than equals, out of regard to himself quite as much as to them. For he who is righteous in the treatment of his slaves, or of any inferiors, will sow in them the seed of virtue. Masters should never jest with their slaves: this, which is a common but foolish practice, increases the difficulty and painfulness of managing them.

Next as to habitations. These ought to have been spoken of before; for no man can marry a wife, and have slaves, who has not a house for them to live in. Let us supply the omission. The temples should be placed round the Agora, and the city built in a circle on the heights. Near the temples, which are holy places and the habitations of the Gods, should be buildings for the magistrates, and the courts of law, including those in which capital offences are to be tried. As to walls, Megillus, I agree with Sparta that they should sleep in the earth; 'cold steel is the best wall,' as the poet finely says. Besides, how absurd to be sending out our youth to fortify and guard the borders of our country, and then to build a city wall, which is very unhealthy, and is apt to make people fancy that they may run there and rest in idleness, not knowing that true repose comes from labour, and that idleness is only a renewal of trouble. If, however, there must be a wall, the private houses had better be so arranged as to form one wall; this will have an agreeable aspect, and the building will be safer and more defensible. These objects should be attended to at the foundation of the city. The wardens of the city must see that they are

carried out; and they must also enforce cleanliness, and preserve the public buildings from encroachments. Moreover, they must take care to let the rain flow off easily, and must regulate other matters concerning the general administration of the city. If any further enactments prove to be necessary, the guardians of the law must supply them.

And now, having provided buildings, and having married our citizens, we will proceed to speak of their mode of life. In a well-constituted state, individuals cannot be allowed to live as they please. Why do I say this? Because I am going to enact that the bridegroom shall not absent himself from the common meals. They were instituted originally on the occasion of some war, and, though deemed singular when first founded, they have tended greatly to the security of states. There was a difficulty in introducing them, but there is no difficulty in them now. There is, however, another institution about which I would speak, if I dared. I may preface my proposal by remarking that disorder in a state is the source of all evil, and order of all good. Now in Sparta and Crete there are common meals for men, and this, as I was saying, is a divine and natural institution. But the women are left to themselves; they live in dark places, and, being weaker, and therefore wickeder, than men, they are at the bottom of a good deal more than half the evil of states. This must be corrected, and the institution of common meals extended to both sexes. But, in the present unfortunate state of opinion, who would dare to establish them? And still more, who can compel women to eat and drink in public? They will defy the legislator to drag them out of their holes. And in any other state such a proposal would be drowned in clamour, but in our own I think that I can show the attempt to be just and reasonable. 'There is nothing which we should like to hear better.' Listen, then; having plenty of time, we will go back to the beginning of things, which is an old subject with us. 'Right.' Either the race of mankind never had a beginning and will never have an end, or the time which has elapsed since man first came into being is all but infinite. 'No doubt.' And in this infinity of time there have been changes of every kind, both in the order of the seasons and in the government of states and in the customs of eating and drinking. Vines and olives were at length discovered, and the

blessings of Demeter and Persephone, of which one Triptolemus is said to have been the minister; before his time the animals had been eating one another. And there are nations in which mankind still sacrifice their fellow-men, and other nations in which they lead a kind of Orphic existence, and will not sacrifice animals, or so much as taste of a cow — they offer fruits or cakes moistened with honey. Perhaps you will ask me what is the bearing of these remarks? ‘We would gladly hear.’ I will endeavour to explain their drift. I see that the virtue of human life depends on the due regulation of three wants or desires. The first is the desire of meat, the second of drink; these begin with birth, and make us disobedient to any voice other than that of pleasure. The third and fiercest and greatest need is felt latest; this is love, which is a madness setting men’s whole nature on fire. These three disorders of mankind we must endeavour to restrain by three mighty influences — fear, and law, and reason, which, with the aid of the Muses and the Gods of contests, may extinguish our lusts.

But to return. After marriage let us proceed to the generation of children, and then to their nurture and education — thus gradually approaching the subject of *syssitia*. There are, however, some other points which are suggested by the three words — meat, drink, love. ‘Proceed,’ the bride and bridegroom ought to set their mind on having a brave offspring. Now a man only succeeds when he takes pains; wherefore the bridegroom ought to take special care of the bride, and the bride of the bridegroom, at the time when their children are about to be born. And let there be a committee of matrons who shall meet every day at the temple of Eilithyia at a time fixed by the magistrates, and inform against any man or woman who does not observe the laws of married life. The time of begetting children and the supervision of the parents shall last for ten years only; if at the expiration of this period they have no children, they may part, with the consent of their relatives and the official matrons, and with a due regard to the interests of either; if a dispute arise, ten of the guardians of the law shall be chosen as arbiters. The matrons shall also have power to enter the houses of the young people, if necessary, and to advise and threaten them. If their efforts fail, let them go to the guardians of the law; and if they too fail, the offender, whether man or woman, shall be forbidden to be present at all family

ceremonies. If when the time for begetting children has ceased, either husband or wife have connexion with others who are of an age to beget children, they shall be liable to the same penalties as those who are still having a family. But when both parties have ceased to beget children there shall be no penalties. If men and women live soberly, the enactments of law may be left to slumber; punishment is necessary only when there is great disorder of manners.

The first year of children's lives is to be registered in their ancestral temples; the name of the archon of the year is to be inscribed on a whited wall in every phratry, and the names of the living members of the phratry close to them, to be erased at their decease. The proper time of marriage for a woman shall be from sixteen years to twenty; for a man, from thirty to thirty-five (compare Republic). The age of holding office for a woman is to be forty, for a man thirty years. The time for military service for a man is to be from twenty years to sixty; for a woman, from the time that she has ceased to bear children until fifty.

BOOK VII. Now that we have married our citizens and brought their children into the world, we have to find nurture and education for them. This is a matter of precept rather than of law, and cannot be precisely regulated by the legislator. For minute regulations are apt to be transgressed, and frequent transgressions impair the habit of obedience to the laws. I speak darkly, but I will also try to exhibit my wares in the light of day. Am I not right in saying that a good education tends to the improvement of body and mind? 'Certainly.' And the body is fairest which grows up straight and well-formed from the time of birth. 'Very true.' And we observe that the first shoot of every living thing is the greatest; many even contend that man is not at twenty-five twice the height that he was at five. 'True.' And growth without exercise of the limbs is the source of endless evils in the body. 'Yes.' The body should have the most exercise when growing most. 'What, the bodies of young infants?' Nay, the bodies of unborn infants. I should like to explain to you this singular kind of gymnastics. The Athenians are fond of cock-fighting, and the people who keep cocks carry them about in their hands or under their arms, and take long walks, to improve, not their own health, but the health of the birds. Here is a proof of the usefulness of motion,

whether of rocking, swinging, riding, or tossing upon the wave; for all these kinds of motion greatly increase strength and the powers of digestion. Hence we infer that our women, when they are with child, should walk about and fashion the embryo; and the children, when born, should be carried by strong nurses, — there must be more than one of them, — and should not be suffered to walk until they are three years old. Shall we impose penalties for the neglect of these rules? The greatest penalty, that is, ridicule, and the difficulty of making the nurses do as we bid them, will be incurred by ourselves. ‘Then why speak of such matters?’ In the hope that heads of families may learn that the due regulation of them is the foundation of law and order in the state.

And now, leaving the body, let us proceed to the soul; but we must first repeat that perpetual motion by night and by day is good for the young creature. This is proved by the Corybantian cure of motion, and by the practice of nurses who rock children in their arms, lapping them at the same time in sweet strains. And the reason of this is obvious. The affections, both of the Bacchantes and of the children, arise from fear, and this fear is occasioned by something wrong which is going on within them. Now a violent external commotion tends to calm the violent internal one; it quiets the palpitation of the heart, giving to the children sleep, and bringing back the Bacchantes to their right minds by the help of dances and acceptable sacrifices. But if fear has such power, will not a child who is always in a state of terror grow up timid and cowardly, whereas if he learns from the first to resist fear he will develop a habit of courage? ‘Very true.’ And we may say that the use of motion will inspire the souls of children with cheerfulness and therefore with courage. ‘Of course.’ Softness enervates and irritates the temper of the young, and violence renders them mean and misanthropical. ‘But how is the state to educate them when they are as yet unable to understand the meaning of words?’ Why, surely they roar and cry, like the young of any other animal, and the nurse knows the meaning of these intimations of the child’s likes or dislikes, and the occasions which call them forth. About three years is passed by children in a state of imperfect articulation, which is quite long enough time to make them either good- or ill-tempered. And, therefore, during these first three years, the infant

should be as free as possible from fear and pain. 'Yes, and he should have as much pleasure as possible.' There, I think, you are wrong; for the influence of pleasure in the beginning of education is fatal. A man should neither pursue pleasure nor wholly avoid pain. He should embrace the mean, and cultivate that state of calm which mankind, taught by some inspiration, attribute to God; and he who would be like God should neither be too fond of pleasure himself, nor should he permit any other to be thus given; above all, not the infant, whose character is just in the making. It may sound ridiculous, but I affirm that a woman in her pregnancy should be carefully tended, and kept from excessive pleasures and pains.

'I quite agree with you about the duty of avoiding extremes and following the mean.'

Let us consider a further point. The matters which are now in question are generally called customs rather than laws; and we have already made the reflection that, though they are not, properly speaking, laws, yet neither can they be neglected. For they fill up the interstices of law, and are the props and ligatures on which the strength of the whole building depends. Laws without customs never last; and we must not wonder if habit and custom sometimes lengthen out our laws. 'Very true.' Up to their third year, then, the life of children may be regulated by customs such as we have described. From three to six their minds have to be amused; but they must not be allowed to become self-willed and spoilt. If punishment is necessary, the same rule will hold as in the case of slaves; they must neither be punished in hot blood nor ruined by indulgence. The children of that age will have their own modes of amusing themselves; they should be brought for their play to the village temples, and placed under the care of nurses, who will be responsible to twelve matrons annually chosen by the women who have authority over marriage. These shall be appointed, one out of each tribe, and their duty shall be to keep order at the meetings: slaves who break the rules laid down by them, they shall punish by the help of some of the public slaves; but citizens who dispute their authority shall be brought before the magistrates. After six years of age there shall be a separation of the sexes; the boys will go to learn riding and the use of arms, and the girls may, if they please, also learn. Here I note a

practical error in early training. Mothers and nurses foolishly believe that the left hand is by nature different from the right, whereas the left leg and foot are acknowledged to be the same as the right. But the truth is that nature made all things to balance, and the power of using the left hand, which is of little importance in the case of the plectrum of the lyre, may make a great difference in the art of the warrior, who should be a skilled gymnast and able to fight and balance himself in any position. If a man were a Briareus, he should use all his hundred hands at once; at any rate, let everybody employ the two which they have. To these matters the magistrates, male and female, should attend; the women superintending the nursing and amusement of the children, and the men superintending their education, that all of them, boys and girls alike, may be sound, wind and limb, and not spoil the gifts of nature by bad habits.

Education has two branches — gymnastic, which is concerned with the body; and music, which improves the soul. And gymnastic has two parts, dancing and wrestling. Of dancing one kind imitates musical recitation and aims at stateliness and freedom; another kind is concerned with the training of the body, and produces health, agility, and beauty. There is no military use in the complex systems of wrestling which pass under the names of Antaeus and Cercyon, or in the tricks of boxing, which are attributed to Amycus and Epeius; but good wrestling and the habit of extricating the neck, hands, and sides, should be diligently learnt and taught. In our dances imitations of war should be practised, as in the dances of the Curetes in Crete and of the Dioscuri at Sparta, or as in the dances in complete armour which were taught us Athenians by the goddess Athene. Youths who are not yet of an age to go to war should make religious processions armed and on horseback; and they should also engage in military games and contests. These exercises will be equally useful in peace and war, and will benefit both states and families.

Next follows music, to which we will once more return; and here I shall venture to repeat my old paradox, that amusements have great influence on laws. He who has been taught to play at the same games and with the same playthings will be content with the same laws. There is no greater evil in a state than the spirit of innovation. In the case of the seasons and winds, in the management of our bodies and

in the habits of our minds, change is a dangerous thing. And in everything but what is bad the same rule holds. We all venerate and acquiesce in the laws to which we are accustomed; and if they have continued during long periods of time, and there is no remembrance of their ever having been otherwise, people are absolutely afraid to change them. Now how can we create this quality of immobility in the laws? I say, by not allowing innovations in the games and plays of children. The children who are always having new plays, when grown up will be always having new laws. Changes in mere fashions are not serious evils, but changes in our estimate of men's characters are most serious; and rhythms and music are representations of characters, and therefore we must avoid novelties in dance and song. For securing permanence no better method can be imagined than that of the Egyptians. 'What is their method?' They make a calendar for the year, arranging on what days the festivals of the various Gods shall be celebrated, and for each festival they consecrate an appropriate hymn and dance. In our state a similar arrangement shall in the first instance be framed by certain individuals, and afterwards solemnly ratified by all the citizens. He who introduces other hymns or dances shall be excluded by the priests and priestesses and the guardians of the law; and if he refuses to submit, he may be prosecuted for impiety. But we must not be too ready to speak about such great matters. Even a young man, when he hears something unaccustomed, stands and looks this way and that, like a traveller at a place where three ways meet; and at our age a man ought to be very sure of his ground in so singular an argument. 'Very true.' Then, leaving the subject for further examination at some future time, let us proceed with our laws about education, for in this manner we may probably throw light upon our present difficulty. 'Let us do as you say.' The ancients used the term *nomoi* to signify harmonious strains, and perhaps they fancied that there was a connexion between the songs and laws of a country. And we say — Whosoever shall transgress the strains by law established is a transgressor of the laws, and shall be punished by the guardians of the law and by the priests and priestesses. 'Very good.' How can we legislate about these consecrated strains without incurring ridicule? Moulds or types must be first framed, and one of the types shall be — Abstinence from evil

words at sacrifices. When a son or brother blasphemes at a sacrifice there is a sound of ill-omen heard in the family; and many a chorus stands by the altar uttering inauspicious words, and he is crowned victor who excites the hearers most with lamentations. Such lamentations should be reserved for evil days, and should be uttered only by hired mourners; and let the singers not wear circlets or ornaments of gold. To avoid every evil word, then, shall be our first type. 'Agreed.' Our second law or type shall be, that prayers ever accompany sacrifices; and our third, that, inasmuch as all prayers are requests, they shall be only for good; this the poets must be made to understand. 'Certainly.' Have we not already decided that no gold or silver Plutus shall be allowed in our city? And did not this show that we were dissatisfied with the poets? And may we not fear that, if they are allowed to utter injudicious prayers, they will bring the greatest misfortunes on the state? And we must therefore make a law that the poet is not to contradict the laws or ideas of the state; nor is he to show his poems to any private persons until they have first received the imprimatur of the director of education. A fourth musical law will be to the effect that hymns and praises shall be offered to Gods, and to heroes and demigods. Still another law will permit eulogies of eminent citizens, whether men or women, but only after their death. As to songs and dances, we will enact as follows: — There shall be a selection made of the best ancient musical compositions and dances; these shall be chosen by judges, who ought not to be less than fifty years of age. They will accept some, and reject or amend others, for which purpose they will call, if necessary, the poets themselves into council. The severe and orderly music is the style in which to educate children, who, if they are accustomed to this, will deem the opposite kind to be illiberal, but if they are accustomed to the other, will count this to be cold and unpleasing. 'True.' Further, a distinction should be made between the melodies of men and women. Nature herself teaches that the grand or manly style should be assigned to men, and to women the moderate and temperate. So much for the subjects of education. But to whom are they to be taught, and when? I must try, like the shipwright, who lays down the keel of a vessel, to build a secure foundation for the vessel of the soul in her voyage through life. Human affairs are hardly

serious, and yet a sad necessity compels us to be serious about them. Let us, therefore, do our best to bring the matter to a conclusion. ‘Very good.’ I say then, that God is the object of a man’s most serious endeavours. But man is created to be the plaything of the Gods; and therefore the aim of every one should be to pass through life, not in grim earnest, but playing at the noblest of pastimes, in another spirit from that which now prevails. For the common opinion is, that work is for the sake of play, war of peace; whereas in war there is neither amusement nor instruction worth speaking of. The life of peace is that which men should chiefly desire to lengthen out and improve. They should live sacrificing, singing, and dancing, with the view of propitiating Gods and heroes. I have already told you the types of song and dance which they should follow: and ‘Some things,’ as the poet well says, ‘you will devise for yourself — others, God will suggest to you.’

These words of his may be applied to our pupils. They will partly teach themselves, and partly will be taught by God, the art of propitiating Him; for they are His puppets, and have only a small portion in truth. ‘You have a poor opinion of man.’ No wonder, when I compare him with God; but, if you are offended, I will place him a little higher.

Next follow the building for gymnasia and schools; these will be in the midst of the city, and outside will be riding-schools and archery-grounds. In all of them there ought to be instructors of the young, drawn from foreign parts by pay, and they will teach them music and war. Education shall be compulsory; the children must attend school, whether their parents like it or not; for they belong to the state more than to their parents. And I say further, without hesitation, that the same education in riding and gymnastic shall be given both to men and women. The ancient tradition about the Amazons confirms my view, and at the present day there are myriads of women, called Sauromatides, dwelling near the Pontus, who practise the art of riding as well as archery and the use of arms. But if I am right, nothing can be more foolish than our modern fashion of training men and women differently, whereby the power the city is reduced to a half. For reflect — if women are not to have the education of men, some other must be found for them, and what

other can we propose? Shall they, like the women of Thrace, tend cattle and till the ground; or, like our own, spin and weave, and take care of the house? or shall they follow the Spartan custom, which is between the two? — there the maidens share in gymnastic exercises and in music; and the grown women, no longer engaged in spinning, weave the web of life, although they are not skilled in archery, like the Amazons, nor can they imitate our warrior goddess and carry shield or spear, even in the extremity of their country's need. Compared with our women, the Sauromatides are like men. But your legislators, Megillus, as I maintain, only half did their work; they took care of the men, and left the women to take care of themselves.

‘Shall we suffer the Stranger, Cleinias, to run down Sparta in this way?’

‘Why, yes; for we cannot withdraw the liberty which we have already conceded to him.’

What will be the manner of life of men in moderate circumstances, freed from the toils of agriculture and business, and having common tables for themselves and their families which are under the inspection of magistrates, male and female? Are men who have these institutions only to eat and fatten like beasts? If they do, how can they escape the fate of a fatted beast, which is to be torn in pieces by some other beast more valiant than himself? True, theirs is not the perfect way of life, for they have not all things in common; but the second best way of life also confers great blessings. Even those who live in the second state have a work to do twice as great as the work of any Pythian or Olympic victor; for their labour is for the body only, but ours both for body and soul. And this higher work ought to be pursued night and day to the exclusion of every other. The magistrates who keep the city should be wakeful, and the master of the household should be up early and before all his servants; and the mistress, too, should awaken her handmaidens, and not be awakened by them. Much sleep is not required either for our souls or bodies. When a man is asleep, he is no better than if he were dead; and he who loves life and wisdom will take no more sleep than is necessary for health. Magistrates who are wide awake at night are terrible to the bad; but they are honoured by the good, and are useful to themselves and the state.

When the morning dawns, let the boy go to school. As the sheep need the shepherd, so the boy needs a master; for he is at once the most cunning and the most insubordinate of creatures. Let him be taken away from mothers and nurses, and tamed with bit and bridle, being treated as a freeman in that he learns and is taught, but as a slave in that he may be chastised by all other freemen; and the freeman who neglects to chastise him shall be disgraced. All these matters will be under the supervision of the Director of Education.

Him we will address as follows: We have spoken to you, O illustrious teacher of youth, of the song, the time, and the dance, and of martial strains; but of the learning of letters and of prose writings, and of music, and of the use of calculation for military and domestic purposes we have not spoken, nor yet of the higher use of numbers in reckoning divine things — such as the revolutions of the stars, or the arrangements of days, months, and years, of which the true calculation is necessary in order that seasons and festivals may proceed in regular course, and arouse and enliven the city, rendering to the Gods their due, and making men know them better. There are, we say, many things about which we have not as yet instructed you — and first, as to reading and music: Shall the pupil be a perfect scholar and musician, or not even enter on these studies? He should certainly enter on both: — to letters he will apply himself from the age of ten to thirteen, and at thirteen he will begin to handle the lyre, and continue to learn music until he is sixteen; no shorter and no longer time will be allowed, however fond he or his parents may be of the pursuit. The study of letters he should carry to the extent of simple reading and writing, but he need not care for calligraphy and tachygraphy, if his natural gifts do not enable him to acquire them in the three years. And here arises a question as to the learning of compositions when unaccompanied with music, I mean, prose compositions. They are a dangerous species of literature. Speak then, O guardians of the law, and tell us what we shall do about them. ‘You seem to be in a difficulty.’ Yes; it is difficult to go against the opinion of all the world. ‘But have we not often already done so?’ Very true. And you imply that the road which we are taking, though disagreeable to many, is approved by those whose judgment is most worth having. ‘Certainly.’ Then I would first observe that we have

many poets, comic as well as tragic, with whose compositions, as people say, youth are to be imbued and saturated. Some would have them learn by heart entire poets; others prefer extracts. Now I believe, and the general opinion is, that some of the things which they learn are good, and some bad. 'Then how shall we reject some and select others?' A happy thought occurs to me; this long discourse of ours is a sample of what we want, and is moreover an inspired work and a kind of poem. I am naturally pleased in reflecting upon all our words, which appear to me to be just the thing for a young man to hear and learn. I would venture, then, to offer to the Director of Education this treatise of laws as a pattern for his guidance; and in case he should find any similar compositions, written or oral, I would have him carefully preserve them, and commit them in the first place to the teachers who are willing to learn them (he should turn off the teacher who refuses), and let them communicate the lesson to the young.

I have said enough to the teacher of letters; and now we will proceed to the teacher of the lyre. He must be reminded of the advice which we gave to the sexagenarian minstrels; like them he should be quick to perceive the rhythms suited to the expression of virtue, and to reject the opposite. With a view to the attainment of this object, the pupil and his instructor are to use the lyre because its notes are pure; the voice and string should coincide note for note: nor should there be complex harmonies and contrasts of intervals, or variations of times or rhythms. Three years' study is not long enough to give a knowledge of these intricacies; and our pupils will have many things of more importance to learn. The tunes and hymns which are to be consecrated for each festival have been already determined by us.

Having given these instructions to the Director of Music, let us now proceed to dancing and gymnastic, which must also be taught to boys and girls by masters and mistresses. Our minister of education will have a great deal to do; and being an old man, how will he get through so much work? There is no difficulty; — the law will provide him with assistants, male and female; and he will consider how important his office is, and how great the responsibility of choosing them. For if education prospers, the vessel of state sails merrily along; or if education fails, the consequences are not even to

be mentioned. Of dancing and gymnastics something has been said already. We include under the latter military exercises, the various uses of arms, all that relates to horsemanship, and military evolutions and tactics. There should be public teachers of both arts, paid by the state, and women as well as men should be trained in them. The maidens should learn the armed dance, and the grown-up women be practised in drill and the use of arms, if only in case of extremity, when the men are gone out to battle, and they are left to guard their families. Birds and beasts defend their young, but women instead of fighting run to the altars, thus degrading man below the level of the animals. 'Such a lack of education, Stranger, is both unseemly and dangerous.'

Wrestling is to be pursued as a military exercise, but the meaning of this, and the nature of the art, can only be explained when action is combined with words. Next follows dancing, which is of two kinds; imitative, first, of the serious and beautiful; and, secondly, of the ludicrous and grotesque. The first kind may be further divided into the dance of war and the dance of peace. The former is called the Pyrrhic; in this the movements of attack and defence are imitated in a direct and manly style, which indicates strength and sufficiency of body and mind. The latter of the two, the dance of peace, is suitable to orderly and law-abiding men. These must be distinguished from the Bacchic dances which imitate drunken revelry, and also from the dances by which purifications are effected and mysteries celebrated. Such dances cannot be characterized either as warlike or peaceful, and are unsuited to a civilized state. Now the dances of peace are of two classes: — the first of them is the more violent, being an expression of joy and triumph after toil and danger; the other is more tranquil, symbolizing the continuance and preservation of good. In speaking or singing we naturally move our bodies, and as we have more or less courage or self-control we become less or more violent and excited. Thus from the imitation of words in gestures the art of dancing arises. Now one man imitates in an orderly, another in a disorderly manner: and so the peaceful kinds of dance have been appropriately called *Emmeleiai*, or dances of order, as the warlike have been called *Pyrrhic*. In the latter a man imitates all sorts of blows and the hurling of weapons and the avoiding of them; in the

former he learns to bear himself gracefully and like a gentleman. The types of these dances are to be fixed by the legislator, and when the guardians of the law have assigned them to the several festivals, and consecrated them in due order, no further change shall be allowed.

Thus much of the dances which are appropriate to fair forms and noble souls. Comedy, which is the opposite of them, remains to be considered. For the serious implies the ludicrous, and opposites cannot be understood without opposites. But a man of repute will desire to avoid doing what is ludicrous. He should leave such performances to slaves, — they are not fit for freemen; and there should be some element of novelty in them. Concerning tragedy, let our law be as follows: When the inspired poet comes to us with a request to be admitted into our state, we will reply in courteous words — We also are tragedians and your rivals; and the drama which we enact is the best and noblest, being the imitation of the truest and noblest life, with a view to which our state is ordered. And we cannot allow you to pitch your stage in the agora, and make your voices to be heard above ours, or suffer you to address our women and children and the common people on opposite principles to our own. Come then, ye children of the Lydian Muse, and present yourselves first to the magistrates, and if they decide that your hymns are as good or better than ours, you shall have your chorus; but if not, not.

There remain three kinds of knowledge which should be learnt by freemen — arithmetic, geometry of surfaces and of solids, and thirdly, astronomy. Few need make an accurate study of such sciences; and of special students we will speak at another time. But most persons must be content with the study of them which is absolutely necessary, and may be said to be a necessity of that nature against which God himself is unable to contend. ‘What are these divine necessities of knowledge?’ Necessities of a knowledge without which neither gods, nor demigods, can govern mankind. And far is he from being a divine man who cannot distinguish one, two, odd and even; who cannot number day and night, and is ignorant of the revolutions of the sun and stars; for to every higher knowledge a knowledge of number is necessary — a fool may see this; how much, is a matter requiring more careful consideration. ‘Very true.’ But the legislator cannot enter into such details, and therefore we must defer the more careful consideration of these matters to another occasion. ‘You seem to fear our habitual want of training in these subjects.’ Still more do I fear the danger of bad training, which is often worse than none at all. ‘Very true.’ I think that a gentleman and a freeman may be expected to know as much as an Egyptian child. In Egypt, arithmetic is taught to children in their sports by a distribution of apples or garlands among a greater or less number of people; or a calculation is made of the various combinations which are possible among a set of boxers or wrestlers; or they distribute cups among the children, sometimes of gold, brass, and silver intermingled, sometimes of one metal only. The knowledge of arithmetic which is thus acquired is a great help, either to the general or to the manager of a household; wherever measure is employed, men are more wide-awake in their dealings, and they get rid of their ridiculous ignorance. ‘What do you mean?’ I have observed this ignorance among my countrymen — they are like pigs — and I am heartily ashamed both on my own behalf and on that of all the Hellenes. ‘In what respect?’ Let me ask you a question. You know that there are such things as length, breadth, and depth? ‘Yes.’ And the Hellenes imagine that they are commensurable (1) with themselves, and (2) with each other; whereas they are only commensurable with themselves. But if

this is true, then we are in an unfortunate case, and may well say to our compatriots that not to possess necessary knowledge is a disgrace, though to possess such knowledge is nothing very grand. 'Certainly.' The discussion of arithmetical problems is a much better amusement for old men than their favourite game of draughts. 'True.' Mathematics, then, will be one of the subjects in which youth should be trained. They may be regarded as an amusement, as well as a useful and innocent branch of knowledge; — I think that we may include them provisionally. 'Yes; that will be the way.' The next question is, whether astronomy shall be made a part of education. About the stars there is a strange notion prevalent. Men often suppose that it is impious to enquire into the nature of God and the world, whereas the very reverse is the truth. 'How do you mean?' What I am going to say may seem absurd and at variance with the usual language of age, and yet if true and advantageous to the state, and pleasing to God, ought not to be withheld. 'Let us hear.' My dear friend, how falsely do we and all the Hellenes speak about the sun and moon! 'In what respect?' We are always saying that they and certain of the other stars do not keep the same path, and we term them planets. 'Yes; and I have seen the morning and evening stars go all manner of ways, and the sun and moon doing what we know that they always do. But I wish that you would explain your meaning further.' You will easily understand what I have had no difficulty in understanding myself, though we are both of us past the time of learning. 'True; but what is this marvellous knowledge which youth are to acquire, and of which we are ignorant?' Men say that the sun, moon, and stars are planets or wanderers; but this is the reverse of the fact. Each of them moves in one orbit only, which is circular, and not in many; nor is the swiftest of them the slowest, as appears to human eyes. What an insult should we offer to Olympian runners if we were to put the first last and the last first! And if that is a ridiculous error in speaking of men, how much more in speaking of the Gods? They cannot be pleased at our telling falsehoods about them. 'They cannot.' Then people should at least learn so much about them as will enable them to avoid impiety.

Enough of education. Hunting and similar pursuits now claim our attention. These require for their regulation that mixture of law and

admonition of which we have often spoken; e.g., in what we were saying about the nurture of young children. And therefore the whole duty of the citizen will not consist in mere obedience to the laws; he must regard not only the enactments but also the precepts of the legislator. I will illustrate my meaning by an example. Of hunting there are many kinds — hunting of fish and fowl, man and beast, enemies and friends; and the legislator can neither omit to speak about these things, nor make penal ordinances about them all. ‘What is he to do then?’ He will praise and blame hunting, having in view the discipline and exercise of youth. And the young man will listen obediently and will regard his praises and censures; neither pleasure nor pain should hinder him. The legislator will express himself in the form of a pious wish for the welfare of the young: — O my friends, he will say, may you never be induced to hunt for fish in the waters, either by day or night; or for men, whether by sea or land. Never let the wish to steal enter into your minds; neither be ye fowlers, which is not an occupation for gentlemen. As to land animals, the legislator will discourage hunting by night, and also the use of nets and snares by day; for these are indolent and unmanly methods. The only mode of hunting which he can praise is with horses and dogs, running, shooting, striking at close quarters. Enough of the prelude: the law shall be as follows: —

Let no one hinder the holy order of huntsmen; but let the nightly hunters who lay snares and nets be everywhere prohibited. Let the fowler confine himself to waste places and to the mountains. The fisherman is also permitted to exercise his calling, except in harbours and sacred streams, marshes and lakes; in all other places he may fish, provided he does not make use of poisonous mixtures.

BOOK VIII. Next, with the help of the Delphian Oracle, we will appoint festivals and sacrifices. There shall be 365 of them, one for every day in the year; and one magistrate, at least, shall offer sacrifice daily according to rites prescribed by a convocation of priests and interpreters, who shall co-operate with the guardians of the law, and supply what the legislator has omitted. Moreover there shall be twelve festivals to the twelve Gods after whom the twelve tribes are named: these shall be celebrated every month with appropriate musical and gymnastic contests. There shall also be

festivals for women, to be distinguished from the men's festivals. Nor shall the Gods below be forgotten, but they must be separated from the Gods above — Pluto shall have his own in the twelfth month. He is not the enemy, but the friend of man, who releases the soul from the body, which is at least as good a work as to unite them. Further, those who have to regulate these matters should consider that our state has leisure and abundance, and wishing to be happy, like an individual, should lead a good life; for he who leads such a life neither does nor suffers injury, of which the first is very easy, and the second very difficult of attainment, and is only to be acquired by perfect virtue. A good city has peace, but the evil city is full of wars within and without. To guard against the danger of external enemies the citizens should practise war at least one day in every month; they should go out en masse, including their wives and children, or in divisions, as the magistrates determine, and have mimic contests, imitating in a lively manner real battles; they should also have prizes and encomiums of valour, both for the victors in these contests, and for the victors in the battle of life. The poet who celebrates the victors should be fifty years old at least, and himself a man who has done great deeds. Of such an one the poems may be sung, even though he is not the best of poets. To the director of education and the guardians of the law shall be committed the judgment, and no song, however sweet, which has not been licensed by them shall be recited. These regulations about poetry, and about military expeditions, apply equally to men and to women.

The legislator may be conceived to make the following address to himself: — With what object am I training my citizens? Are they not strivers for mastery in the greatest of combats? Certainly, will be the reply. And if they were boxers or wrestlers, would they think of entering the lists without many days' practice? Would they not as far as possible imitate all the circumstances of the contest; and if they had no one to box with, would they not practise on a lifeless image, heedless of the laughter of the spectators? And shall our soldiers go out to fight for life and kindred and property unprepared, because sham fights are thought to be ridiculous? Will not the legislator require that his citizens shall practise war daily, performing lesser exercises without arms, while the combatants on a greater scale will

carry arms, and take up positions, and lie in ambuscade? And let their combats be not without danger, that opportunity may be given for distinction, and the brave man and the coward may receive their meed of honour or disgrace. If occasionally a man is killed, there is no great harm done — there are others as good as he is who will replace him; and the state can better afford to lose a few of her citizens than to lose the only means of testing them.

‘We agree, Stranger, that such warlike exercises are necessary.’ But why are they so rarely practised? Or rather, do we not all know the reasons? One of them (1) is the inordinate love of wealth. This absorbs the soul of a man, and leaves him no time for any other pursuit. Knowledge is valued by him only as it tends to the attainment of wealth. All is lost in the desire of heaping up gold and silver; anybody is ready to do anything, right or wrong, for the sake of eating and drinking, and the indulgence of his animal passions. ‘Most true.’ This is one of the causes which prevents a man being a good soldier, or anything else which is good; it converts the temperate and orderly into shopkeepers or servants, and the brave into burglars or pirates. Many of these latter are men of ability, and are greatly to be pitied, because their souls are hungering and thirsting all their lives long. The bad forms of government (2) are another reason — democracy, oligarchy, tyranny, which, as I was saying, are not states, but states of discord, in which the rulers are afraid of their subjects, and therefore do not like them to become rich, or noble, or valiant. Now our state will escape both these causes of evil; the society is perfectly free, and has plenty of leisure, and is not allowed by the laws to be absorbed in the pursuit of wealth; hence we have an excellent field for a perfect education, and for the introduction of martial pastimes. Let us proceed to describe the character of these pastimes. All gymnastic exercises in our state must have a military character; no other will be allowed. Activity and quickness are most useful in war; and yet these qualities do not attain their greatest efficiency unless the competitors are armed. The runner should enter the lists in armour, and in the races which our heralds proclaim, no prize is to be given except to armed warriors. Let there be six courses — first, the stadium; secondly, the diaulos or double course; thirdly, the horse course; fourthly, the long course; fifthly,

aces (1) between heavy-armed soldiers who shall pass over sixty stadia and finish at a temple of Ares, and (2) between still more heavily-armed competitors who run over smoother ground; sixthly, a race for archers, who shall run over hill and dale a distance of a hundred stadia, and their goal shall be a temple of Apollo and Artemis. There shall be three contests of each kind — one for boys, another for youths, a third for men; the course for the boys we will fix at half, and that for the youths at two-thirds of the entire length. Women shall join in the races: young girls who are not grown up shall run naked; but after thirteen they shall be suitably dressed; from thirteen to eighteen they shall be obliged to share in these contests, and from eighteen to twenty they may if they please and if they are unmarried. As to trials of strength, single combats in armour, or battles between two and two, or of any number up to ten, shall take the place of wrestling and the heavy exercises. And there must be umpires, as there are now in wrestling, to determine what is a fair hit and who is conqueror. Instead of the pancratium, let there be contests in which the combatants carry bows and wear light shields and hurl javelins and throw stones. The next provision of the law will relate to horses, which, as we are in Crete, need be rarely used by us, and chariots never; our horse-racing prizes will only be given to single horses, whether colts, half-grown, or full-grown. Their riders are to wear armour, and there shall be a competition between mounted archers. Women, if they have a mind, may join in the exercises of men.

But enough of gymnastics, and nearly enough of music. All musical contests will take place at festivals, whether every third or every fifth year, which are to be fixed by the guardians of the law, the judges of the games, and the director of education, who for this purpose shall become legislators and arrange times and conditions. The principles on which such contests are to be ordered have been often repeated by the first legislator; no more need be said of them, nor are the details of them important. But there is another subject of the highest importance, which, if possible, should be determined by the laws, not of man, but of God; or, if a direct revelation is impossible, there is need of some bold man who, alone against the world, will speak plainly of the corruption of human nature, and go

to war with the passions of mankind. 'We do not understand you.' I will try to make my meaning plainer. In speaking of education, I seemed to see young men and maidens in friendly intercourse with one another; and there arose in my mind a natural fear about a state, in which the young of either sex are well nurtured, and have little to do, and occupy themselves chiefly with festivals and dances. How can they be saved from those passions which reason forbids them to indulge, and which are the ruin of so many? The prohibition of wealth, and the influence of education, and the all-seeing eye of the ruler, will alike help to promote temperance; but they will not wholly extirpate the unnatural loves which have been the destruction of states; and against this evil what remedy can be devised? Lacedaemon and Crete give no assistance here; on the subject of love, as I may whisper in your ear, they are against us. Suppose a person were to urge that you ought to restore the natural use which existed before the days of Laius; he would be quite right, but he would not be supported by public opinion in either of your states. Or try the matter by the test which we apply to all laws, — who will say that the permission of such things tends to virtue? Will he who is seduced learn the habit of courage; or will the seducer acquire temperance? And will any legislator be found to make such actions legal?

But to judge of this matter truly, we must understand the nature of love and friendship, which may take very different forms. For we speak of friendship, first, when there is some similarity or equality of virtue; secondly, when there is some want; and either of these, when in excess, is termed love. The first kind is gentle and sociable; the second is fierce and unmanageable; and there is also a third kind, which is akin to both, and is under the dominion of opposite principles. The one is of the body, and has no regard for the character of the beloved; but he who is under the influence of the other disregards the body, and is a looker rather than a lover, and desires only with his soul to be knit to the soul of his friend; while the intermediate sort is both of the body and of the soul. Here are three kinds of love: ought the legislator to prohibit all of them equally, or to allow the virtuous love to remain? 'The latter, clearly.' I expected to gain your approval; but I will reserve the task of convincing our

friend Cleinias for another occasion. 'Very good.' To make right laws on this subject is in one point of view easy, and in another most difficult; for we know that in some cases most men abstain willingly from intercourse with the fair. The unwritten law which prohibits members of the same family from such intercourse is strictly obeyed, and no thought of anything else ever enters into the minds of men in general. A little word puts out the fire of their lusts. 'What is it?' The declaration that such things are hateful to the Gods, and most abominable and unholy. The reason is that everywhere, in jest and earnest alike, this is the doctrine which is repeated to all from their earliest youth. They see on the stage that an Oedipus or a Thyestes or a Macareus, when undeceived, are ready to kill themselves. There is an undoubted power in public opinion when no breath is heard adverse to the law; and the legislator who would enslave these enslaving passions must consecrate such a public opinion all through the city. 'Good: but how can you create it?' A fair objection; but I promised to try and find some means of restraining loves to their natural objects. A law which would extirpate unnatural love as effectually as incest is at present extirpated, would be the source of innumerable blessings, because it would be in accordance with nature, and would get rid of excess in eating and drinking and of adulteries and frenzies, making men love their wives, and having other excellent effects. I can imagine that some lusty youth overhears what we are saying, and roars out in abusive terms that we are legislating for impossibilities. And so a person might have said of the syssitia, or common meals; but this is refuted by facts, although even now they are not extended to women. 'True.' There is no impossibility or super-humanity in my proposed law, as I shall endeavour to prove. 'Do so.' Will not a man find abstinence more easy when his body is sound than when he is in ill-condition? 'Yes.' Have we not heard of Iccus of Tarentum and other wrestlers who abstained wholly for a time? Yet they were infinitely worse educated than our citizens, and far more lusty in their bodies. And shall they have abstained for the sake of an athletic contest, and our citizens be incapable of a similar endurance for the sake of a much nobler victory, — the victory over pleasure, which is true happiness? Will not the fear of impiety enable them to conquer that which many who

were inferior to them have conquered? 'I dare say.' And therefore the law must plainly declare that our citizens should not fall below the other animals, who live all together in flocks, and yet remain pure and chaste until the time of procreation comes, when they pair, and are ever after faithful to their compact. But if the corruption of public opinion is too great to allow our first law to be carried out, then our guardians of the law must turn legislators, and try their hand at a second law. They must minimize the appetites, diverting the vigour of youth into other channels, allowing the practice of love in secret, but making detection shameful. Three higher principles may be brought to bear on all these corrupt natures. 'What are they?' Religion, honour, and the love of the higher qualities of the soul. Perhaps this is a dream only, yet it is the best of dreams; and if not the whole, still, by the grace of God, a part of what we desire may be realized. Either men may learn to abstain wholly from any loves, natural or unnatural, except of their wedded wives; or, at least, they may give up unnatural loves; or, if detected, they shall be punished with loss of citizenship, as aliens from the state in their morals. 'I entirely agree with you,' said Megillus, 'but Cleinias must speak for himself.' 'I will give my opinion by-and-by.'

We were speaking of the *syssitia*, which will be a natural institution in a Cretan colony. Whether they shall be established after the model of Crete or Lacedaemon, or shall be different from either, is an unimportant question which may be determined without difficulty. We may, therefore, proceed to speak of the mode of life among our citizens, which will be far less complex than in other cities; a state which is inland and not maritime requires only half the number of laws. There is no trouble about trade and commerce, and a thousand other things. The legislator has only to regulate the affairs of husbandmen and shepherds, which will be easily arranged, now that the principal questions, such as marriage, education, and government, have been settled.

Let us begin with husbandry: First, let there be a law of Zeus against removing a neighbour's landmark, whether he be a citizen or stranger. For this is 'to move the immoveable'; and Zeus, the God of kindred, witnesses to the wrongs of citizens, and Zeus, the God of strangers, to the wrongs of strangers. The offence of removing a

boundary shall receive two punishments — the first will be inflicted by the God himself; the second by the judges. In the next place, the differences between neighbours about encroachments must be guarded against. He who encroaches shall pay twofold the amount of the injury; of all such matters the wardens of the country shall be the judges, in lesser cases the officers, and in greater the whole number of them belonging to any one division. Any injury done by cattle, the decoying of bees, the careless firing of woods, the planting unduly near a neighbour's ground, shall all be visited with proper damages. Such details have been determined by previous legislators, and need not now be mixed up with greater matters. Husbandmen have had of old excellent rules about streams and waters; and we need not 'divert their course.' Anybody may take water from a common stream, if he does not thereby cut off a private spring; he may lead the water in any direction, except through a house or temple, but he must do no harm beyond the channel. If land is without water the occupier shall dig down to the clay, and if at this depth he find no water, he shall have a right of getting water from his neighbours for his household; and if their supply is limited, he shall receive from them a measure of water fixed by the wardens of the country. If there be heavy rains, the dweller on the higher ground must not recklessly suffer the water to flow down upon a neighbour beneath him, nor must he who lives upon lower ground or dwells in an adjoining house refuse an outlet. If the two parties cannot agree, they shall go before the wardens of the city or country, and if a man refuse to abide by their decision, he shall pay double the damage which he has caused.

In autumn God gives us two boons — one the joy of Dionysus not to be laid up — the other to be laid up. About the fruits of autumn let the law be as follows: He who gathers the storing fruits of autumn, whether grapes or figs, before the time of the vintage, which is the rising of Arcturus, shall pay fifty drachmas as a fine to Dionysus, if he gathers on his own ground; if on his neighbour's ground, a mina, and two-thirds of a mina if on that of any one else. The grapes or figs not used for storing a man may gather when he pleases on his own ground, but on that of others he must pay the penalty of removing what he has not laid down. If he be a slave who has gathered, he shall receive a stroke for every grape or fig. A metic must purchase the

choice fruit; but a stranger may pluck for himself and his attendant. This right of hospitality, however, does not extend to storing grapes. A slave who eats of the storing grapes or figs shall be beaten, and the freeman be dismissed with a warning. Pears, apples, pomegranates, may be taken secretly, but he who is detected in the act of taking them shall be lightly beaten off, if he be not more than thirty years of age. The stranger and the elder may partake of them, but not carry any away; the latter, if he does not obey the law, shall fail in the competition of virtue, if anybody brings up his offence against him.

Water is also in need of protection, being the greatest element of nutrition, and, unlike the other elements — soil, air, and sun — which conspire in the growth of plants, easily polluted. And therefore he who spoils another's water, whether in springs or reservoirs, either by trenching, or theft, or by means of poisonous substances, shall pay the damage and purify the stream. At the getting-in of the harvest everybody shall have a right of way over his neighbour's ground, provided he is careful to do no damage beyond the trespass, or if he himself will gain three times as much as his neighbour loses. Of all this the magistrates are to take cognizance, and they are to assess the damage where the injury does not exceed three minae; cases of greater damage can be tried only in the public courts. A charge against a magistrate is to be referred to the public courts, and any one who is found guilty of deciding corruptly shall pay twofold to the aggrieved person. Matters of detail relating to punishments and modes of procedure, and summonses, and witnesses to summonses, do not require the mature wisdom of the aged legislator; the younger generation may determine them according to their experience; but when once determined, they shall remain unaltered.

The following are to be the regulations respecting handicrafts: — No citizen, or servant of a citizen, is to practise them. For the citizen has already an art and mystery, which is the care of the state; and no man can practise two arts, or practise one and superintend another. No smith should be a carpenter, and no carpenter, having many slaves who are smiths, should look after them himself; but let each man practise one art which shall be his means of livelihood. The wardens of the city should see to this, punishing the citizen who offends with temporary deprivation of his rights — the foreigner shall

be imprisoned, fined, exiled. Any disputes about contracts shall be determined by the wardens of the city up to fifty drachmae — above that sum by the public courts. No customs are to be exacted either on imports or exports. Nothing unnecessary is to be imported from abroad, whether for the service of the Gods or for the use of man — neither purple, nor other dyes, nor frankincense, — and nothing needed in the country is to be exported. These things are to be decided on by the twelve guardians of the law who are next in seniority to the five elders. Arms and the materials of war are to be imported and exported only with the consent of the generals, and then only by the state. There is to be no retail trade either in these or any other articles. For the distribution of the produce of the country, the Cretan laws afford a rule which may be usefully followed. All shall be required to distribute corn, grain, animals, and other valuable produce, into twelve portions. Each of these shall be subdivided into three parts — one for freemen, another for servants, and the third shall be sold for the supply of artisans, strangers, and metics. These portions must be equal whether the produce be much or little; and the master of a household may distribute the two portions among his family and his slaves as he pleases — the remainder is to be measured out to the animals.

Next as to the houses in the country — there shall be twelve villages, one in the centre of each of the twelve portions; and in every village there shall be temples and an agora — also shrines for heroes or for any old Magnesian deities who linger about the place. In every division there shall be temples of Hestia, Zeus, and Athene, as well as of the local deity, surrounded by buildings on eminences, which will be the guard-houses of the rural police. The dwellings of the artisans will be thus arranged: — The artisans shall be formed into thirteen guilds, one of which will be divided into twelve parts and settled in the city; of the rest there shall be one in each division of the country. And the magistrates will fix them on the spots where they will cause the least inconvenience and be most serviceable in supplying the wants of the husbandmen.

The care of the agora will fall to the wardens of the agora. Their first duty will be the regulation of the temples which surround the market-place; and their second to see that the markets are orderly and

that fair dealing is observed. They will also take care that the sales which the citizens are required to make to strangers are duly executed. The law shall be, that on the first day of each month the auctioneers to whom the sale is entrusted shall offer grain; and at this sale a twelfth part of the whole shall be exposed, and the foreigner shall supply his wants for a month. On the tenth, there shall be a sale of liquids, and on the twenty-third of animals, skins, woven or woollen stuffs, and other things which husbandmen have to sell and foreigners want to buy. None of these commodities, any more than barley or flour, or any other food, may be retailed by a citizen to a citizen; but foreigners may sell them to one another in the foreigners' market. There must also be butchers who will sell parts of animals to foreigners and craftsmen, and their servants; and foreigners may buy firewood wholesale of the commissioners of woods, and may sell retail to foreigners. All other goods must be sold in the market, at some place indicated by the magistrates, and shall be paid for on the spot. He who gives credit, and is cheated, will have no redress. In buying or selling, any excess or diminution of what the law allows shall be registered. The same rule is to be observed about the property of metics. Anybody who practises a handicraft may come and remain twenty years from the day on which he is enrolled; at the expiration of this time he shall take what he has and depart. The only condition which is to be imposed upon him as the tax of his sojourn is good conduct; and he is not to pay any tax for being allowed to buy or sell. But if he wants to extend the time of his sojourn, and has done any service to the state, and he can persuade the council and assembly to grant his request, he may remain. The children of metics may also be metics; and the period of twenty years, during which they are permitted to sojourn, is to count, in their case, from their fifteenth year.

No mention occurs in the Laws of the doctrine of Ideas. The will of God, the authority of the legislator, and the dignity of the soul, have taken their place in the mind of Plato. If we ask what is that truth or principle which, towards the end of his life, seems to have absorbed him most, like the idea of good in the Republic, or of beauty in the Symposium, or of the unity of virtue in the Protagoras, we should answer — The priority of the soul to the body: his later

system mainly hangs upon this. In the *Laws*, as in the *Sophist* and *Statesman*, we pass out of the region of metaphysical or transcendental ideas into that of psychology.

The opening of the fifth book, though abrupt and unconnected in style, is one of the most elevated passages in Plato. The religious feeling which he seeks to diffuse over the commonest actions of life, the blessedness of living in the truth, the great mistake of a man living for himself, the pity as well as anger which should be felt at evil, the kindness due to the suppliant and the stranger, have the temper of Christian philosophy. The remark that elder men, if they want to educate others, should begin by educating themselves; the necessity of creating a spirit of obedience in the citizens; the desirableness of limiting property; the importance of parochial districts, each to be placed under the protection of some God or demigod, have almost the tone of a modern writer. In many of his views of politics, Plato seems to us, like some politicians of our own time, to be half socialist, half conservative.

In the *Laws*, we remark a change in the place assigned by him to pleasure and pain. There are two ways in which even the ideal systems of morals may regard them: either like the Stoics, and other ascetics, we may say that pleasure must be eradicated; or if this seems unreal to us, we may affirm that virtue is the true pleasure; and then, as Aristotle says, 'to be brought up to take pleasure in what we ought, exercises a great and paramount influence on human life' (*Arist. Eth. Nic.*). Or as Plato says in the *Laws*, 'A man will recognize the noblest life as having the greatest pleasure and the least pain, if he have a true taste.' If we admit that pleasures differ in kind, the opposition between these two modes of speaking is rather verbal than real; and in the greater part of the writings of Plato they alternate with each other. In the *Republic*, the mere suggestion that pleasure may be the chief good, is received by Socrates with a cry of abhorrence; but in the *Philebus*, innocent pleasures vindicate their right to a place in the scale of goods. In the *Protagoras*, speaking in the person of Socrates rather than in his own, Plato admits the calculation of pleasure to be the true basis of ethics, while in the *Phaedo* he indignantly denies that the exchange of one pleasure for another is the exchange of virtue. So wide of the mark are they who

would attribute to Plato entire consistency in thoughts or words.

He acknowledges that the second state is inferior to the first — in this, at any rate, he is consistent; and he still casts longing eyes upon the ideal. Several features of the first are retained in the second: the education of men and women is to be as far as possible the same; they are to have common meals, though separate, the men by themselves, the women with their children; and they are both to serve in the army; the citizens, if not actually communists, are in spirit communistic; they are to be lovers of equality; only a certain amount of wealth is permitted to them, and their burdens and also their privileges are to be proportioned to this. The constitution in the *Laws* is a timocracy of wealth, modified by an aristocracy of merit. Yet the political philosopher will observe that the first of these two principles is fixed and permanent, while the latter is uncertain and dependent on the opinion of the multitude. Wealth, after all, plays a great part in the Second Republic of Plato. Like other politicians, he deems that a property qualification will contribute stability to the state. The four classes are derived from the constitution of Athens, just as the form of the city, which is clustered around a citadel set on a hill, is suggested by the Acropolis at Athens. Plato, writing under Pythagorean influences, seems really to have supposed that the well-being of the city depended almost as much on the number 5040 as on justice and moderation. But he is not prevented by Pythagoreanism from observing the effects which climate and soil exercise on the characters of nations.

He was doubtful in the *Republic* whether the ideal or communistic state could be realized, but was at the same time prepared to maintain that whether it existed or not made no difference to the philosopher, who will in any case regulate his life by it (*Republic*). He has now lost faith in the practicability of his scheme — he is speaking to ‘men, and not to Gods or sons of Gods’ (*Laws*). Yet he still maintains it to be the true pattern of the state, which we must approach as nearly as possible: as Aristotle says, ‘After having created a more general form of state, he gradually brings it round to the other’ (*Pol.*). He does not observe, either here or in the *Republic*, that in such a commonwealth there would be little room for the development of individual character. In several respects the second state is an

improvement on the first, especially in being based more distinctly on the dignity of the soul. The standard of truth, justice, temperance, is as high as in the Republic; — in one respect higher, for temperance is now regarded, not as a virtue, but as the condition of all virtue. It is finally acknowledged that the virtues are all one and connected, and that if they are separated, courage is the lowest of them. The treatment of moral questions is less speculative but more human. The idea of good has disappeared; the excellences of individuals — of him who is faithful in a civil broil, of the examiner who is incorruptible, are the patterns to which the lives of the citizens are to conform. Plato is never weary of speaking of the honour of the soul, which can only be honoured truly by being improved. To make the soul as good as possible, and to prepare her for communion with the Gods in another world by communion with divine virtue in this, is the end of life. If the Republic is far superior to the Laws in form and style, and perhaps in reach of thought, the Laws leave on the mind of the modern reader much more strongly the impression of a struggle against evil, and an enthusiasm for human improvement. When Plato says that he must carry out that part of his ideal which is practicable, he does not appear to have reflected that part of an ideal cannot be detached from the whole.

The great defect of both his constitutions is the fixedness which he seeks to impress upon them. He had seen the Athenian empire, almost within the limits of his own life, wax and wane, but he never seems to have asked himself what would happen if, a century from the time at which he was writing, the Greek character should have as much changed as in the century which had preceded. He fails to perceive that the greater part of the political life of a nation is not that which is given them by their legislators, but that which they give themselves. He has never reflected that without progress there cannot be order, and that mere order can only be preserved by an unnatural and despotic repression. The possibility of a great nation or of an universal empire arising never occurred to him. He sees the enfeebled and distracted state of the Hellenic world in his own later life, and thinks that the remedy is to make the laws unchangeable. The same want of insight is apparent in his judgments about art. He would like to have the forms of sculpture and of music fixed as in

Egypt. He does not consider that this would be fatal to the true principles of art, which, as Socrates had himself taught, was to give life (Xen. Mem.). We wonder how, familiar as he was with the statues of Pheidias, he could have endured the lifeless and half-monstrous works of Egyptian sculpture. The 'chants of Isis' (Laws), we might think, would have been barbarous in an Athenian ear. But although he is aware that there are some things which are not so well among 'the children of the Nile,' he is deeply struck with the stability of Egyptian institutions. Both in politics and in art Plato seems to have seen no way of bringing order out of disorder, except by taking a step backwards. Antiquity, compared with the world in which he lived, had a sacredness and authority for him: the men of a former age were supposed by him to have had a sense of reverence which was wanting among his contemporaries. He could imagine the early stages of civilization; he never thought of what the future might bring forth. His experience is confined to two or three centuries, to a few Greek states, and to an uncertain report of Egypt and the East. There are many ways in which the limitations of their knowledge affected the genius of the Greeks. In criticism they were like children, having an acute vision of things which were near to them, blind to possibilities which were in the distance.

The colony is to receive from the mother-country her original constitution, and some of the first guardians of the law. The guardians of the law are to be ministers of justice, and the president of education is to take precedence of them all. They are to keep the registers of property, to make regulations for trade, and they are to be superannuated at seventy years of age. Several questions of modern politics, such as the limitation of property, the enforcement of education, the relations of classes, are anticipated by Plato. He hopes that in his state will be found neither poverty nor riches; every man having the necessities of life, he need not go fortune-hunting in marriage. Almost in the spirit of the Gospel he would say, 'How hardly can a rich man dwell in a perfect state.' For he cannot be a good man who is always gaining too much and spending too little (Laws; compare Arist. Eth. Nic.). Plato, though he admits wealth as a political element, would deny that material prosperity can be the foundation of a really great community. A man's soul, as he often

says, is more to be esteemed than his body; and his body than external goods. He repeats the complaint which has been made in all ages, that the love of money is the corruption of states. He has a sympathy with thieves and burglars, 'many of whom are men of ability and greatly to be pitied, because their souls are hungering and thirsting all their lives long;' but he has little sympathy with shopkeepers or retailers, although he makes the reflection, which sometimes occurs to ourselves, that such occupations, if they were carried on honestly by the best men and women, would be delightful and honourable. For traders and artisans a moderate gain was, in his opinion, best. He has never, like modern writers, idealized the wealth of nations, any more than he has worked out the problems of political economy, which among the ancients had not yet grown into a science. The isolation of Greek states, their constant wars, the want of a free industrial population, and of the modern methods and instruments of 'credit,' prevented any great extension of commerce among them; and so hindered them from forming a theory of the laws which regulate the accumulation and distribution of wealth.

The constitution of the army is aristocratic and also democratic; official appointment is combined with popular election. The two principles are carried out as follows: The guardians of the law nominate generals out of whom three are chosen by those who are or have been of the age for military service; and the generals elected have the nomination of certain of the inferior officers. But if either in the case of generals or of the inferior officers any one is ready to swear that he knows of a better man than those nominated, he may put the claims of his candidate to the vote of the whole army, or of the division of the service which he will, if elected, command. There is a general assembly, but its functions, except at elections, are hardly noticed. In the election of the Boule, Plato again attempts to mix aristocracy and democracy. This is effected, first as in the Servian constitution, by balancing wealth and numbers; for it cannot be supposed that those who possessed a higher qualification were equal in number with those who had a lower, and yet they have an equal number of representatives. In the second place, all classes are compelled to vote in the election of senators from the first and second class; but the fourth class is not compelled to elect from the

third, nor the third and fourth from the fourth. Thirdly, out of the 180 persons who are thus chosen from each of the four classes, 720 in all, 360 are to be taken by lot; these form the council for the year.

These political adjustments of Plato's will be criticised by the practical statesman as being for the most part fanciful and ineffectual. He will observe, first of all, that the only real check on democracy is the division into classes. The second of the three proposals, though ingenious, and receiving some light from the apathy to politics which is often shown by the higher classes in a democracy, would have little power in times of excitement and peril, when the precaution was most needed. At such political crises, all the lower classes would vote equally with the higher. The subtraction of half the persons chosen at the first election by the chances of the lot would not raise the character of the senators, and is open to the objection of uncertainty, which necessarily attends this and similar schemes of double representative government. Nor can the voters be expected to retain the continuous political interest required for carrying out such a proposal as Plato's. Who could select 180 persons of each class, fitted to be senators? And whoever were chosen by the voter in the first instance, his wishes might be neutralized by the action of the lot. Yet the scheme of Plato is not really so extravagant as the actual constitution of Athens, in which all the senators appear to have been elected by lot (*apo kuamou bouleutai*), at least, after the revolution made by Cleisthenes; for the constitution of the senate which was established by Solon probably had some aristocratic features, though their precise nature is unknown to us. The ancients knew that election by lot was the most democratic of all modes of appointment, seeming to say in the objectionable sense, that 'one man is as good as another.' Plato, who is desirous of mingling different elements, makes a partial use of the lot, which he applies to candidates already elected by vote. He attempts also to devise a system of checks and balances such as he supposes to have been intended by the ancient legislators. We are disposed to say to him, as he himself says in a remarkable passage, that 'no man ever legislates, but accidents of all sorts, which legislate for us in all sorts of ways. The violence of war and the hard necessity of poverty are constantly overturning governments and changing

laws.' And yet, as he adds, the true legislator is still required: he must co-operate with circumstances. Many things which are ascribed to human foresight are the result of chance. Ancient, and in a less degree modern political constitutions, are never consistent with themselves, because they are never framed on a single design, but are added to from time to time as new elements arise and gain the preponderance in the state. We often attribute to the wisdom of our ancestors great political effects which have sprung unforeseen from the accident of the situation. Power, not wisdom, is most commonly the source of political revolutions. And the result, as in the Roman Republic, of the co-existence of opposite elements in the same state is, not a balance of power or an equable progress of liberal principles, but a conflict of forces, of which one or other may happen to be in the ascendant. In Greek history, as well as in Plato's conception of it, this 'progression by antagonism' involves reaction: the aristocracy expands into democracy and returns again to tyranny.

The constitution of the Laws may be said to consist, besides the magistrates, mainly of three elements, — an administrative Council, the judiciary, and the Nocturnal Council, which is an intellectual aristocracy, composed of priests and the ten eldest guardians of the law and some younger co-opted members. To this latter chiefly are assigned the functions of legislation, but to be exercised with a sparing hand. The powers of the ordinary council are administrative rather than legislative. The whole number of 360, as in the Athenian constitution, is distributed among the months of the year according to the number of the tribes. Not more than one-twelfth is to be in office at once, so that the government would be made up of twelve administrations succeeding one another in the course of the year. They are to exercise a general superintendence, and, like the Athenian counsellors, are to preside in monthly divisions over all assemblies. Of the ecclesia over which they presided little is said, and that little relates to comparatively trifling duties. Nothing is less present to the mind of Plato than a House of Commons, carrying on year by year the work of legislation. For he supposes the laws to be already provided. As little would he approve of a body like the Roman Senate. The people and the aristocracy alike are to be represented, not by assemblies, but by officers elected for one or two

years, except the guardians of the law, who are elected for twenty years.

The evils of this system are obvious. If in any state, as Plato says in the *Statesman*, it is easier to find fifty good draught-players than fifty good rulers, the greater part of the 360 who compose the council must be unfitted to rule. The unfitness would be increased by the short period during which they held office. There would be no traditions of government among them, as in a Greek or Italian oligarchy, and no individual would be responsible for any of their acts. Everything seems to have been sacrificed to a false notion of equality, according to which all have a turn of ruling and being ruled. In the constitution of the *Magnesian state* Plato has not emancipated himself from the limitations of ancient politics. His government may be described as a democracy of magistrates elected by the people. He never troubles himself about the political consistency of his scheme. He does indeed say that the greater part of the good of this world arises, not from equality, but from proportion, which he calls the judgment of Zeus (compare Aristotle's *Distributive Justice*), but he hardly makes any attempt to carry out the principle in practice. There is no attempt to proportion representation to merit; nor is there any body in his commonwealth which represents the life either of a class or of the whole state. The manner of appointing magistrates is taken chiefly from the old democratic constitution of Athens, of which it retains some of the worst features, such as the use of the lot, while by doing away with the political character of the popular assembly the mainspring of the machine is taken out. The guardians of the law, thirty-seven in number, of whom the ten eldest reappear as a part of the *Nocturnal Council* at the end of the twelfth book, are to be elected by the whole military class, but they are to hold office for twenty years, and would therefore have an oligarchical rather than a democratic character. Nothing is said of the manner in which the functions of the *Nocturnal Council* are to be harmonized with those of the guardians of the law, or as to how the ordinary council is related to it.

Similar principles are applied to inferior offices. To some the appointment is made by vote, to others by lot. In the elections to the priesthood, Plato endeavours to mix or balance in a friendly manner

‘demos and not demus.’ The commonwealth of the Laws, like the Republic, cannot dispense with a spiritual head, which is the same in both — the oracle of Delphi. From this the laws about all divine things are to be derived. The final selection of the Interpreters, the choice of an heir for a vacant lot, the punishment for removing a deposit, are also to be determined by it. Plato is not disposed to encourage amateur attempts to revive religion in states. For, as he says in the Laws, ‘To institute religious rites is the work of a great intelligence.’

Though the council is framed on the model of the Athenian Boule, the law courts of Plato do not equally conform to the pattern of the Athenian dicasteries. Plato thinks that the judges should speak and ask questions: — this is not possible if they are numerous; he would, therefore, have a few judges only, but good ones. He is nevertheless aware that both in public and private suits there must be a popular element. He insists that the whole people must share in the administration of justice — in public causes they are to take the first step, and the final decision is to remain with them. In private suits they are also to retain a share; ‘for the citizen who has no part in the administration of justice is apt to think that he has no share in the state. For this reason there is to be a court of law in every tribe (i.e. for about every 2,000 citizens), and the judges are to be chosen by lot.’ Of the courts of law he gives what he calls a superficial sketch. Nor, indeed is it easy to reconcile his various accounts of them. It is however clear that although some officials, like the guardians of the law, the wardens of the agora, city, and country have power to inflict minor penalties, the administration of justice is in the main popular. The ingenious expedient of dividing the questions of law and fact between a judge and jury, which would have enabled Plato to combine the popular element with the judicial, did not occur to him or to any other ancient political philosopher. Though desirous of limiting the number of judges, and thereby confining the office to persons specially fitted for it, he does not seem to have understood that a body of law must be formed by decisions as well as by legal enactments.

He would have men in the first place seek justice from their friends and neighbours, because, as he truly remarks, they know best

the questions at issue; these are called in another passage arbiters rather than judges. But if they cannot settle the matter, it is to be referred to the courts of the tribes, and a higher penalty is to be paid by the party who is unsuccessful in the suit. There is a further appeal allowed to the select judges, with a further increase of penalty. The select judges are to be appointed by the magistrates, who are to choose one from every magistracy. They are to be elected annually, and therefore probably for a year only, and are liable to be called to account before the guardians of the law. In cases of which death is the penalty, the trial takes place before a special court, which is composed of the guardians of the law and of the judges of appeal.

In treating of the subject in Book ix, he proposes to leave for the most part the methods of procedure to a younger generation of legislators; the procedure in capital causes he determines himself. He insists that the vote of the judges shall be given openly, and before they vote they are to hear speeches from the plaintiff and defendant. They are then to take evidence in support of what has been said, and to examine witnesses. The eldest judge is to ask his questions first, and then the second, and then the third. The interrogatories are to continue for three days, and the evidence is to be written down. Apparently he does not expect the judges to be professional lawyers, any more than he expects the members of the council to be trained statesmen.

In forming marriage connexions, Plato supposes that the public interest will prevail over private inclination. There was nothing in this very shocking to the notions of Greeks, among whom the feeling of love towards the other sex was almost deprived of sentiment or romance. Married life is to be regulated solely with a view to the good of the state. The newly-married couple are not allowed to absent themselves from their respective *syssitia*, even during their honeymoon; they are to give their whole mind to the procreation of children; their duties to one another at a later period of life are not a matter about which the state is equally solicitous. Divorces are readily allowed for incompatibility of temper. As in the Republic, physical considerations seem almost to exclude moral and social ones. To modern feelings there is a degree of coarseness in Plato's treatment of the subject. Yet he also makes some shrewd remarks on

marriage, as for example, that a man who does not marry for money will not be the humble servant of his wife. And he shows a true conception of the nature of the family, when he requires that the newly-married couple 'should leave their father and mother,' and have a separate home. He also provides against extravagance in marriage festivals, which in some states of society, for instance in the case of the Hindoos, has been a social evil of the first magnitude.

In treating of property, Plato takes occasion to speak of property in slaves. They are to be treated with perfect justice; but, for their own sake, to be kept at a distance. The motive is not so much humanity to the slave, of which there are hardly any traces (although Plato allows that many in the hour of peril have found a slave more attached than members of their own family), but the self-respect which the freeman and citizen owes to himself (compare Republic). If they commit crimes, they are doubly punished; if they inform against illegal practices of their masters, they are to receive a protection, which would probably be ineffectual, from the guardians of the law; in rare cases they are to be set free. Plato still breathes the spirit of the old Hellenic world, in which slavery was a necessity, because leisure must be provided for the citizen.

The education propounded in the Laws differs in several points from that of the Republic. Plato seems to have reflected as deeply and earnestly on the importance of infancy as Rousseau, or Jean Paul (compare the saying of the latter— 'Not the moment of death, but the moment of birth, is probably the more important'). He would fix the amusements of children in the hope of fixing their characters in after-life. In the spirit of the statesman who said, 'Let me make the ballads of a country, and I care not who make their laws,' Plato would say, 'Let the amusements of children be unchanged, and they will not want to change the laws. The 'Goddess Harmonia' plays a great part in Plato's ideas of education. The natural restless force of life in children, 'who do nothing but roar until they are three years old,' is gradually to be reduced to law and order. As in the Republic, he fixes certain forms in which songs are to be composed: (1) they are to be strains of cheerfulness and good omen; (2) they are to be hymns or prayers addressed to the Gods; (3) they are to sing only of the lawful and good. The poets are again expelled or rather ironically invited to

depart; and those who remain are required to submit their poems to the censorship of the magistrates. Youth are no longer compelled to commit to memory many thousand lyric and tragic Greek verses; yet, perhaps, a worse fate is in store for them. Plato has no belief in 'liberty of prophesying'; and having guarded against the dangers of lyric poetry, he remembers that there is an equal danger in other writings. He cannot leave his old enemies, the Sophists, in possession of the field; and therefore he proposes that youth shall learn by heart, instead of the compositions of poets or prose writers, his own inspired work on laws. These, and music and mathematics, are the chief parts of his education.

Mathematics are to be cultivated, not as in the Republic with a view to the science of the idea of good, — though the higher use of them is not altogether excluded, — but rather with a religious and political aim. They are a sacred study which teaches men how to distribute the portions of a state, and which is to be pursued in order that they may learn not to blaspheme about astronomy. Against three mathematical errors Plato is in profound earnest. First, the error of supposing that the three dimensions of length, breadth, and height, are really commensurable with one another. The difficulty which he feels is analogous to the difficulty which he formerly felt about the connexion of ideas, and is equally characteristic of ancient philosophy: he fixes his mind on the point of difference, and cannot at the same time take in the similarity. Secondly, he is puzzled about the nature of fractions: in the Republic, he is disposed to deny the possibility of their existence. Thirdly, his optimism leads him to insist (unlike the Spanish king who thought that he could have improved on the mechanism of the heavens) on the perfect or circular movement of the heavenly bodies. He appears to mean, that instead of regarding the stars as overtaking or being overtaken by one another, or as planets wandering in many paths, a more comprehensive survey of the heavens would enable us to infer that they all alike moved in a circle around a centre (compare *Timaeus*; *Republic*). He probably suspected, though unacquainted with the true cause, that the appearance of the heavens did not agree with the reality: at any rate, his notions of what was right or fitting easily overpowered the results of actual observation. To the early

astronomers, who lived at the revival of science, as to Plato, there was nothing absurd in a priori astronomy, and they would probably have made fewer real discoveries if they had followed any other track. (Compare Introduction to the Republic.)

The science of dialectic is nowhere mentioned by name in the Laws, nor is anything said of the education of after-life. The child is to begin to learn at ten years of age: he is to be taught reading and writing for three years, from ten to thirteen, and no longer; and for three years more, from thirteen to sixteen, he is to be instructed in music. The great fault which Plato finds in the contemporary education is the almost total ignorance of arithmetic and astronomy, in which the Greeks would do well to take a lesson from the Egyptians (compare Republic). Dancing and wrestling are to have a military character, and women as well as men are to be taught the use of arms. The military spirit which Plato has vainly endeavoured to expel in the first two books returns again in the seventh and eighth. He has evidently a sympathy with the soldier, as well as with the poet, and he is no mean master of the art, or at least of the theory, of war (compare Laws; Republic), though inclining rather to the Spartan than to the Athenian practice of it (Laws). Of a supreme or master science which was to be the 'coping-stone' of the rest, few traces appear in the Laws. He seems to have lost faith in it, or perhaps to have realized that the time for such a science had not yet come, and that he was unable to fill up the outline which he had sketched. There is no requirement that the guardians of the law shall be philosophers, although they are to know the unity of virtue, and the connexion of the sciences. Nor are we told that the leisure of the citizens, when they are grown up, is to be devoted to any intellectual employment. In this respect we note a falling off from the Republic, but also there is 'the returning to it' of which Aristotle speaks in the Politics. The public and family duties of the citizens are to be their main business, and these would, no doubt, take up a great deal more time than in the modern world we are willing to allow to either of them. Plato no longer entertains the idea of any regular training to be pursued under the superintendence of the state from eighteen to thirty, or from thirty to thirty-five; he has taken the first step downwards on 'Constitution Hill' (Republic). But he maintains as

earnestly as ever that 'to men living under this second polity there remains the greatest of all works, the education of the soul,' and that no bye-work should be allowed to interfere with it. Night and day are not long enough for the consummation of it.

Few among us are either able or willing to carry education into later life; five or six years spent at school, three or four at a university, or in the preparation for a profession, an occasional attendance at a lecture to which we are invited by friends when we have an hour to spare from house-keeping or money-making — these comprise, as a matter of fact, the education even of the educated; and then the lamp is extinguished 'more truly than Heracleitus' sun, never to be lighted again' (Republic). The description which Plato gives in the Republic of the state of adult education among his contemporaries may be applied almost word for word to our own age. He does not however acquiesce in this widely-spread want of a higher education; he would rather seek to make every man something of a philosopher before he enters on the duties of active life. But in the Laws he no longer prescribes any regular course of study which is to be pursued in mature years. Nor does he remark that the education of after-life is of another kind, and must consist with the majority of the world rather in the improvement of character than in the acquirement of knowledge. It comes from the study of ourselves and other men: from moderation and experience: from reflection on circumstances: from the pursuit of high aims: from a right use of the opportunities of life. It is the preservation of what we have been, and the addition of something more. The power of abstract study or continuous thought is very rare, but such a training as this can be given by every one to himself.

The singular passage in Book vii., in which Plato describes life as a pastime, like many other passages in the Laws is imperfectly expressed. Two thoughts seem to be struggling in his mind: first, the reflection, to which he returns at the end of the passage, that men are playthings or puppets, and that God only is the serious aim of human endeavours; this suggests to him the afterthought that, although playthings, they are the playthings of the Gods, and that this is the best of them. The cynical, ironical fancy of the moment insensibly passes into a religious sentiment. In another passage he says that life

is a game of which God, who is the player, shifts the pieces so as to procure the victory of good on the whole. Or once more: Tragedies are acted on the stage; but the best and noblest of them is the imitation of the noblest life, which we affirm to be the life of our whole state. Again, life is a chorus, as well as a sort of mystery, in which we have the Gods for playmates. Men imagine that war is their serious pursuit, and they make war that they may return to their amusements. But neither wars nor amusements are the true satisfaction of men, which is to be found only in the society of the Gods, in sacrificing to them and propitiating them. Like a Christian ascetic, Plato seems to suppose that life should be passed wholly in the enjoyment of divine things. And after meditating in amazement on the sadness and unreality of the world, he adds, in a sort of parenthesis, 'Be cheerful, Sirs' (Shakespeare, *Tempest*.)

In one of the noblest passages of Plato, he speaks of the relation of the sexes. Natural relations between members of the same family have been established of old; a 'little word' has put a stop to incestuous connexions. But unnatural unions of another kind continued to prevail at Crete and Lacedaemon, and were even justified by the example of the Gods. They, too, might be banished, if the feeling that they were unholy and abominable could sink into the minds of men. The legislator is to cry aloud, and spare not, 'Let not men fall below the level of the beasts.' Plato does not shrink, like some modern philosophers, from 'carrying on war against the mightiest lusts of mankind;' neither does he expect to extirpate them, but only to confine them to their natural use and purpose, by the enactments of law, and by the influence of public opinion. He will not feed them by an over-luxurious diet, nor allow the healthier instincts of the soul to be corrupted by music and poetry. The prohibition of excessive wealth is, as he says, a very considerable gain in the way of temperance, nor does he allow of those enthusiastic friendships between older and younger persons which in his earlier writings appear to be alluded to with a certain degree of amusement and without reproof (compare *Introduction to the Symposium*). Sappho and Anacreon are celebrated by him in the *Charmides* and the *Phaedrus*; but they would have been expelled from the Magnesian state.

Yet he does not suppose that the rule of absolute purity can be enforced on all mankind. Something must be conceded to the weakness of human nature. He therefore adopts a 'second legal standard of honourable and dishonourable, having a second standard of right.' He would abolish altogether 'the connexion of men with men...As to women, if any man has to do with any but those who come into his house duly married by sacred rites, and he offends publicly in the face of all mankind, we shall be right in enacting that he be deprived of civic honours and privileges.' But feeling also that it is impossible wholly to control the mightiest passions of mankind,' Plato, like other legislators, makes a compromise. The offender must not be found out; decency, if not morality, must be respected. In this he appears to agree with the practice of all civilized ages and countries. Much may be truly said by the moralist on the comparative harm of open and concealed vice. Nor do we deny that some moral evils are better turned out to the light, because, like diseases, when exposed, they are more easily cured. And secrecy introduces mystery which enormously exaggerates their power; a mere animal want is thus elevated into a sentimental ideal. It may very well be that a word spoken in season about things which are commonly concealed may have an excellent effect. But having regard to the education of youth, to the innocence of children, to the sensibilities of women, to the decencies of society, Plato and the world in general are not wrong in insisting that some of the worst vices, if they must exist, should be kept out of sight; this, though only a second-best rule, is a support to the weakness of human nature. There are some things which may be whispered in the closet, but should not be shouted on the housetop. It may be said of this, as of many other things, that it is a great part of education to know to whom they are to be spoken of, and when, and where.

BOOK IX. Punishments of offences and modes of procedure come next in order. We have a sense of disgrace in making regulations for all the details of crime in a virtuous and well-ordered state. But seeing that we are legislating for men and not for Gods, there is no uncharitableness in apprehending that some one of our citizens may have a heart, like the seed which has touched the ox's horn, so hard as to be impenetrable to the law. Let our first enactment

be directed against the robbing of temples. No well-educated citizen will be guilty of such a crime, but one of their servants, or some stranger, may, and with a view to him, and at the same time with a remoter eye to the general infirmity of human nature, I will lay down the law, beginning with a prelude. To the intending robber we will say — O sir, the complaint which troubles you is not human; but some curse has fallen upon you, inherited from the crimes of your ancestors, of which you must purge yourself: go and sacrifice to the Gods, associate with the good, avoid the wicked; and if you are cured of the fatal impulse, well; but if not, acknowledge death to be better than life, and depart.

These are the accents, soft and low, in which we address the would-be criminal. And if he will not listen, then cry aloud as with the sound of a trumpet: Whosoever robs a temple, if he be a slave or foreigner shall be branded in the face and hands, and scourged, and cast naked beyond the border. And perhaps this may improve him: for the law aims either at the reformation of the criminal, or the repression of crime. No punishment is designed to inflict useless injury. But if the offender be a citizen, he must be incurable, and for him death is the only fitting penalty. His iniquity, however, shall not be visited on his children, nor shall his property be confiscated.

As to the exaction of penalties, any person who is fined for an offence shall not be liable to pay the fine, unless he have property in excess of his lot. For the lots must never go uncultivated for lack of means; the guardians of the law are to provide against this. If a fine is inflicted upon a man which he cannot pay, and for which his friends are unwilling to give security, he shall be imprisoned and otherwise dishonoured. But no criminal shall go unpunished: — whether death, or imprisonment, or stripes, or fines, or the stocks, or banishment to a remote temple, be the penalty. Capital offences shall come under the cognizance of the guardians of the law, and a college of the best of the last year's magistrates. The order of suits and similar details we shall leave to the lawgivers of the future, and only determine the mode of voting. The judges are to sit in order of seniority, and the proceedings shall begin with the speeches of the plaintiff and the defendant; and then the judges, beginning with the eldest, shall ask questions and collect evidence during three days, which, at the end of

each day, shall be deposited in writing under their seals on the altar of Hestia; and when they have evidence enough, after a solemn declaration that they will decide justly, they shall vote and end the case. The votes are to be given openly in the presence of the citizens.

Next to religion, the preservation of the constitution is the first object of the law. The greatest enemy of the state is he who attempts to set up a tyrant, or breeds plots and conspiracies; not far below him in guilt is a magistrate who either knowingly, or in ignorance, fails to bring the offender to justice. Any one who is good for anything will give information against traitors. The mode of proceeding at such trials will be the same as at trials for sacrilege; the penalty, death. But neither in this case nor in any other is the son to bear the iniquity of the father, unless father, grandfather, great-grandfather, have all of them been capitally convicted, and then the family of the criminal are to be sent off to the country of their ancestor, retaining their property, with the exception of the lot and its fixtures. And ten are to be selected from the younger sons of the other citizens — one of whom is to be chosen by the oracle of Delphi to be heir of the lot.

Our third law will be a general one, concerning the procedure and the judges in cases of treason. As regards the remaining or departure of the family of the offender, the same law shall apply equally to the traitor, the sacrilegious, and the conspirator.

A thief, whether he steals much or little, must refund twice the amount, if he can do so without impairing his lot; if he cannot, he must go to prison until he either pays the plaintiff, or in case of a public theft, the city, or they agree to forgive him. ‘But should all kinds of theft incur the same penalty?’ You remind me of what I know — that legislation is never perfect. The men for whom laws are now made may be compared to the slave who is being doctored, according to our old image, by the unscientific doctor. For the empirical practitioner, if he chance to meet the educated physician talking to his patient, and entering into the philosophy of his disease, would burst out laughing and say, as doctors delight in doing, ‘Foolish fellow, instead of curing the patient you are educating him!’ ‘And would he not be right?’ Perhaps; and he might add, that he who discourses in our fashion preaches to the citizens instead of legislating for them. ‘True.’ There is, however, one advantage which

we possess — that being amateurs only, we may either take the most ideal, or the most necessary and utilitarian view. ‘But why offer such an alternative? As if all our legislation must be done to-day, and nothing put off until the morrow. We may surely rough-hew our materials first, and shape and place them afterwards.’ That will be the natural way of proceeding. There is a further point. Of all writings either in prose or verse the writings of the legislator are the most important. For it is he who has to determine the nature of good and evil, and how they should be studied with a view to our instruction. And is it not as disgraceful for Solon and Lycurgus to lay down false precepts about the institutions of life as for Homer and Tyrtaeus? The laws of states ought to be the models of writing, and what is at variance with them should be deemed ridiculous. And we may further imagine them to express the affection and good sense of a father or mother, and not to be the fiats of a tyrant. ‘Very true.’

Let us enquire more particularly about sacrilege, theft and other crimes, for which we have already legislated in part. And this leads us to ask, first of all, whether we are agreed or disagreed about the nature of the honourable and just. ‘To what are you referring?’ I will endeavour to explain. All are agreed that justice is honourable, whether in men or things, and no one who maintains that a very ugly men who is just, is in his mind fair, would be thought extravagant. ‘Very true.’ But if honour is to be attributed to justice, are just sufferings honourable, or only just actions? ‘What do you mean?’ Our laws supply a case in point; for we enacted that the robber of temples and the traitor should die; and this was just, but the reverse of honourable. In this way does the language of the many rend asunder the just and honourable. ‘That is true.’ But is our own language consistent? I have already said that the evil are involuntarily evil; and the evil are the unjust. Now the voluntary cannot be the involuntary; and if you two come to me and say, ‘Then shall we legislate for our city?’ Of course, I shall reply.— ‘Then will you distinguish what crimes are voluntary and what involuntary, and shall we impose lighter penalties on the latter, and heavier on the former? Or shall we refuse to determine what is the meaning of voluntary and involuntary, and maintain that our words have come down from heaven, and that they should be at once embodied in a

law?’ All states legislate under the idea that there are two classes of actions, the voluntary and the involuntary, but there is great confusion about them in the minds of men; and the law can never act unless they are distinguished. Either we must abstain from affirming that unjust actions are involuntary, or explain the meaning of this statement. Believing, then, that acts of injustice cannot be divided into voluntary and involuntary, I must endeavour to find some other mode of classifying them. Hurts are voluntary and involuntary, but all hurts are not injuries: on the other hand, a benefit when wrongly conferred may be an injury. An act which gives or takes away anything is not simply just; but the legislator who has to decide whether the case is one of hurt or injury, must consider the animus of the agent; and when there is hurt, he must as far as possible, provide a remedy and reparation: but if there is injustice, he must, when compensation has been made, further endeavour to reconcile the two parties. ‘Excellent.’ Where injustice, like disease, is remediable, there the remedy must be applied in word or deed, with the assistance of pleasures and pains, of bounties and penalties, or any other influence which may inspire man with the love of justice, or hatred of injustice; and this is the noblest work of law. But when the legislator perceives the evil to be incurable, he will consider that the death of the offender will be a good to himself, and in two ways a good to society: first, as he becomes an example to others; secondly, because the city will be quit of a rogue; and in such a case, but in no other, the legislator will punish with death. ‘There is some truth in what you say. I wish, however, that you would distinguish more clearly the difference of injury and hurt, and the complications of voluntary and involuntary.’ You will admit that anger is of a violent and destructive nature? ‘Certainly.’ And further, that pleasure is different from anger, and has an opposite power, working by persuasion and deceit? ‘Yes.’ Ignorance is the third source of crimes; this is of two kinds — simple ignorance and ignorance doubled by conceit of knowledge; the latter, when accompanied with power, is a source of terrible errors, but is excusable when only weak and childish. ‘True.’ We often say that one man masters, and another is mastered by pleasure and anger. ‘Just so.’ But no one says that one man masters, and another is mastered by ignorance. ‘You are right.’

All these motives actuate men and sometimes drive them in different ways. 'That is so.' Now, then, I am in a position to define the nature of just and unjust. By injustice I mean the dominion of anger and fear, pleasure and pain, envy and desire, in the soul, whether doing harm or not: by justice I mean the rule of the opinion of the best, whether in states or individuals, extending to the whole of life; although actions done in error are often thought to be involuntary injustice. No controversy need be raised about names at present; we are only desirous of fixing in our memories the heads of error. And the pain which is called fear and anger is our first head of error; the second is the class of pleasures and desires; and the third, of hopes which aim at true opinion about the best; — this latter falls into three divisions (i.e. (1) when accompanied by simple ignorance, (2) when accompanied by conceit of wisdom combined with power, or (3) with weakness), so that there are in all five. And the laws relating to them may be summed up under two heads, laws which deal with acts of open violence and with acts of deceit; to which may be added acts both violent and deceitful, and these last should be visited with the utmost rigour of the law. 'Very properly.'

Let us now return to the enactment of laws. We have treated of sacrilege, and of conspiracy, and of treason. Any of these crimes may be committed by a person not in his right mind, or in the second childhood of old age. If this is proved to be the fact before the judges, the person in question shall only have to pay for the injury, and not be punished further, unless he have on his hands the stain of blood. In this case he shall be exiled for a year, and if he return before the expiration of the year, he shall be retained in the public prison two years.

Homicides may be divided into voluntary and involuntary: and first of involuntary homicide. He who unintentionally kills another man at the games or in military exercises duly authorized by the magistrates, whether death follow immediately or after an interval, shall be acquitted, subject only to the purification required by the Delphian Oracle. Any physician whose patient dies against his will shall in like manner be acquitted. Any one who unintentionally kills the slave of another, believing that he is his own, with or without weapons, shall bear the master of the slave harmless, or pay a penalty

amounting to twice the value of the slave, and to this let him add a purification greater than in the case of homicide at the games. If a man kill his own slave, a purification only is required of him. If he kill a freeman unintentionally, let him also make purification; and let him remember the ancient tradition which says that the murdered man is indignant when he sees the murderer walk about in his own accustomed haunts, and that he terrifies him with the remembrance of his crime. And therefore the homicide should keep away from his native land for a year, or, if he have slain a stranger, let him avoid the land of the stranger for a like period. If he complies with this condition, the nearest kinsman of the deceased shall take pity upon him and be reconciled to him; but if he refuses to remain in exile, or visits the temples unpurified, then let the kinsman proceed against him, and demand a double penalty. The kinsman who neglects this duty shall himself incur the curse, and any one who likes may proceed against him, and compel him to leave his country for five years. If a stranger involuntarily kill a stranger, any one may proceed against him in the same manner: and the homicide, if he be a metic, shall be banished for a year; but if he be an entire stranger, whether he have murdered metic, citizen, or stranger, he shall be banished for ever; and if he return, he shall be punished with death, and his property shall go to the next of kin of the murdered man. If he come back by sea against his will, he shall remain on the seashore, wetting his feet in the water while he waits for a vessel to sail; or if he be brought back by land, the magistrates shall send him unharmed beyond the border.

Next follows murder done from anger, which is of two kinds — either arising out of a sudden impulse, and attended with remorse; or committed with premeditation, and unattended with remorse. The cause of both is anger, and both are intermediate between voluntary and involuntary. The one which is committed from sudden impulse, though not wholly involuntary, bears the image of the involuntary, and is therefore the more excusable of the two, and should receive a gentler punishment. The act of him who nurses his wrath is more voluntary, and therefore more culpable. The degree of culpability depends on the presence or absence of intention, to which the degree of punishment should correspond. For the first kind of murder, that

which is done on a momentary impulse, let two years' exile be the penalty; for the second, that which is accompanied with malice prepense, three. When the time of any one's exile has expired, the guardians shall send twelve judges to the borders of the land, who shall have authority to decide whether he may return or not. He who after returning repeats the offence, shall be exiled and return no more, and, if he return, shall be put to death, like the stranger in a similar case. He who in a fit of anger kills his own slave, shall purify himself; and he who kills another man's slave, shall pay to his master double the value. Any one may proceed against the offender if he appear in public places, not having been purified; and may bring to trial both the next of kin to the dead man and the homicide, and compel the one to exact, and the other to pay, a double penalty. If a slave kill his master, or a freeman who is not his master, in anger, the kinsmen of the murdered person may do with the murderer whatever they please, but they must not spare his life. If a father or mother kill their son or daughter in anger, let the slayer remain in exile for three years; and on the return of the exile let the parents separate, and no longer continue to cohabit, or have the same sacred rites with those whom he or she has deprived of a brother or sister. The same penalty is decreed against the husband who murders his wife, and also against the wife who murders her husband. Let them be absent three years, and on their return never again share in the same sacred rites with their children, or sit at the same table with them. Nor is a brother or sister who have lifted up their hands against a brother or sister, ever to come under the same roof or share in the same rites with those whom they have robbed of a child. If a son feels such hatred against his father or mother as to take the life of either of them, then, if the parent before death forgive him, he shall only suffer the penalty due to involuntary homicide; but if he be unforgiven, there are many laws against which he has offended; he is guilty of outrage, impiety, sacrilege all in one, and deserves to be put to death many times over. For if the law will not allow a man to kill the authors of his being even in self-defence, what other penalty than death can be inflicted upon him who in a fit of passion wilfully slays his father or mother? If a brother kill a brother in self-defence during a civil broil, or a citizen a citizen, or a slave a slave, or a stranger a

stranger, let them be free from blame, as he is who slays an enemy in battle. But if a slave kill a freeman, let him be as a parricide. In all cases, however, the forgiveness of the injured party shall acquit the agents; and then they shall only be purified, and remain in exile for a year.

Enough of actions that are involuntary, or done in anger; let us proceed to voluntary and premeditated actions. The great source of voluntary crime is the desire of money, which is begotten by evil education; and this arises out of the false praise of riches, common both among Hellenes and barbarians; they think that to be the first of goods which is really the third. For the body is not for the sake of wealth, but wealth for the body, as the body is for the soul. If this were better understood, the crime of murder, of which avarice is the chief cause, would soon cease among men. Next to avarice, ambition is a source of crime, troublesome to the ambitious man himself, as well as to the chief men of the state. And next to ambition, base fear is a motive, which has led many an one to commit murder in order that he may get rid of the witnesses of his crimes. Let this be said as a prelude to all enactments about crimes of violence; and the tradition must not be forgotten, which tells that the murderer is punished in the world below, and that when he returns to this world he meets the fate which he has dealt out to others. If a man is deterred by the prelude and the fear of future punishment, he will have no need of the law; but in case he disobey, let the law be declared against him as follows: — He who of malice prepense kills one of his kindred, shall in the first place be outlawed; neither temple, harbour, nor agora shall be polluted by his presence. And if a kinsman of the deceased refuse to proceed against his slayer, he shall take the curse of pollution upon himself, and also be liable to be prosecuted by any one who will avenge the dead. The prosecutor, however, must observe the customary ceremonial before he proceeds against the offender. The details of these observances will be best determined by a conclave of prophets and interpreters and guardians of the law, and the judges of the cause itself shall be the same as in cases of sacrilege. He who is convicted shall be punished with death, and not be buried within the country of the murdered person. He who flies from the law shall undergo perpetual banishment; if he return,

he may be put to death with impunity by any relative of the murdered man or by any other citizen, or bound and delivered to the magistrates. He who accuses a man of murder shall demand satisfactory bail of the accused, and if this is not forthcoming, the magistrate shall keep him in prison against the day of trial. If a man commit murder by the hand of another, he shall be tried in the same way as in the cases previously supposed, but if the offender be a citizen, his body after execution shall be buried within the land.

If a slave kill a freeman, either with his own hand or by contrivance, let him be led either to the grave or to a place whence he can see the grave of the murdered man, and there receive as many stripes at the hand of the public executioner as the person who took him pleases; and if he survive he shall be put to death. If a slave be put out of the way to prevent his informing of some crime, his death shall be punished like that of a citizen. If there are any of those horrible murders of kindred which sometimes occur even in well-regulated societies, and of which the legislator, however unwilling, cannot avoid taking cognizance, he will repeat the old myth of the divine vengeance against the perpetrators of such atrocities. The myth will say that the murderer must suffer what he has done: if he have slain his father, he must be slain by his children; if his mother, he must become a woman and perish at the hands of his offspring in another age of the world. Such a preamble may terrify him; but if, notwithstanding, in some evil hour he murders father or mother or brethren or children, the mode of proceeding shall be as follows: — Him who is convicted, the officers of the judges shall lead to a spot without the city where three ways meet, and there slay him and expose his body naked; and each of the magistrates shall cast a stone upon his head and justify the city, and he shall be thrown unburied beyond the border. But what shall we say of him who takes the life which is dearest to him, that is to say, his own; and this not from any disgrace or calamity, but from cowardice and indolence? The manner of his burial and the purification of his crime is a matter for God and the interpreters to decide and for his kinsmen to execute. Let him, at any rate, be buried alone in some uncultivated and nameless spot, and be without name or monument. If a beast kill a man, not in a public contest, let it be prosecuted for murder, and after condemnation slain and cast without the border. Also inanimate things which have caused death, except in the case of lightning and other visitations from heaven, shall be carried without the border. If the body of a dead man be found, and the murderer remain unknown, the trial shall take place all the same, and the unknown murderer shall be warned not to set foot in the temples or come within the borders of the land; if discovered, he shall die, and his body shall be

cast out. A man is justified in taking the life of a burglar, of a footpad, of a violator of women or youth; and he may take the life of another with impunity in defence of father, mother, brother, wife, or other relations.

The nurture and education which are necessary to the existence of men have been considered, and the punishment of acts of violence which destroy life. There remain maiming, wounding, and the like, which admit of a similar division into voluntary and involuntary. About this class of actions the preamble shall be: Whereas men would be like wild beasts unless they obeyed the laws, the first duty of citizens is the care of the public interests, which unite and preserve states, as private interests distract them. A man may know what is for the public good, but if he have absolute power, human nature will impel him to seek pleasure instead of virtue, and so darkness will come over his soul and over the state. If he had mind, he would have no need of law; for mind is the perfection of law. But such a freeman, 'whom the truth makes free,' is hardly to be found; and therefore law and order are necessary, which are the second-best, and they regulate things as they exist in part only, but cannot take in the whole. For actions have innumerable characteristics, which must be partly determined by the law and partly left to the judge. The judge must determine the fact; and to him also the punishment must sometimes be left. What shall the law prescribe, and what shall be left to the judge? A city is unfortunate in which the tribunals are either secret and speechless, or, what is worse, noisy and public, when the people, as if they were in a theatre, clap and hoot the various speakers. Such courts a legislator would rather not have; but if he is compelled to have them, he will speak distinctly, and leave as little as possible to their discretion. But where the courts are good, and presided over by well-trained judges, the penalties to be inflicted may be in a great measure left to them; and as there are to be good courts among our colonists, we need not determine beforehand the exact proportion of the penalty and the crime. Returning, then, to our legislator, let us indite a law about wounding, which shall run as follows: — He who wounds with intent to kill, and fails in his object, shall be tried as if he had succeeded. But since God has favoured both him and his victim, instead of being put to death, he shall be allowed to go into

exile and take his property with him, the damage due to the sufferer having been previously estimated by the court, which shall be the same as would have tried the case if death had ensued. If a child should intentionally wound a parent, or a servant his master, or brother or sister wound brother or sister with malice prepense, the penalty shall be death. If a husband or wife wound one another with intent to kill, the penalty which is inflicted upon them shall be perpetual exile; and if they have young children, the guardians shall take care of them and administer their property as if they were orphans. If they have no children, their kinsmen male and female shall meet, and after a consultation with the priests and guardians of the law, shall appoint an heir of the house; for the house and family belong to the state, being a 5040th portion of the whole. And the state is bound to preserve her families happy and holy; therefore, when the heir of a house has committed a capital offence, or is in exile for life, the house is to be purified, and then the kinsmen of the house and the guardians of the law are to find out a family which has a good name and in which there are many sons, and introduce one of them to be the heir and priest of the house. He shall assume the fathers and ancestors of the family, while the first son dies in dishonour and his name is blotted out.

Some actions are intermediate between the voluntary and involuntary. Those done from anger are of this class. If a man wound another in anger, let him pay double the damage, if the injury is curable; or fourfold, if curable, and at the same time dishonourable; and fourfold, if incurable; the amount is to be assessed by the judges. If the wounded person is rendered incapable of military service, the injurer, besides the other penalties, shall serve in his stead, or be liable to a suit for refusing to serve. If brother wounds brother, then their parents and kindred, of both sexes, shall meet and judge the crime. The damages shall be assessed by the parents; and if the amount fixed by them is disputed, an appeal shall be made to the male kindred; or in the last resort to the guardians of the law. Parents who wound their children are to be tried by judges of at least sixty years of age, who have children of their own; and they are to determine whether death, or some lesser punishment, is to be inflicted upon them — no relatives are to take part in the trial. If a

slave in anger smite a freeman, he is to be delivered up by his master to the injured person. If the master suspect collusion between the slave and the injured person, he may bring the matter to trial: and if he fail he shall pay three times the injury; or if he obtain a conviction, the contriver of the conspiracy shall be liable to an action for kidnapping. He who wounds another unintentionally shall only pay for the actual harm done.

In all outrages and acts of violence, the elder is to be more regarded than the younger. An injury done by a younger man to an elder is abominable and hateful; but the younger man who is struck by an elder is to bear with him patiently, considering that he who is twenty years older is *loco parentis*, and remembering the reverence which is due to the Gods who preside over birth. Let him keep his hands, too, from the stranger; instead of taking upon himself to chastise him when he is insolent, he shall bring him before the wardens of the city, who shall examine into the case, and if they find him guilty, shall scourge him with as many blows as he has given; or if he be innocent, they shall warn and threaten his accuser. When an equal strikes an equal, whether an old man an old man, or a young man a young man, let them use only their fists and have no weapons. He who being above forty years of age commences a fight, or retaliates, shall be counted mean and base.

To this preamble, let the law be added: If a man smite another who is his elder by twenty years or more, let the bystander, in case he be older than the combatants, part them; or if he be younger than the person struck, or of the same age with him, let him defend him as he would a father or brother; and let the striker be brought to trial, and if convicted imprisoned for a year or more at the discretion of the judges. If a stranger smite one who is his elder by twenty years or more, he shall be imprisoned for two years, and a metic, in like case, shall suffer three years' imprisonment. He who is standing by and gives no assistance, shall be punished according to his class in one of four penalties — a mina, fifty, thirty, twenty drachmas. The generals and other superior officers of the army shall form the court which tries this class of offences.

Laws are made to instruct the good, and in the hope that there may be no need of them; also to control the bad, whose hardness of

heart will not be hindered from crime. The uttermost penalty will fall upon those who lay violent hands upon a parent, having no fear of the Gods above, or of the punishments which will pursue them in the world below. They are too wise in their own conceits to believe in such things: wherefore the tortures which await them in another life must be anticipated in this. Let the law be as follows: —

If a man, being in his right mind, dare to smite his father and mother, or his grandfather and grandmother, let the passer-by come to the rescue; and if he be a metic or stranger who comes to the rescue, he shall have the first place at the games; or if he do not come to the rescue, he shall be a perpetual exile. Let the citizen in the like case be praised or blamed, and the slave receive freedom or a hundred stripes. The wardens of the agora, the city, or the country, as the case may be, shall see to the execution of the law. And he who is an inhabitant of the same place and is present shall come to the rescue, or he shall fall under a curse.

If a man be convicted of assaulting his parents, let him be banished for ever from the city into the country, and let him abstain from all sacred rites; and if he do not abstain, let him be punished by the wardens of the country; and if he return to the city, let him be put to death. If any freeman consort with him, let him be purified before he returns to the city. If a slave strike a freeman, whether citizen or stranger, let the bystander be obliged to seize and deliver him into the hands of the injured person, who may inflict upon him as many blows as he pleases, and shall then return him to his master. The law will be as follows: — The slave who strikes a freeman shall be bound by his master, and not set at liberty without the consent of the person whom he has injured. All these laws apply to women as well as to men.

BOOK X. The greatest wrongs arise out of youthful insolence, and the greatest of all are committed against public temples; they are in the second degree great when private rites and sepulchres are insulted; in the third degree, when committed against parents; in the fourth degree, when they are done against the authority or property of the rulers; in the fifth degree, when the rights of individuals are violated. Most of these offences have been already considered; but there remains the question of admonition and punishment of offences

against the Gods. Let the admonition be in the following terms: — No man who ever intentionally did or said anything impious, had a true belief in the existence of the Gods; but either he thought that there were no Gods, or that they did not care about men, or that they were easily appeased by sacrifices and prayers. ‘What shall we say or do to such persons?’ My good sir, let us first hear the jests which they in their superiority will make upon us. ‘What will they say?’ Probably something of this kind:— ‘Strangers you are right in thinking that some of us do not believe in the existence of the Gods; while others assert that they do not care for us, and others that they are propitiated by prayers and offerings. But we want you to argue with us before you threaten; you should prove to us by reasonable evidence that there are Gods, and that they are too good to be bribed. Poets, priests, prophets, rhetoricians, even the best of them, speak to us of atoning for evil, and not of avoiding it. From legislators who profess to be gentle we ask for instruction, which may, at least, have the persuasive power of truth, if no other.’ What have you to say? ‘Well, there is no difficulty in proving the being of the Gods. The sun, and earth, and stars, moving in their courses, the recurring seasons, furnish proofs of their existence; and there is the general opinion of mankind.’ I fear that the unbelievers — not that I care for their opinion — will despise us. You are not aware that their impiety proceeds, not from sensuality, but from ignorance taking the garb of wisdom. ‘What do you mean?’ At Athens there are tales current both in prose and verse of a kind which are not tolerated in a well-regulated state like yours. The oldest of them relate the origin of the world, and the birth and life of the Gods. These narratives have a bad influence on family relations; but as they are old we will let them pass, and consider another kind of tales, invented by the wisdom of a younger generation, who, if any one argues for the existence of the Gods and claims that the stars have a divine being, insist that these are mere earth and stones, which can have no care of human things, and that all theology is a cooking up of words. Now what course ought we to take? Shall we suppose some impious man to charge us with assuming the existence of the Gods, and make a defence? Or shall we leave the preamble and go on to the laws? ‘There is no hurry, and we have often said that the shorter and worse method

should not be preferred to the longer and better. The proof that there are Gods who are good, and the friends of justice, is the best preamble of all our laws.' Come, let us talk with the impious, who have been brought up from their infancy in the belief of religion, and have heard their own fathers and mothers praying for them and talking with the Gods as if they were absolutely convinced of their existence; who have seen mankind prostrate in prayer at the rising and setting of the sun and moon and at every turn of fortune, and have dared to despise and disbelieve all this. Can we keep our temper with them, when they compel us to argue on such a theme? We must; or like them we shall go mad, though with more reason. Let us select one of them and address him as follows:

O my son, you are young; time and experience will make you change many of your opinions. Do not be hasty in forming a conclusion about the divine nature; and let me mention to you a fact which I know. You and your friends are not the first or the only persons who have had these notions about the Gods. There are always a considerable number who are infected by them: I have known many myself, and can assure you that no one who was an unbeliever in his youth ever persisted till he was old in denying the existence of the Gods. The two other opinions, first, that the Gods exist and have no care of men, secondly, that they care for men, but may be propitiated by sacrifices and prayers, may indeed last through life in a few instances, but even this is not common. I would beg of you to be patient, and learn the truth of the legislator and others; in the mean time abstain from impiety. 'So far, our discourse has gone well.'

I will now speak of a strange doctrine, which is regarded by many as the crown of philosophy. They affirm that all things come into being either by art or nature or chance, and that the greater things are done by nature and chance, and the lesser things by art, which receiving from nature the greater creations, moulds and fashions all those lesser works which are termed works of art. Their meaning is that fire, water, earth, and air all exist by nature and chance, and not by art; and that out of these, according to certain chance affinities of opposites, the sun, the moon, the stars, and the earth have been framed, not by any action of mind, but by nature and chance only.

Thus, in their opinion, the heaven and earth were created, as well as the animals and plants. Art came later, and is of mortal birth; by her power were invented certain images and very partial imitations of the truth, of which kind are the creations of musicians and painters: but they say that there are other arts which combine with nature, and have a deeper truth, such as medicine, husbandry, gymnastic. Also the greater part of politics they imagine to co-operate with nature, but in a less degree, having more of art, while legislation is declared by them to be wholly a work of art. 'How do you mean?' In the first place, they say that the Gods exist neither by nature nor by art, but by the laws of states, which are different in different countries; and that virtue is one thing by nature and another by convention; and that justice is altogether conventional, made by law, and having authority for the moment only. This is repeated to young men by sages and poets, and leads to impiety, and the pretended life according to nature and in disobedience to law; for nobody believes the Gods to be such as the law affirms. 'How true! and oh! how injurious to states and to families!' But then, what should the lawgiver do? Should he stand up in the state and threaten mankind with the severest penalties if they persist in their unbelief, while he makes no attempt to win them by persuasion? 'Nay, Stranger, the legislator ought never to weary of trying to persuade the world that there are Gods; and he should declare that law and art exist by nature.' Yes, Cleinias; but these are difficult and tedious questions. 'And shall our patience, which was not exhausted in the enquiry about music or drink, fail now that we are discoursing about the Gods? There may be a difficulty in framing laws, but when written down they remain, and time and diligence will make them clear; if they are useful there would be neither reason nor religion in rejecting them on account of their length.' Most true. And the general spread of unbelief shows that the legislator should do something in vindication of the laws, when they are being undermined by bad men. 'He should.' You agree with me, Cleinias, that the heresy consists in supposing earth, air, fire, and water to be the first of all things. These the heretics call nature, conceiving them to be prior to the soul. 'I agree.' You would further agree that natural philosophy is the source of this impiety — the study appears to be pursued in a wrong way. 'In what way do you mean?' The error

consists in transposing first and second causes. They do not see that the soul is before the body, and before all other things, and the author and ruler of them all. And if the soul is prior to the body, then the things of the soul are prior to the things of the body. In other words, opinion, attention, mind, art, law, are prior to sensible qualities; and the first and greater works of creation are the results of art and mind, whereas the works of nature, as they are improperly termed, are secondary and subsequent. ‘Why do you say “improperly”?’ Because when they speak of nature they seem to mean the first creative power. But if the soul is first, and not fire and air, then the soul above all things may be said to exist by nature. And this can only be on the supposition that the soul is prior to the body. Shall we try to prove that it is so? ‘By all means.’ I fear that the greenness of our argument will ludicrously contrast with the ripeness of our ages. But as we must go into the water, and the stream is strong, I will first attempt to cross by myself, and if I arrive at the bank, you shall follow. Remembering that you are unaccustomed to such discussions, I will ask and answer the questions myself, while you listen in safety. But first I must pray the Gods to assist at the demonstration of their own existence — if ever we are to call upon them, now is the time. Let me hold fast to the rope, and enter into the depths: Shall I put the question to myself in this form? — Are all things at rest, and is nothing in motion? or are some things in motion, and some things at rest? ‘The latter.’ And do they move and rest, some in one place, some in more? ‘Yes.’ There may be (1) motion in the same place, as in revolution on an axis, which is imparted swiftly to the larger and slowly to the lesser circle; and there may be motion in different places, having sometimes (2) one centre of motion and sometimes (3) more. (4) When bodies in motion come against other bodies which are at rest, they are divided by them, and (5) when they are caught between other bodies coming from opposite directions they unite with them; and (6) they grow by union and (7) waste by dissolution while their constitution remains the same, but are (8) destroyed when their constitution fails. There is a growth from one dimension to two, and from a second to a third, which then becomes perceptible to sense; this process is called generation, and the opposite, destruction. We have now enumerated all possible motions with the exception of

two. 'What are they?' Just the two with which our enquiry is concerned; for our enquiry relates to the soul. There is one kind of motion which is only able to move other things; there is another which can move itself as well, working in composition and decomposition, by increase and diminution, by generation and destruction. 'Granted.' (9) That which moves and is moved by another is the ninth kind of motion; (10) that which is self-moved and moves others is the tenth. And this tenth kind of motion is the mightiest, and is really the first, and is followed by that which was improperly called the ninth. 'How do you mean?' Must not that which is moved by others finally depend upon that which is moved by itself? Nothing can be affected by any transition prior to self-motion. Then the first and eldest principle of motion, whether in things at rest or not at rest, will be the principle of self-motion; and that which is moved by others and can move others will be the second. 'True.' Let me ask another question:

What is the name which is given to self-motion when manifested in any material substance? 'Life.' And soul too is life? 'Very good.' And are there not three kinds of knowledge — a knowledge (1) of the essence, (2) of the definition, (3) of the name? And sometimes the name leads us to ask the definition, sometimes the definition to ask the name. For example, number can be divided into equal parts, and when thus divided is termed even, and the definition of even and the word 'even' refer to the same thing. 'Very true.' And what is the definition of the thing which is named 'soul'? Must we not reply, 'The self-moved'? And have we not proved that the self-moved is the source of motion in other things? 'Yes.' And the motion which is not self-moved will be inferior to this? 'True.' And if so, we shall be right in saying that the soul is prior and superior to the body, and the body by nature subject and inferior to the soul? 'Quite right.' And we agreed that if the soul was prior to the body, the things of the soul were prior to the things of the body? 'Certainly.' And therefore desires, and manners, and thoughts, and true opinions, and recollections, are prior to the length and breadth and force of bodies. 'To be sure.' In the next place, we acknowledge that the soul is the cause of good and evil, just and unjust, if we suppose her to be the cause of all things? 'Certainly.' And the soul which orders all things

must also order the heavens? 'Of course.' One soul or more? More; for less than two are inconceivable, one good, the other evil. 'Most true.' The soul directs all things by her movements, which we call will, consideration, attention, deliberation, opinion true and false, joy, sorrow, courage, fear, hatred, love, and similar affections. These are the primary movements, and they receive the secondary movements of bodies, and guide all things to increase and diminution, separation and union, and to all the qualities which accompany them — cold, hot, heavy, light, hard, soft, white, black, sweet, bitter; these and other such qualities the soul, herself a goddess, uses, when truly receiving the divine mind she leads all things rightly to their happiness; but under the impulse of folly she works out an opposite result. For the controller of heaven and earth and the circle of the world is either the wise and good soul, or the foolish and vicious soul, working in them. 'What do you mean?' If we say that the whole course and motion of heaven and earth is in accordance with the workings and reasonings of mind, clearly the best soul must have the care of the heaven, and guide it along that better way. 'True.' But if the heavens move wildly and disorderly, then they must be under the guidance of the evil soul. 'True again.' What is the nature of the movement of the soul? We must not suppose that we can see and know the soul with our bodily eyes, any more than we can fix them on the midday sun; it will be safer to look at an image only. 'How do you mean?' Let us find among the ten kinds of motion an image of the motion of the mind. You remember, as we said, that all things are divided into two classes; and some of them were moved and some at rest. 'Yes.' And of those which were moved, some were moved in the same place, others in more places than one. 'Just so.' The motion which was in one place was circular, like the motion of a spherical body; and such a motion in the same place, and in the same relations, is an excellent image of the motion of mind. 'Very true.' The motion of the other sort, which has no fixed place or manner or relation or order or proportion, is akin to folly and nonsense. 'Very true.' After what has been said, it is clear that, since the soul carries round all things, some soul which is either very good or the opposite carries round the circumference of heaven. But that soul can be no other than the best. Again, the soul carries round the

sun, moon, and stars, and if the sun has a soul, then either the soul of the sun is within and moves the sun as the human soul moves the body; or, secondly, the sun is contained in some external air or fire, which the soul provides and through which she operates; or, thirdly, the course of the sun is guided by the soul acting in a wonderful manner without a body. 'Yes, in one of those ways the soul must guide all things.' And this soul of the sun, which is better than the sun, whether driving him in a chariot or employing any other agency, is by every man called a God? 'Yes, by every man who has any sense.' And of the seasons, stars, moon, and year, in like manner, it may be affirmed that the soul or souls from which they derive their excellence are divine; and without insisting on the manner of their working, no one can deny that all things are full of Gods. 'No one.' And now let us offer an alternative to him who denies that there are Gods. Either he must show that the soul is not the origin of all things, or he must live for the future in the belief that there are Gods.

Next, as to the man who believes in the Gods, but refuses to acknowledge that they take care of human things — let him too have a word of admonition. 'Best of men,' we will say to him, 'some affinity to the Gods leads you to honour them and to believe in them. But you have heard the happiness of wicked men sung by poets and admired by the world, and this has drawn you away from your natural piety. Or you have seen the wicked growing old in prosperity, and leaving great offices to their children; or you have watched the tyrant succeeding in his career of crime; and considering all these things you have been led to believe in an irrational way that the Gods take no care of human affairs. That your error may not increase, I will endeavour to purify your soul.' Do you, Megillus and Cleinias, make answer for the youth, and when we come to a difficulty, I will carry you over the water as I did before. 'Very good.' He will easily be convinced that the Gods care for the small as well as the great; for he heard what was said of their goodness and of their having all things under their care. 'He certainly heard.' Then now let us enquire what is meant by the virtue of the Gods. To possess mind belongs to virtue, and the contrary to vice. 'That is what we say.' And is not courage a part of virtue, and cowardice of vice? 'Certainly.' And to the Gods we ascribe virtues; but idleness and indolence are not

virtues. 'Of course not.' And is God to be conceived of as a careless, indolent fellow, such as the poet would compare to a stingless drone? 'Impossible.' Can we be right in praising any one who cares for great matters and leaves the small to take care of themselves? Whether God or man, he who does so, must either think the neglect of such matters to be of no consequence, or he is indolent and careless. For surely neither of them can be charged with neglect if they fail to attend to something which is beyond their power? 'Certainly not.'

And now we will examine the two classes of offenders who admit that there are Gods, but say, — the one that they may be appeased, the other that they take no care of small matters: do they not acknowledge that the Gods are omnipotent and omniscient, and also good and perfect? 'Certainly.' Then they cannot be indolent, for indolence is the offspring of idleness, and idleness of cowardice, and there is no cowardice in God. 'True.' If the Gods neglect small matters, they must either know or not know that such things are not to be regarded. But of course they know that they should be regarded, and knowing, they cannot be supposed to neglect their duty, overcome by the seductions of pleasure or pain. 'Impossible.' And do not all human things share in soul, and is not man the most religious of animals and the possession of the Gods? And the Gods, who are the best of owners, will surely take care of their property, small or great. Consider further, that the greater the power of perception, the less the power of action. For it is harder to see and hear the small than the great, but easier to control them. Suppose a physician who had to cure a patient — would he ever succeed if he attended to the great and neglected the little? 'Impossible.' Is not life made up of littles? — the pilot, general, householder, statesman, all attend to small matters; and the builder will tell you that large stones do not lie well without small ones. And God is not inferior to mortal craftsmen, who in proportion to their skill are careful in the details of their work; we must not imagine the best and wisest to be a lazy good-for-nothing, who wearies of his work and hurries over small and easy matters. 'Never, never!' He who charges the Gods with neglect has been forced to admit his error; but I should like further to persuade him that the author of all has made every part for the sake of the whole, and that the smallest part has an appointed state of

action or passion, and that the least action or passion of any part has a presiding minister. You, we say to him, are a minute fraction of this universe, created with a view to the whole; the world is not made for you, but you for the world; for the good artist considers the whole first, and afterwards the parts. And you are annoyed at not seeing how you and the universe are all working together for the best, so far as the laws of the common creation admit. The soul undergoes many changes from her contact with bodies; and all that the player does is to put the pieces into their right places. ‘What do you mean?’ I mean that God acts in the way which is simplest and easiest. Had each thing been formed without any regard to the rest, the transposition of the Cosmos would have been endless; but now there is not much trouble in the government of the world. For when the king saw the actions of the living souls and bodies, and the virtue and vice which were in them, and the indestructibility of the soul and body (although they were not eternal), he contrived so to arrange them that virtue might conquer and vice be overcome as far as possible; giving them a seat and room adapted to them, but leaving the direction of their separate actions to men’s own wills, which make our characters to be what they are. ‘That is very probable.’ All things which have a soul possess in themselves the principle of change, and in changing move according to fate and law; natures which have undergone lesser changes move on the surface; but those which have changed utterly for the worse, sink into Hades and the infernal world. And in all great changes for good and evil which are produced either by the will of the soul or the influence of others, there is a change of place. The good soul, which has intercourse with the divine nature, passes into a holier and better place; and the evil soul, as she grows worse, changes her place for the worse. This, — as we declare to the youth who fancies that he is neglected of the Gods, — is the law of divine justice — the worse to the worse, the better to the better, like to like, in life and in death. And from this law no man will ever boast that he has escaped. Even if you say— ‘I am small, and will creep into the earth,’ or ‘I am high, and will mount to heaven’ — you are not so small or so high that you shall not pay the fitting penalty, either here or in the world below. This is also the explanation of the seeming prosperity of the wicked, in whose actions as in a mirror you

imagined that you saw the neglect of the Gods, not considering that they make all things contribute to the whole. And how then could you form any idea of true happiness? — If Cleinias and Megillus and I have succeeded in persuading you that you know not what you say about the Gods, God will help you; but if there is still any deficiency of proof, hear our answer to the third opponent.

Enough has been said to prove that the Gods exist and care for us; that they can be propitiated, or that they receive gifts, is not to be allowed or admitted for an instant. ‘Let us proceed with the argument.’ Tell me, by the Gods, I say, how the Gods are to be propitiated by us? Are they not rulers, who may be compared to charioteers, pilots, perhaps generals, or physicians providing against the assaults of disease, husbandmen observing the perils of the seasons, shepherds watching their flocks? To whom shall we compare them? We acknowledged that the world is full both of good and evil, but having more of evil than of good. There is an immortal conflict going on, in which Gods and demigods are our allies, and we their property; for injustice and folly and wickedness make war in our souls upon justice and temperance and wisdom. There is little virtue to be found on earth; and evil natures fawn upon the Gods, like wild beasts upon their keepers, and believe that they can win them over by flattery and prayers. And this sin, which is termed dishonesty, is to the soul what disease is to the body, what pestilence is to the seasons, what injustice is to states. ‘Quite so.’ And they who maintain that the Gods can be appeased must say that they forgive the sins of men, if they are allowed to share in their spoils; as you might suppose wolves to mollify the dogs by throwing them a portion of the prey. ‘That is the argument.’ But let us apply our images to the Gods — are they the pilots who are won by gifts to wreck their own ships — or the charioteers who are bribed to lose the race — or the generals, or doctors, or husbandmen, who are perverted from their duty — or the dogs who are silenced by wolves? ‘God forbid.’ Are they not rather our best guardians; and shall we suppose them to fall short even of a moderate degree of human or even canine virtue, which will not betray justice for reward? ‘Impossible.’ He, then, who maintains such a doctrine, is the most blasphemous of mankind.

And now our three points are proven; and we are agreed (1) that there are Gods, (2) that they care for men, (3) that they cannot be bribed to do injustice. I have spoken warmly, from a fear lest this impiety of theirs should lead to a perversion of life. And our warmth will not have been in vain, if we have succeeded in persuading these men to abominate themselves, and to change their ways. 'So let us hope.' Then now that the preamble is completed, we will make a proclamation commanding the impious to renounce their evil ways; and in case they refuse, the law shall be added: — If a man is guilty of impiety in word or deed, let the bystander inform the magistrates, and let the magistrates bring the offender before the court; and if any of the magistrates refuses to act, he likewise shall be tried for impiety. Any one who is found guilty of such an offence shall be fined at the discretion of the court, and shall also be punished by a term of imprisonment. There shall be three prisons — one for common offences against life and property; another, near by the spot where the Nocturnal Council will assemble, which is to be called the 'House of Reformation'; the third, to be situated in some desolate region in the centre of the country, shall be called by a name indicating retribution. There are three causes of impiety, and from each of them spring impieties of two kinds, six in all. First, there is the impiety of those who deny the existence of the Gods; these may be honest men, haters of evil, who are only dangerous because they talk loosely about the Gods and make others like themselves; but there is also a more vicious class, who are full of craft and licentiousness. To this latter belong diviners, jugglers, despots, demagogues, generals, hierophants of private mysteries, and sophists. The first class shall be only imprisoned and admonished. The second class should be put to death, if they could be, many times over. The two other sorts of impiety, first of those who deny the care of the Gods, and secondly, of those who affirm that they may be propitiated, have similar subdivisions, varying in degree of guilt. Those who have learnt to blaspheme from mere ignorance shall be imprisoned in the House of Reformation for five years at least, and not allowed to see any one but members of the Nocturnal Council, who shall converse with them touching their souls health. If any of the prisoners come to their right mind, at the end of five years let

them be restored to sane company; but he who again offends shall die. As to that class of monstrous natures who not only believe that the Gods are negligent, or may be propitiated, but pretend to practise on the souls of quick and dead, and promise to charm the Gods, and to effect the ruin of houses and states — he, I say, who is guilty of these things, shall be bound in the central prison, and shall have no intercourse with any freeman, receiving only his daily rations of food from the public slaves; and when he dies, let him be cast beyond the border; and if any freeman assist to bury him, he shall be liable to a suit for impiety. But the sins of the father shall not be visited upon his children, who, like other orphans, shall be educated by the state. Further, let there be a general law which will have a tendency to repress impiety. No man shall have religious services in his house, but he shall go with his friends to pray and sacrifice in the temples. The reason of this is, that religious institutions can only be framed by a great intelligence. But women and weak men are always consecrating the event of the moment; they are under the influence of dreams and apparitions, and they build altars and temples in every village and in any place where they have had a vision. The law is designed to prevent this, and also to deter men from attempting to propitiate the Gods by secret sacrifices, which only multiply their sins. Therefore let the law run: — No one shall have private religious rites; and if a man or woman who has not been previously noted for any impiety offend in this way, let them be admonished to remove their rites to a public temple; but if the offender be one of the obstinate sort, he shall be brought to trial before the guardians, and if he be found guilty, let him die.

BOOK XI. As to dealings between man and man, the principle of them is simple — Thou shalt not take what is not thine; and shalt do to others as thou wouldst that they should do to thee. First, of treasure trove: — May I never desire to find, or lift, if I find, or be induced by the counsel of diviners to lift, a treasure which one who was not my ancestor has laid down; for I shall not gain so much in money as I shall lose in virtue. The saying, ‘Move not the immovable,’ may be repeated in a new sense; and there is a common belief which asserts that such deeds prevent a man from having a family. To him who is careless of such consequences, and, despising

the word of the wise, takes up a treasure which is not his — what will be done by the hand of the Gods, God only knows, — but I would have the first person who sees the offender, inform the wardens of the city or the country; and they shall send to Delphi for a decision, and whatever the oracle orders, they shall carry out. If the informer be a freeman, he shall be honoured, and if a slave, set free; but he who does not inform, if he be a freeman, shall be dishonoured, and if a slave, shall be put to death. If a man leave anywhere anything great or small, intentionally or unintentionally, let him who may find the property deem the deposit sacred to the Goddess of ways. And he who appropriates the same, if he be a slave, shall be beaten with many stripes; if a freeman, he shall pay tenfold, and be held to have done a dishonourable action. If a person says that another has something of his, and the other allows that he has the property in dispute, but maintains it to be his own, let the ownership be proved out of the registers of property. If the property is registered as belonging to some one who is absent, possession shall be given to him who offers sufficient security on behalf of the absentee; or if the property is not registered, let it remain with the three eldest magistrates, and if it should be an animal, the defeated party must pay the cost of its keep. A man may arrest his own slave, and he may also imprison for safe-keeping the runaway slave of a friend. Any one interfering with him must produce three sureties; otherwise, he will be liable to an action for violence, and if he be cast, must pay a double amount of damages to him from whom he has taken the slave. A freedman who does not pay due respect to his patron, may also be seized. Due respect consists in going three times a month to the house of his patron, and offering to perform any lawful service for him; he must also marry as his master pleases; and if his property be greater than his master's, he must hand over to him the excess. A freedman may not remain in the state, except with the consent of the magistrates and of his master, for more than twenty years; and whenever his census exceeds that of the third class, he must in any case leave the country within thirty days, taking his property with him. If he break this regulation, the penalty shall be death, and his property shall be confiscated. Suits about these matters are to be decided in the courts of the tribes, unless the parties have settled the

matter before a court of neighbours or before arbiters. If anybody claim a beast, or anything else, let the possessor refer to the seller or giver of the property within thirty days, if the latter reside in the city, or, if the goods have been received from a stranger, within five months, of which the middle month shall include the summer solstice. All purchases and exchanges are to be made in the agora, and paid for on the spot; the law will not allow credit to be given. No law shall protect the money subscribed for clubs. He who sells anything of greater value than fifty drachmas shall abide in the city for ten days, and let his whereabouts be known to the buyer, in case of any reclamation. When a slave is sold who is subject to epilepsy, stone, or any other invisible disorder, the buyer, if he be a physician or trainer, or if he be warned, shall have no redress; but in other cases within six months, or within twelve months in epileptic disorders, he may bring the matter before a jury of physicians to be agreed upon by both parties; and the seller who loses the suit, if he be an expert, shall pay twice the price; or if he be a private person, the bargain shall be rescinded, and he shall simply refund. If a person knowingly sells a homicide to another, who is informed of his character, there is no redress. But if the judges — who are to be the five youngest guardians of the law — decide that the purchaser was not aware, then the seller is to pay threefold, and to purify the house of the buyer.

He who exchanges money for money, or beast for beast, must warrant either of them to be sound and good. As in the case of other laws, let us have a preamble, relating to all this class of crime. Adulteration is a kind of falsehood about which the many commonly say that at proper times the practice may often be right, but they do not define at what times. But the legislator will tell them, that no man should invoke the Gods when he is practising deceit or fraud, in word or deed. For he is the enemy of heaven, first, who swears falsely, not thinking of the Gods by whom he swears, and secondly, he who lies to his superiors. (Now the superiors are the betters of inferiors, — the elder of the younger, parents of children, men of women, and rulers of subjects.) The trader who cheats in the agora is a liar and is perjured — he respects neither the name of God nor the regulations of the magistrates. If after hearing this he will still be dishonest, let him listen to the law: — The seller shall not have two prices on the

same day, neither must he puff his goods, nor offer to swear about them. If he break the law, any citizen not less than thirty years of age may smite him. If he sell adulterated goods, the slave or metic who informs against him shall have the goods; the citizen who brings such a charge, if he prove it, shall offer up the goods in question to the Gods of the agora; or if he fail to prove it, shall be dishonoured. He who is detected in selling adulterated goods shall be deprived of them, and shall receive a stripe for every drachma of their value. The wardens of the agora and the guardians of the law shall take experienced persons into counsel, and draw up regulations for the agora. These shall be inscribed on a column in front of the court of the wardens of the agora. — As to the wardens of the city, enough has been said already. But if any omissions in the law are afterwards discovered, the wardens and the guardians shall supply them, and have them inscribed after the original regulations on a column before the court of the wardens of the city.

Next in order follows the subject of retail trades, which in their natural use are the reverse of mischievous; for every man is a benefactor who reduces what is unequal to symmetry and proportion. Money is the instrument by which this is accomplished, and the shop-keeper, the merchant, and hotel-keeper do but supply the wants and equalize the possessions of mankind. Why, then, does any dishonour attach to a beneficent occupation? Let us consider the nature of the accusation first, and then see whether it can be removed. ‘What is your drift?’ Dear Cleinias, there are few men who are so gifted by nature, and improved by education, as to be able to control the desire of making money; or who are sober in their wishes and prefer moderation to accumulation. The great majority think that they can never have enough, and the consequence is that retail trade has become a reproach. Whereas, however ludicrous the idea may seem, if noble men and noble women could be induced to open a shop, and to trade upon incorruptible principles, then the aspect of things would change, and retail traders would be regarded as nursing fathers and mothers. In our own day the trader goes and settles in distant places, and receives the weary traveller hospitably at first, but in the end treats him as an enemy and a captive, whom he only liberates for an enormous ransom. This is what has brought retail

trade into disrepute, and against this the legislator ought to provide. Men have said of old, that to fight against two opponents is hard; and the two opponents of whom I am thinking are wealth and poverty — the one corrupting men by luxury; the other, through misery, depriving them of the sense of shame. What remedies can a city find for this disease? First, to have as few retail traders as possible; secondly, to give retail trade over to a class whose corruption will not injure the state; and thirdly, to restrain the insolence and meanness of the retailers.

Let us make the following laws: — (1) In the city of the Magnetes none of the 5040 citizens shall be a retailer or merchant, or do any service to any private persons who do not equally serve him, except to his father and mother and their fathers and mothers, and generally to his elders who are freemen, and whom he serves as a freeman. He who follows an illiberal pursuit may be cited for dishonouring his family, and kept in bonds for a year; and if he offend again, he shall be bound for two years; and for every offence his punishment shall be doubled: (2) Every retailer shall be a metic or a foreigner: (3) The guardians of the law shall have a special care of this part of the community, whose calling exposes them to peculiar temptations. They shall consult with persons of experience, and find out what prices will yield the traders a moderate profit, and fix them.

When a man does not fulfil his contract, he being under no legal or other impediment, the case shall be brought before the court of the tribes, if not previously settled by arbitration. The class of artisans is consecrated to Hephaestus and Athene; the makers of weapons to Ares and Athene: all of whom, remembering that the Gods are their ancestors, should be ashamed to deceive in the practice of their craft. If any man is lazy in the fulfilment of his work, and fancies, foolish fellow, that his patron God will not deal hardly with him, he will be punished by the God; and let the law follow: — He who fails in his undertaking shall pay the value, and do the work gratis in a specified time. The contractor, like the seller, is enjoined by law to charge the simple value of his work; in a free city, art should be a true thing, and the artist must not practise on the ignorance of others. On the other hand, he who has ordered any work and does not pay the workman according to agreement, dishonours Zeus and Athene, and breaks the

bonds of society. And if he does not pay at the time agreed, let him pay double; and although interest is forbidden in other cases, let the workman receive after the expiration of a year interest at the rate of an obol a month for every drachma (equal to 200 per cent. per ann.). And we may observe by the way, in speaking of craftsmen, that if our military craft do their work well, the state will praise those who honour them, and blame those who do not honour them. Not that the first place of honour is to be assigned to the warrior; a higher still is reserved for those who obey the laws.

Most of the dealings between man and man are now settled, with the exception of such as relate to orphans and guardianships. These lead us to speak of the intentions of the dying, about which we must make regulations. I say 'must'; for mankind cannot be allowed to dispose of their property as they please, in ways at variance with one another and with law and custom. But a dying person is a strange being, and is not easily managed; he wants to be master of all he has, and is apt to use angry words. He will say,— 'May I not do what I will with my own, and give much to my friends, and little to my enemies?' 'There is reason in that.' O Cleinias, in my judgment the older lawgivers were too soft-hearted, and wanting in insight into human affairs. They were too ready to listen to the outcry of a dying man, and hence they were induced to give him an absolute power of bequest. But I would say to him: — O creature of a day, you know neither what is yours nor yourself: for you and your property are not your own, but belong to your whole family, past and to come, and property and family alike belong to the State. And therefore I must take out of your hands the charge of what you leave behind you, with a view to the interests of all. And I hope that you will not quarrel with us, now that you are going the way of all mankind; we will do our best for you and yours when you are no longer here. Let this be our address to the living and dying, and let the law be as follows: — The father who has sons shall appoint one of them to be the heir of the lot; and if he has given any other son to be adopted by another, the adoption shall also be recorded; and if he has still a son who has no lot, and has a chance of going to a colony, he may give him what he has more than the lot; or if he has more than one son unprovided for, he may divide the money between them. A son who has a house

of his own, and a daughter who is betrothed, are not to share in the bequest of money; and the son or daughter who, having inherited one lot, acquires another, is to bequeath the new inheritance to the next of kin. If a man have only daughters, he may adopt the husband of any one of them; or if he have lost a son, let him make mention of the circumstance in his will and adopt another. If he have no children, he may give away a tenth of his acquired property to whomsoever he likes; but he must adopt an heir to inherit the lot, and may leave the remainder to him. Also he may appoint guardians for his children; or if he die without appointing them or without making a will, the nearest kinsmen, — two on the father's and two on the mother's side, — and one friend of the departed, shall be appointed guardians. The fifteen eldest guardians of the law are to have special charge of all orphans, the whole number of fifteen being divided into bodies of three, who will succeed one another according to seniority every year for five years. If a man dying intestate leave daughters, he must pardon the law which marries them for looking, first to kinship, and secondly to the preservation of the lot. The legislator cannot regard the character of the heir, which to the father is the first consideration. The law will therefore run as follows: — If the intestate leave daughters, husbands are to be found for them among their kindred according to the following table of affinity: first, their father's brothers; secondly, the sons of their father's brothers; thirdly, of their father's sisters; fourthly, their great-uncles; fifthly, the sons of a great-uncle; sixthly, the sons of a great-aunt. The kindred in such cases shall always be reckoned in this way; the relationship shall proceed upwards through brothers and sisters and brothers' and sisters' children, and first the male line must be taken and then the female. If there is a dispute in regard to fitness of age for marriage, this the judge shall decide, after having made an inspection of the youth naked, and of the maiden naked down to the waist. If the maiden has no relations within the degree of third cousin, she may choose whom she likes, with the consent of her guardians; or she may even select some one who has gone to a colony, and he, if he be a kinsman, will take the lot by law; if not, he must have her guardians' consent, as well as hers. When a man dies without children and without a will, let a young man and a young woman go

forth from the family and take up their abode in the desolate house. The woman shall be selected from the kindred in the following order of succession: — first, a sister of the deceased; second, a brother's daughter; third, a sister's daughter; fourth, a father's sister; fifth, a daughter of a father's brother; sixth, a daughter of a father's sister. For the man the same order shall be observed as in the preceding case. The legislator foresees that laws of this kind will sometimes press heavily, and that his intention cannot always be fulfilled; as for example, when there are mental and bodily defects in the persons who are enjoined to marry. But he must be excused for not being always able to reconcile the general principles of public interest with the particular circumstances of individuals; and he is willing to allow, in like manner, that the individual cannot always do what the lawgiver wishes. And then arbiters must be chosen, who will determine equitably the cases which may arise under the law: e.g. a rich cousin may sometimes desire a grander match, or the requirements of the law can only be fulfilled by marrying a madwoman. To meet such cases let the following law be enacted: — If any one comes forward and says that the lawgiver, had he been alive, would not have required the carrying out of the law in a particular case, let him go to the fifteen eldest guardians of the law who have the care of orphans; but if he thinks that too much power is thus given to them, he may bring the case before the court of select judges.

Thus will orphans have a second birth. In order to make their sad condition as light as possible, the guardians of the law shall be their parents, and shall be admonished to take care of them. And what admonition can be more appropriate than the assurance which we formerly gave, that the souls of the dead watch over mortal affairs? About this there are many ancient traditions, which may be taken on trust from the legislator. Let men fear, in the first place, the Gods above; secondly, the souls of the departed, who naturally care for their own descendants; thirdly, the aged living, who are quick to hear of any neglect of family duties, especially in the case of orphans. For they are the holiest and most sacred of all deposits, and the peculiar care of guardians and magistrates; and those who try to bring them up well will contribute to their own good and to that of their families.

He who listens to the preamble of the law will never know the severity of the legislator; but he who disobeys, and injures the orphan, will pay twice the penalty he would have paid if the parents had been alive. More laws might have been made about orphans, did we not suppose that the guardians have children and property of their own which are protected by the laws; and the duty of the guardian in our state is the same as that of a father, though his honour or disgrace is greater. A legal admonition and threat may, however, be of service: the guardian of the orphan and the guardian of the law who is over him, shall love the orphan as their own children, and take more care of his or her property than of their own. If the guardian of the child neglect his duty, the guardian of the law shall fine him; and the guardian may also have the magistrate tried for neglect in the court of select judges, and he shall pay, if convicted, a double penalty. Further, the guardian of the orphan who is careless or dishonest may be fined on the information of any of the citizens in a fourfold penalty, half to go to the orphan and half to the prosecutor of the suit. When the orphan is of age, if he thinks that he has been ill-used, his guardian may be brought to trial by him within five years, and the penalty shall be fixed by the court. Or if the magistrate has neglected the orphan, he shall pay damages to him; but if he have defrauded him, he shall make compensation and also be deposed from his office of guardian of the law.

If irremediable differences arise between fathers and sons, the father may want to renounce his son, or the son may indict his father for imbecility: such violent separations only take place when the family are 'a bad lot'; if only one of the two parties is bad, the differences do not grow to so great a height. But here arises a difficulty. Although in any other state a son who is disinherited does not cease to be a citizen, in ours he does; for the number of citizens cannot exceed 5040. And therefore he who is to suffer such a penalty ought to be abjured, not only by his father, but by the whole family. The law, then, should run as follows: — If any man's evil fortune or temper incline him to disinherit his son, let him not do so lightly or on the instant; but let him have a council of his own relations and of the maternal relations of his son, and set forth to them the propriety of disinheriting him, and allow his son to answer. And if more than

half of the kindred male and female, being of full age, condemn the son, let him be disinherited. If any other citizen desires to adopt him, he may, for young men's characters often change in the course of life. But if, after ten years, he remains unadopted, let him be sent to a colony. If disease, or old age, or evil disposition cause a man to go out of his mind, and he is ruining his house and property, and his son doubts about indicting him for insanity, let him lay the case before the eldest guardians of the law, and consult with them. And if they advise him to proceed, and the father is decided to be imbecile, he shall have no more control over his property, but shall live henceforward like a child in the house.

If a man and his wife are of incompatible tempers, ten guardians of the law and ten of the matrons who regulate marriage shall take their case in hand, and reconcile them, if possible. If, however, their swelling souls cannot be pacified, the wife may try and find a new husband, and the husband a new wife; probably they are not very gentle creatures, and should therefore be joined to milder natures. The younger of those who are separated should also select their partners with a view to the procreation of children; while the older should seek a companion for their declining years. If a woman dies, leaving children male or female, the law will advise, but not compel, the widower to abstain from a second marriage; if she leave no children, he shall be compelled to marry. Also a widow, if she is not old enough to live honestly without marriage, shall marry again; and in case she have no children, she should marry for the sake of them. There is sometimes an uncertainty which parent the offspring is to follow: in unions of a female slave with a male slave, or with a freedman or free man, or of a free woman with a male slave, the offspring is to belong to the master; but if the master or mistress be themselves the parent of the child, the slave and the child are to be sent away to another land.

Concerning duty to parents, let the preamble be as follows: — We honour the Gods in their lifeless images, and believe that we thus propitiate them. But he who has an aged father or mother has a living image, which if he cherish it will do him far more good than any statue. 'What do you mean by cherishing them?' I will tell you. Oedipus and Amyntor and Theseus cursed their children, and their

curses took effect. This proves that the Gods hear the curses of parents who are wronged; and shall we doubt that they hear and fulfil their blessings too?' 'Surely not.' And, as we were saying, no image is more honoured by the Gods than an aged father and mother, to whom when honour is done, the God who hears their prayers is rejoiced, and their influence is greater than that of the lifeless statue; for they pray that good or evil may come to us in proportion as they are honoured or dishonoured, but the statue is silent. 'Excellent.' Good men are glad when their parents live to extreme old age, or if they depart early, lament their loss; but to bad man their parents are always terrible. Wherefore let every one honour his parents, and if this preamble fails of influencing him, let him hear the law: — If any one does not take sufficient care of his parents, let the aggrieved person inform the three eldest guardians of the law and three of the women who are concerned with marriages. Women up to forty years of age, and men up to thirty, who thus offend, shall be beaten and imprisoned. After that age they are to be brought before a court composed of the eldest citizens, who may inflict any punishment upon them which they please. If the injured party cannot inform, let any freeman who hears of the case inform; a slave who does so shall be set free, — if he be the slave of the one of the parties, by the magistrate, — if owned by another, at the cost of the state; and let the magistrates, take care that he is not wronged by any one out of revenge.

The injuries which one person does to another by the use of poisons are of two kinds; — one affects the body by the employment of drugs and potions; the other works on the mind by the practice of sorcery and magic. Fatal cases of either sort have been already mentioned; and now we must have a law respecting cases which are not fatal. There is no use in arguing with a man whose mind is disturbed by waxen images placed at his own door, or on the sepulchre of his father or mother, or at a spot where three ways meet. But to the wizards themselves we must address a solemn preamble, begging them not to treat the world as if they were children, or compel the legislator to expose them, and to show men that the poisoner who is not a physician and the wizard who is not a prophet or diviner are equally ignorant of what they are doing. Let the law be

as follows: — He who by the use of poison does any injury not fatal to a man or his servants, or any injury whether fatal or not to another's cattle or bees, is to be punished with death if he be a physician, and if he be not a physician he is to suffer the punishment awarded by the court: and he who injures another by sorcery, if he be a diviner or prophet, shall be put to death; and, if he be not a diviner, the court shall determine what he ought to pay or suffer.

Any one who injures another by theft or violence shall pay damages at least equal to the injury; and besides the compensation, a suitable punishment shall be inflicted. The foolish youth who is the victim of others is to have a lighter punishment; he whose folly is occasioned by his own jealousy or desire or anger is to suffer more heavily. Punishment is to be inflicted, not for the sake of vengeance, for what is done cannot be undone, but for the sake of prevention and reformation. And there should be a proportion between the punishment and the crime, in which the judge, having a discretion left him, must, by estimating the crime, second the legislator, who, like a painter, furnishes outlines for him to fill up.

A madman is not to go about at large in the city, but is to be taken care of by his relatives. Neglect on their part is to be punished in the first class by a fine of a hundred drachmas, and proportionally in the others. Now madness is of various kinds; in addition to that which arises from disease there is the madness which originates in a passionate temperament, and makes men when engaged in a quarrel use foul and abusive language against each other. This is intolerable in a well-ordered state; and therefore our law shall be as follows: — No one is to speak evil of another, but when men differ in opinion they are to instruct one another without speaking evil. Nor should any one seek to rouse the passions which education has calmed; for he who feeds and nurses his wrath is apt to make ribald jests at his opponent, with a loss of character or dignity to himself. And for this reason no one may use any abusive word in a temple, or at sacrifices, or games, or in any public assembly, and he who offends shall be censured by the proper magistrate; and the magistrate, if he fail to censure him, shall not claim the prize of virtue. In any other place the angry man who indulges in revilings, whether he be the beginner or not, may be chastised by an elder. The reviler is always trying to

make his opponent ridiculous; and the use of ridicule in anger we cannot allow. We forbid the comic poet to ridicule our citizens, under a penalty of expulsion from the country or a fine of three minae. Jest in which there is no offence may be allowed; but the question of offence shall be determined by the director of education, who is to be the licenser of theatrical performances.

The righteous man who is in adversity will not be allowed to starve in a well-ordered city; he will never be a beggar. Nor is a man to be pitied, merely because he is hungry, unless he be temperate. Therefore let the law be as follows: — Let there be no beggars in our state; and he who begs shall be expelled by the magistrates both from town and country.

If a slave, male or female, does any harm to the property of another, who is not himself a party to the harm, the master shall compensate the injury or give up the offending slave. But if the master argue that the charge has arisen by collusion, with the view of obtaining the slave, he may put the plaintiff on his trial for malpractices, and recover from him twice the value of the slave; or if he is cast he must make good the damage and deliver up the slave. The injury done by a horse or other animal shall be compensated in like manner.

A witness who will not come of himself may be summoned, and if he fail in appearing, he shall be liable for any harm which may ensue: if he swears that he does not know, he may leave the court. A judge who is called upon as a witness must not vote. A free woman, if she is over forty, may bear witness and plead, and, if she have no husband, she may also bring an action. A slave, male or female, and a child may witness and plead only in case of murder, but they must give sureties that they will appear at the trial, if they should be charged with false witness. Such charges must be made pending the trial, and the accusations shall be sealed by both parties and kept by the magistrates until the trial for perjury comes off. If a man is twice convicted of perjury, he is not to be required, if three times, he is not to be allowed to bear witness, or, if he persists in bearing witness, is to be punished with death. When more than half the evidence is proved to be false there must be a new trial.

The best and noblest things in human life are liable to be defiled

and perverted. Is not justice the civilizer of mankind? And yet upon the noble profession of the advocate has come an evil name. For he is said to make the worse appear the better cause, and only requires money in return for his services. Such an art will be forbidden by the legislator, and if existing among us will be requested to depart to another city. To the disobedient let the voice of the law be heard saying: — He who tries to pervert justice in the minds of the judges, or to increase litigation, shall be brought before the supreme court. If he does so from contentiousness, let him be silenced for a time, and, if he offend again, put to death. If he have acted from a love of gain, let him be sent out of the country if he be a foreigner, or if he be a citizen let him be put to death.

BOOK XII. If a false message be taken to or brought from other states, whether friendly or hostile, by ambassadors or heralds, they shall be indicted for having dishonoured their sacred office, and, if convicted, shall suffer a penalty. — Stealing is mean; robbery is shameless. Let no man deceive himself by the supposed example of the Gods, for no God or son of a God ever really practised either force or fraud. On this point the legislator is better informed than all the poets put together. He who listens to him shall be for ever happy, but he who will not listen shall have the following law directed against him: — He who steals much, or he who steals little of the public property is deserving of the same penalty; for they are both impelled by the same evil motive. When the law punishes one man more lightly than another, this is done under the idea, not that he is less guilty, but that he is more curable. Now a thief who is a foreigner or slave may be curable; but the thief who is a citizen, and has had the advantages of education, should be put to death, for he is incurable.

Much consideration and many regulations are necessary about military expeditions; the great principal of all is that no one, male or female, in war or peace, in great matters or small, shall be without a commander. Whether men stand or walk, or drill, or pursue, or retreat, or wash, or eat, they should all act together and in obedience to orders. We should practise from our youth upwards the habits of command and obedience. All dances, relaxations, endurances of meats and drinks, of cold and heat, and of hard couches, should have

a view to war, and care should be taken not to destroy the natural covering and use of the head and feet by wearing shoes and caps; for the head is the lord of the body, and the feet are the best of servants. The soldier should have thoughts like these; and let him hear the law: — He who is enrolled shall serve, and if he absent himself without leave he shall be indicted for failure of service before his own branch of the army when the expedition returns, and if he be found guilty he shall suffer the penalty which the courts award, and never be allowed to contend for any prize of valour, or to accuse another of misbehaviour in military matters. Desertion shall also be tried and punished in the same manner. After the courts for trying failure of service and desertion have been held, the generals shall hold another court, in which the several arms of the service will award prizes for the expedition which has just concluded. The prize is to be a crown of olive, which the victor shall offer up at the temple of his favourite war God...In any suit which a man brings, let the indictment be scrupulously true, for justice is an honourable maiden, to whom falsehood is naturally hateful. For example, when men are prosecuted for having lost their arms, great care should be taken by the witnesses to distinguish between cases in which they have been lost from necessity and from cowardice. If the hero Patroclus had not been killed but had been brought back alive from the field, he might have been reproached with having lost the divine armour. And a man may lose his arms in a storm at sea, or from a fall, and under many other circumstances. There is a distinction of language to be observed in the use of the two terms, ‘thrower away of a shield’ (ripsaspis), and ‘loser of arms’ (apoboleus opion), one being the voluntary, the other the involuntary relinquishment of them. Let the law then be as follows: — If any one is overtaken by the enemy, having arms in his hands, and he leaves them behind him voluntarily, choosing base life instead of honourable death, let justice be done. The old legend of Caeneus, who was changed by Poseidon from a woman into a man, may teach by contraries the appropriate punishment. Let the thrower away of his shield be changed from a man into a woman — that is to say, let him be all his life out of danger, and never again be admitted by any commander into the ranks of his army; and let him pay a heavy fine according to his class. And any commander who permits

him to serve shall also be punished by a fine.

All magistrates, whatever be their tenure of office, must give an account of their magistracy. But where shall we find the magistrate who is worthy to supervise them or look into their short-comings and crooked ways? The examiner must be more than man who is sufficient for these things. For the truth is that there are many causes of the dissolution of states; which, like ships or animals, have their cords, and girders, and sinews easily relaxed, and nothing tends more to their welfare and preservation than the supervision of them by examiners who are better than the magistrates; failing in this they fall to pieces, and each becomes many instead of one. Wherefore let the people meet after the summer solstice, in the precincts of Apollo and the Sun, and appoint three men of not less than fifty years of age. They shall proceed as follows: — Each citizen shall select some one, not himself, whom he thinks the best. The persons selected shall be reduced to one half, who have the greatest number of votes, if they are an even number; but if an odd number, he who has the smallest number of votes shall be previously withdrawn. The voting shall continue in the same manner until three only remain; and if the number of votes cast for them be equal, a distinction between the first, second, and third shall be made by lot. The three shall be crowned with an olive wreath, and proclamation made, that the city of the Magnetes, once more preserved by the Gods, presents her three best men to Apollo and the Sun, to whom she dedicates them as long as their lives answer to the judgment formed of them. They shall choose in the first year of their office twelve examiners, to continue until they are seventy-five years of age; afterwards three shall be added annually. While they hold office, they shall dwell within the precinct of the God. They are to divide all the magistracies into twelve classes, and may apply any methods of enquiry, and inflict any punishments which they please; in some cases singly, in other cases together, announcing the acquittal or punishment of the magistrate on a tablet which they will place in the agora. A magistrate who has been condemned by the examiners may appeal to the select judges, and, if he gain his suit, may in turn prosecute the examiners; but if the appellant is cast, his punishment shall be doubled, unless he was previously condemned to death.

And what honours shall be paid to these examiners, whom the whole state counts worthy of the rewards of virtue? They shall have the first place at all sacrifices and other ceremonies, and in all assemblies and public places; they shall go on sacred embassies, and have the exclusive privilege of wearing a crown of laurel. They are priests of Apollo and the Sun, and he of their number who is judged first shall be high priest, and give his name to the year. The manner of their burial, too, shall be different from that of the other citizens. The colour of their funeral array shall be white, and, instead of the voice of lamentation, around the bier shall stand a chorus of fifteen boys and fifteen maidens, chanting hymns in honour of the deceased in alternate strains during an entire day; and at dawn a band of a hundred youths shall carry the bier to the grave, marching in the garb of warriors, and the boys in front of the bier shall sing their national hymn, while the maidens and women past child-bearing follow after. Priests and priestesses may also follow, unless the Pythian oracle forbids. The sepulchre shall be a vault built underground, which will last for ever, having couches of stone placed side by side; on one of these they shall lay the departed saint, and then cover the tomb with a mound, and plant trees on every side except one, where an opening shall be left for other interments. Every year there shall be games — musical, gymnastic, or equestrian, in honour of those who have passed every ordeal. But if any of them, after having been acquitted on any occasion, begin to show the wickedness of human nature, he who pleases may bring them to trial before a court composed of the guardians of the law, and of the select judges, and of any of the examiners who are alive. If he be convicted he shall be deprived of his honours, and if the accuser do not obtain a fifth part of the votes, he shall pay a fine according to his class.

What is called the judgment of Rhadamanthus is suited to ‘ages of faith,’ but not to our days. He knew that his contemporaries believed in the Gods, for many of them were the sons of Gods; and he thought that the easiest and surest method of ending litigation was to commit the decision to Heaven. In our own day, men either deny the existence of Gods or their care of men, or maintain that they may be bribed by attentions and gifts; and the procedure of Rhadamanthus would therefore be out of date. When the religious ideas of mankind

change, their laws should also change. Thus oaths should no longer be taken from plaintiff and defendant; simple statements of affirmation and denial should be substituted. For there is something dreadful in the thought, that nearly half the citizens of a state are perjured men. There is no objection to an oath, where a man has no interest in forswearing himself; as, for example, when a judge is about to give his decision, or in voting at an election, or in the judgment of games and contests. But where there would be a premium on perjury, oaths and imprecations should be prohibited as irrelevant, like appeals to feeling. Let the principles of justice be learned and taught without words of evil omen. The oaths of a stranger against a stranger may be allowed, because strangers are not permitted to become permanent residents in our state.

Trials in private causes are to be decided in the same manner as lesser offences against the state. The non-attendance at a chorus or sacrifice, or the omission to pay a war-tax, may be regarded as in the first instance remediable, and the defaulter may give security; but if he forfeits the security, the goods pledged shall be sold and the money given to the state. And for obstinate disobedience, the magistrate shall have the power of inflicting greater penalties.

A city which is without trade or commerce must consider what it will do about the going abroad of its own people and the admission of strangers. For out of intercourse with strangers there arises great confusion of manners, which in most states is not of any consequence, because the confusion exists already; but in a well-ordered state it may be a great evil. Yet the absolute prohibition of foreign travel, or the exclusion of strangers, is impossible, and would appear barbarous to the rest of mankind. Public opinion should never be lightly regarded, for the many are not so far wrong in their judgments as in their lives. Even the worst of men have often a divine instinct, which enables them to judge of the differences between the good and bad. States are rightly advised when they desire to have the praise of men; and the greatest and truest praise is that of virtue. And our Cretan colony should, and probably will, have a character for virtue, such as few cities have. Let this, then, be our law about foreign travel and the reception of strangers: — No one shall be allowed to leave the country who is under forty years of age

— of course military service abroad is not included in this regulation — and no one at all except in a public capacity. To the Olympic, and Pythian, and Nemean, and Isthmian games, shall be sent the fairest and best and bravest, who shall support the dignity of the city in time of peace. These, when they come home, shall teach the youth the inferiority of all other governments. Besides those who go on sacred missions, other persons shall be sent out by permission of the guardians to study the institutions of foreign countries. For a people which has no experience, and no knowledge of the characters of men or the reason of things, but lives by habit only, can never be perfectly civilized. Moreover, in all states, bad as well as good, there are holy and inspired men; these the citizen of a well-ordered city should be ever seeking out; he should go forth to find them over sea and over land, that he may more firmly establish institutions in his own state which are good already and amend the bad. ‘What will be the best way of accomplishing such an object?’ In the first place, let the visitor of foreign countries be between fifty and sixty years of age, and let him be a citizen of repute, especially in military matters. On his return he shall appear before the Nocturnal Council: this is a body which sits from dawn to sunrise, and includes amongst its members the priests who have gained the prize of virtue, and the ten oldest guardians of the law, and the director and past directors of education; each of whom has power to bring with him a younger friend of his own selection, who is between thirty and forty. The assembly thus constituted shall consider the laws of their own and other states, and gather information relating to them. Anything of the sort which is approved by the elder members of the council shall be studied with all diligence by the younger; who are to be specially watched by the rest of the citizens, and shall receive honour, if they are deserving of honour, or dishonour, if they prove inferior. This is the assembly to which the visitor of foreign countries shall come and tell anything which he has heard from others in the course of his travels, or which he has himself observed. If he be made neither better nor worse, let him at least be praised for his zeal; and let him receive still more praise, and special honour after death, if he be improved. But if he be deteriorated by his travels, let him be prohibited from speaking to any one; and if he submit, he may live as a private individual: but if

he be convicted of attempting to make innovations in education and the laws, let him die.

Next, as to the reception of strangers. Of these there are four classes: — First, merchants, who, like birds of passage, find their way over the sea at a certain time of the year, that they may exhibit their wares. These should be received in markets and public buildings without the city, by proper officers, who shall see that justice is done them, and shall also watch against any political designs which they may entertain; no more intercourse is to be held with them than is absolutely necessary. Secondly, there are the visitors at the festivals, who shall be entertained by hospitable persons at the temples for a reasonable time; the priests and ministers of the temples shall have a care of them. In small suits brought by them or against them, the priests shall be the judges; but in the more important, the wardens of the agora. Thirdly, there are ambassadors of foreign states; these are to be honourably received by the generals and commanders, and placed under the care of the Prytanes and of the persons with whom they are lodged. Fourthly, there is the philosophical stranger, who, like our own spectators, from time to time goes to see what is rich and rare in foreign countries. Like them he must be fifty years of age: and let him go unbidden to the doors of the wise and rich, that he may learn from them, and they from him.

These are the rules of missions into foreign countries, and of the reception of strangers. Let Zeus, the God of hospitality, be honoured; and let not the stranger be excluded, as in Egypt, from meals and sacrifices, or, (as at Sparta,) driven away by savage proclamations.

Let guarantees be clearly given in writing and before witnesses. The number of witnesses shall be three when the sum lent is under a thousand drachmas, or five when above. The agent and principal at a fraudulent sale shall be equally liable. He who would search another man's house for anything must swear that he expects to find it there; and he shall enter naked, or having on a single garment and no girdle. The owner shall place at the disposal of the searcher all his goods, sealed as well as unsealed; if he refuse, he shall be liable in double the value of the property, if it shall prove to be in his possession. If the owner be absent, the searcher may counter-seal the property which is under seal, and place watchers. If the owner remain absent

more than five days, the searcher shall take the magistrates, and open the sealed property, and seal it up again in their presence. The recovery of goods disputed, except in the case of lands and houses, (about which there can be no dispute in our state), is to be barred by time. The public and unimpeached use of anything for a year in the city, or for five years in the country, or the private possession and domestic use for three years in the city, or for ten years in the country, is to give a right of ownership. But if the possessor have the property in a foreign country, there shall be no bar as to time. The proceedings of any trial are to be void, in which either the parties or the witnesses, whether bond or free, have been prevented by violence from attending: — if a slave be prevented, the suit shall be invalid; or if a freeman, he who is guilty of the violence shall be imprisoned for a year, and shall also be liable to an action for kidnapping. If one competitor forcibly prevents another from attending at the games, the other may be inscribed as victor in the temples, and the first, whether victor or not, shall be liable to an action for damages. The receiver of stolen goods shall undergo the same punishment as the thief. The receiver of an exile shall be punished with death. A man ought to have the same friends and enemies as his country; and he who makes war or peace for himself shall be put to death. And if a party in the state make war or peace, their leaders shall be indicted by the generals, and, if convicted, they shall be put to death. The ministers and officers of a country ought not to receive gifts, even as the reward of good deeds. He who disobeys shall die.

With a view to taxation a man should have his property and income valued: and the government may, at their discretion, levy the tax upon the annual return, or take a portion of the whole.

The good man will offer moderate gifts to the Gods; his land or hearth cannot be offered, because they are already consecrated to all Gods. Gold and silver, which arouse envy, and ivory, which is taken from the dead body of an animal, are unsuitable offerings; iron and brass are materials of war. Wood and stone of a single piece may be offered; also woven work which has not occupied one woman more than a month in making. White is a colour which is acceptable to the Gods; figures of birds and similar offerings are the best of gifts, but they must be such as the painter can execute in a day.

Next concerning lawsuits. Judges, or rather arbiters, may be agreed upon by the plaintiff and defendant; and if no decision is obtained from them, their fellow-tribesmen shall judge. At this stage there shall be an increase of the penalty: the defendant, if he be cast, shall pay a fifth more than the damages claimed. If he further persist, and appeal a second time, the case shall be heard before the select judges; and he shall pay, if defeated, the penalty and half as much again. And the pursuer, if on the first appeal he is defeated, shall pay one fifth of the damages claimed by him; and if on the second, one half. Other matters relating to trials, such as the assignment of judges to courts, the times of sitting, the number of judges, the modes of pleading and procedure, as we have already said, may be determined by younger legislators.

These are to be the rules of private courts. As regards public courts, many states have excellent modes of procedure which may serve for models; these, when duly tested by experience, should be ratified and made permanent by us.

Let the judge be accomplished in the laws. He should possess writings about them, and make a study of them; for laws are the highest instrument of mental improvement, and derive their name from mind (*nous*, *nomos*). They afford a measure of all censure and praise, whether in verse or prose, in conversation or in books, and are an antidote to the vain disputes of men and their equally vain acquiescence in each other's opinions. The just judge, who imbibes their spirit, makes the city and himself to stand upright. He establishes justice for the good, and cures the tempers of the bad, if they can be cured; but denounces death, which is the only remedy, to the incurable, the threads of whose life cannot be reversed.

When the suits of the year are completed, execution is to follow. The court is to award to the plaintiff the property of the defendant, if he is cast, reserving to him only his lot of land. If the plaintiff is not satisfied within a month, the court shall put into his hands the property of the defendant. If the defendant fails in payment to the amount of a drachma, he shall lose the use and protection of the court; or if he rebel against the authority of the court, he shall be brought before the guardians of the law, and if found guilty he shall be put to death.

Man having been born, educated, having begotten and brought up children, and gone to law, fulfils the debt of nature. The rites which are to be celebrated after death in honour of the Gods above and below shall be determined by the Interpreters. The dead shall be buried in uncultivated places, where they will be out of the way and do least injury to the living. For no one either in life or after death has any right to deprive other men of the sustenance which mother earth provides for them. No sepulchral mound is to be piled higher than five men can raise it in five days, and the grave-stone shall not be larger than is sufficient to contain an inscription of four heroic verses. The dead are only to be exposed for three days, which is long enough to test the reality of death. The legislator will instruct the people that the body is a mere shadow or image, and that the soul, which is our true being, is gone to give an account of herself before the Gods below. When they hear this, the good are full of hope, and the evil are terrified. It is also said that not much can be done for any one after death. And therefore while in life all man should be helped by their kindred to pass their days justly and holily, that they may depart in peace. When a man loses a son or a brother, he should consider that the beloved one has gone away to fulfil his destiny in another place, and should not waste money over his lifeless remains. Let the law then order a moderate funeral of five minae for the first class, of three for the second, of two for the third, of one for the fourth. One of the guardians of the law, to be selected by the relatives, shall assist them in arranging the affairs of the deceased. There would be a want of delicacy in prescribing that there should or should not be mourning for the dead. But, at any rate, such mourning

is to be confined to the house; there must be no processions in the streets, and the dead body shall be taken out of the city before daybreak. Regulations about other forms of burial and about the non-burial of parricides and other sacrilegious persons have already been laid down. The work of legislation is therefore nearly completed; its end will be finally accomplished when we have provided for the continuance of the state.

Do you remember the names of the Fates? Lachesis, the giver of the lots, is the first of them; Clotho, the spinster, the second; Atropos, the unchanging one, is the third and last, who makes the threads of the web irreversible. And we too want to make our laws irreversible, for the unchangeable quality in them will be the salvation of the state, and the source of health and order in the bodies and souls of our citizens. 'But can such a quality be implanted?' I think that it may; and at any rate we must try; for, after all our labour, to have been piling up a fabric which has no foundation would be too ridiculous. 'What foundation would you lay?' We have already instituted an assembly which was composed of the ten oldest guardians of the law, and secondly, of those who had received prizes of virtue, and thirdly, of the travellers who had gone abroad to enquire into the laws of other countries. Moreover, each of the members was to choose a young man, of not less than thirty years of age, to be approved by the rest; and they were to meet at dawn, when all the world is at leisure. This assembly will be an anchor to the vessel of state, and provide the means of permanence; for the constitutions of states, like all other things, have their proper saviours, which are to them what the head and soul are to the living being. 'How do you mean?' Mind in the soul, and sight and hearing in the head, or rather, the perfect union of mind and sense, may be justly called every man's salvation. 'Certainly.' Yes; but of what nature is this union? In the case of a ship, for example, the senses of the sailors are added to the intelligence of the pilot, and the two together save the ship and the men in the ship. Again, the physician and the general have their objects; and the object of the one is health, of the other victory. States, too, have their objects, and the ruler must understand, first, their nature, and secondly, the means of attaining them, whether in laws or men. The state which is wanting in this

knowledge cannot be expected to be wise when the time for action arrives. Now what class or institution is there in our state which has such a saving power? 'I suspect that you are referring to the Nocturnal Council.' Yes, to that council which is to have all virtue, and which should aim directly at the mark. 'Very true.' The inconsistency of legislation in most states is not surprising, when the variety of their objects is considered. One of them makes their rule of justice the government of a class; another aims at wealth; another at freedom, or at freedom and power; and some who call themselves philosophers maintain that you should seek for all of them at once. But our object is unmistakably virtue, and virtue is of four kinds. 'Yes; and we said that mind is the chief and ruler of the three other kinds of virtue and of all else.' True, Cleinias; and now, having already declared the object which is present to the mind of the pilot, the general, the physician, we will interrogate the mind of the statesman. Tell me, I say, as the physician and general have told us their object, what is the object of the statesman. Can you tell me? 'We cannot.' Did we not say that there are four virtues — courage, wisdom, and two others, all of which are called by the common name of virtue, and are in a sense one? 'Certainly we did.' The difficulty is, not in understanding the differences of the virtues, but in apprehending their unity. Why do we call virtue, which is a single thing, by the two names of wisdom and courage? The reason is that courage is concerned with fear, and is found both in children and in brutes; for the soul may be courageous without reason, but no soul was, or ever will be, wise without reason. 'That is true.' I have explained to you the difference, and do you in return explain to me the unity. But first let us consider whether any one who knows the name of a thing without the definition has any real knowledge of it. Is not such knowledge a disgrace to a man of sense, especially where great and glorious truths are concerned? and can any subject be more worthy of the attention of our legislators than the four virtues of which we are speaking — courage, temperance, justice, wisdom? Ought not the magistrates and officers of the state to instruct the citizens in the nature of virtue and vice, instead of leaving them to be taught by some chance poet or sophist? A city which is without instruction suffers the usual fate of cities in our day. What then shall

we do? How shall we perfect the ideas of our guardians about virtue? how shall we give our state a head and eyes? ‘Yes, but how do you apply the figure?’ The city will be the body or trunk; the best of our young men will mount into the head or acropolis and be our eyes; they will look about them, and inform the elders, who are the mind and use the younger men as their instruments: together they will save the state. Shall this be our constitution, or shall all be educated alike, and the special training be given up? ‘That is impossible.’ Let us then endeavour to attain to some more exact idea of education. Did we not say that the true artist or guardian ought to have an eye, not only to the many, but to the one, and to order all things with a view to the one? Can there be any more philosophical speculation than how to reduce many things which are unlike to one idea? ‘Perhaps not.’ Say rather, ‘Certainly not.’ And the rulers of our divine state ought to have an exact knowledge of the common principle in courage, temperance, justice, wisdom, which is called by the name of virtue; and unless we know whether virtue is one or many, we shall hardly know what virtue is. Shall we contrive some means of engrafting this knowledge on our state, or give the matter up? ‘Anything rather than that.’ Let us begin by making an agreement. ‘By all means, if we can.’ Well, are we not agreed that our guardians ought to know, not only how the good and the honourable are many, but also how they are one? ‘Yes, certainly.’ The true guardian of the laws ought to know their truth, and should also be able to interpret and execute them? ‘He should.’ And is there any higher knowledge than the knowledge of the existence and power of the Gods? The people may be excused for following tradition; but the guardian must be able to give a reason of the faith which is in him. And there are two great evidences of religion — the priority of the soul and the order of the heavens. For no man of sense, when he contemplates the universe, will be likely to substitute necessity for reason and will. Those who maintain that the sun and the stars are inanimate beings are utterly wrong in their opinions. The men of a former generation had a suspicion, which has been confirmed by later thinkers, that things inanimate could never without mind have attained such scientific accuracy; and some (Anaxagoras) even in those days ventured to assert that mind had ordered all things in heaven; but they had no

idea of the priority of mind, and they turned the world, or more properly themselves, upside down, and filled the universe with stones, and earth, and other inanimate bodies. This led to great impiety, and the poets said many foolish things against the philosophers, whom they compared to 'yelping she-dogs,' besides making other abusive remarks. No man can now truly worship the Gods who does not believe that the soul is eternal, and prior to the body, and the ruler of all bodies, and does not perceive also that there is mind in the stars; or who has not heard the connexion of these things with music, and has not harmonized them with manners and laws, giving a reason of things which are matters of reason. He who is unable to acquire this knowledge, as well as the ordinary virtues of a citizen, can only be a servant, and not a ruler in the state.

Let us then add another law to the effect that the Nocturnal Council shall be a guard set for the salvation of the state. 'Very good.' To establish this will be our aim, and I hope that others besides myself will assist. 'Let us proceed along the road in which God seems to guide us.' We cannot, Megillus and Cleinias, anticipate the details which will hereafter be needed; they must be supplied by experience. 'What do you mean?' First of all a register will have to be made of all those whose age, character, or education would qualify them to be guardians. The subjects which they are to learn, and the order in which they are to be learnt, are mysteries which cannot be explained beforehand, but not mysteries in any other sense. 'If that is the case, what is to be done?' We must stake our all on a lucky throw, and I will share the risk by stating my views on education. And I would have you, Cleinias, who are the founder of the Magnesian state, and will obtain the greatest glory if you succeed, and will at least be praised for your courage, if you fail, take especial heed of this matter. If we can only establish the Nocturnal Council, we will hand over the city to its keeping; none of the present company will hesitate about that. Our dream will then become a reality; and our citizens, if they are carefully chosen and well educated, will be saviours and guardians such as the world hitherto has never seen.

The want of completeness in the Laws becomes more apparent in the later books. There is less arrangement in them, and the transitions

are more abrupt from one subject to another. Yet they contain several noble passages, such as the 'prelude to the discourse concerning the honour and dishonour of parents,' or the picture of the dangers attending the 'friendly intercourse of young men and maidens with one another,' or the soothing remonstrance which is addressed to the dying man respecting his right to do what he will with his own, or the fine description of the burial of the dead. The subject of religion in Book X is introduced as a prelude to offences against the Gods, and this portion of the work appears to be executed in Plato's best manner.

In the last four books, several questions occur for consideration: among them are (I) the detection and punishment of offences; (II) the nature of the voluntary and involuntary; (III) the arguments against atheism, and against the opinion that the Gods have no care of human affairs; (IV) the remarks upon retail trade; (V) the institution of the Nocturnal Council.

I. A weak point in the Laws of Plato is the amount of inquisition into private life which is to be made by the rulers. The magistrate is always watching and waylaying the citizens. He is constantly to receive information against improprieties of life. Plato does not seem to be aware that espionage can only have a negative effect. He has not yet discovered the boundary line which parts the domain of law from that of morality or social life. Men will not tell of one another; nor will he ever be the most honoured citizen, who gives the most frequent information about offenders to the magistrates.

As in some writers of fiction, so also in philosophers, we may observe the effect of age. Plato becomes more conservative as he grows older, and he would govern the world entirely by men like himself, who are above fifty years of age; for in them he hopes to find a principle of stability. He does not remark that, in destroying the freedom he is destroying also the life of the State. In reducing all the citizens to rule and measure, he would have been depriving the Magnesian colony of those great men 'whose acquaintance is beyond all price;' and he would have found that in the worst-governed Hellenic State, there was more of a *carrière ouverte* for extraordinary genius and virtue than in his own.

Plato has an evident dislike of the Athenian dicasteries; he prefers

a few judges who take a leading part in the conduct of trials to a great number who only listen in silence. He allows of two appeals — in each case however with an increase of the penalty. Modern jurists would disapprove of the redress of injustice being purchased only at an increasing risk; though indirectly the burden of legal expenses, which seems to have been little felt among the Athenians, has a similar effect. The love of litigation, which is a remnant of barbarism quite as much as a corruption of civilization, and was innate in the Athenian people, is diminished in the new state by the imposition of severe penalties. If persevered in, it is to be punished with death.

In the Laws murder and homicide besides being crimes, are also pollutions. Regarded from this point of view, the estimate of such offences is apt to depend on accidental circumstances, such as the shedding of blood, and not on the real guilt of the offender or the injury done to society. They are measured by the horror which they arouse in a barbarous age. For there is a superstition in law as well as in religion, and the feelings of a primitive age have a traditional hold on the mass of the people. On the other hand, Plato is innocent of the barbarity which would visit the sins of the fathers upon the children, and he is quite aware that punishment has an eye to the future, and not to the past. Compared with that of most European nations in the last century his penal code, though sometimes capricious, is reasonable and humane.

A defect in Plato's criminal jurisprudence is his remission of the punishment when the homicide has obtained the forgiveness of the murdered person; as if crime were a personal affair between individuals, and not an offence against the State. There is a ridiculous disproportion in his punishments. Because a slave may fairly receive a blow for stealing one fig or one bunch of grapes, or a tradesman for selling adulterated goods to the value of one drachma, it is rather hard upon the slave that he should receive as many blows as he has taken grapes or figs, or upon the tradesman who has sold adulterated goods to the value of a thousand drachmas that he should receive a thousand blows.

II. But before punishment can be inflicted at all, the legislator must determine the nature of the voluntary and involuntary. The great question of the freedom of the will, which in modern times has been

worn threadbare with purely abstract discussion, was approached both by Plato and Aristotle — first, from the judicial; secondly, from the sophistical point of view. They were puzzled by the degrees and kinds of crime; they observed also that the law only punished hurts which are inflicted by a voluntary agent on an involuntary patient.

In attempting to distinguish between hurt and injury, Plato says that mere hurt is not injury; but that a benefit when done in a wrong spirit may sometimes injure, e.g. when conferred without regard to right and wrong, or to the good or evil consequences which may follow. He means to say that the good or evil disposition of the agent is the principle which characterizes actions; and this is not sufficiently described by the terms voluntary and involuntary. You may hurt another involuntarily, and no one would suppose that you had injured him; and you may hurt him voluntarily, as in inflicting punishment — neither is this injury; but if you hurt him from motives of avarice, ambition, or cowardly fear, this is injury. Injustice is also described as the victory of desire or passion or self-conceit over reason, as justice is the subordination of them to reason. In some paradoxical sense Plato is disposed to affirm all injustice to be involuntary; because no man would do injustice who knew that it never paid and could calculate the consequences of what he was doing. Yet, on the other hand, he admits that the distinction of voluntary and involuntary, taken in another and more obvious sense, is the basis of legislation. His conception of justice and injustice is complicated (1) by the want of a distinction between justice and virtue, that is to say, between the quality which primarily regards others, and the quality in which self and others are equally regarded; (2) by the confusion of doing and suffering justice; (3) by the unwillingness to renounce the old Socratic paradox, that evil is involuntary.

III. The Laws rest on a religious foundation; in this respect they bear the stamp of primitive legislation. They do not escape the almost inevitable consequence of making irreligion penal. If laws are based upon religion, the greatest offence against them must be irreligion. Hence the necessity for what in modern language, and according to a distinction which Plato would scarcely have understood, might be termed persecution. But the spirit of

persecution in Plato, unlike that of modern religious bodies, arises out of the desire to enforce a true and simple form of religion, and is directed against the superstitions which tend to degrade mankind. Sir Thomas More, in his *Utopia*, is in favour of tolerating all except the intolerant, though he would not promote to high offices those who disbelieved in the immortality of the soul. Plato has not advanced quite so far as this in the path of toleration. But in judging of his enlightenment, we must remember that the evils of necromancy and divination were far greater than those of intolerance in the ancient world. Human nature is always having recourse to the first; but only when organized into some form of priesthood falls into the other; although in primitive as in later ages the institution of a priesthood may claim probably to be an advance on some form of religion which preceded. The Laws would have rested on a sounder foundation, if Plato had ever distinctly realized to his mind the difference between crime and sin or vice. Of this, as of many other controversies, a clear definition might have been the end. But such a definition belongs to a later age of philosophy.

The arguments which Plato uses for the being of a God, have an extremely modern character: first, the consensus gentium; secondly, the argument which has already been adduced in the *Phaedrus*, of the priority of the self-moved. The answer to those who say that God ‘cares not,’ is, that He governs by general laws; and that he who takes care of the great will assuredly take care of the small. Plato did not feel, and has not attempted to consider, the difficulty of reconciling the special with the general providence of God. Yet he is on the road to a solution, when he regards the world as a whole, of which all the parts work together towards the final end.

We are surprised to find that the scepticism, which we attribute to young men in our own day, existed then (compare *Republic*); that the Epicureanism expressed in the line of Horace (borrowed from Lucretius) —

‘*Namque Deos didici securum agere aevum,*’

was already prevalent in the age of Plato; and that the terrors of another world were freely used in order to gain advantages over other men in this. The same objection which struck the Psalmist — ‘when I saw the prosperity of the wicked’ — is supposed to lie at the root of

the better sort of unbelief. And the answer is substantially the same which the modern theologian would offer: — that the ways of God in this world cannot be justified unless there be a future state of rewards and punishments. Yet this future state of rewards and punishments is in Plato's view not any addition of happiness or suffering imposed from without, but the permanence of good and evil in the soul: here he is in advance of many modern theologians. The Greek, too, had his difficulty about the existence of evil, which in one solitary passage, remarkable for being inconsistent with his general system, Plato explains, after the Magian fashion, by a good and evil spirit (compare Theaet., Statesman). This passage is also remarkable for being at variance with the general optimism of the Tenth Book — not 'all things are ordered by God for the best,' but some things by a good, others by an evil spirit.

The Tenth Book of the Laws presents a picture of the state of belief among the Greeks singularly like that of the world in which we live. Plato is disposed to attribute the incredulity of his own age to several causes. First, to the bad effect of mythological tales, of which he retains his disapproval; but he has a weak side for antiquity, and is unwilling, as in the Republic, wholly to proscribe them. Secondly, he remarks the self-conceit of a newly-fledged generation of philosophers, who declare that the sun, moon, and stars, are earth and stones only; and who also maintain that the Gods are made by the laws of the state. Thirdly, he notes a confusion in the minds of men arising out of their misinterpretation of the appearances of the world around them: they do not always see the righteous rewarded and the wicked punished. So in modern times there are some whose infidelity has arisen from doubts about the inspiration of ancient writings; others who have been made unbelievers by physical science, or again by the seemingly political character of religion; while there is a third class to whose minds the difficulty of 'justifying the ways of God to man' has been the chief stumblingblock. Plato is very much out of temper at the impiety of some of his contemporaries; yet he is determined to reason with the victims, as he regards them, of these illusions before he punishes them. His answer to the unbelievers is twofold: first, that the soul is prior to the body; secondly, that the ruler of the universe being perfect has made all things with a view to

their perfection. The difficulties arising out of ancient sacred writings were far less serious in the age of Plato than in our own.

We too have our popular Epicureanism, which would allow the world to go on as if there were no God. When the belief in Him, whether of ancient or modern times, begins to fade away, men relegate Him, either in theory or practice, into a distant heaven. They do not like expressly to deny God when it is more convenient to forget Him; and so the theory of the Epicurean becomes the practice of mankind in general. Nor can we be said to be free from that which Plato justly considers to be the worst unbelief — of those who put superstition in the place of true religion. For the larger half of Christians continue to assert that the justice of God may be turned aside by gifts, and, if not by the ‘odour of fat, and the sacrifice steaming to heaven,’ still by another kind of sacrifice placed upon the altar — by masses for the quick and dead, by dispensations, by building churches, by rites and ceremonies — by the same means which the heathen used, taking other names and shapes. And the indifference of Epicureanism and unbelief is in two ways the parent of superstition, partly because it permits, and also because it creates, a necessity for its development in religious and enthusiastic temperaments. If men cannot have a rational belief, they will have an irrational. And hence the most superstitious countries are also at a certain point of civilization the most unbelieving, and the revolution which takes one direction is quickly followed by a reaction in the other. So we may read ‘between the lines’ ancient history and philosophy into modern, and modern into ancient. Whether we compare the theory of Greek philosophy with the Christian religion, or the practice of the Gentile world with the practice of the Christian world, they will be found to differ more in words and less in reality than we might have supposed. The greater opposition which is sometimes made between them seems to arise chiefly out of a comparison of the ideal of the one with the practice of the other.

To the errors of superstition and unbelief Plato opposes the simple and natural truth of religion; the best and highest, whether conceived in the form of a person or a principle — as the divine mind or as the idea of good — is believed by him to be the basis of human life. That all things are working together for good to the good and evil to the

evil in this or in some other world to which human actions are transferred, is the sum of his faith or theology. Unlike Socrates, he is absolutely free from superstition. Religion and morality are one and indivisible to him. He dislikes the 'heathen mythology,' which, as he significantly remarks, was not tolerated in Crete, and perhaps (for the meaning of his words is not quite clear) at Sparta. He gives no encouragement to individual enthusiasm; 'the establishment of religion could only be the work of a mighty intellect.' Like the Hebrews, he prohibits private rites; for the avoidance of superstition, he would transfer all worship of the Gods to the public temples. He would not have men and women consecrating the accidents of their lives. He trusts to human punishments and not to divine judgments; though he is not unwilling to repeat the old tradition that certain kinds of dishonesty 'prevent a man from having a family.' He considers that the 'ages of faith' have passed away and cannot now be recalled. Yet he is far from wishing to extirpate the sentiment of religion, which he sees to be common to all mankind — Barbarians as well as Hellenes. He remarks that no one passes through life without, sooner or later, experiencing its power. To which we may add the further remark that the greater the irreligion, the more violent has often been the religious reaction.

It is remarkable that Plato's account of mind at the end of the *Laws* goes beyond Anaxagoras, and beyond himself in any of his previous writings. Aristotle, in a well-known passage (*Met.*) which is an echo of the *Phaedo*, remarks on the inconsistency of Anaxagoras in introducing the agency of mind, and yet having recourse to other and inferior, probably material causes. But Plato makes the further criticism, that the error of Anaxagoras consisted, not in denying the universal agency of mind, but in denying the priority, or, as we should say, the eternity of it. Yet in the *Timaeus* he had himself allowed that God made the world out of pre-existing materials: in the *Statesman* he says that there were seeds of evil in the world arising out of the remains of a former chaos which could not be got rid of; and even in the Tenth Book of the *Laws* he has admitted that there are two souls, a good and evil. In the *Meno*, the *Phaedrus*, and the *Phaedo*, he had spoken of the recovery of ideas from a former state of existence. But now he has attained to a clearer point of view: he

has discarded these fancies. From meditating on the priority of the human soul to the body, he has learnt the nature of soul absolutely. The power of the best, of which he gave an intimation in the *Phaedo* and in the *Republic*, now, as in the *Philebus*, takes the form of an intelligence or person. He no longer, like Anaxagoras, supposes mind to be introduced at a certain time into the world and to give order to a pre-existing chaos, but to be prior to the chaos, everlasting and evermoving, and the source of order and intelligence in all things. This appears to be the last form of Plato's religious philosophy, which might almost be summed up in the words of Kant, 'the starry heaven above and the moral law within.' Or rather, perhaps, 'the starry heaven above and mind prior to the world.'

IV. The remarks about retail trade, about adulteration, and about mendicity, have a very modern character. Greek social life was more like our own than we are apt to suppose. There was the same division of ranks, the same aristocratic and democratic feeling, and, even in a democracy, the same preference for land and for agricultural pursuits. Plato may be claimed as the first free trader, when he prohibits the imposition of customs on imports and exports, though he was clearly not aware of the importance of the principle which he enunciated. The discredit of retail trade he attributes to the rogueries of traders, and is inclined to believe that if a nobleman would keep a shop, which heaven forbid! retail trade might become honourable. He has hardly lighted upon the true reason, which appears to be the essential distinction between buyers and sellers, the one class being necessarily in some degree dependent on the other. When he proposes to fix prices 'which would allow a moderate gain,' and to regulate trade in several minute particulars, we must remember that this is by no means so absurd in a city consisting of 5040 citizens, in which almost every one would know and become known to everybody else, as in our own vast population. Among ourselves we are very far from allowing every man to charge what he pleases. Of many things the prices are fixed by law. Do we not often hear of wages being adjusted in proportion to the profits of employers? The objection to regulating them by law and thus avoiding the conflicts which continually arise between the buyers and sellers of labour, is not so much the undesirableness as the impossibility of doing so.

Wherever free competition is not reconcileable either with the order of society, or, as in the case of adulteration, with common honesty, the government may lawfully interfere. The only question is, — Whether the interference will be effectual, and whether the evil of interference may not be greater than the evil which is prevented by it.

He would prohibit beggars, because in a well-ordered state no good man would be left to starve. This again is a prohibition which might have been easily enforced, for there is no difficulty in maintaining the poor when the population is small. In our own times the difficulty of pauperism is rendered far greater, (1) by the enormous numbers, (2) by the facility of locomotion, (3) by the increasing tenderness for human life and suffering. And the only way of meeting the difficulty seems to be by modern nations subdividing themselves into small bodies having local knowledge and acting together in the spirit of ancient communities (compare Arist. Pol.)

V. Regarded as the framework of a polity the Laws are deemed by Plato to be a decline from the Republic, which is the dream of his earlier years. He nowhere imagines that he has reached a higher point of speculation. He is only descending to the level of human things, and he often returns to his original idea. For the guardians of the Republic, who were the elder citizens, and were all supposed to be philosophers, is now substituted a special body, who are to review and amend the laws, preserving the spirit of the legislator. These are the Nocturnal Council, who, although they are not specially trained in dialectic, are not wholly destitute of it; for they must know the relation of particular virtues to the general principle of virtue. Plato has been arguing throughout the Laws that temperance is higher than courage, peace than war, that the love of both must enter into the character of the good citizen. And at the end the same thought is summed up by him in an abstract form. The true artist or guardian must be able to reduce the many to the one, than which, as he says with an enthusiasm worthy of the Phaedrus or Philebus, ‘no more philosophical method was ever devised by the wit of man.’ But the sense of unity in difference can only be acquired by study; and Plato does not explain to us the nature of this study, which we may reasonably infer, though there is a remarkable omission of the word, to be akin to the dialectic of the Republic.

The Nocturnal Council is to consist of the priests who have obtained the rewards of virtue, of the ten eldest guardians of the law, and of the director and ex-directors of education; each of whom is to select for approval a younger coadjutor. To this council the 'Spectator,' who is sent to visit foreign countries, has to make his report. It is not an administrative body, but an assembly of sages who are to make legislation their study. Plato is not altogether disinclined to changes in the law where experience shows them to be necessary; but he is also anxious that the original spirit of the constitution should never be lost sight of.

The Laws of Plato contain the latest phase of his philosophy, showing in many respects an advance, and in others a decline, in his views of life and the world. His Theory of Ideas in the next generation passed into one of Numbers, the nature of which we gather chiefly from the Metaphysics of Aristotle. Of the speculative side of this theory there are no traces in the Laws, but doubtless Plato found the practical value which he attributed to arithmetic greatly confirmed by the possibility of applying number and measure to the revolution of the heavens, and to the regulation of human life. In the return to a doctrine of numbers there is a retrogression rather than an advance; for the most barren logical abstraction is of a higher nature than number and figure. Philosophy fades away into the distance; in the Laws it is confined to the members of the Nocturnal Council. The speculative truth which was the food of the guardians in the Republic, is for the majority of the citizens to be superseded by practical virtues. The law, which is the expression of mind written down, takes the place of the living word of the philosopher. (Compare the contrast of Phaedrus, and Laws; also the plays on the words nous, nomos, nou dianome; and the discussion in the Statesman of the difference between the personal rule of a king and the impersonal reign of law.) The State is based on virtue and religion rather than on knowledge; and virtue is no longer identified with knowledge, being of the commoner sort, and spoken of in the sense generally understood. Yet there are many traces of advance as well as retrogression in the Laws of Plato. The attempt to reconcile the ideal with actual life is an advance; to 'have brought philosophy down from heaven to earth,' is a praise which may be claimed for

him as well as for his master Socrates. And the members of the Nocturnal Council are to continue students of the 'one in many' and of the nature of God. Education is the last word with which Plato supposes the theory of the Laws to end and the reality to begin.

Plato's increasing appreciation of the difficulties of human affairs, and of the element of chance which so largely influences them, is an indication not of a narrower, but of a maturer mind, which had become more conversant with realities. Nor can we fairly attribute any want of originality to him, because he has borrowed many of his provisions from Sparta and Athens. Laws and institutions grow out of habits and customs; and they have 'better opinion, better confirmation,' if they have come down from antiquity and are not mere literary inventions. Plato would have been the first to acknowledge that the Book of Laws was not the creation of his fancy, but a collection of enactments which had been devised by inspired legislators, like Minos, Lycurgus, and Solon, to meet the actual needs of men, and had been approved by time and experience.

In order to do justice therefore to the design of the work, it is necessary to examine how far it rests on an historical foundation and coincides with the actual laws of Sparta and Athens. The consideration of the historical aspect of the Laws has been reserved for this place. In working out the comparison the writer has been greatly assisted by the excellent essays of C.F. Hermann ('*De vestigiis institutorum veterum, imprimis Atticorum, per Platonis de Legibus libros indagandis*,' and '*Juris domestici et familiaris apud Platonem in Legibus cum veteris Graeciae inque primis Athenarum institutis comparatio*': Marburg, 1836), and by J.B. Telfy's '*Corpus Juris Attici*' (Leipzig, 1868).

EXCURSUS ON THE RELATION OF THE LAWS OF PLATO TO THE INSTITUTIONS OF CRETE AND LACEDAEMON AND TO THE LAWS AND CONSTITUTION OF ATHENS.

The Laws of Plato are essentially Greek: unlike Xenophon's *Cyropaedia*, they contain nothing foreign or oriental. Their aim is to reconstruct the work of the great lawgivers of Hellas in a literary form. They partake both of an Athenian and a Spartan character. Some of them too are derived from Crete, and are appropriately transferred to a Cretan colony. But of Crete so little is known to us, that although, as Montesquieu (*Esprit des Loix*) remarks, 'the Laws of Crete are the original of those of Sparta and the Laws of Plato the correction of these latter,' there is only one point, viz. the common meals, in which they can be compared. Most of Plato's provisions resemble the laws and customs which prevailed in these three states (especially in the two former), and which the personifying instinct of the Greeks attributed to Minos, Lycurgus, and Solon. A very few particulars may have been borrowed from Zaleucus (*Cic. de Legibus*), and Charondas, who is said to have first made laws against perjury (*Arist. Pol.*) and to have forbidden credit (*Stob. Florileg.*, *Gaisford*). Some enactments are Plato's own, and were suggested by his experience of defects in the Athenian and other Greek states. The Laws also contain many lesser provisions, which are not found in the ordinary codes of nations, because they cannot be properly defined, and are therefore better left to custom and common sense. 'The greater part of the work,' as Aristotle remarks (*Pol.*), 'is taken up with laws': yet this is not wholly true, and applies to the latter rather than to the first half of it. The book rests on an ethical and religious foundation: the actual laws begin with a hymn of praise in honour of the soul. And the same lofty aspiration after the good is perpetually recurring, especially in Books X, XI, XII, and whenever Plato's mind is filled with his highest themes. In prefixing to most of his laws a prooemium he has two ends in view, to persuade and also to threaten. They are to have the sanction of laws and the effect of sermons. And

Plato's 'Book of Laws,' if described in the language of modern philosophy, may be said to be as much an ethical and educational, as a political or legal treatise.

But although the Laws partake both of an Athenian and a Spartan character, the elements which are borrowed from either state are necessarily very different, because the character and origin of the two governments themselves differed so widely. Sparta was the more ancient and primitive: Athens was suited to the wants of a later stage of society. The relation of the two states to the Laws may be conceived in this manner: — The foundation and ground-plan of the work are more Spartan, while the superstructure and details are more Athenian. At Athens the laws were written down and were voluminous; more than a thousand fragments of them have been collected by Telfy. Like the Roman or English law, they contained innumerable particulars. Those of them which regulated daily life were familiarly known to the Athenians; for every citizen was his own lawyer, and also a judge, who decided the rights of his fellow-citizens according to the laws, often after hearing speeches from the parties interested or from their advocates. It is to Rome and not to Athens that the invention of law, in the modern sense of the term, is commonly ascribed. But it must be remembered that long before the times of the Twelve Tables (B.C. 451), regular courts and forms of law had existed at Athens and probably in the Greek colonies. And we may reasonably suppose, though without any express proof of the fact, that many Roman institutions and customs, like Latin literature and mythology, were partly derived from Hellas and had imperceptibly drifted from one shore of the Ionian Sea to the other (compare especially the constitutions of Servius Tullius and of Solon).

It is not proved that the laws of Sparta were in ancient times either written down in books or engraved on tablets of marble or brass. Nor is it certain that, if they had been, the Spartans could have read them. They were ancient customs, some of them older probably than the settlement in Laconia, of which the origin is unknown; they occasionally received the sanction of the Delphic oracle, but there was a still stronger obligation by which they were enforced, — the necessity of self-defence: the Spartans were always living in the

presence of their enemies. They belonged to an age when written law had not yet taken the place of custom and tradition. The old constitution was very rarely affected by new enactments, and these only related to the duties of the Kings or Ephors, or the new relations of classes which arose as time went on. Hence there was as great a difference as could well be conceived between the Laws of Athens and Sparta: the one was the creation of a civilized state, and did not differ in principle from our modern legislation, the other of an age in which the people were held together and also kept down by force of arms, and which afterwards retained many traces of its barbaric origin 'surviving in culture.'

Nevertheless the Lacedaemonian was the ideal of a primitive Greek state. According to Thucydides it was the first which emerged out of confusion and became a regular government. It was also an army devoted to military exercises, but organized with a view to self-defence and not to conquest. It was not quick to move or easily excited; but stolid, cautious, unambitious, procrastinating. For many centuries it retained the same character which was impressed upon it by the hand of the legislator. This singular fabric was partly the result of circumstances, partly the invention of some unknown individual in prehistoric times, whose ideal of education was military discipline, and who, by the ascendancy of his genius, made a small tribe into a nation which became famous in the world's history. The other Hellenes wondered at the strength and stability of his work. The rest of Hellas, says Thucydides, undertook the colonisation of Heraclea the more readily, having a feeling of security now that they saw the Lacedaemonians taking part in it. The Spartan state appears to us in the dawn of history as a vision of armed men, irresistible by any other power then existing in the world. It can hardly be said to have understood at all the rights or duties of nations to one another, or indeed to have had any moral principle except patriotism and obedience to commanders. Men were so trained to act together that they lost the freedom and spontaneity of human life in cultivating the qualities of the soldier and ruler. The Spartan state was a composite body in which kings, nobles, citizens, perioeci, artisans, slaves, had to find a 'modus vivendi' with one another. All of them were taught some use of arms. The strength of the family tie was diminished

among them by an enforced absence from home and by common meals. Sparta had no life or growth; no poetry or tradition of the past; no art, no thought. The Athenians started on their great career some centuries later, but the Spartans would have been easily conquered by them, if Athens had not been deficient in the qualities which constituted the strength (and also the weakness) of her rival.

The ideal of Athens has been pictured for all time in the speech which Thucydides puts into the mouth of Pericles, called the Funeral Oration. He contrasts the activity and freedom and pleasantness of Athenian life with the immobility and severe looks and incessant drill of the Spartans. The citizens of no city were more versatile, or more readily changed from land to sea or more quickly moved about from place to place. They 'took their pleasures' merrily, and yet, when the time for fighting arrived, were not a whit behind the Spartans, who were like men living in a camp, and, though always keeping guard, were often too late for the fray. Any foreigner might visit Athens; her ships found a way to the most distant shores; the riches of the whole earth poured in upon her. Her citizens had their theatres and festivals; they 'provided their souls with many relaxations'; yet they were not less manly than the Spartans or less willing to sacrifice this enjoyable existence for their country's good. The Athenian was a nobler form of life than that of their rivals, a life of music as well as of gymnastic, the life of a citizen as well as of a soldier. Such is the picture which Thucydides has drawn of the Athenians in their glory. It is the spirit of this life which Plato would infuse into the Magnesian state and which he seeks to combine with the common meals and gymnastic discipline of Sparta.

The two great types of Athens and Sparta had deeply entered into his mind. He had heard of Sparta at a distance and from common Hellenic fame: he was a citizen of Athens and an Athenian of noble birth. He must often have sat in the law-courts, and may have had personal experience of the duties of offices such as he is establishing. There is no need to ask the question, whence he derived his knowledge of the Laws of Athens: they were a part of his daily life. Many of his enactments are recognized to be Athenian laws from the fragments preserved in the Orators and elsewhere: many more would be found to be so if we had better information. Probably also still

more of them would have been incorporated in the Magnesian code, if the work had ever been finally completed. But it seems to have come down to us in a form which is partly finished and partly unfinished, having a beginning and end, but wanting arrangement in the middle. The Laws answer to Plato's own description of them, in the comparison which he makes of himself and his two friends to gatherers of stones or the beginners of some composite work, 'who are providing materials and partly putting them together: — having some of their laws, like stones, already fixed in their places, while others lie about.'

Plato's own life coincided with the period at which Athens rose to her greatest heights and sank to her lowest depths. It was impossible that he should regard the blessings of democracy in the same light as the men of a former generation, whose view was not intercepted by the evil shadow of the taking of Athens, and who had only the glories of Marathon and Salamis and the administration of Pericles to look back upon. On the other hand the fame and prestige of Sparta, which had outlived so many crimes and blunders, was not altogether lost at the end of the life of Plato. Hers was the only great Hellenic government which preserved something of its ancient form; and although the Spartan citizens were reduced to almost one-tenth of their original number (Arist. Pol.), she still retained, until the rise of Thebes and Macedon, a certain authority and predominance due to her final success in the struggle with Athens and to the victories which Agesilaus won in Asia Minor.

Plato, like Aristotle, had in his mind some form of a mean state which should escape the evils and secure the advantages of both aristocracy and democracy. It may however be doubted whether the creation of such a state is not beyond the legislator's art, although there have been examples in history of forms of government, which through some community of interest or of origin, through a balance of parties in the state itself, or through the fear of a common enemy, have for a while preserved such a character of moderation. But in general there arises a time in the history of a state when the struggle between the few and the many has to be fought out. No system of checks and balances, such as Plato has devised in the Laws, could have given equipoise and stability to an ancient state, any more than

the skill of the legislator could have withstood the tide of democracy in England or France during the last hundred years, or have given life to China or India.

The basis of the Magnesian constitution is the equal division of land. In the new state, as in the Republic, there was to be neither poverty nor riches. Every citizen under all circumstances retained his lot, and as much money as was necessary for the cultivation of it, and no one was allowed to accumulate property to the amount of more than five times the value of the lot, inclusive of it. The equal division of land was a Spartan institution, not known to have existed elsewhere in Hellas. The mention of it in the Laws of Plato affords considerable presumption that it was of ancient origin, and not first introduced, as Mr. Grote and others have imagined, in the reformation of Cleomenes III. But at Sparta, if we may judge from the frequent complaints of the accumulation of property in the hands of a few persons (Arist. Pol.), no provision could have been made for the maintenance of the lot. Plutarch indeed speaks of a law introduced by the Ephor Epitadeus soon after the Peloponnesian War, which first allowed the Spartans to sell their land (Agis): but from the manner in which Aristotle refers to the subject, we should imagine this evil in the state to be of a much older standing. Like some other countries in which small proprietors have been numerous, the original equality passed into inequality, and, instead of a large middle class, there was probably at Sparta greater disproportion in the property of the citizens than in any other state of Hellas. Plato was aware of the danger, and has improved on the Spartan custom. The land, as at Sparta, must have been tilled by slaves, since other occupations were found for the citizens. Bodies of young men between the ages of twenty-five and thirty were engaged in making biennial peregrinations of the country. They and their officers are to be the magistrates, police, engineers, aediles, of the twelve districts into which the colony was divided. Their way of life may be compared with that of the Spartan secret police or *Crypteia*, a name which Plato freely applies to them without apparently any consciousness of the odium which has attached to the word in history.

Another great institution which Plato borrowed from Sparta (or

Crete) is the Syssitia or common meals. These were established in both states, and in some respects were considered by Aristotle to be better managed in Crete than at Lacedaemon (Pol.). In the Laws the Cretan custom appears to be adopted (This is not proved, as Hermann supposes ('De Vestigiis,' etc.)): that is to say, if we may interpret Plato by Aristotle, the cost of them was defrayed by the state and not by the individuals (Arist. Pol); so that the members of the mess, who could not pay their quota, still retained their rights of citizenship. But this explanation is hardly consistent with the Laws, where contributions to the Syssitia from private estates are expressly mentioned. Plato goes further than the legislators of Sparta and Crete, and would extend the common meals to women as well as men: he desires to curb the disorders, which existed among the female sex in both states, by the application to women of the same military discipline to which the men were already subject. It was an extension of the custom of Syssitia from which the ancient legislators shrank, and which Plato himself believed to be very difficult of enforcement.

Like Sparta, the new colony was not to be surrounded by walls, — a state should learn to depend upon the bravery of its citizens only — a fallacy or paradox, if it is not to be regarded as a poetical fancy, which is fairly enough ridiculed by Aristotle (Pol.). Women, too, must be ready to assist in the defence of their country: they are not to rush to the temples and altars, but to arm themselves with shield and spear. In the regulation of the Syssitia, in at least one of his enactments respecting property, and in the attempt to correct the licence of women, Plato shows, that while he borrowed from the institutions of Sparta and favoured the Spartan mode of life, he also sought to improve upon them.

The enmity to the sea is another Spartan feature which is transferred by Plato to the Magnesians. He did not reflect that a non-maritime power would always be at the mercy of one which had a command of the great highway. Their many island homes, the vast extent of coast which had to be protected by them, their struggles first of all with the Phoenicians and Carthaginians, and secondly with the Persian fleets, forced the Greeks, mostly against their will, to devote themselves to the sea. The islanders before the inhabitants of

the continent, the maritime cities before the inland, the Corinthians and Athenians before the Spartans, were compelled to fit out ships: last of all the Spartans, by the pressure of the Peloponnesian War, were driven to establish a naval force, which, after the battle of Aegospotami, for more than a generation commanded the Aegean. Plato, like the Spartans, had a prejudice against a navy, because he regarded it as the nursery of democracy. But he either never considered, or did not care to explain, how a city, set upon an island and 'distant not more than ten miles from the sea, having a seaboard provided with excellent harbours,' could have safely subsisted without one.

Neither the Spartans nor the Magnesians were permitted to engage in trade or commerce. In order to limit their dealings as far as possible to their own country, they had a separate coinage; the Magnesians were only allowed to use the common currency of Hellas when they travelled abroad, which they were forbidden to do unless they received permission from the government. Like the Spartans, Plato was afraid of the evils which might be introduced into his state by intercourse with foreigners; but he also shrinks from the utter exclusiveness of Sparta, and is not unwilling to allow visitors of a suitable age and rank to come from other states to his own, as he also allows citizens of his own state to go to foreign countries and bring back a report of them. Such international communication seemed to him both honourable and useful.

We may now notice some points in which the commonwealth of the Laws approximates to the Athenian model. These are much more numerous than the previous class of resemblances; we are better able to compare the laws of Plato with those of Athens, because a good deal more is known to us of Athens than of Sparta.

The information which we possess about Athenian law, though comparatively fuller, is still fragmentary. The sources from which our knowledge is derived are chiefly the following: —

(1) The Orators, — Antiphon, Andocides, Lysias, Isocrates, Demosthenes, Aeschines, Lycurgus, and others.

(2) Herodotus, Thucydides, Xenophon, Plato, Aristotle, as well as later writers, such as Cicero de Legibus, Plutarch, Aelian, Pausanias.

(3) Lexicographers, such as Harpocration, Pollux, Hesychius,

Suidas, and the compiler of the *Etymologicum Magnum*, many of whom are of uncertain date, and to a great extent based upon one another. Their writings extend altogether over more than eight hundred years, from the second to the tenth century.

(4) The Scholia on Aristophanes, Plato, Demosthenes.

(5) A few inscriptions.

Our knowledge of a subject derived from such various sources and for the most part of uncertain date and origin, is necessarily precarious. No critic can separate the actual laws of Solon from those which passed under his name in later ages. Nor do the Scholiasts and Lexicographers attempt to distinguish how many of these laws were still in force at the time when they wrote, or when they fell into disuse and were to be found in books only. Nor can we hastily assume that enactments which occur in the Laws of Plato were also a part of Athenian law, however probable this may appear.

There are two classes of similarities between Plato's Laws and those of Athens: (i) of institutions (ii) of minor enactments.

(i) The constitution of the Laws in its general character resembles much more nearly the Athenian constitution of Solon's time than that which succeeded it, or the extreme democracy which prevailed in Plato's own day. It was a mean state which he hoped to create, equally unlike a Syracusan tyranny or the mob-government of the Athenian assembly. There are various expedients by which he sought to impart to it the quality of moderation. (1) The whole people were to be educated: they could not be all trained in philosophy, but they were to acquire the simple elements of music, arithmetic, geometry, astronomy; they were also to be subject to military discipline, *archontes kai archomenoi*. (2) The majority of them were, or had been at some time in their lives, magistrates, and had the experience which is given by office. (3) The persons who held the highest offices were to have a further education, not much inferior to that provided for the guardians in the Republic, though the range of their studies is narrowed to the nature and divisions of virtue: here their philosophy comes to an end. (4) The entire number of the citizens (5040) rarely, if ever, assembled, except for purposes of elections. The whole people were divided into four classes, each having the right to be represented by the same number of members in the

Council. The result of such an arrangement would be, as in the constitution of Servius Tullius, to give a disproportionate share of power to the wealthier classes, who may be supposed to be always much fewer in number than the poorer. This tendency was qualified by the complicated system of selection by vote, previous to the final election by lot, of which the object seems to be to hand over to the wealthy few the power of selecting from the many poor, and vice versa. (5) The most important body in the state was the Nocturnal Council, which is borrowed from the Areopagus at Athens, as it existed, or was supposed to have existed, in the days before Ephialtes and the Eumenides of Aeschylus, when its power was undiminished. In some particulars Plato appears to have copied exactly the customs and procedure of the Areopagus: both assemblies sat at night (Telfy). There was a resemblance also in more important matters. Like the Areopagus, the Nocturnal Council was partly composed of magistrates and other state officials, whose term of office had expired. (7) The constitution included several diverse and even opposing elements, such as the Assembly and the Nocturnal Council. (8) There was much less exclusiveness than at Sparta; the citizens were to have an interest in the government of neighbouring states, and to know what was going on in the rest of the world. — All these were moderating influences.

A striking similarity between Athens and the constitution of the Magnesians is the use of the lot in the election of judges and other magistrates. That such a mode of election should have been resorted to in any civilized state, or that it should have been transferred by Plato to an ideal or imaginary one, is very singular to us. The most extreme democracy of modern times has never thought of leaving government wholly to chance. It was natural that Socrates should scoff at it, and ask, ‘Who would choose a pilot or carpenter or flute-player by lot’ (Xen. Mem.)? Yet there were many considerations which made this mode of choice attractive both to the oligarch and to the democrat: — (1) It seemed to recognize that one man was as good as another, and that all the members of the governing body, whether few or many, were on a perfect equality in every sense of the word. (2) To the pious mind it appeared to be a choice made, not by man, but by heaven (compare Laws). (3) It

afforded a protection against corruption and intrigue...It must also be remembered that, although elected by lot, the persons so elected were subject to a scrutiny before they entered on their office, and were therefore liable, after election, if disqualified, to be rejected (Laws). They were, moreover, liable to be called to account after the expiration of their office. In the election of councillors Plato introduces a further check: they are not to be chosen directly by lot from all the citizens, but from a select body previously elected by vote. In Plato's state at least, as we may infer from his silence on this point, judges and magistrates performed their duties without pay, which was a guarantee both of their disinterestedness and of their belonging probably to the higher class of citizens (compare Arist. Pol.). Hence we are not surprised that the use of the lot prevailed, not only in the election of the Athenian Council, but also in many oligarchies, and even in Plato's colony. The evil consequences of the lot are to a great extent avoided, if the magistrates so elected do not, like the dicasts at Athens, receive pay from the state.

Another parallel is that of the Popular Assembly, which at Athens was omnipotent, but in the Laws has only a faded and secondary existence. In Plato it was chiefly an elective body, having apparently no judicial and little political power entrusted to it. At Athens it was the mainspring of the democracy; it had the decision of war or peace, of life and death; the acts of generals or statesmen were authorized or condemned by it; no office or person was above its control. Plato was far from allowing such a despotic power to exist in his model community, and therefore he minimizes the importance of the Assembly and narrows its functions. He probably never asked himself a question, which naturally occurs to the modern reader, where was to be the central authority in this new community, and by what supreme power would the differences of inferior powers be decided. At the same time he magnifies and brings into prominence the Nocturnal Council (which is in many respects a reflection of the Areopagus), but does not make it the governing body of the state.

Between the judicial system of the Laws and that of Athens there was very great similarity, and a difference almost equally great. Plato not unfrequently adopts the details when he rejects the principle. At Athens any citizen might be a judge and member of the great court of

the Heliæa. This was ordinarily subdivided into a number of inferior courts, but an occasion is recorded on which the whole body, in number six thousand, met in a single court (*Andoc. de Myst.*). Plato significantly remarks that a few judges, if they are good, are better than a great number. He also, at least in capital cases, confines the plaintiff and defendant to a single speech each, instead of allowing two apiece, as was the common practice at Athens. On the other hand, in all private suits he gives two appeals, from the arbiters to the courts of the tribes, and from the courts of the tribes to the final or supreme court. There was nothing answering to this at Athens. The three courts were appointed in the following manner: — the arbiters were to be agreed upon by the parties to the cause; the judges of the tribes to be elected by lot; the highest tribunal to be chosen at the end of each year by the great officers of state out of their own number — they were to serve for a year, to undergo a scrutiny, and, unlike the Athenian judges, to vote openly. Plato does not dwell upon methods of procedure: these are the lesser matters which he leaves to the younger legislators. In cases of murder and some other capital offences, the cause was to be tried by a special tribunal, as was the custom at Athens: military offences, too, as at Athens, were decided by the soldiers. Public causes in the Laws, as sometimes at Athens, were voted upon by the whole people: because, as Plato remarks, they are all equally concerned in them. They were to be previously investigated by three of the principal magistrates. He believes also that in private suits all should take part; ‘for he who has no share in the administration of justice is apt to imagine that he has no share in the state at all.’ The wardens of the country, like the Forty at Athens, also exercised judicial power in small matters, as well as the wardens of the agora and city. The department of justice is better organized in Plato than in an ordinary Greek state, proceeding more by regular methods, and being more restricted to distinct duties.

The executive of Plato’s Laws, like the Athenian, was different from that of a modern civilized state. The difference chiefly consists in this, that whereas among ourselves there are certain persons or classes of persons set apart for the execution of the duties of government, in ancient Greece, as in all other communities in the earlier stages of their development, they were not equally

distinguished from the rest of the citizens. The machinery of government was never so well organized as in the best modern states. The judicial department was not so completely separated from the legislative, nor the executive from the judicial, nor the people at large from the professional soldier, lawyer, or priest. To Aristotle (Pol.) it was a question requiring serious consideration — Who should execute a sentence? There was probably no body of police to whom were entrusted the lives and properties of the citizens in any Hellenic state. Hence it might be reasonably expected that every man should be the watchman of every other, and in turn be watched by him. The ancients do not seem to have remembered the homely adage that, ‘What is every man’s business is no man’s business,’ or always to have thought of applying the principle of a division of labour to the administration of law and to government. Every Athenian was at some time or on some occasion in his life a magistrate, judge, advocate, soldier, sailor, policeman. He had not necessarily any private business; a good deal of his time was taken up with the duties of office and other public occupations. So, too, in Plato’s Laws. A citizen was to interfere in a quarrel, if older than the combatants, or to defend the outraged party, if his junior. He was especially bound to come to the rescue of a parent who was ill-treated by his children. He was also required to prosecute the murderer of a kinsman. In certain cases he was allowed to arrest an offender. He might even use violence to an abusive person. Any citizen who was not less than thirty years of age at times exercised a magisterial authority, to be enforced even by blows. Both in the Magnesian state and at Athens many thousand persons must have shared in the highest duties of government, if a section only of the Council, consisting of thirty or of fifty persons, as in the Laws, or at Athens after the days of Cleisthenes, held office for a month, or for thirty-five days only. It was almost as if, in our own country, the Ministry or the Houses of Parliament were to change every month. The average ability of the Athenian and Magnesian councillors could not have been very high, considering there were so many of them. And yet they were entrusted with the performance of the most important executive duties. In these respects the constitution of the Laws resembles Athens far more than Sparta. All the citizens were to be, not merely soldiers, but

politicians and administrators.

(ii) There are numerous minor particulars in which the Laws of Plato resemble those of Athens. These are less interesting than the preceding, but they show even more strikingly how closely in the composition of his work Plato has followed the laws and customs of his own country.

(1) Evidence. (a) At Athens a child was not allowed to give evidence (Telfy). Plato has a similar law: 'A child shall be allowed to give evidence only in cases of murder.' (b) At Athens an unwilling witness might be summoned; but he was not required to appear if he was ready to declare on oath that he knew nothing about the matter in question (Telfy). So in the Laws. (c) Athenian law enacted that when more than half the witnesses in a case had been convicted of perjury, there was to be a new trial (*anadikos krisis* — Telfy). There is a similar provision in the Laws. (d) False-witness was punished at Athens by *atimia* and a fine (Telfy). Plato is at once more lenient and more severe: 'If a man be twice convicted of false-witness, he shall not be required, and if thrice, he shall not be allowed to bear witness; and if he dare to witness after he has been convicted three times,...he shall be punished with death.'

(2) Murder. (a) Wilful murder was punished in Athenian law by death, perpetual exile, and confiscation of property (Telfy). Plato, too, has the alternative of death or exile, but he does not confiscate the murderer's property. (b) The Parricide was not allowed to escape by going into exile at Athens (Telfy), nor, apparently, in the Laws. (c) A homicide, if forgiven by his victim before death, received no punishment, either at Athens (Telfy), or in the Magnesian state. In both (Telfy) the contriver of a murder is punished as severely as the doer; and persons accused of the crime are forbidden to enter temples or the agora until they have been tried (Telfy). (d) At Athens slaves who killed their masters and were caught red-handed, were not to be put to death by the relations of the murdered man, but to be handed over to the magistrates (Telfy). So in the Laws, the slave who is guilty of wilful murder has a public execution: but if the murder is committed in anger, it is punished by the kinsmen of the victim.

(3) Involuntary homicide. (a) The guilty person, according to the Athenian law, had to go into exile, and might not return, until the

family of the man slain were conciliated. Then he must be purified (Telfy). If he is caught before he has obtained forgiveness, he may be put to death. These enactments reappear in the Laws. (b) The curious provision of Plato, that a stranger who has been banished for involuntary homicide and is subsequently wrecked upon the coast, must 'take up his abode on the sea-shore, wetting his feet in the sea, and watching for an opportunity of sailing,' recalls the procedure of the *Judicium Phreatteum* at Athens, according to which an involuntary homicide, who, having gone into exile, is accused of a wilful murder, was tried at Phreatto for this offence in a boat by magistrates on the shore. (c) A still more singular law, occurring both in the Athenian and Magnesian code, enacts that a stone or other inanimate object which kills a man is to be tried, and cast over the border (Telfy).

(4) Justifiable or excusable homicide. Plato and Athenian law agree in making homicide justifiable or excusable in the following cases: — (1) at the games (Telfy); (2) in war (Telfy); (3) if the person slain was found doing violence to a free woman (Telfy); (4) if a doctor's patient dies; (5) in the case of a robber (Telfy); (6) in self-defence (Telfy).

(5) Impiety. Death or expulsion was the Athenian penalty for impiety (Telfy). In the Laws it is punished in various cases by imprisonment for five years, for life, and by death.

(6) Sacrilege. Robbery of temples at Athens was punished by death, refusal of burial in the land, and confiscation of property (Telfy). In the Laws the citizen who is guilty of such a crime is to 'perish ingloriously and be cast beyond the borders of the land,' but his property is not confiscated.

(7) Sorcery. The sorcerer at Athens was to be executed (Telfy): compare Laws, where it is enacted that the physician who poisons and the professional sorcerer shall be punished with death.

(8) Treason. Both at Athens and in the Laws the penalty for treason was death (Telfy), and refusal of burial in the country (Telfy).

(9) Sheltering exiles. 'If a man receives an exile, he shall be punished with death.' So, too, in Athenian law (Telfy).

(10) Wounding. Athenian law compelled a man who had wounded another to go into exile; if he returned, he was to be put to death

(Telfy). Plato only punishes the offence with death when children wound their parents or one another, or a slave wounds his master.

(11) Bribery. Death was the punishment for taking a bribe, both at Athens (Telfy) and in the Laws; but Athenian law offered an alternative — the payment of a fine of ten times the amount of the bribe.

(12) Theft. Plato, like Athenian law (Telfy), punishes the theft of public property by death; the theft of private property in both involves a fine of double the value of the stolen goods (Telfy).

(13) Suicide. He ‘who slays him who of all men, as they say, is his own best friend,’ is regarded in the same spirit by Plato and by Athenian law. Plato would have him ‘buried ingloriously on the borders of the twelve portions of the land, in such places as are uncultivated and nameless,’ and ‘no column or inscription is to mark the place of his interment.’ Athenian law enacted that the hand which did the deed should be separated from the body and be buried apart (Telfy).

(14) Injury. In cases of wilful injury, Athenian law compelled the guilty person to pay double the damage; in cases of involuntary injury, simple damages (Telfy). Plato enacts that if a man wounds another in passion, and the wound is curable, he shall pay double the damage, if incurable or disfiguring, fourfold damages. If, however, the wounding is accidental, he shall simply pay for the harm done.

(15) Treatment of parents. Athenian law allowed any one to indict another for neglect or illtreatment of parents (Telfy). So Plato bids bystanders assist a father who is assaulted by his son, and allows any one to give information against children who neglect their parents.

(16) Execution of sentences. Both Plato and Athenian law give to the winner of a suit power to seize the goods of the loser, if he does not pay within the appointed time (Telfy). At Athens the penalty was also doubled (Telfy); not so in Plato. Plato however punishes contempt of court by death, which at Athens seems only to have been visited with a further fine (Telfy).

(17) Property. (a) Both at Athens and in the Laws a man who has disputed property in his possession must give the name of the person from whom he received it (Telfy); and any one searching for lost property must enter a house naked (Telfy), or, as Plato says, ‘naked,

or wearing only a short tunic and without a girdle. (b) Athenian law, as well as Plato, did not allow a father to disinherit his son without good reason and the consent of impartial persons (Telfy). Neither grants to the eldest son any special claim on the paternal estate (Telfy). In the law of inheritance both prefer males to females (Telfy). (c) Plato and Athenian law enacted that a tree should be planted at a fair distance from a neighbour's property (Telfy), and that when a man could not get water, his neighbour must supply him (Telfy). Both at Athens and in Plato there is a law about bees, the former providing that a beehive must be set up at not less a distance than 300 feet from a neighbour's (Telfy), and the latter forbidding the decoying of bees.

(18) Orphans. A ward must proceed against a guardian whom he suspects of fraud within five years of the expiration of the guardianship. This provision is common to Plato and to Athenian law (Telfy). Further, the latter enacted that the nearest male relation should marry or provide a husband for an heiress (Telfy), — a point in which Plato follows it closely.

(19) Contracts. Plato's law that 'when a man makes an agreement which he does not fulfil, unless the agreement be of a nature which the law or a vote of the assembly does not allow, or which he has made under the influence of some unjust compulsion, or which he is prevented from fulfilling against his will by some unexpected chance, — the other party may go to law with him,' according to Pollux (quoted in Telfy's note) prevailed also at Athens.

(20) Trade regulations. (a) Lying was forbidden in the agora both by Plato and at Athens (Telfy). (b) Athenian law allowed an action of recovery against a man who sold an unsound slave as sound (Telfy). Plato's enactment is more explicit: he allows only an unskilled person (i.e. one who is not a trainer or physician) to take proceedings in such a case. (c) Plato diverges from Athenian practice in the disapproval of credit, and does not even allow the supply of goods on the deposit of a percentage of their value (Telfy). He enacts that 'when goods are exchanged by buying and selling, a man shall deliver them and receive the price of them at a fixed place in the agora, and have done with the matter,' and that 'he who gives credit must be satisfied whether he obtain his money or not, for in such

exchanges he will not be protected by law. (d) Athenian law forbade an extortionate rate of interest (Telfy); Plato allows interest in one case only — if a contractor does not receive the price of his work within a year of the time agreed — and at the rate of 200 per cent. per annum for every drachma a monthly interest of an obol. (e) Both at Athens and in the Laws sales were to be registered (Telfy), as well as births (Telfy).

(21) Sumptuary laws. Extravagance at weddings (Telfy), and at funerals (Telfy) was forbidden at Athens and also in the Magnesians state.

There remains the subject of family life, which in Plato's Laws partakes both of an Athenian and Spartan character. Under this head may conveniently be included the condition of women and of slaves. To family life may be added citizenship.

As at Sparta, marriages are to be contracted for the good of the state; and they may be dissolved on the same ground, where there is a failure of issue, — the interest of the state requiring that every one of the 5040 lots should have an heir. Divorces are likewise permitted by Plato where there is an incompatibility of temper, as at Athens by mutual consent. The duty of having children is also enforced by a still higher motive, expressed by Plato in the noble words:— 'A man should cling to immortality, and leave behind him children's children to be the servants of God in his place.' Again, as at Athens, the father is allowed to put away his undutiful son, but only with the consent of impartial persons (Telfy), and the only suit which may be brought by a son against a father is for imbecility. The class of elder and younger men and women are still to regard one another, as in the Republic, as standing in the relation of parents and children. This is a trait of Spartan character rather than of Athenian. A peculiar sanctity and tenderness was to be shown towards the aged; the parent or grandparent stricken with years was to be loved and worshipped like the image of a God, and was to be deemed far more able than any lifeless statue to bring good or ill to his descendants. Great care is to be taken of orphans: they are entrusted to the fifteen eldest Guardians of the Law, who are to be 'lawgivers and fathers to them not inferior to their natural fathers,' as at Athens they were entrusted to the Archons. Plato wishes to make the misfortune of orphanhood as little

sad to them as possible.

Plato, seeing the disorder into which half the human race had fallen at Athens and Sparta, is minded to frame for them a new rule of life. He renounces his fanciful theory of communism, but still desires to place women as far as possible on an equality with men. They were to be trained in the use of arms, they are to live in public. Their time was partly taken up with gymnastic exercises; there could have been little family or private life among them. Their lot was to be neither like that of Spartan women, who were made hard and common by excessive practice of gymnastic and the want of all other education, — nor yet like that of Athenian women, who, at least among the upper classes, retired into a sort of oriental seclusion, — but something better than either. They were to be the perfect mothers of perfect children, yet not wholly taken up with the duties of motherhood, which were to be made easy to them as far as possible (compare Republic), but able to share in the perils of war and to be the companions of their husbands. Here, more than anywhere else, the spirit of the Laws reverts to the Republic. In speaking of them as the companions of their husbands we must remember that it is an Athenian and not a Spartan way of life which they are invited to share, a life of gaiety and brightness, not of austerity and abstinence, which often by a reaction degenerated into licence and grossness.

In Plato's age the subject of slavery greatly interested the minds of thoughtful men; and how best to manage this 'troublesome piece of goods' exercised his own mind a good deal. He admits that they have often been found better than brethren or sons in the hour of danger, and are capable of rendering important public services by informing against offenders — for this they are to be rewarded; and the master who puts a slave to death for the sake of concealing some crime which he has committed, is held guilty of murder. But they are not always treated with equal consideration. The punishments inflicted on them bear no proportion to their crimes. They are to be addressed only in the language of command. Their masters are not to jest with them, lest they should increase the hardship of their lot. Some privileges were granted to them by Athenian law of which there is no mention in Plato; they were allowed to purchase their freedom from their master, and if they despaired of being liberated by him they

could demand to be sold, on the chance of falling into better hands. But there is no suggestion in the Laws that a slave who tried to escape should be branded with the words — *kateche me, pheugo*, or that evidence should be extracted from him by torture, that the whole household was to be executed if the master was murdered and the perpetrator remained undetected: all these were provisions of Athenian law. Plato is more consistent than either the Athenians or the Spartans; for at Sparta too the Helots were treated in a manner almost unintelligible to us. On the one hand, they had arms put into their hands, and served in the army, not only, as at Plataea, in attendance on their masters, but, after they had been manumitted, as a separate body of troops called *Neodamodes*: on the other hand, they were the victims of one of the greatest crimes recorded in Greek history (Thucyd.). The two great philosophers of Hellas sought to extricate themselves from this cruel condition of human life, but acquiesced in the necessity of it. A noble and pathetic sentiment of Plato, suggested by the thought of their misery, may be quoted in this place:— ‘The right treatment of slaves is to behave properly to them, and to do to them, if possible, even more justice than to those who are our equals; for he who naturally and genuinely reverences justice, and hates injustice, is discovered in his dealings with any class of men to whom he can easily be unjust. And he who in regard to the natures and actions of his slaves is undefiled by impiety and injustice, will best sow the seeds of virtue in them; and this may be truly said of every master, and tyrant, and of every other having authority in relation to his inferiors.’

All the citizens of the Magnesian state were free and equal; there was no distinction of rank among them, such as is believed to have prevailed at Sparta. Their number was a fixed one, corresponding to the 5040 lots. One of the results of this is the requirement that younger sons or those who have been disinherited shall go out to a colony. At Athens, where there was not the same religious feeling against increasing the size of the city, the number of citizens must have been liable to considerable fluctuations. Several classes of persons, who were not citizens by birth, were admitted to the privilege. Perpetual exiles from other countries, people who settled there to practise a trade (*Telfy*), any one who had shown

distinguished valour in the cause of Athens, the Plataeans who escaped from the siege, metics and strangers who offered to serve in the army, the slaves who fought at Arginusae, — all these could or did become citizens. Even those who were only on one side of Athenian parentage were at more than one period accounted citizens. But at times there seems to have arisen a feeling against this promiscuous extension of the citizen body, an expression of which is to be found in the law of Pericles — monous Athenaious einai tous ek duoin Athenaion gegonotas (Plutarch, Pericles); and at no time did the adopted citizen enjoy the full rights of citizenship — e.g. he might not be elected archon or to the office of priest (Telfy), although this prohibition did not extend to his children, if born of a citizen wife. Plato never thinks of making the metic, much less the slave, a citizen. His treatment of the former class is at once more gentle and more severe than that which prevailed at Athens. He imposes upon them no tax but good behaviour, whereas at Athens they were required to pay twelve drachmae per annum, and to have a patron: on the other hand, he only allows them to reside in the Magnesian state on condition of following a trade; they were required to depart when their property exceeded that of the third class, and in any case after a residence of twenty years, unless they could show that they had conferred some great benefit on the state. This privileged position reflects that of the isoteleis at Athens, who were excused from the metoikion. It is Plato's greatest concession to the metic, as the bestowal of freedom is his greatest concession to the slave.

Lastly, there is a more general point of view under which the Laws of Plato may be considered, — the principles of Jurisprudence which are contained in them. These are not formally announced, but are scattered up and down, to be observed by the reflective reader for himself. Some of them are only the common principles which all courts of justice have gathered from experience; others are peculiar and characteristic. That judges should sit at fixed times and hear causes in a regular order, that evidence should be laid before them, that false witnesses should be disallowed, and corruption punished, that defendants should be heard before they are convicted, — these are the rules, not only of the Hellenic courts, but of courts of law in all ages and countries. But there are also points which are peculiar,

and in which ancient jurisprudence differs considerably from modern; some of them are of great importance...It could not be said at Athens, nor was it ever contemplated by Plato, that all men, including metics and slaves, should be equal 'in the eye of the law.' There was some law for the slave, but not much; no adequate protection was given him against the cruelty of his master...It was a singular privilege granted, both by the Athenian and Magnesian law, to a murdered man, that he might, before he died, pardon his murderer, in which case no legal steps were afterwards to be taken against him. This law is the remnant of an age in which the punishment of offences against the person was the concern rather of the individual and his kinsmen than of the state...Plato's division of crimes into voluntary and involuntary and those done from passion, only partially agrees with the distinction which modern law has drawn between murder and manslaughter; his attempt to analyze them is confused by the Socratic paradox, that 'All vice is involuntary'...It is singular that both in the Laws and at Athens theft is commonly punished by a twofold restitution of the article stolen. The distinction between civil and criminal courts or suits was not yet recognized...Possession gives a right of property after a certain time...The religious aspect under which certain offences were regarded greatly interfered with a just and natural estimate of their guilt...As among ourselves, the intent to murder was distinguished by Plato from actual murder...We note that both in Plato and the laws of Athens, libel in the market-place and personality in the theatre were forbidden...Both in Plato and Athenian law, as in modern times, the accomplice of a crime is to be punished as well as the principal...Plato does not allow a witness in a cause to act as a judge of it...Oaths are not to be taken by the parties to a suit...Both at Athens and in Plato's Laws capital punishment for murder was not to be inflicted, if the offender was willing to go into exile...Respect for the dead, duty towards parents, are to be enforced by the law as well as by public opinion...Plato proclaims the noble sentiment that the object of all punishment is the improvement of the offender... Finally, he repeats twice over, as with the voice of a prophet, that the crimes of the fathers are not to be visited upon the children. In this respect he is nobly distinguished from the Oriental, and indeed from the

spirit of Athenian law (compare Telfy, — *dei kai autous kai tous ek touton atimous einai*), as the Hebrew in the age of Ezekial is from the Jewish people of former ages.

Of all Plato's provisions the object is to bring the practice of the law more into harmony with reason and philosophy; to secure impartiality, and while acknowledging that every citizen has a right to share in the administration of justice, to counteract the tendency of the courts to become mere popular assemblies.

...

Thus we have arrived at the end of the writings of Plato, and at the last stage of philosophy which was really his. For in what followed, which we chiefly gather from the uncertain intimations of Aristotle, the spirit of the master no longer survived. The doctrine of Ideas passed into one of numbers; instead of advancing from the abstract to the concrete, the theories of Plato were taken out of their context, and either asserted or refuted with a provoking literalism; the Socratic or Platonic element in his teaching was absorbed into the Pythagorean or Megarian. His poetry was converted into mysticism; his unsubstantial visions were assailed *secundum artem* by the rules of logic. His political speculations lost their interest when the freedom of Hellas had passed away. Of all his writings the Laws were the furthest removed from the traditions of the Platonic school in the next generation. Both his political and his metaphysical philosophy are for the most part misinterpreted by Aristotle. The best of him — his love of truth, and his 'contemplation of all time and all existence,' was soonest lost; and some of his greatest thoughts have slept in the ear of mankind almost ever since they were first uttered.

We have followed him during his forty or fifty years of authorship, from the beginning when he first attempted to depict the teaching of Socrates in a dramatic form, down to the time at which the character of Socrates had disappeared, and we have the latest reflections of Plato's own mind upon Hellas and upon philosophy. He, who was 'the last of the poets,' in his book of Laws writes prose only; he has himself partly fallen under the rhetorical influences which in his earlier dialogues he was combating. The progress of his writings is also the history of his life; we have no other authentic life of him. They are the true self of the philosopher, stripped of the

accidents of time and place. The great effort which he makes is, first, to realize abstractions, secondly, to connect them. In the attempt to realize them, he was carried into a transcendental region in which he isolated them from experience, and we pass out of the range of science into poetry or fiction. The fancies of mythology for a time cast a veil over the gulf which divides phenomena from *onta* (*Meno*, *Phaedrus*, *Symposium*, *Phaedo*). In his return to earth Plato meets with a difficulty which has long ceased to be a difficulty to us. He cannot understand how these obstinate, unmanageable ideas, residing alone in their heaven of abstraction, can be either combined with one another, or adapted to phenomena (*Parmenides*, *Philebus*, *Sophist*). That which is the most familiar process of our own minds, to him appeared to be the crowning achievement of the dialectical art. The difficulty which in his own generation threatened to be the destruction of philosophy, he has rendered unmeaning and ridiculous. For by his conquests in the world of mind our thoughts are widened, and he has furnished us with new dialectical instruments which are of greater compass and power. We have endeavoured to see him as he truly was, a great original genius struggling with unequal conditions of knowledge, not prepared with a system nor evolving in a series of dialogues ideas which he had long conceived, but contradictory, enquiring as he goes along, following the argument, first from one point of view and then from another, and therefore arriving at opposite conclusions, hovering around the light, and sometimes dazzled with excess of light, but always moving in the same element of ideal truth. We have seen him also in his decline, when the wings of his imagination have begun to droop, but his experience of life remains, and he turns away from the contemplation of the eternal to take a last sad look at human affairs.

...

And so having brought into the world 'noble children' (*Phaedr.*), he rests from the labours of authorship. More than two thousand two hundred years have passed away since he returned to the place of *Apollo* and the *Muses*. Yet the echo of his words continues to be heard among men, because of all philosophers he has the most melodious voice. He is the inspired prophet or teacher who can never die, the only one in whom the outward form adequately represents

the fair soul within; in whom the thoughts of all who went before him are reflected and of all who come after him are partly anticipated. Other teachers of philosophy are dried up and withered, — after a few centuries they have become dust; but he is fresh and blooming, and is always begetting new ideas in the minds of men. They are one-sided and abstract; but he has many sides of wisdom. Nor is he always consistent with himself, because he is always moving onward, and knows that there are many more things in philosophy than can be expressed in words, and that truth is greater than consistency. He who approaches him in the most reverent spirit shall reap most of the fruit of his wisdom; he who reads him by the light of ancient commentators will have the least understanding of him.

We may see him with the eye of the mind in the groves of the Academy, or on the banks of the Ilissus, or in the streets of Athens, alone or walking with Socrates, full of those thoughts which have since become the common possession of mankind. Or we may compare him to a statue hid away in some temple of Zeus or Apollo, no longer existing on earth, a statue which has a look as of the God himself. Or we may once more imagine him following in another state of being the great company of heaven which he beheld of old in a vision (*Phaedr.*). So, ‘partly trifling, but with a certain degree of seriousness’ (*Symp.*), we linger around the memory of a world which has passed away (*Phaedr.*).

LAWS.

BOOK I.

PERSONS OF THE DIALOGUE: An Athenian Stranger, Cleinias (a Cretan), Megillus (a Lacedaemonian).

ATHENIAN: Tell me, Strangers, is a God or some man supposed to be the author of your laws?

CLEINIAS: A God, Stranger; in very truth a God: among us Cretans he is said to have been Zeus, but in Lacedaemon, whence our friend here comes, I believe they would say that Apollo is their lawgiver: would they not, Megillus?

MEGILLUS: Certainly.

ATHENIAN: And do you, Cleinias, believe, as Homer tells, that every ninth year Minos went to converse with his Olympian sire, and was inspired by him to make laws for your cities?

CLEINIAS: Yes, that is our tradition; and there was Rhadamanthus, a brother of his, with whose name you are familiar; he is reputed to have been the justest of men, and we Cretans are of opinion that he earned this reputation from his righteous administration of justice when he was alive.

ATHENIAN: Yes, and a noble reputation it was, worthy of a son of Zeus. As you and Megillus have been trained in these institutions, I dare say that you will not be unwilling to give an account of your government and laws; on our way we can pass the time pleasantly in talking about them, for I am told that the distance from Cnosus to the cave and temple of Zeus is considerable; and doubtless there are shady places under the lofty trees, which will protect us from this scorching sun. Being no longer young, we may often stop to rest beneath them, and get over the whole journey without difficulty, beguiling the time by conversation.

CLEINIAS: Yes, Stranger, and if we proceed onward we shall come to groves of cypresses, which are of rare height and beauty, and there

are green meadows, in which we may repose and converse.

ATHENIAN: Very good.

CLEINIAS: Very good, indeed; and still better when we see them; let us move on cheerily.

ATHENIAN: I am willing — And first, I want to know why the law has ordained that you shall have common meals and gymnastic exercises, and wear arms.

CLEINIAS: I think, Stranger, that the aim of our institutions is easily intelligible to any one. Look at the character of our country: Crete is not like Thessaly, a large plain; and for this reason they have horsemen in Thessaly, and we have runners — the inequality of the ground in our country is more adapted to locomotion on foot; but then, if you have runners you must have light arms — no one can carry a heavy weight when running, and bows and arrows are convenient because they are light. Now all these regulations have been made with a view to war, and the legislator appears to me to have looked to this in all his arrangements: — the common meals, if I am not mistaken, were instituted by him for a similar reason, because he saw that while they are in the field the citizens are by the nature of the case compelled to take their meals together for the sake of mutual protection. He seems to me to have thought the world foolish in not understanding that all men are always at war with one another; and if in war there ought to be common meals and certain persons regularly appointed under others to protect an army, they should be continued in peace. For what men in general term peace would be said by him to be only a name; in reality every city is in a natural state of war with every other, not indeed proclaimed by heralds, but everlasting. And if you look closely, you will find that this was the intention of the Cretan legislator; all institutions, private as well as public, were arranged by him with a view to war; in giving them he was under the impression that no possessions or institutions are of any value to him who is defeated in battle; for all the good things of the conquered pass into the hands of the conquerors.

ATHENIAN: You appear to me, Stranger, to have been thoroughly trained in the Cretan institutions, and to be well informed about them; will you tell me a little more explicitly what is the principle of government which you would lay down? You seem to imagine that a well-governed state ought to be so ordered as to conquer all other states in war: am I right in supposing this to be your meaning?

CLEINIAS: Certainly; and our Lacedaemonian friend, if I am not mistaken, will agree with me.

MEGILLUS: Why, my good friend, how could any Lacedaemonian say anything else?

ATHENIAN: And is what you say applicable only to states, or also to villages?

CLEINIAS: To both alike.

ATHENIAN: The case is the same?

CLEINIAS: Yes.

ATHENIAN: And in the village will there be the same war of family against family, and of individual against individual?

CLEINIAS: The same.

ATHENIAN: And should each man conceive himself to be his own enemy: — what shall we say?

CLEINIAS: O Athenian Stranger — inhabitant of Attica I will not call you, for you seem to deserve rather to be named after the goddess herself, because you go back to first principles, — you have thrown a light upon the argument, and will now be better able to understand what I was just saying, — that all men are publicly one another's enemies, and each man privately his own.

(ATHENIAN: My good sir, what do you mean?) —

CLEINIAS:....Moreover, there is a victory and defeat — the first and best of victories, the lowest and worst of defeats — which each man

gains or sustains at the hands, not of another, but of himself; this shows that there is a war against ourselves going on within every one of us.

ATHENIAN: Let us now reverse the order of the argument: Seeing that every individual is either his own superior or his own inferior, may we say that there is the same principle in the house, the village, and the state?

CLEINIAS: You mean that in each of them there is a principle of superiority or inferiority to self?

ATHENIAN: Yes.

CLEINIAS: You are quite right in asking the question, for there certainly is such a principle, and above all in states; and the state in which the better citizens win a victory over the mob and over the inferior classes may be truly said to be better than itself, and may be justly praised, where such a victory is gained, or censured in the opposite case.

ATHENIAN: Whether the better is ever really conquered by the worse, is a question which requires more discussion, and may be therefore left for the present. But I now quite understand your meaning when you say that citizens who are of the same race and live in the same cities may unjustly conspire, and having the superiority in numbers may overcome and enslave the few just; and when they prevail, the state may be truly called its own inferior and therefore bad; and when they are defeated, its own superior and therefore good.

CLEINIAS: Your remark, Stranger, is a paradox, and yet we cannot possibly deny it.

ATHENIAN: Here is another case for consideration; — in a family there may be several brothers, who are the offspring of a single pair; very possibly the majority of them may be unjust, and the just may be in a minority.

CLEINIAS: Very possibly.

ATHENIAN: And you and I ought not to raise a question of words as to whether this family and household are rightly said to be superior when they conquer, and inferior when they are conquered; for we are not now considering what may or may not be the proper or customary way of speaking, but we are considering the natural principles of right and wrong in laws.

CLEINIAS: What you say, Stranger, is most true.

MEGILLUS: Quite excellent, in my opinion, as far as we have gone.

ATHENIAN: Again; might there not be a judge over these brethren, of whom we were speaking?

CLEINIAS: Certainly.

ATHENIAN: Now, which would be the better judge — one who destroyed the bad and appointed the good to govern themselves; or one who, while allowing the good to govern, let the bad live, and made them voluntarily submit? Or third, I suppose, in the scale of excellence might be placed a judge, who, finding the family distracted, not only did not destroy any one, but reconciled them to one another for ever after, and gave them laws which they mutually observed, and was able to keep them friends.

CLEINIAS: The last would be by far the best sort of judge and legislator.

ATHENIAN: And yet the aim of all the laws which he gave would be the reverse of war.

CLEINIAS: Very true.

ATHENIAN: And will he who constitutes the state and orders the life of man have in view external war, or that kind of intestine war called civil, which no one, if he could prevent, would like to have occurring in his own state; and when occurring, every one would wish to be quit of as soon as possible?

CLEINIAS: He would have the latter chiefly in view.

ATHENIAN: And would he prefer that this civil war should be terminated by the destruction of one of the parties, and by the victory of the other, or that peace and friendship should be re-established, and that, being reconciled, they should give their attention to foreign enemies?

CLEINIAS: Every one would desire the latter in the case of his own state.

ATHENIAN: And would not that also be the desire of the legislator?

CLEINIAS: Certainly.

ATHENIAN: And would not every one always make laws for the sake of the best?

CLEINIAS: To be sure.

ATHENIAN: But war, whether external or civil, is not the best, and the need of either is to be deprecated; but peace with one another, and good will, are best. Nor is the victory of the state over itself to be regarded as a really good thing, but as a necessity; a man might as well say that the body was in the best state when sick and purged by medicine, forgetting that there is also a state of the body which needs no purge. And in like manner no one can be a true statesman, whether he aims at the happiness of the individual or state, who looks only, or first of all, to external warfare; nor will he ever be a sound legislator who orders peace for the sake of war, and not war for the sake of peace.

CLEINIAS: I suppose that there is truth, Stranger, in that remark of yours; and yet I am greatly mistaken if war is not the entire aim and object of our own institutions, and also of the Lacedaemonian.

ATHENIAN: I dare say; but there is no reason why we should rudely quarrel with one another about your legislators, instead of gently questioning them, seeing that both we and they are equally in earnest. Please follow me and the argument closely: — And first I will put forward Tyrtaeus, an Athenian by birth, but also a Spartan citizen, who of all men was most eager about war: Well, he says,

‘I sing not, I care not, about any man,

even if he were the richest of men, and possessed every good (and then he gives a whole list of them), if he be not at all times a brave warrior.’ I imagine that you, too, must have heard his poems; our Lacedaemonian friend has probably heard more than enough of them.

MEGILLUS: Very true.

CLEINIAS: And they have found their way from Lacedaemon to Crete.

ATHENIAN: Come now and let us all join in asking this question of Tyrtaeus: O most divine poet, we will say to him, the excellent praise which you have bestowed on those who excel in war sufficiently proves that you are wise and good, and I and Megillus and Cleinias of Cnosus do, as I believe, entirely agree with you. But we should like to be quite sure that we are speaking of the same men; tell us, then, do you agree with us in thinking that there are two kinds of war; or what would you say? A far inferior man to Tyrtaeus would have no difficulty in replying quite truly, that war is of two kinds, — one which is universally called civil war, and is, as we were just now saying, of all wars the worst; the other, as we should all admit, in which we fall out with other nations who are of a different race, is a far milder form of warfare.

CLEINIAS: Certainly, far milder.

ATHENIAN: Well, now, when you praise and blame war in this high-flown strain, whom are you praising or blaming, and to which kind of war are you referring? I suppose that you must mean foreign war, if I am to judge from expressions of yours in which you say that you abominate those

‘Who refuse to look upon fields of blood, and will not draw near and strike at their enemies.’

And we shall naturally go on to say to him, — You, Tyrtaeus, as it seems, praise those who distinguish themselves in external and

foreign war; and he must admit this.

CLEINIAS: Evidently.

ATHENIAN: They are good; but we say that there are still better men whose virtue is displayed in the greatest of all battles. And we too have a poet whom we summon as a witness, Theognis, citizen of Megara in Sicily:

‘Cyrnus,’ he says, ‘he who is faithful in a civil broil is worth his weight in gold and silver.’

And such an one is far better, as we affirm, than the other in a more difficult kind of war, much in the same degree as justice and temperance and wisdom, when united with courage, are better than courage only; for a man cannot be faithful and good in civil strife without having all virtue. But in the war of which Tyrtaeus speaks, many a mercenary soldier will take his stand and be ready to die at his post, and yet they are generally and almost without exception insolent, unjust, violent men, and the most senseless of human beings. You will ask what the conclusion is, and what I am seeking to prove: I maintain that the divine legislator of Crete, like any other who is worthy of consideration, will always and above all things in making laws have regard to the greatest virtue; which, according to Theognis, is loyalty in the hour of danger, and may be truly called perfect justice. Whereas, that virtue which Tyrtaeus highly praises is well enough, and was praised by the poet at the right time, yet in place and dignity may be said to be only fourth rate (i.e., it ranks after justice, temperance, and wisdom.).

CLEINIAS: Stranger, we are degrading our inspired lawgiver to a rank which is far beneath him.

ATHENIAN: Nay, I think that we degrade not him but ourselves, if we imagine that Lycurgus and Minos laid down laws both in Lacedaemon and Crete mainly with a view to war.

CLEINIAS: What ought we to say then?

ATHENIAN: What truth and what justice require of us, if I am not

mistaken, when speaking in behalf of divine excellence; — that the legislator when making his laws had in view not a part only, and this the lowest part of virtue, but all virtue, and that he devised classes of laws answering to the kinds of virtue; not in the way in which modern inventors of laws make the classes, for they only investigate and offer laws whenever a want is felt, and one man has a class of laws about allotments and heiresses, another about assaults; others about ten thousand other such matters. But we maintain that the right way of examining into laws is to proceed as we have now done, and I admired the spirit of your exposition; for you were quite right in beginning with virtue, and saying that this was the aim of the giver of the law, but I thought that you went wrong when you added that all his legislation had a view only to a part, and the least part of virtue, and this called forth my subsequent remarks. Will you allow me then to explain how I should have liked to have heard you expound the matter?

CLEINIAS: By all means.

ATHENIAN: You ought to have said, Stranger — The Cretan laws are with reason famous among the Hellenes; for they fulfil the object of laws, which is to make those who use them happy; and they confer every sort of good. Now goods are of two kinds: there are human and there are divine goods, and the human hang upon the divine; and the state which attains the greater, at the same time acquires the less, or, not having the greater, has neither. Of the lesser goods the first is health, the second beauty, the third strength, including swiftness in running and bodily agility generally, and the fourth is wealth, not the blind god (Pluto), but one who is keen of sight, if only he has wisdom for his companion. For wisdom is chief and leader of the divine class of goods, and next follows temperance; and from the union of these two with courage springs justice, and fourth in the scale of virtue is courage. All these naturally take precedence of the other goods, and this is the order in which the legislator must place them, and after them he will enjoin the rest of his ordinances on the citizens with a view to these, the human looking to the divine, and the divine looking to their leader mind. Some of his ordinances will

relate to contracts of marriage which they make one with another, and then to the procreation and education of children, both male and female; the duty of the lawgiver will be to take charge of his citizens, in youth and age, and at every time of life, and to give them punishments and rewards; and in reference to all their intercourse with one another, he ought to consider their pains and pleasures and desires, and the vehemence of all their passions; he should keep a watch over them, and blame and praise them rightly by the mouth of the laws themselves. Also with regard to anger and terror, and the other perturbations of the soul, which arise out of misfortune, and the deliverances from them which prosperity brings, and the experiences which come to men in diseases, or in war, or poverty, or the opposite of these; in all these states he should determine and teach what is the good and evil of the condition of each. In the next place, the legislator has to be careful how the citizens make their money and in what way they spend it, and to have an eye to their mutual contracts and dissolutions of contracts, whether voluntary or involuntary: he should see how they order all this, and consider where justice as well as injustice is found or is wanting in their several dealings with one another; and honour those who obey the law, and impose fixed penalties on those who disobey, until the round of civil life is ended, and the time has come for the consideration of the proper funeral rites and honours of the dead. And the lawgiver reviewing his work, will appoint guardians to preside over these things, — some who walk by intelligence, others by true opinion only, and then mind will bind together all his ordinances and show them to be in harmony with temperance and justice, and not with wealth or ambition. This is the spirit, Stranger, in which I was and am desirous that you should pursue the subject. And I want to know the nature of all these things, and how they are arranged in the laws of Zeus, as they are termed, and in those of the Pythian Apollo, which Minos and Lycurgus gave; and how the order of them is discovered to his eyes, who has experience in laws gained either by study or habit, although they are far from being self-evident to the rest of mankind like ourselves.

CLEINIAS: How shall we proceed, Stranger?

ATHENIAN: I think that we must begin again as before, and first consider the habit of courage; and then we will go on and discuss another and then another form of virtue, if you please. In this way we shall have a model of the whole; and with these and similar discourses we will beguile the way. And when we have gone through all the virtues, we will show, by the grace of God, that the institutions of which I was speaking look to virtue.

MEGILLUS: Very good; and suppose that you first criticize this praiser of Zeus and the laws of Crete.

ATHENIAN: I will try to criticize you and myself, as well as him, for the argument is a common concern. Tell me, — were not first the syssitia, and secondly the gymnasia, invented by your legislator with a view to war?

MEGILLUS: Yes.

ATHENIAN: And what comes third, and what fourth? For that, I think, is the sort of enumeration which ought to be made of the remaining parts of virtue, no matter whether you call them parts or what their name is, provided the meaning is clear.

MEGILLUS: Then I, or any other Lacedaemonian, would reply that hunting is third in order.

ATHENIAN: Let us see if we can discover what comes fourth and fifth.

MEGILLUS: I think that I can get as far as the fourth head, which is the frequent endurance of pain, exhibited among us Spartans in certain hand-to-hand fights; also in stealing with the prospect of getting a good beating; there is, too, the so-called Crypteia, or secret service, in which wonderful endurance is shown, — our people wander over the whole country by day and by night, and even in winter have not a shoe to their foot, and are without beds to lie upon, and have to attend upon themselves. Marvellous, too, is the endurance which our citizens show in their naked exercises, contending against the violent summer heat; and there are many

similar practices, to speak of which in detail would be endless.

ATHENIAN: Excellent, O Lacedaemonian Stranger. But how ought we to define courage? Is it to be regarded only as a combat against fears and pains, or also against desires and pleasures, and against flatteries; which exercise such a tremendous power, that they make the hearts even of respectable citizens to melt like wax?

MEGILLUS: I should say the latter.

ATHENIAN: In what preceded, as you will remember, our Cnosian friend was speaking of a man or a city being inferior to themselves: — Were you not, Cleinias?

CLEINIAS: I was.

ATHENIAN: Now, which is in the truest sense inferior, the man who is overcome by pleasure or by pain?

CLEINIAS: I should say the man who is overcome by pleasure; for all men deem him to be inferior in a more disgraceful sense, than the other who is overcome by pain.

ATHENIAN: But surely the lawgivers of Crete and Lacedaemon have not legislated for a courage which is lame of one leg, able only to meet attacks which come from the left, but impotent against the insidious flatteries which come from the right?

CLEINIAS: Able to meet both, I should say.

ATHENIAN: Then let me once more ask, what institutions have you in either of your states which give a taste of pleasures, and do not avoid them any more than they avoid pains; but which set a person in the midst of them, and compel or induce him by the prospect of reward to get the better of them? Where is an ordinance about pleasure similar to that about pain to be found in your laws? Tell me what there is of this nature among you: — What is there which makes your citizen equally brave against pleasure and pain, conquering what they ought to conquer, and superior to the enemies who are most dangerous and nearest home?

MEGILLUS: I was able to tell you, Stranger, many laws which were directed against pain; but I do not know that I can point out any great or obvious examples of similar institutions which are concerned with pleasure; there are some lesser provisions, however, which I might mention.

CLEINIAS: Neither can I show anything of that sort which is at all equally prominent in the Cretan laws.

ATHENIAN: No wonder, my dear friends; and if, as is very likely, in our search after the true and good, one of us may have to censure the laws of the others, we must not be offended, but take kindly what another says.

CLEINIAS: You are quite right, Athenian Stranger, and we will do as you say.

ATHENIAN: At our time of life, Cleinias, there should be no feeling of irritation.

CLEINIAS: Certainly not.

ATHENIAN: I will not at present determine whether he who censures the Cretan or Lacedaemonian polities is right or wrong. But I believe that I can tell better than either of you what the many say about them. For assuming that you have reasonably good laws, one of the best of them will be the law forbidding any young men to enquire which of them are right or wrong; but with one mouth and one voice they must all agree that the laws are all good, for they came from God; and any one who says the contrary is not to be listened to. But an old man who remarks any defect in your laws may communicate his observation to a ruler or to an equal in years when no young man is present.

CLEINIAS: Exactly so, Stranger; and like a diviner, although not there at the time, you seem to me quite to have hit the meaning of the legislator, and to say what is most true.

ATHENIAN: As there are no young men present, and the legislator has given old men free licence, there will be no impropriety in our

discussing these very matters now that we are alone.

CLEINIAS: True. And therefore you may be as free as you like in your censure of our laws, for there is no discredit in knowing what is wrong; he who receives what is said in a generous and friendly spirit will be all the better for it.

ATHENIAN: Very good; however, I am not going to say anything against your laws until to the best of my ability I have examined them, but I am going to raise doubts about them. For you are the only people known to us, whether Greek or barbarian, whom the legislator commanded to eschew all great pleasures and amusements and never to touch them; whereas in the matter of pains or fears which we have just been discussing, he thought that they who from infancy had always avoided pains and fears and sorrows, when they were compelled to face them would run away from those who were hardened in them, and would become their subjects. Now the legislator ought to have considered that this was equally true of pleasure; he should have said to himself, that if our citizens are from their youth upward unacquainted with the greatest pleasures, and unused to endure amid the temptations of pleasure, and are not disciplined to refrain from all things evil, the sweet feeling of pleasure will overcome them just as fear would overcome the former class; and in another, and even a worse manner, they will be the slaves of those who are able to endure amid pleasures, and have had the opportunity of enjoying them, they being often the worst of mankind. One half of their souls will be a slave, the other half free; and they will not be worthy to be called in the true sense men and freemen. Tell me whether you assent to my words?

CLEINIAS: On first hearing, what you say appears to be the truth; but to be hasty in coming to a conclusion about such important matters would be very childish and simple.

ATHENIAN: Suppose, Cleinias and Megillus, that we consider the virtue which follows next of those which we intended to discuss (for after courage comes temperance), what institutions shall we find relating to temperance, either in Crete or Lacedaemon, which, like

your military institutions, differ from those of any ordinary state.

MEGILLUS: That is not an easy question to answer; still I should say that the common meals and gymnastic exercises have been excellently devised for the promotion both of temperance and courage.

ATHENIAN: There seems to be a difficulty, Stranger, with regard to states, in making words and facts coincide so that there can be no dispute about them. As in the human body, the regimen which does good in one way does harm in another; and we can hardly say that any one course of treatment is adapted to a particular constitution. Now the gymnasia and common meals do a great deal of good, and yet they are a source of evil in civil troubles; as is shown in the case of the Milesian, and Boeotian, and Thurian youth, among whom these institutions seem always to have had a tendency to degrade the ancient and natural custom of love below the level, not only of man, but of the beasts. The charge may be fairly brought against your cities above all others, and is true also of most other states which especially cultivate gymnastics. Whether such matters are to be regarded jestingly or seriously, I think that the pleasure is to be deemed natural which arises out of the intercourse between men and women; but that the intercourse of men with men, or of women with women, is contrary to nature, and that the bold attempt was originally due to unbridled lust. The Cretans are always accused of having invented the story of Ganymede and Zeus because they wanted to justify themselves in the enjoyment of unnatural pleasures by the practice of the god whom they believe to have been their lawgiver. Leaving the story, we may observe that any speculation about laws turns almost entirely on pleasure and pain, both in states and in individuals: these are two fountains which nature lets flow, and he who draws from them where and when, and as much as he ought, is happy; and this holds of men and animals — of individuals as well as states; and he who indulges in them ignorantly and at the wrong time, is the reverse of happy.

MEGILLUS: I admit, Stranger, that your words are well spoken, and I hardly know what to say in answer to you; but still I think that the

Spartan lawgiver was quite right in forbidding pleasure. Of the Cretan laws, I shall leave the defence to my Cnosian friend. But the laws of Sparta, in as far as they relate to pleasure, appear to me to be the best in the world; for that which leads mankind in general into the wildest pleasure and licence, and every other folly, the law has clean driven out; and neither in the country nor in towns which are under the control of Sparta, will you find revelries and the many incitements of every kind of pleasure which accompany them; and any one who meets a drunken and disorderly person, will immediately have him most severely punished, and will not let him off on any pretence, not even at the time of a Dionysiac festival; although I have remarked that this may happen at your performances 'on the cart,' as they are called; and among our Tarentine colonists I have seen the whole city drunk at a Dionysiac festival; but nothing of the sort happens among us.

ATHENIAN: O Lacedaemonian Stranger, these festivities are praiseworthy where there is a spirit of endurance, but are very senseless when they are under no regulations. In order to retaliate, an Athenian has only to point out the licence which exists among your women. To all such accusations, whether they are brought against the Tarentines, or us, or you, there is one answer which exonerates the practice in question from impropriety. When a stranger expresses wonder at the singularity of what he sees, any inhabitant will naturally answer him: — Wonder not, O stranger; this is our custom, and you may very likely have some other custom about the same things. Now we are speaking, my friends, not about men in general, but about the merits and defects of the lawgivers themselves. Let us then discourse a little more at length about intoxication, which is a very important subject, and will seriously task the discrimination of the legislator. I am not speaking of drinking, or not drinking, wine at all, but of intoxication. Are we to follow the custom of the Scythians, and Persians, and Carthaginians, and Celts, and Iberians, and Thracians, who are all warlike nations, or that of your countrymen, for they, as you say, altogether abstain? But the Scythians and Thracians, both men and women, drink unmixed wine, which they pour on their garments, and this they think a happy and glorious

institution. The Persians, again, are much given to other practices of luxury which you reject, but they have more moderation in them than the Thracians and Scythians.

MEGILLUS: O best of men, we have only to take arms into our hands, and we send all these nations flying before us.

ATHENIAN: Nay, my good friend, do not say that; there have been, as there always will be, flights and pursuits of which no account can be given, and therefore we cannot say that victory or defeat in battle affords more than a doubtful proof of the goodness or badness of institutions. For when the greater states conquer and enslave the lesser, as the Syracusans have done the Locrians, who appear to be the best-governed people in their part of the world, or as the Athenians have done the Ceans (and there are ten thousand other instances of the same sort of thing), all this is not to the point; let us endeavour rather to form a conclusion about each institution in itself and say nothing, at present, of victories and defeats. Let us only say that such and such a custom is honourable, and another not. And first permit me to tell you how good and bad are to be estimated in reference to these very matters.

MEGILLUS: How do you mean?

ATHENIAN: All those who are ready at a moment's notice to praise or censure any practice which is matter of discussion, seem to me to proceed in a wrong way. Let me give you an illustration of what I mean: — You may suppose a person to be praising wheat as a good kind of food, whereupon another person instantly blames wheat, without ever enquiring into its effect or use, or in what way, or to whom, or with what, or in what state and how, wheat is to be given. And that is just what we are doing in this discussion. At the very mention of the word intoxication, one side is ready with their praises and the other with their censures; which is absurd. For either side adduce their witnesses and approvers, and some of us think that we speak with authority because we have many witnesses; and others because they see those who abstain conquering in battle, and this again is disputed by us. Now I cannot say that I shall be satisfied, if

we go on discussing each of the remaining laws in the same way. And about this very point of intoxication I should like to speak in another way, which I hold to be the right one; for if number is to be the criterion, are there not myriads upon myriads of nations ready to dispute the point with you, who are only two cities?

MEGILLUS: I shall gladly welcome any method of enquiry which is right.

ATHENIAN: Let me put the matter thus: — Suppose a person to praise the keeping of goats, and the creatures themselves as capital things to have, and then some one who had seen goats feeding without a goatherd in cultivated spots, and doing mischief, were to censure a goat or any other animal who has no keeper, or a bad keeper, would there be any sense or justice in such censure?

MEGILLUS: Certainly not.

ATHENIAN: Does a captain require only to have nautical knowledge in order to be a good captain, whether he is sea-sick or not? What do you say?

MEGILLUS: I say that he is not a good captain if, although he have nautical skill, he is liable to sea-sickness.

ATHENIAN: And what would you say of the commander of an army? Will he be able to command merely because he has military skill if he be a coward, who, when danger comes, is sick and drunk with fear?

MEGILLUS: Impossible.

ATHENIAN: And what if besides being a coward he has no skill?

MEGILLUS: He is a miserable fellow, not fit to be a commander of men, but only of old women.

ATHENIAN: And what would you say of some one who blames or praises any sort of meeting which is intended by nature to have a ruler, and is well enough when under his presidency? The critic,

however, has never seen the society meeting together at an orderly feast under the control of a president, but always without a ruler or with a bad one: — when observers of this class praise or blame such meetings, are we to suppose that what they say is of any value?

MEGILLUS: Certainly not, if they have never seen or been present at such a meeting when rightly ordered.

ATHENIAN: Reflect; may not banqueters and banquets be said to constitute a kind of meeting?

MEGILLUS: Of course.

ATHENIAN: And did any one ever see this sort of convivial meeting rightly ordered? Of course you two will answer that you have never seen them at all, because they are not customary or lawful in your country; but I have come across many of them in many different places, and moreover I have made enquiries about them wherever I went, as I may say, and never did I see or hear of anything of the kind which was carried on altogether rightly; in some few particulars they might be right, but in general they were utterly wrong.

CLEINIAS: What do you mean, Stranger, by this remark? Explain. For we, as you say, from our inexperience in such matters, might very likely not know, even if they came in our way, what was right or wrong in such societies.

ATHENIAN: Likely enough; then let me try to be your instructor: You would acknowledge, would you not, that in all gatherings of mankind, of whatever sort, there ought to be a leader?

CLEINIAS: Certainly I should.

ATHENIAN: And we were saying just now, that when men are at war the leader ought to be a brave man?

CLEINIAS: We were.

ATHENIAN: The brave man is less likely than the coward to be disturbed by fears?

CLEINIAS: That again is true.

ATHENIAN: And if there were a possibility of having a general of an army who was absolutely fearless and imperturbable, should we not by all means appoint him?

CLEINIAS: Assuredly.

ATHENIAN: Now, however, we are speaking not of a general who is to command an army, when foe meets foe in time of war, but of one who is to regulate meetings of another sort, when friend meets friend in time of peace.

CLEINIAS: True.

ATHENIAN: And that sort of meeting, if attended with drunkenness, is apt to be unquiet.

CLEINIAS: Certainly; the reverse of quiet.

ATHENIAN: In the first place, then, the revellers as well as the soldiers will require a ruler?

CLEINIAS: To be sure; no men more so.

ATHENIAN: And we ought, if possible, to provide them with a quiet ruler?

CLEINIAS: Of course.

ATHENIAN: And he should be a man who understands society; for his duty is to preserve the friendly feelings which exist among the company at the time, and to increase them for the future by his use of the occasion.

CLEINIAS: Very true.

ATHENIAN: Must we not appoint a sober man and a wise to be our master of the revels? For if the ruler of drinkers be himself young and drunken, and not over-wise, only by some special good fortune will he be saved from doing some great evil.

CLEINIAS: It will be by a singular good fortune that he is saved.

ATHENIAN: Now suppose such associations to be framed in the best way possible in states, and that some one blames the very fact of their existence — he may very likely be right. But if he blames a practice which he only sees very much mismanaged, he shows in the first place that he is not aware of the mismanagement, and also not aware that everything done in this way will turn out to be wrong, because done without the superintendence of a sober ruler. Do you not see that a drunken pilot or a drunken ruler of any sort will ruin ship, chariot, army — anything, in short, of which he has the direction?

CLEINIAS: The last remark is very true, Stranger; and I see quite clearly the advantage of an army having a good leader — he will give victory in war to his followers, which is a very great advantage; and so of other things. But I do not see any similar advantage which either individuals or states gain from the good management of a feast; and I want you to tell me what great good will be effected, supposing that this drinking ordinance is duly established.

ATHENIAN: If you mean to ask what great good accrues to the state from the right training of a single youth, or of a single chorus — when the question is put in that form, we cannot deny that the good is not very great in any particular instance. But if you ask what is the good of education in general, the answer is easy — that education makes good men, and that good men act nobly, and conquer their enemies in battle, because they are good. Education certainly gives victory, although victory sometimes produces forgetfulness of education; for many have grown insolent from victory in war, and this insolence has engendered in them innumerable evils; and many a victory has been and will be suicidal to the victors; but education is never suicidal.

CLEINIAS: You seem to imply, my friend, that convivial meetings, when rightly ordered, are an important element of education.

ATHENIAN: Certainly I do.

CLEINIAS: And can you show that what you have been saying is true?

ATHENIAN: To be absolutely sure of the truth of matters concerning which there are many opinions, is an attribute of the Gods not given to man, Stranger; but I shall be very happy to tell you what I think, especially as we are now proposing to enter on a discussion concerning laws and constitutions.

CLEINIAS: Your opinion, Stranger, about the questions which are now being raised, is precisely what we want to hear.

ATHENIAN: Very good; I will try to find a way of explaining my meaning, and you shall try to have the gift of understanding me. But first let me make an apology. The Athenian citizen is reputed among all the Hellenes to be a great talker, whereas Sparta is renowned for brevity, and the Cretans have more wit than words. Now I am afraid of appearing to elicit a very long discourse out of very small materials. For drinking indeed may appear to be a slight matter, and yet is one which cannot be rightly ordered according to nature, without correct principles of music; these are

necessary to any clear or satisfactory treatment of the subject, and music again runs up into education generally, and there is much to be said about all this. What would you say then to leaving these matters for the present, and passing on to some other question of law?

MEGILLUS: O Athenian Stranger, let me tell you what perhaps you do not know, that our family is the proxenus of your state. I imagine that from their earliest youth all boys, when they are told that they are the proxeni of a particular state, feel kindly towards their second country; and this has certainly been my own feeling. I can well remember from the days of my boyhood, how, when any Lacedaemonians praised or blamed the Athenians, they used to say to me,— ‘See, Megillus, how ill or how well,’ as the case might be, ‘has your state treated us’; and having always had to fight your battles against detractors when I heard you assailed, I became warmly attached to you. And I always like to hear the Athenian

tongue spoken; the common saying is quite true, that a good Athenian is more than ordinarily good, for he is the only man who is freely and genuinely good by the divine inspiration of his own nature, and is not manufactured. Therefore be assured that I shall like to hear you say whatever you have to say.

CLEINIAS: Yes, Stranger; and when you have heard me speak, say boldly what is in your thoughts. Let me remind you of a tie which unites you to Crete. You must have heard here the story of the prophet Epimenides, who was of my family, and came to Athens ten years before the Persian war, in accordance with the response of the Oracle, and offered certain sacrifices which the God commanded. The Athenians were at that time in dread of the Persian invasion; and he said that for ten years they would not come, and that when they came, they would go away again without accomplishing any of their objects, and would suffer more evil than they inflicted. At that time my forefathers formed ties of hospitality with you; thus ancient is the friendship which I and my parents have had for you.

ATHENIAN: You seem to be quite ready to listen; and I am also ready to perform as much as I can of an almost impossible task, which I will nevertheless attempt. At the outset of the discussion, let me define the nature and power of education; for this is the way by which our argument must travel onwards to the God Dionysus.

CLEINIAS: Let us proceed, if you please.

ATHENIAN: Well, then, if I tell you what are my notions of education, will you consider whether they satisfy you?

CLEINIAS: Let us hear.

ATHENIAN: According to my view, any one who would be good at anything must practise that thing from his youth upwards, both in sport and earnest, in its several branches: for example, he who is to be a good builder, should play at building children's houses; he who is to be a good husbandman, at tilling the ground; and those who have the care of their education should provide them when young with mimic tools. They should learn beforehand the knowledge

which they will afterwards require for their art. For example, the future carpenter should learn to measure or apply the line in play; and the future warrior should learn riding, or some other exercise, for amusement, and the teacher should endeavour to direct the children's inclinations and pleasures, by the help of amusements, to their final aim in life. The most important part of education is right training in the nursery. The soul of the child in his play should be guided to the love of that sort of excellence in which when he grows up to manhood he will have to be perfected. Do you agree with me thus far?

CLEINIAS: Certainly.

ATHENIAN: Then let us not leave the meaning of education ambiguous or ill-defined. At present, when we speak in terms of praise or blame about the bringing-up of each person, we call one man educated and another uneducated, although the uneducated man may be sometimes very well educated for the calling of a retail trader, or of a captain of a ship, and the like. For we are not speaking of education in this narrower sense, but of that other education in virtue from youth upwards, which makes a man eagerly pursue the ideal perfection of citizenship, and teaches him how rightly to rule and how to obey. This is the only education which, upon our view, deserves the name; that other sort of training, which aims at the acquisition of wealth or bodily strength, or mere cleverness apart from intelligence and justice, is mean and illiberal, and is not worthy to be called education at all. But let us not quarrel with one another about a word, provided that the proposition which has just been granted hold good: to wit, that those who are rightly educated generally become good men. Neither must we cast a slight upon education, which is the first and fairest thing that the best of men can ever have, and which, though liable to take a wrong direction, is capable of reformation. And this work of reformation is the great business of every man while he lives.

CLEINIAS: Very true; and we entirely agree with you.

ATHENIAN: And we agreed before that they are good men who are

able to rule themselves, and bad men who are not.

CLEINIAS: You are quite right.

ATHENIAN: Let me now proceed, if I can, to clear up the subject a little further by an illustration which I will offer you.

CLEINIAS: Proceed.

ATHENIAN: Do we not consider each of ourselves to be one?

CLEINIAS: We do.

ATHENIAN: And each one of us has in his bosom two counsellors, both foolish and also antagonistic; of which we call the one pleasure, and the other pain.

CLEINIAS: Exactly.

ATHENIAN: Also there are opinions about the future, which have the general name of expectations; and the specific name of fear, when the expectation is of pain; and of hope, when of pleasure; and further, there is reflection about the good or evil of them, and this, when embodied in a decree by the State, is called Law.

CLEINIAS: I am hardly able to follow you; proceed, however, as if I were.

MEGILLUS: I am in the like case.

ATHENIAN: Let us look at the matter thus: May we not conceive each of us living beings to be a puppet of the Gods, either their plaything only, or created with a purpose — which of the two we cannot certainly know? But we do know, that these affections in us are like cords and strings, which pull us different and opposite ways, and to opposite actions; and herein lies the difference between virtue and vice. According to the argument there is one among these cords which every man ought to grasp and never let go, but to pull with it against all the rest; and this is the sacred and golden cord of reason, called by us the common law of the State; there are others which are hard and of iron, but this one is soft because golden; and there are

several other kinds. Now we ought always to cooperate with the lead of the best, which is law. For inasmuch as reason is beautiful and gentle, and not violent, her rule must needs have ministers in order to help the golden principle in vanquishing the other principles. And thus the moral of the tale about our being puppets will not have been lost, and the meaning of the expression ‘superior or inferior to a man’s self’ will become clearer; and the individual, attaining to right reason in this matter of pulling the strings of the puppet, should live according to its rule; while the city, receiving the same from some god or from one who has knowledge of these things, should embody it in a law, to be her guide in her dealings with herself and with other states. In this way virtue and vice will be more clearly distinguished by us. And when they have become clearer, education and other institutions will in like manner become clearer; and in particular that question of convivial entertainment, which may seem, perhaps, to have been a very trifling matter, and to have taken a great many more words than were necessary.

CLEINIAS: Perhaps, however, the theme may turn out not to be unworthy of the length of discourse.

ATHENIAN: Very good; let us proceed with any enquiry which really bears on our present object.

CLEINIAS: Proceed.

ATHENIAN: Suppose that we give this puppet of ours drink, — what will be the effect on him?

CLEINIAS: Having what in view do you ask that question?

ATHENIAN: Nothing as yet; but I ask generally, when the puppet is brought to the drink, what sort of result is likely to follow. I will endeavour to explain my meaning more clearly: what I am now asking is this — Does the drinking of wine heighten and increase pleasures and pains, and passions and loves?

CLEINIAS: Very greatly.

ATHENIAN: And are perception and memory, and opinion and

prudence, heightened and increased? Do not these qualities entirely desert a man if he becomes saturated with drink?

CLEINIAS: Yes, they entirely desert him.

ATHENIAN: Does he not return to the state of soul in which he was when a young child?

CLEINIAS: He does.

ATHENIAN: Then at that time he will have the least control over himself?

CLEINIAS: The least.

ATHENIAN: And will he not be in a most wretched plight?

CLEINIAS: Most wretched.

ATHENIAN: Then not only an old man but also a drunkard becomes a second time a child?

CLEINIAS: Well said, Stranger.

ATHENIAN: Is there any argument which will prove to us that we ought to encourage the taste for drinking instead of doing all we can to avoid it?

CLEINIAS: I suppose that there is; you at any rate, were just now saying that you were ready to maintain such a doctrine.

ATHENIAN: True, I was; and I am ready still, seeing that you have both declared that you are anxious to hear me.

CLEINIAS: To be sure we are, if only for the strangeness of the paradox, which asserts that a man ought of his own accord to plunge into utter degradation.

ATHENIAN: Are you speaking of the soul?

CLEINIAS: Yes.

ATHENIAN: And what would you say about the body, my friend?

Are you not surprised at any one of his own accord bringing upon himself deformity, leanness, ugliness, decrepitude?

CLEINIAS: Certainly.

ATHENIAN: Yet when a man goes of his own accord to a doctor's shop, and takes medicine, is he not aware that soon, and for many days afterwards, he will be in a state of body which he would die rather than accept as the permanent condition of his life? Are not those who train in gymnasia, at first beginning reduced to a state of weakness?

CLEINIAS: Yes, all that is well known.

ATHENIAN: Also that they go of their own accord for the sake of the subsequent benefit?

CLEINIAS: Very good.

ATHENIAN: And we may conceive this to be true in the same way of other practices?

CLEINIAS: Certainly.

ATHENIAN: And the same view may be taken of the pastime of drinking wine, if we are right in supposing that the same good effect follows?

CLEINIAS: To be sure.

ATHENIAN: If such convivialities should turn out to have any advantage equal in importance to that of gymnastic, they are in their very nature to be preferred to mere bodily exercise, inasmuch as they have no accompaniment of pain.

CLEINIAS: True; but I hardly think that we shall be able to discover any such benefits to be derived from them.

ATHENIAN: That is just what we must endeavour to show. And let me ask you a question: — Do we not distinguish two kinds of fear, which are very different?

CLEINIAS: What are they?

ATHENIAN: There is the fear of expected evil.

CLEINIAS: Yes.

ATHENIAN: And there is the fear of an evil reputation; we are afraid of being thought evil, because we do or say some dishonourable thing, which fear we and all men term shame.

CLEINIAS: Certainly.

ATHENIAN: These are the two fears, as I called them; one of which is the opposite of pain and other fears, and the opposite also of the greatest and most numerous sort of pleasures.

CLEINIAS: Very true.

ATHENIAN: And does not the legislator and every one who is good for anything, hold this fear in the greatest honour? This is what he terms reverence, and the confidence which is the reverse of this he terms insolence; and the latter he always deems to be a very great evil both to individuals and to states.

CLEINIAS: True.

ATHENIAN: Does not this kind of fear preserve us in many important ways? What is there which so surely gives victory and safety in war? For there are two things which give victory — confidence before enemies, and fear of disgrace before friends.

CLEINIAS: There are.

ATHENIAN: Then each of us should be fearless and also fearful; and why we should be either has now been determined.

CLEINIAS: Certainly.

ATHENIAN: And when we want to make any one fearless, we and the law bring him face to face with many fears.

CLEINIAS: Clearly.

ATHENIAN: And when we want to make him rightly fearful, must we not introduce him to shameless pleasures, and train him to take up arms against them, and to overcome them? Or does this principle apply to courage only, and must he who would be perfect in valour fight against and overcome his own natural character, — since if he be unpractised and inexperienced in such conflicts, he will not be half the man which he might have been, — and are we to suppose, that with temperance it is otherwise, and that he who has never fought with the shameless and unrighteous temptations of his pleasures and lusts, and conquered them, in earnest and in play, by word, deed, and act, will still be perfectly temperate?

CLEINIAS: A most unlikely supposition.

ATHENIAN: Suppose that some God had given a fear-potion to men, and that the more a man drank of this the more he regarded himself at every draught as a child of misfortune, and that he feared everything happening or about to happen to him; and that at last the most courageous of men utterly lost his presence of mind for a time, and only came to himself again when he had slept off the influence of the draught.

CLEINIAS: But has such a draught, Stranger, ever really been known among men?

ATHENIAN: No; but, if there had been, might not such a draught have been of use to the legislator as a test of courage? Might we not go and say to him, ‘O legislator, whether you are legislating for the Cretan, or for any other state, would you not like to have a touchstone of the courage and cowardice of your citizens?’

CLEINIAS: ‘I should,’ will be the answer of every one.

ATHENIAN: ‘And you would rather have a touchstone in which there is no risk and no great danger than the reverse?’

CLEINIAS: In that proposition every one may safely agree.

ATHENIAN: ‘And in order to make use of the draught, you would lead them amid these imaginary terrors, and prove them, when the

affection of fear was working upon them, and compel them to be fearless, exhorting and admonishing them; and also honouring them, but dishonouring any one who will not be persuaded by you to be in all respects such as you command him; and if he underwent the trial well and manfully, you would let him go unscathed; but if ill, you would inflict a punishment upon him? Or would you abstain from using the potion altogether, although you have no reason for abstaining?’

CLEINIAS: He would be certain, Stranger, to use the potion.

ATHENIAN: This would be a mode of testing and training which would be wonderfully easy in comparison with those now in use, and might be applied to a single person, or to a few, or indeed to any number; and he would do well who provided himself with the potion only, rather than with any number of other things, whether he preferred to be by himself in solitude, and there contend with his fears, because he was ashamed to be seen by the eye of man until he was perfect; or trusting to the force of his own nature and habits, and believing that he had been already disciplined sufficiently, he did not hesitate to train himself in company with any number of others, and display his power in conquering the irresistible change effected by the draught — his virtue being such, that he never in any instance fell into any great unseemliness, but was always himself, and left off before he arrived at the last cup, fearing that he, like all other men, might be overcome by the potion.

CLEINIAS: Yes, Stranger, in that last case, too, he might equally show his self-control.

ATHENIAN: Let us return to the lawgiver, and say to him:— ‘Well, lawgiver, there is certainly no such fear-potion which man has either received from the Gods or himself discovered; for witchcraft has no place at our board. But is there any potion which might serve as a test of overboldness and excessive and indiscreet boasting?’

CLEINIAS: I suppose that he will say, Yes, — meaning that wine is such a potion.

ATHENIAN: Is not the effect of this quite the opposite of the effect of the other? When a man drinks wine he begins to be better pleased with himself, and the more he drinks the more he is filled full of brave hopes, and conceit of his power, and at last the string of his tongue is loosened, and fancying himself wise, he is brimming over with lawlessness, and has no more fear or respect, and is ready to do or say anything.

CLEINIAS: I think that every one will admit the truth of your description.

MEGILLUS: Certainly.

ATHENIAN: Now, let us remember, as we were saying, that there are two things which should be cultivated in the soul: first, the greatest courage; secondly, the greatest fear —

CLEINIAS: Which you said to be characteristic of reverence, if I am not mistaken.

ATHENIAN: Thank you for reminding me. But now, as the habit of courage and fearlessness is to be trained amid fears, let us consider whether the opposite quality is not also to be trained among opposites.

CLEINIAS: That is probably the case.

ATHENIAN: There are times and seasons at which we are by nature more than commonly valiant and bold; now we ought to train ourselves on these occasions to be as free from impudence and shamelessness as possible, and to be afraid to say or suffer or do anything that is base.

CLEINIAS: True.

ATHENIAN: Are not the moments in which we are apt to be bold and shameless such as these? — when we are under the influence of anger, love, pride, ignorance, avarice, cowardice? or when wealth, beauty, strength, and all the intoxicating workings of pleasure madden us? What is better adapted than the festive use of wine, in

the first place to test, and in the second place to train the character of a man, if care be taken in the use of it? What is there cheaper, or more innocent? For do but consider which is the greater risk: — Would you rather test a man of a morose and savage nature, which is the source of ten thousand acts of injustice, by making bargains with him at a risk to yourself, or by having him as a companion at the festival of Dionysus? Or would you, if you wanted to apply a touchstone to a man who is prone to love, entrust your wife, or your sons, or daughters to him, perilling your dearest interests in order to have a view of the condition of his soul? I might mention numberless cases, in which the advantage would be manifest of getting to know a character in sport, and without paying dearly for experience. And I do not believe that either a Cretan, or any other man, will doubt that such a test is a fair test, and safer, cheaper, and speedier than any other.

CLEINIAS: That is certainly true.

ATHENIAN: And this knowledge of the natures and habits of men's souls will be of the greatest use in that art which has the management of them; and that art, if I am not mistaken, is politics.

CLEINIAS: Exactly so.

BOOK II.

ATHENIAN: And now we have to consider whether the insight into human nature is the only benefit derived from well-ordered potations, or whether there are not other advantages great and much to be desired. The argument seems to imply that there are. But how and in what way these are to be attained, will have to be considered attentively, or we may be entangled in error.

CLEINIAS: Proceed.

ATHENIAN: Let me once more recall our doctrine of right education; which, if I am not mistaken, depends on the due regulation of convivial intercourse.

CLEINIAS: You talk rather grandly.

ATHENIAN: Pleasure and pain I maintain to be the first perceptions of children, and I say that they are the forms under which virtue and vice are originally present to them. As to wisdom and true and fixed opinions, happy is the man who acquires them, even when declining in years; and we may say that he who possesses them, and the blessings which are contained in them, is a perfect man. Now I mean by education that training which is given by suitable habits to the first instincts of virtue in children; — when pleasure, and friendship, and pain, and hatred, are rightly implanted in souls not yet capable of understanding the nature of them, and who find them, after they have attained reason, to be in harmony with her. This harmony of the soul, taken as a whole, is virtue; but the particular training in respect of pleasure and pain, which leads you always to hate what you ought to hate, and love what you ought to love from the beginning of life to the end, may be separated off; and, in my view, will be rightly called education.

CLEINIAS: I think, Stranger, that you are quite right in all that you have said and are saying about education.

ATHENIAN: I am glad to hear that you agree with me; for, indeed,

the discipline of pleasure and pain which, when rightly ordered, is a principle of education, has been often relaxed and corrupted in human life. And the Gods, pitying the toils which our race is born to undergo, have appointed holy festivals, wherein men alternate rest with labour; and have given them the Muses and Apollo, the leader of the Muses, and Dionysus, to be companions in their revels, that they may improve their education by taking part in the festivals of the Gods, and with their help. I should like to know whether a common saying is in our opinion true to nature or not. For men say that the young of all creatures cannot be quiet in their bodies or in their voices; they are always wanting to move and cry out; some leaping and skipping, and overflowing with sportiveness and delight at something, others uttering all sorts of cries. But, whereas the animals have no perception of order or disorder in their movements, that is, of rhythm or harmony, as they are called, to us, the Gods, who, as we say, have been appointed to be our companions in the dance, have given the pleasurable sense of harmony and rhythm; and so they stir us into life, and we follow them, joining hands together in dances and songs; and these they call choruses, which is a term naturally expressive of cheerfulness. Shall we begin, then, with the acknowledgment that education is first given through Apollo and the Muses? What do you say?

CLEINIAS: I assent.

ATHENIAN: And the uneducated is he who has not been trained in the chorus, and the educated is he who has been well trained?

CLEINIAS: Certainly.

ATHENIAN: And the chorus is made up of two parts, dance and song?

CLEINIAS: True.

ATHENIAN: Then he who is well educated will be able to sing and dance well?

CLEINIAS: I suppose that he will.

ATHENIAN: Let us see; what are we saying?

CLEINIAS: What?

ATHENIAN: He sings well and dances well; now must we add that he sings what is good and dances what is good?

CLEINIAS: Let us make the addition.

ATHENIAN: We will suppose that he knows the good to be good, and the bad to be bad, and makes use of them accordingly: which now is the better trained in dancing and music — he who is able to move his body and to use his voice in what is understood to be the right manner, but has no delight in good or hatred of evil; or he who is incorrect in gesture and voice, but is right in his sense of pleasure and pain, and welcomes what is good, and is offended at what is evil?

CLEINIAS: There is a great difference, Stranger, in the two kinds of education.

ATHENIAN: If we three know what is good in song and dance, then we truly know also who is educated and who is uneducated; but if not, then we certainly shall not know wherein lies the safeguard of education, and whether there is any or not.

CLEINIAS: True.

ATHENIAN: Let us follow the scent like hounds, and go in pursuit of beauty of figure, and melody, and song, and dance; if these escape us, there will be no use in talking about true education, whether Hellenic or barbarian.

CLEINIAS: Yes.

ATHENIAN: And what is beauty of figure, or beautiful melody? When a manly soul is in trouble, and when a cowardly soul is in similar case, are they likely to use the same figures and gestures, or to give utterance to the same sounds?

CLEINIAS: How can they, when the very colours of their faces

differ?

ATHENIAN: Good, my friend; I may observe, however, in passing, that in music there certainly are figures and there are melodies: and music is concerned with harmony and rhythm, so that you may speak of a melody or figure having good rhythm or good harmony — the term is correct enough; but to speak metaphorically of a melody or figure having a ‘good colour,’ as the masters of choruses do, is not allowable, although you can speak of the melodies or figures of the brave and the coward, praising the one and censuring the other. And not to be tedious, let us say that the figures and melodies which are expressive of virtue of soul or body, or of images of virtue, are without exception good, and those which are expressive of vice are the reverse of good.

CLEINIAS: Your suggestion is excellent; and let us answer that these things are so.

ATHENIAN: Once more, are all of us equally delighted with every sort of dance?

CLEINIAS: Far otherwise.

ATHENIAN: What, then, leads us astray? Are beautiful things not the same to us all, or are they the same in themselves, but not in our opinion of them? For no one will admit that forms of vice in the dance are more beautiful than forms of virtue, or that he himself delights in the forms of vice, and others in a muse of another character. And yet most persons say, that the excellence of music is to give pleasure to our souls. But this is intolerable and blasphemous; there is, however, a much more plausible account of the delusion.

CLEINIAS: What?

ATHENIAN: The adaptation of art to the characters of men. Choric movements are imitations of manners occurring in various actions, fortunes, dispositions, — each particular is imitated, and those to whom the words, or songs, or dances are suited, either by nature or habit or both, cannot help feeling pleasure in them and applauding

them, and calling them beautiful. But those whose natures, or ways, or habits are unsuited to them, cannot delight in them or applaud them, and they call them base. There are others, again, whose natures are right and their habits wrong, or whose habits are right and their natures wrong, and they praise one thing, but are pleased at another. For they say that all these imitations are pleasant, but not good. And in the presence of those whom they think wise, they are ashamed of dancing and singing in the baser manner, or of deliberately lending any countenance to such proceedings; and yet, they have a secret pleasure in them.

CLEINIAS: Very true.

ATHENIAN: And is any harm done to the lover of vicious dances or songs, or any good done to the approver of the opposite sort of pleasure?

CLEINIAS: I think that there is.

ATHENIAN: 'I think' is not the word, but I would say, rather, 'I am certain.' For must they not have the same effect as when a man associates with bad characters, whom he likes and approves rather than dislikes, and only censures playfully because he has a suspicion of his own badness? In that case, he who takes pleasure in them will surely become like those in whom he takes pleasure, even though he be ashamed to praise them. And what greater good or evil can any destiny ever make us undergo?

CLEINIAS: I know of none.

ATHENIAN: Then in a city which has good laws, or in future ages is to have them, bearing in mind the instruction and amusement which are given by music, can we suppose that the poets are to be allowed to teach in the dance anything which they themselves like, in the way of rhythm, or melody, or words, to the young children of any well-conditioned parents? Is the poet to train his choruses as he pleases, without reference to virtue or vice?

CLEINIAS: That is surely quite unreasonable, and is not to be

thought of.

ATHENIAN: And yet he may do this in almost any state with the exception of Egypt.

CLEINIAS: And what are the laws about music and dancing in Egypt?

ATHENIAN: You will wonder when I tell you: Long ago they appear to have recognized the very principle of which we are now speaking — that their young citizens must be habituated to forms and strains of virtue. These they fixed, and exhibited the patterns of them in their temples; and no painter or artist is allowed to innovate upon them, or to leave the traditional forms and invent new ones. To this day, no alteration is allowed either in these arts, or in music at all. And you will find that their works of art are painted or moulded in the same forms which they had ten thousand years ago; — this is literally true and no exaggeration, — their ancient paintings and sculptures are not a whit better or worse than the work of to-day, but are made with just the same skill.

CLEINIAS: How extraordinary!

ATHENIAN: I should rather say, How statesmanlike, how worthy of a legislator! I know that other things in Egypt are not so well. But what I am telling you about music is true and deserving of consideration, because showing that a lawgiver may institute melodies which have a natural truth and correctness without any fear of failure. To do this, however, must be the work of God, or of a divine person; in Egypt they have a tradition that their ancient chants which have been preserved for so many ages are the composition of the Goddess Isis. And therefore, as I was saying, if a person can only find in any way the natural melodies, he may confidently embody them in a fixed and legal form. For the love of novelty which arises out of pleasure in the new and weariness of the old, has not strength enough to corrupt the consecrated song and dance, under the plea that they have become antiquated. At any rate, they are far from being corrupted in Egypt.

CLEINIAS: Your arguments seem to prove your point.

ATHENIAN: May we not confidently say that the true use of music and of choral festivities is as follows: We rejoice when we think that we prosper, and again we think that we prosper when we rejoice?

CLEINIAS: Exactly.

ATHENIAN: And when rejoicing in our good fortune, we are unable to be still?

CLEINIAS: True.

ATHENIAN: Our young men break forth into dancing and singing, and we who are their elders deem that we are fulfilling our part in life when we look on at them. Having lost our agility, we delight in their sports and merry-making, because we love to think of our former selves; and gladly institute contests for those who are able to awaken in us the memory of our youth.

CLEINIAS: Very true.

ATHENIAN: Is it altogether unmeaning to say, as the common people do about festivals, that he should be adjudged the wisest of men, and the winner of the palm, who gives us the greatest amount of pleasure and mirth? For on such occasions, and when mirth is the order of the day, ought not he to be honoured most, and, as I was saying, bear the palm, who gives most mirth to the greatest number? Now is this a true way of speaking or of acting?

CLEINIAS: Possibly.

ATHENIAN: But, my dear friend, let us distinguish between different cases, and not be hasty in forming a judgment: One way of considering the question will be to imagine a festival at which there are entertainments of all sorts, including gymnastic, musical, and equestrian contests: the citizens are assembled; prizes are offered, and proclamation is made that any one who likes may enter the lists, and that he is to bear the palm who gives the most pleasure to the spectators — there is to be no regulation about the manner how; but

he who is most successful in giving pleasure is to be crowned victor, and deemed to be the pleasantest of the candidates: What is likely to be the result of such a proclamation?

CLEINIAS: In what respect?

ATHENIAN: There would be various exhibitions: one man, like Homer, will exhibit a rhapsody, another a performance on the lute; one will have a tragedy, and another a comedy. Nor would there be anything astonishing in some one imagining that he could gain the prize by exhibiting a puppet-show. Suppose these competitors to meet, and not these only, but innumerable others as well — can you tell me who ought to be the victor?

CLEINIAS: I do not see how any one can answer you, or pretend to know, unless he has heard with his own ears the several competitors; the question is absurd.

ATHENIAN: Well, then, if neither of you can answer, shall I answer this question which you deem so absurd?

CLEINIAS: By all means.

ATHENIAN: If very small children are to determine the question, they will decide for the puppet show.

CLEINIAS: Of course.

ATHENIAN: The older children will be advocates of comedy; educated women, and young men, and people in general, will favour tragedy.

CLEINIAS: Very likely.

ATHENIAN: And I believe that we old men would have the greatest pleasure in hearing a rhapsodist recite well the Iliad and Odyssey, or one of the Hesiodic poems, and would award the victory to him. But, who would really be the victor? — that is the question.

CLEINIAS: Yes.

ATHENIAN: Clearly you and I will have to declare that those whom we old men adjudge victors ought to win; for our ways are far and away better than any which at present exist anywhere in the world.

CLEINIAS: Certainly.

ATHENIAN: Thus far I too should agree with the many, that the excellence of music is to be measured by pleasure. But the pleasure must not be that of chance persons; the fairest music is that which delights the best and best educated, and especially that which delights the one man who is pre-eminent in virtue and education. And therefore the judges must be men of character, for they will require both wisdom and courage; the true judge must not draw his inspiration from the theatre, nor ought he to be unnerved by the clamour of the many and his own incapacity; nor again, knowing the truth, ought he through cowardice and unmanliness carelessly to deliver a lying judgment, with the very same lips which have just appealed to the Gods before he judged. He is sitting not as the disciple of the theatre, but, in his proper place, as their instructor, and he ought to be the enemy of all pandering to the pleasure of the spectators. The ancient and common custom of Hellas, which still prevails in Italy and Sicily, did certainly leave the judgment to the body of spectators, who determined the victor by show of hands. But this custom has been the destruction of the poets; for they are now in the habit of composing with a view to please the bad taste of their judges, and the result is that the spectators instruct themselves; — and also it has been the ruin of the theatre; they ought to be having characters put before them better than their own, and so receiving a higher pleasure, but now by their own act the opposite result follows. What inference is to be drawn from all this? Shall I tell you?

CLEINIAS: What?

ATHENIAN: The inference at which we arrive for the third or fourth time is, that education is the constraining and directing of youth towards that right reason, which the law affirms, and which the experience of the eldest and best has agreed to be truly right. In order, then, that the soul of the child may not be habituated to feel

joy and sorrow in a manner at variance with the law, and those who obey the law, but may rather follow the law and rejoice and sorrow at the same things as the aged — in order, I say, to produce this effect, chants appear to have been invented, which really enchant, and are designed to implant that harmony of which we speak. And, because the mind of the child is incapable of enduring serious training, they are called plays and songs, and are performed in play; just as when men are sick and ailing in their bodies, their attendants give them wholesome diet in pleasant meats and drinks, but unwholesome diet in disagreeable things, in order that they may learn, as they ought, to like the one, and to dislike the other. And similarly the true legislator will persuade, and, if he cannot persuade, will compel the poet to express, as he ought, by fair and noble words, in his rhythms, the figures, and in his melodies, the music of temperate and brave and in every way good men.

CLEINIAS: But do you really imagine, Stranger, that this is the way in which poets generally compose in States at the present day? As far as I can observe, except among us and among the Lacedaemonians, there are no regulations like those of which you speak; in other places novelties are always being introduced in dancing and in music, generally not under the authority of any law, but at the instigation of lawless pleasures; and these pleasures are so far from being the same, as you describe the Egyptian to be, or having the same principles, that they are never the same.

ATHENIAN: Most true, Cleinias; and I daresay that I may have expressed myself obscurely, and so led you to imagine that I was speaking of some really existing state of things, whereas I was only saying what regulations I would like to have about music; and hence there occurred a misapprehension on your part. For when evils are far gone and irremediable, the task of censuring them is never pleasant, although at times necessary. But as we do not really differ, will you let me ask you whether you consider such institutions to be more prevalent among the Cretans and Lacedaemonians than among the other Hellenes?

CLEINIAS: Certainly they are.

ATHENIAN: And if they were extended to the other Hellenes, would it be an improvement on the present state of things?

CLEINIAS: A very great improvement, if the customs which prevail among them were such as prevail among us and the Lacedaemonians, and such as you were just now saying ought to prevail.

ATHENIAN: Let us see whether we understand one another: — Are not the principles of education and music which prevail among you as follows: you compel your poets to say that the good man, if he be temperate and just, is fortunate and happy; and this whether he be great and strong or small and weak, and whether he be rich or poor; and, on the other hand, if he have a wealth passing that of Cinyras or Midas, and be unjust, he is wretched and lives in misery? As the poet says, and with truth: I sing not, I care not about him who accomplishes all noble things, not having justice; let him who ‘draws near and stretches out his hand against his enemies be a just man.’ But if he be unjust, I would not have him ‘look calmly upon bloody death,’ nor ‘surpass in swiftness the Thracian Boreas;’ and let no other thing that is called good ever be his. For the goods of which the many speak are not really good: first in the catalogue is placed health, beauty next, wealth third; and then innumerable others, as for example to have a keen eye or a quick ear, and in general to have all the senses perfect; or, again, to be a tyrant and do as you like; and the final consummation of happiness is to have acquired all these things, and when you have acquired them to become at once immortal. But you and I say, that while to the just and holy all these things are the best of possessions, to the unjust they are all, including even health, the greatest of evils. For in truth, to have sight, and hearing, and the use of the senses, or to live at all without justice and virtue, even though a man be rich in all the so-called goods of fortune, is the greatest of evils, if life be immortal; but not so great, if the bad man lives only a very short time. These are the truths which, if I am not mistaken, you will persuade or compel your poets to utter with suitable accompaniments of harmony and rhythm, and in these they must train up your youth. Am I not right? For I plainly declare that evils as they are termed are goods to the unjust, and only evils to the

just, and that goods are truly good to the good, but evil to the evil. Let me ask again, Are you and I agreed about this?

CLEINIAS: I think that we partly agree and partly do not.

ATHENIAN: When a man has health and wealth and a tyranny which lasts, and when he is pre-eminent in strength and courage, and has the gift of immortality, and none of the so-called evils which counter-balance these goods, but only the injustice and insolence of his own nature — of such an one you are, I suspect, unwilling to believe that he is miserable rather than happy.

CLEINIAS: That is quite true.

ATHENIAN: Once more: Suppose that he be valiant and strong, and handsome and rich, and does throughout his whole life whatever he likes, still, if he be unrighteous and insolent, would not both of you agree that he will of necessity live basely? You will surely grant so much?

CLEINIAS: Certainly.

ATHENIAN: And an evil life too?

CLEINIAS: I am not equally disposed to grant that.

ATHENIAN: Will he not live painfully and to his own disadvantage?

CLEINIAS: How can I possibly say so?

ATHENIAN: How! Then may Heaven make us to be of one mind, for now we are of two. To me, dear Cleinias, the truth of what I am saying is as plain as the fact that Crete is an island. And, if I were a lawgiver, I would try to make the poets and all the citizens speak in this strain, and I would inflict the heaviest penalties on any one in all the land who should dare to say that there are bad men who lead pleasant lives, or that the profitable and gainful is one thing, and the just another; and there are many other matters about which I should make my citizens speak in a manner different from the Cretans and Lacedaemonians of this age, and I may say, indeed, from the world in

general. For tell me, my good friends, by Zeus and Apollo tell me, if I were to ask these same Gods who were your legislators, — Is not the most just life also the pleasantest? or are there two lives, one of which is the justest and the other the pleasantest? — and they were to reply that there are two; and thereupon I proceeded to ask, (that would be the right way of pursuing the enquiry), Which are the happier — those who lead the justest, or those who lead the pleasantest life? and they replied, Those who lead the pleasantest — that would be a very strange answer, which I should not like to put into the mouth of the Gods. The words will come with more propriety from the lips of fathers and legislators, and therefore I will repeat my former questions to one of them, and suppose him to say again that he who leads the pleasantest life is the happiest. And to that I rejoin: — O my father, did you not wish me to live as happily as possible? And yet you also never ceased telling me that I should live as justly as possible. Now, here the giver of the rule, whether he be legislator or father, will be in a dilemma, and will in vain endeavour to be consistent with himself. But if he were to declare that the justest life is also the happiest, every one hearing him would enquire, if I am not mistaken, what is that good and noble principle in life which the law approves, and which is superior to pleasure. For what good can the just man have which is separated from pleasure? Shall we say that glory and fame, coming from Gods and men, though good and noble, are nevertheless unpleasant, and infamy pleasant? Certainly not, sweet legislator. Or shall we say that the not-doing of wrong and there being no wrong done is good and honourable, although there is no pleasure in it, and that the doing wrong is pleasant, but evil and base?

CLEINIAS: Impossible.

ATHENIAN: The view which identifies the pleasant and the pleasant and the just and the good and the noble has an excellent moral and religious tendency. And the opposite view is most at variance with the designs of the legislator, and is, in his opinion, infamous; for no one, if he can help, will be persuaded to do that which gives him more pain than pleasure. But as distant prospects are apt to make us

dizzy, especially in childhood, the legislator will try to purge away the darkness and exhibit the truth; he will persuade the citizens, in some way or other, by customs and praises and words, that just and unjust are shadows only, and that injustice, which seems opposed to justice, when contemplated by the unjust and evil man appears pleasant and the just most unpleasant; but that from the just man's point of view, the very opposite is the appearance of both of them.

CLEINIAS: True.

ATHENIAN: And which may be supposed to be the truer judgment — that of the inferior or of the better soul?

CLEINIAS: Surely, that of the better soul.

ATHENIAN: Then the unjust life must not only be more base and depraved, but also more unpleasant than the just and holy life?

CLEINIAS: That seems to be implied in the present argument.

ATHENIAN: And even supposing this were otherwise, and not as the argument has proven, still the lawgiver, who is worth anything, if he ever ventures to tell a lie to the young for their good, could not invent a more useful lie than this, or one which will have a better effect in making them do what is right, not on compulsion but voluntarily.

CLEINIAS: Truth, Stranger, is a noble thing and a lasting, but a thing of which men are hard to be persuaded.

ATHENIAN: And yet the story of the Sidonian Cadmus, which is so improbable, has been readily believed, and also innumerable other tales.

CLEINIAS: What is that story?

ATHENIAN: The story of armed men springing up after the sowing of teeth, which the legislator may take as a proof that he can persuade the minds of the young of anything; so that he has only to reflect and find out what belief will be of the greatest public advantage, and then use all his efforts to make the whole community

utter one and the same word in their songs and tales and discourses all their life long. But if you do not agree with me, there is no reason why you should not argue on the other side.

CLEINIAS: I do not see that any argument can fairly be raised by either of us against what you are now saying.

ATHENIAN: The next suggestion which I have to offer is, that all our three choruses shall sing to the young and tender souls of children, reciting in their strains all the noble thoughts of which we have already spoken, or are about to speak; and the sum of them shall be, that the life which is by the Gods deemed to be the happiest is also the best; — we shall affirm this to be a most certain truth; and the minds of our young disciples will be more likely to receive these words of ours than any others which we might address to them.

CLEINIAS: I assent to what you say.

ATHENIAN: First will enter in their natural order the sacred choir composed of children, which is to sing lustily the heaven-taught lay to the whole city. Next will follow the choir of young men under the age of thirty, who will call upon the God Paean to testify to the truth of their words, and will pray him to be gracious to the youth and to turn their hearts. Thirdly, the choir of elder men, who are from thirty to sixty years of age, will also sing. There remain those who are too old to sing, and they will tell stories, illustrating the same virtues, as with the voice of an oracle.

CLEINIAS: Who are those who compose the third choir, Stranger? for I do not clearly understand what you mean to say about them.

ATHENIAN: And yet almost all that I have been saying has been said with a view to them.

CLEINIAS: Will you try to be a little plainer?

ATHENIAN: I was speaking at the commencement of our discourse, as you will remember, of the fiery nature of young creatures: I said that they were unable to keep quiet either in limb or voice, and that they called out and jumped about in a disorderly manner; and that no

other animal attained to any perception of order, but man only. Now the order of motion is called rhythm, and the order of the voice, in which high and low are duly mingled, is called harmony; and both together are termed choric song. And I said that the Gods had pity on us, and gave us Apollo and the Muses to be our playfellows and leaders in the dance; and Dionysus, as I dare say that you will remember, was the third.

CLEINIAS: I quite remember.

ATHENIAN: Thus far I have spoken of the chorus of Apollo and the Muses, and I have still to speak of the remaining chorus, which is that of Dionysus.

CLEINIAS: How is that arranged? There is something strange, at any rate on first hearing, in a Dionysiac chorus of old men, if you really mean that those who are above thirty, and may be fifty, or from fifty to sixty years of age, are to dance in his honour.

ATHENIAN: Very true; and therefore it must be shown that there is good reason for the proposal.

CLEINIAS: Certainly.

ATHENIAN: Are we agreed thus far?

CLEINIAS: About what?

ATHENIAN: That every man and boy, slave and free, both sexes, and the whole city, should never cease charming themselves with the strains of which we have spoken; and that there should be every sort of change and variation of them in order to take away the effect of sameness, so that the singers may always receive pleasure from their hymns, and may never weary of them?

CLEINIAS: Every one will agree.

ATHENIAN: Where, then, will that best part of our city which, by reason of age and intelligence, has the greatest influence, sing these fairest of strains, which are to do so much good? Shall we be so

foolish as to let them off who would give us the most beautiful and also the most useful of songs?

CLEINIAS: But, says the argument, we cannot let them off.

ATHENIAN: Then how can we carry out our purpose with decorum? Will this be the way?

CLEINIAS: What?

ATHENIAN: When a man is advancing in years, he is afraid and reluctant to sing; — he has no pleasure in his own performances; and if compulsion is used, he will be more and more ashamed, the older and more discreet he grows; — is not this true?

CLEINIAS: Certainly.

ATHENIAN: Well, and will he not be yet more ashamed if he has to stand up and sing in the theatre to a mixed audience? — and if moreover when he is required to do so, like the other choirs who contend for prizes, and have been trained under a singing master, he is pinched and hungry, he will certainly have a feeling of shame and discomfort which will make him very unwilling to exhibit.

CLEINIAS: No doubt.

ATHENIAN: How, then, shall we reassure him, and get him to sing? Shall we begin by enacting that boys shall not taste wine at all until they are eighteen years of age; we will tell them that fire must not be poured upon fire, whether in the body or in the soul, until they begin to go to work — this is a precaution which has to be taken against the excitableness of youth; — afterwards they may taste wine in moderation up to the age of thirty, but while a man is young he should abstain altogether from intoxication and from excess of wine; when, at length, he has reached forty years, after dinner at a public mess, he may invite not only the other Gods, but Dionysus above all, to the mystery and festivity of the elder men, making use of the wine which he has given men to lighten the sourness of old age; that in age we may renew our youth, and forget our sorrows; and also in order that the nature of the soul, like iron melted in the fire, may become

softer and so more impressible. In the first place, will not any one who is thus mellowed be more ready and less ashamed to sing — I do not say before a large audience, but before a moderate company; nor yet among strangers, but among his familiars, and, as we have often said, to chant, and to enchant?

CLEINIAS: He will be far more ready.

ATHENIAN: There will be no impropriety in our using such a method of persuading them to join with us in song.

CLEINIAS: None at all.

ATHENIAN: And what strain will they sing, and what muse will they hymn? The strain should clearly be one suitable to them.

CLEINIAS: Certainly.

ATHENIAN: And what strain is suitable for heroes? Shall they sing a choric strain?

CLEINIAS: Truly, Stranger, we of Crete and Lacedaemon know no strain other than that which we have learnt and been accustomed to sing in our chorus.

ATHENIAN: I dare say; for you have never acquired the knowledge of the most beautiful kind of song, in your military way of life, which is modelled after the camp, and is not like that of dwellers in cities; and you have your young men herding and feeding together like young colts. No one takes his own individual colt and drags him away from his fellows against his will, raging and foaming, and gives him a groom to attend to him alone, and trains and rubs him down privately, and gives him the qualities in education which will make him not only a good soldier, but also a governor of a state and of cities. Such an one, as we said at first, would be a greater warrior than he of whom Tyrtaeus sings; and he would honour courage everywhere, but always as the fourth, and not as the first part of virtue, either in individuals or states.

CLEINIAS: Once more, Stranger, I must complain that you

depreciate our lawgivers.

ATHENIAN: Not intentionally, if at all, my good friend; but whither the argument leads, thither let us follow; for if there be indeed some strain of song more beautiful than that of the choruses or the public theatres, I should like to impart it to those who, as we say, are ashamed of these, and want to have the best.

CLEINIAS: Certainly.

ATHENIAN: When things have an accompanying charm, either the best thing in them is this very charm, or there is some rightness or utility possessed by them; — for example, I should say that eating and drinking, and the use of food in general, have an accompanying charm which we call pleasure; but that this rightness and utility is just the healthfulness of the things served up to us, which is their true rightness.

CLEINIAS: Just so.

ATHENIAN: Thus, too, I should say that learning has a certain accompanying charm which is the pleasure; but that the right and the profitable, the good and the noble, are qualities which the truth gives to it.

CLEINIAS: Exactly.

ATHENIAN: And so in the imitative arts — if they succeed in making likenesses, and are accompanied by pleasure, may not their works be said to have a charm?

CLEINIAS: Yes.

ATHENIAN: But equal proportions, whether of quality or quantity, and not pleasure, speaking generally, would give them truth or rightness.

CLEINIAS: Yes.

ATHENIAN: Then that only can be rightly judged by the standard of pleasure, which makes or furnishes no utility or truth or likeness, nor

on the other hand is productive of any hurtful quality, but exists solely for the sake of the accompanying charm; and the term 'pleasure' is most appropriately applied to it when these other qualities are absent.

CLEINIAS: You are speaking of harmless pleasure, are you not?

ATHENIAN: Yes; and this I term amusement, when doing neither harm nor good in any degree worth speaking of.

CLEINIAS: Very true.

ATHENIAN: Then, if such be our principles, we must assert that imitation is not to be judged of by pleasure and false opinion; and this is true of all equality, for the equal is not equal or the symmetrical symmetrical, because somebody thinks or likes something, but they are to be judged of by the standard of truth, and by no other whatever.

CLEINIAS: Quite true.

ATHENIAN: Do we not regard all music as representative and imitative?

CLEINIAS: Certainly.

ATHENIAN: Then, when any one says that music is to be judged of by pleasure, his doctrine cannot be admitted; and if there be any music of which pleasure is the criterion, such music is not to be sought out or deemed to have any real excellence, but only that other kind of music which is an imitation of the good.

CLEINIAS: Very true.

ATHENIAN: And those who seek for the best kind of song and music ought not to seek for that which is pleasant, but for that which is true; and the truth of imitation consists, as we were saying, in rendering the thing imitated according to quantity and quality.

CLEINIAS: Certainly.

ATHENIAN: And every one will admit that musical compositions are all imitative and representative. Will not poets and spectators and actors all agree in this?

CLEINIAS: They will.

ATHENIAN: Surely then he who would judge correctly must know what each composition is; for if he does not know what is the character and meaning of the piece, and what it represents, he will never discern whether the intention is true or false.

CLEINIAS: Certainly not.

ATHENIAN: And will he who does not know what is true be able to distinguish what is good and bad? My statement is not very clear; but perhaps you will understand me better if I put the matter in another way.

CLEINIAS: How?

ATHENIAN: There are ten thousand likenesses of objects of sight?

CLEINIAS: Yes.

ATHENIAN: And can he who does not know what the exact object is which is imitated, ever know whether the resemblance is truthfully executed? I mean, for example, whether a statue has the proportions of a body, and the true situation of the parts; what those proportions are, and how the parts fit into one another in due order; also their colours and conformations, or whether this is all confused in the execution: do you think that any one can know about this, who does not know what the animal is which has been imitated?

CLEINIAS: Impossible.

ATHENIAN: But even if we know that the thing pictured or sculptured is a man, who has received at the hand of the artist all his proper parts and colours and shapes, must we not also know whether the work is beautiful or in any respect deficient in beauty?

CLEINIAS: If this were not required, Stranger, we should all of us

be judges of beauty.

ATHENIAN: Very true; and may we not say that in everything imitated, whether in drawing, music, or any other art, he who is to be a competent judge must possess three things; — he must know, in the first place, of what the imitation is; secondly, he must know that it is true; and thirdly, that it has been well executed in words and melodies and rhythms?

CLEINIAS: Certainly.

ATHENIAN: Then let us not faint in discussing the peculiar difficulty of music. Music is more celebrated than any other kind of imitation, and therefore requires the greatest care of them all. For if a man makes a mistake here, he may do himself the greatest injury by welcoming evil dispositions, and the mistake may be very difficult to discern, because the poets are artists very inferior in character to the Muses themselves, who would never fall into the monstrous error of assigning to the words of men the gestures and songs of women; nor after combining the melodies with the gestures of freemen would they add on the rhythms of slaves and men of the baser sort; nor, beginning with the rhythms and gestures of freemen, would they assign to them a melody or words which are of an opposite character; nor would they mix up the voices and sounds of animals and of men and instruments, and every other sort of noise, as if they were all one. But human poets are fond of introducing this sort of inconsistent mixture, and so make themselves ridiculous in the eyes of those who, as Orpheus says, ‘are ripe for true pleasure.’ The experienced see all this confusion, and yet the poets go on and make still further havoc by separating the rhythm and the figure of the dance from the melody, setting bare words to metre, and also separating the melody and the rhythm from the words, using the lyre or the flute alone. For when there are no words, it is very difficult to recognize the meaning of the harmony and rhythm, or to see that any worthy object is imitated by them. And we must acknowledge that all this sort of thing, which aims only at swiftness and smoothness and a brutish noise, and uses the flute and the lyre not as the mere accompaniments of the dance and song, is exceedingly coarse and tasteless. The use of

either instrument, when unaccompanied, leads to every sort of irregularity and trickery. This is all rational enough. But we are considering not how our choristers, who are from thirty to fifty years of age, and may be over fifty, are not to use the Muses, but how they are to use them. And the considerations which we have urged seem to show in what way these fifty years' old choristers who are to sing, may be expected to be better trained. For they need to have a quick perception and knowledge of harmonies and rhythms; otherwise, how can they ever know whether a melody would be rightly sung to the Dorian mode, or to the rhythm which the poet has assigned to it?

CLEINIAS: Clearly they cannot.

ATHENIAN: The many are ridiculous in imagining that they know what is in proper harmony and rhythm, and what is not, when they can only be made to sing and step in rhythm by force; it never occurs to them that they are ignorant of what they are doing. Now every melody is right when it has suitable harmony and rhythm, and wrong when unsuitable.

CLEINIAS: That is most certain.

ATHENIAN: But can a man who does not know a thing, as we were saying, know that the thing is right?

CLEINIAS: Impossible.

ATHENIAN: Then now, as would appear, we are making the discovery that our newly-appointed choristers, whom we hereby invite and, although they are their own masters, compel to sing, must be educated to such an extent as to be able to follow the steps of the rhythm and the notes of the song, that they may know the harmonies and rhythms, and be able to select what are suitable for men of their age and character to sing; and may sing them, and have innocent pleasure from their own performance, and also lead younger men to welcome with dutiful delight good dispositions. Having such training, they will attain a more accurate knowledge than falls to the lot of the common people, or even of the poets themselves. For the poet need not know the third point, viz., whether the imitation is

good or not, though he can hardly help knowing the laws of melody and rhythm. But the aged chorus must know all the three, that they may choose the best, and that which is nearest to the best; for otherwise they will never be able to charm the souls of young men in the way of virtue. And now the original design of the argument which was intended to bring eloquent aid to the Chorus of Dionysus, has been accomplished to the best of our ability, and let us see whether we were right: — I should imagine that a drinking assembly is likely to become more and more tumultuous as the drinking goes on: this, as we were saying at first, will certainly be the case.

CLEINIAS: Certainly.

ATHENIAN: Every man has a more than natural elevation; his heart is glad within him, and he will say anything and will be restrained by nobody at such a time; he fancies that he is able to rule over himself and all mankind.

CLEINIAS: Quite true.

ATHENIAN: Were we not saying that on such occasions the souls of the drinkers become like iron heated in the fire, and grow softer and younger, and are easily moulded by him who knows how to educate and fashion them, just as when they were young, and that this fashioner of them is the same who prescribed for them in the days of their youth, viz., the good legislator; and that he ought to enact laws of the banquet, which, when a man is confident, bold, and impudent, and unwilling to wait his turn and have his share of silence and speech, and drinking and music, will change his character into the opposite — such laws as will infuse into him a just and noble fear, which will take up arms at the approach of insolence, being that divine fear which we have called reverence and shame?

CLEINIAS: True.

ATHENIAN: And the guardians of these laws and fellow-workers with them are the calm and sober generals of the drinkers; and without their help there is greater difficulty in fighting against drink than in fighting against enemies when the commander of an army is

not himself calm; and he who is unwilling to obey them and the commanders of Dionysiac feasts who are more than sixty years of age, shall suffer a disgrace as great as he who disobeys military leaders, or even greater.

CLEINIAS: Right.

ATHENIAN: If, then, drinking and amusement were regulated in this way, would not the companions of our revels be improved? they would part better friends than they were, and not, as now, enemies. Their whole intercourse would be regulated by law and observant of it, and the sober would be the leaders of the drunken.

CLEINIAS: I think so too, if drinking were regulated as you propose.

ATHENIAN: Let us not then simply censure the gift of Dionysus as bad and unfit to be received into the State. For wine has many excellences, and one pre-eminent one, about which there is a difficulty in speaking to the many, from a fear of their misconceiving and misunderstanding what is said.

CLEINIAS: To what do you refer?

ATHENIAN: There is a tradition or story, which has somehow crept about the world, that Dionysus was robbed of his wits by his stepmother Here, and that out of revenge he inspires Bacchic furies and dancing madresses in others; for which reason he gave men wine. Such traditions concerning the Gods I leave to those who think that they may be safely uttered (compare Euthyph.; Republic); I only know that no animal at birth is mature or perfect in intelligence; and in the intermediate period, in which he has not yet acquired his own proper sense, he rages and roars without rhyme or reason; and when he has once got on his legs he jumps about without rhyme or reason; and this, as you will remember, has been already said by us to be the origin of music and gymnastic.

CLEINIAS: To be sure, I remember.

ATHENIAN: And did we not say that the sense of harmony and rhythm sprang from this beginning among men, and that Apollo and

the Muses and Dionysus were the Gods whom we had to thank for them?

CLEINIAS: Certainly.

ATHENIAN: The other story implied that wine was given man out of revenge, and in order to make him mad; but our present doctrine, on the contrary, is, that wine was given him as a balm, and in order to implant modesty in the soul, and health and strength in the body.

CLEINIAS: That, Stranger, is precisely what was said.

ATHENIAN: Then half the subject may now be considered to have been discussed; shall we proceed to the consideration of the other half?

CLEINIAS: What is the other half, and how do you divide the subject?

ATHENIAN: The whole choral art is also in our view the whole of education; and of this art, rhythms and harmonies form the part which has to do with the voice.

CLEINIAS: Yes.

ATHENIAN: The movement of the body has rhythm in common with the movement of the voice, but gesture is peculiar to it, whereas song is simply the movement of the voice.

CLEINIAS: Most true.

ATHENIAN: And the sound of the voice which reaches and educates the soul, we have ventured to term music.

CLEINIAS: We were right.

ATHENIAN: And the movement of the body, when regarded as an amusement, we termed dancing; but when extended and pursued with a view to the excellence of the body, this scientific training may be called gymnastic.

CLEINIAS: Exactly.

ATHENIAN: Music, which was one half of the choral art, may be said to have been completely discussed. Shall we proceed to the other half or not? What would you like?

CLEINIAS: My good friend, when you are talking with a Cretan and Lacedaemonian, and we have discussed music and not gymnastic, what answer are either of us likely to make to such an enquiry?

ATHENIAN: An answer is contained in your question; and I understand and accept what you say not only as an answer, but also as a command to proceed with gymnastic.

CLEINIAS: You quite understand me; do as you say.

ATHENIAN: I will; and there will not be any difficulty in speaking intelligibly to you about a subject with which both of you are far more familiar than with music.

CLEINIAS: There will not.

ATHENIAN: Is not the origin of gymnastics, too, to be sought in the tendency to rapid motion which exists in all animals; man, as we were saying, having attained the sense of rhythm, created and invented dancing; and melody arousing and awakening rhythm, both united formed the choral art?

CLEINIAS: Very true.

ATHENIAN: And one part of this subject has been already discussed by us, and there still remains another to be discussed?

CLEINIAS: Exactly.

ATHENIAN: I have first a final word to add to my discourse about drink, if you will allow me to do so.

CLEINIAS: What more have you to say?

ATHENIAN: I should say that if a city seriously means to adopt the

practice of drinking under due regulation and with a view to the enforcement of temperance, and in like manner, and on the same principle, will allow of other pleasures, designing to gain the victory over them — in this way all of them may be used. But if the State makes drinking an amusement only, and whoever likes may drink whenever he likes, and with whom he likes, and add to this any other indulgences, I shall never agree or allow that this city or this man should practise drinking. I would go further than the Cretans and Lacedaemonians, and am disposed rather to the law of the Carthaginians, that no one while he is on a campaign should be allowed to taste wine at all, but that he should drink water during all that time, and that in the city no slave, male or female, should ever drink wine; and that no magistrates should drink during their year of office, nor should pilots of vessels or judges while on duty taste wine at all, nor any one who is going to hold a consultation about any matter of importance; nor in the day-time at all, unless in consequence of exercise or as medicine; nor again at night, when any one, either man or woman, is minded to get children. There are numberless other cases also in which those who have good sense and good laws ought not to drink wine, so that if what I say is true, no city will need many vineyards. Their husbandry and their way of life in general will follow an appointed order, and their cultivation of the vine will be the most limited and the least common of their employments. And this, Stranger, shall be the crown of my discourse about wine, if you agree.

CLEINIAS: Excellent: we agree.

BOOK III.

ATHENIAN: Enough of this. And what, then, is to be regarded as the origin of government? Will not a man be able to judge of it best from a point of view in which he may behold the progress of states and their transitions to good or evil?

CLEINIAS: What do you mean?

ATHENIAN: I mean that he might watch them from the point of view of time, and observe the changes which take place in them during infinite ages.

CLEINIAS: How so?

ATHENIAN: Why, do you think that you can reckon the time which has elapsed since cities first existed and men were citizens of them?

CLEINIAS: Hardly.

ATHENIAN: But are sure that it must be vast and incalculable?

CLEINIAS: Certainly.

ATHENIAN: And have not thousands and thousands of cities come into being during this period and as many perished? And has not each of them had every form of government many times over, now growing larger, now smaller, and again improving or declining?

CLEINIAS: To be sure.

ATHENIAN: Let us endeavour to ascertain the cause of these changes; for that will probably explain the first origin and development of forms of government.

CLEINIAS: Very good. You shall endeavour to impart your thoughts to us, and we will make an effort to understand you.

ATHENIAN: Do you believe that there is any truth in ancient traditions?

CLEINIAS: What traditions?

ATHENIAN: The traditions about the many destructions of mankind which have been occasioned by deluges and pestilences, and in many other ways, and of the survival of a remnant?

CLEINIAS: Every one is disposed to believe them.

ATHENIAN: Let us consider one of them, that which was caused by the famous deluge.

CLEINIAS: What are we to observe about it?

ATHENIAN: I mean to say that those who then escaped would only be hill shepherds, — small sparks of the human race preserved on the tops of mountains.

CLEINIAS: Clearly.

ATHENIAN: Such survivors would necessarily be unacquainted with the arts and the various devices which are suggested to the dwellers in cities by interest or ambition, and with all the wrongs which they contrive against one another.

CLEINIAS: Very true.

ATHENIAN: Let us suppose, then, that the cities in the plain and on the sea-coast were utterly destroyed at that time.

CLEINIAS: Very good.

ATHENIAN: Would not all implements have then perished and every other excellent invention of political or any other sort of wisdom have utterly disappeared?

CLEINIAS: Why, yes, my friend; and if things had always continued as they are at present ordered, how could any discovery have ever been made even in the least particular? For it is evident that the arts were unknown during ten thousand times ten thousand years. And no more than a thousand or two thousand years have elapsed since the discoveries of Daedalus, Orpheus and Palamedes, — since Marsyas

and Olympus invented music, and Amphion the lyre — not to speak of numberless other inventions which are but of yesterday.

ATHENIAN: Have you forgotten, Cleinias, the name of a friend who is really of yesterday?

CLEINIAS: I suppose that you mean Epimenides.

ATHENIAN: The same, my friend; he does indeed far overleap the heads of all mankind by his invention; for he carried out in practice, as you declare, what of old Hesiod (Works and Days) only preached.

CLEINIAS: Yes, according to our tradition.

ATHENIAN: After the great destruction, may we not suppose that the state of man was something of this sort: — In the beginning of things there was a fearful illimitable desert and a vast expanse of land; a herd or two of oxen would be the only survivors of the animal world; and there might be a few goats, these too hardly enough to maintain the shepherds who tended them?

CLEINIAS: True.

ATHENIAN: And of cities or governments or legislation, about which we are now talking, do you suppose that they could have any recollection at all?

CLEINIAS: None whatever.

ATHENIAN: And out of this state of things has there not sprung all that we now are and have: cities and governments, and arts and laws, and a great deal of vice and a great deal of virtue?

CLEINIAS: What do you mean?

ATHENIAN: Why, my good friend, how can we possibly suppose that those who knew nothing of all the good and evil of cities could have attained their full development, whether of virtue or of vice?

CLEINIAS: I understand your meaning, and you are quite right.

ATHENIAN: But, as time advanced and the race multiplied, the world came to be what the world is.

CLEINIAS: Very true.

ATHENIAN: Doubtless the change was not made all in a moment, but little by little, during a very long period of time.

CLEINIAS: A highly probable supposition.

ATHENIAN: At first, they would have a natural fear ringing in their ears which would prevent their descending from the heights into the plain.

CLEINIAS: Of course.

ATHENIAN: The fewness of the survivors at that time would have made them all the more desirous of seeing one another; but then the means of travelling either by land or sea had been almost entirely lost, as I may say, with the loss of the arts, and there was great difficulty in getting at one another; for iron and brass and all metals were jumbled together and had disappeared in the chaos; nor was there any possibility of extracting ore from them; and they had scarcely any means of felling timber. Even if you suppose that some implements might have been preserved in the mountains, they must quickly have worn out and vanished, and there would be no more of them until the art of metallurgy had again revived.

CLEINIAS: There could not have been.

ATHENIAN: In how many generations would this be attained?

CLEINIAS: Clearly, not for many generations.

ATHENIAN: During this period, and for some time afterwards, all the arts which require iron and brass and the like would disappear.

CLEINIAS: Certainly.

ATHENIAN: Faction and war would also have died out in those days, and for many reasons.

CLEINIAS: How would that be?

ATHENIAN: In the first place, the desolation of these primitive men would create in them a feeling of affection and goodwill towards one another; and, secondly, they would have no occasion to quarrel about their subsistence, for they would have pasture in abundance, except just at first, and in some particular cases; and from their pasture-land they would obtain the greater part of their food in a primitive age, having plenty of milk and flesh; moreover they would procure other food by the chase, not to be despised either in quantity or quality. They would also have abundance of clothing, and bedding, and dwellings, and utensils either capable of standing on the fire or not; for the plastic and weaving arts do not require any use of iron: and God has given these two arts to man in order to provide him with all such things, that, when reduced to the last extremity, the human race may still grow and increase. Hence in those days mankind were not very poor; nor was poverty a cause of difference among them; and rich they could not have been, having neither gold nor silver: — such at that time was their condition. And the community which has neither poverty nor riches will always have the noblest principles; in it there is no insolence or injustice, nor, again, are there any contentions or envyings. And therefore they were good, and also because they were what is called simple-minded; and when they were told about good and evil, they in their simplicity believed what they heard to be very truth and practised it. No one had the wit to suspect another of a falsehood, as men do now; but what they heard about Gods and men they believed to be true, and lived accordingly; and therefore they were in all respects such as we have described them.

CLEINIAS: That quite accords with my views, and with those of my friend here.

ATHENIAN: Would not many generations living on in a simple manner, although ruder, perhaps, and more ignorant of the arts generally, and in particular of those of land or naval warfare, and likewise of other arts, termed in cities legal practices and party conflicts, and including all conceivable ways of hurting one another

in word and deed; — although inferior to those who lived before the deluge, or to the men of our day in these respects, would they not, I say, be simpler and more manly, and also more temperate and altogether more just? The reason has been already explained.

CLEINIAS: Very true.

ATHENIAN: I should wish you to understand that what has preceded and what is about to follow, has been, and will be said, with the intention of explaining what need the men of that time had of laws, and who was their lawgiver.

CLEINIAS: And thus far what you have said has been very well said.

ATHENIAN: They could hardly have wanted lawgivers as yet; nothing of that sort was likely to have existed in their days, for they had no letters at this early period; they lived by habit and the customs of their ancestors, as they are called.

CLEINIAS: Probably.

ATHENIAN: But there was already existing a form of government which, if I am not mistaken, is generally termed a lordship, and this still remains in many places, both among Hellenes and barbarians (compare Arist. Pol.), and is the government which is declared by Homer to have prevailed among the Cyclopes: —

‘They have neither councils nor judgments, but they dwell in hollow caves on the tops of high mountains, and every one gives law to his wife and children, and they do not busy themselves about one another.’ (Odys.)

CLEINIAS: That seems to be a charming poet of yours; I have read some other verses of his, which are very clever; but I do not know much of him, for foreign poets are very little read among the Cretans.

MEGILLUS: But they are in Lacedaemon, and he appears to be the prince of them all; the manner of life, however, which he describes is not Spartan, but rather Ionian, and he seems quite to confirm what

you are saying, when he traces up the ancient state of mankind by the help of tradition to barbarism.

ATHENIAN: Yes, he does confirm it; and we may accept his witness to the fact that such forms of government sometimes arise.

CLEINIAS: We may.

ATHENIAN: And were not such states composed of men who had been dispersed in single habitations and families by the poverty which attended the devastations; and did not the eldest then rule among them, because with them government originated in the authority of a father and a mother, whom, like a flock of birds, they followed, forming one troop under the patriarchal rule and sovereignty of their parents, which of all sovereignties is the most just?

CLEINIAS: Very true.

ATHENIAN: After this they came together in greater numbers, and increased the size of their cities, and betook themselves to husbandry, first of all at the foot of the mountains, and made enclosures of loose walls and works of defence, in order to keep off wild beasts; thus creating a single large and common habitation.

CLEINIAS: Yes; at least we may suppose so.

ATHENIAN: There is another thing which would probably happen.

CLEINIAS: What?

ATHENIAN: When these larger habitations grew up out of the lesser original ones, each of the lesser ones would survive in the larger; every family would be under the rule of the eldest, and, owing to their separation from one another, would have peculiar customs in things divine and human, which they would have received from their several parents who had educated them; and these customs would incline them to order, when the parents had the element of order in their nature, and to courage, when they had the element of courage. And they would naturally stamp upon their children, and upon their

children's children, their own likings; and, as we are saying, they would find their way into the larger society, having already their own peculiar laws.

CLEINIAS: Certainly.

ATHENIAN: And every man surely likes his own laws best, and the laws of others not so well.

CLEINIAS: True.

ATHENIAN: Then now we seem to have stumbled upon the beginnings of legislation.

CLEINIAS: Exactly.

ATHENIAN: The next step will be that these persons who have met together, will select some arbiters, who will review the laws of all of them, and will publicly present such as they approve to the chiefs who lead the tribes, and who are in a manner their kings, allowing them to choose those which they think best. These persons will themselves be called legislators, and will appoint the magistrates, framing some sort of aristocracy, or perhaps monarchy, out of the dynasties or lordships, and in this altered state of the government they will live.

CLEINIAS: Yes, that would be the natural order of things.

ATHENIAN: Then, now let us speak of a third form of government, in which all other forms and conditions of polities and cities concur.

CLEINIAS: What is that?

ATHENIAN: The form which in fact Homer indicates as following the second. This third form arose when, as he says, Dardanus founded Dardania: —

‘For not as yet had the holy Ilium been built on the plain to be a city of speaking men; but they were still dwelling at the foot of many-fountained Ida.’

For indeed, in these verses, and in what he said of the Cyclopes, he speaks the words of God and nature; for poets are a divine race, and often in their strains, by the aid of the Muses and the Graces, they attain truth.

CLEINIAS: Yes.

ATHENIAN: Then now let us proceed with the rest of our tale, which will probably be found to illustrate in some degree our proposed design: — Shall we do so?

CLEINIAS: By all means.

ATHENIAN: Ilium was built, when they descended from the mountain, in a large and fair plain, on a sort of low hill, watered by many rivers descending from Ida.

CLEINIAS: Such is the tradition.

ATHENIAN: And we must suppose this event to have taken place many ages after the deluge?

ATHENIAN: A marvellous forgetfulness of the former destruction would appear to have come over them, when they placed their town right under numerous streams flowing from the heights, trusting for their security to not very high hills, either.

CLEINIAS: There must have been a long interval, clearly.

ATHENIAN: And, as population increased, many other cities would begin to be inhabited.

CLEINIAS: Doubtless.

ATHENIAN: Those cities made war against Troy — by sea as well as land — for at that time men were ceasing to be afraid of the sea.

CLEINIAS: Clearly.

ATHENIAN: The Achaeans remained ten years, and overthrew Troy.

CLEINIAS: True.

ATHENIAN: And during the ten years in which the Achaeans were besieging Ilium, the homes of the besiegers were falling into an evil plight. Their youth revolted; and when the soldiers returned to their own cities and families, they did not receive them properly, and as they ought to have done, and numerous deaths, murders, exiles, were the consequence. The exiles came again, under a new name, no longer Achaeans, but Dorians, — a name which they derived from Dorieus; for it was he who gathered them together. The rest of the story is told by you Lacedaemonians as part of the history of Sparta.

MEGILLUS: To be sure.

ATHENIAN: Thus, after digressing from the original subject of laws into music and drinking-bouts, the argument has, providentially, come back to the same point, and presents to us another handle. For we have reached the settlement of Lacedaemon; which, as you truly say, is in laws and in institutions the sister of Crete. And we are all the better for the digression, because we have gone through various governments and settlements, and have been present at the foundation of a first, second, and third state, succeeding one another in infinite time. And now there appears on the horizon a fourth state or nation which was once in process of settlement and has continued settled to this day. If, out of all this, we are able to discern what is well or ill settled, and what laws are the salvation and what are the destruction of cities, and what changes would make a state happy, O Megillus and Cleinias, we may now begin again, unless we have some fault to find with the previous discussion.

MEGILLUS: If some God, Stranger, would promise us that our new enquiry about legislation would be as good and full as the present, I would go a great way to hear such another, and would think that a day as long as this — and we are now approaching the longest day of the year — was too short for the discussion.

ATHENIAN: Then I suppose that we must consider this subject?

MEGILLUS: Certainly.

ATHENIAN: Let us place ourselves in thought at the moment when

Lacedaemon and Argos and Messene and the rest of the Peloponnesus were all in complete subjection, Megillus, to your ancestors; for afterwards, as the legend informs us, they divided their army into three portions, and settled three cities, Argos, Messene, Lacedaemon.

MEGILLUS: True.

ATHENIAN: Temenus was the king of Argos, Cresphontes of Messene, Procles and Eurysthenes of Lacedaemon.

MEGILLUS: Certainly.

ATHENIAN: To these kings all the men of that day made oath that they would assist them, if any one subverted their kingdom.

MEGILLUS: True.

ATHENIAN: But can a kingship be destroyed, or was any other form of government ever destroyed, by any but the rulers themselves? No indeed, by Zeus. Have we already forgotten what was said a little while ago?

MEGILLUS: No.

ATHENIAN: And may we not now further confirm what was then mentioned? For we have come upon facts which have brought us back again to the same principle; so that, in resuming the discussion, we shall not be enquiring about an empty theory, but about events which actually happened. The case was as follows: — Three royal heroes made oath to three cities which were under a kingly government, and the cities to the kings, that both rulers and subjects should govern and be governed according to the laws which were common to all of them: the rulers promised that as time and the race went forward they would not make their rule more arbitrary; and the subjects said that, if the rulers observed these conditions, they would never subvert or permit others to subvert those kingdoms; the kings were to assist kings and peoples when injured, and the peoples were to assist peoples and kings in like manner. Is not this the fact?

MEGILLUS: Yes.

ATHENIAN: And the three states to whom these laws were given, whether their kings or any others were the authors of them, had therefore the greatest security for the maintenance of their constitutions?

MEGILLUS: What security?

ATHENIAN: That the other two states were always to come to the rescue against a rebellious third.

MEGILLUS: True.

ATHENIAN: Many persons say that legislators ought to impose such laws as the mass of the people will be ready to receive; but this is just as if one were to command gymnastic masters or physicians to treat or cure their pupils or patients in an agreeable manner.

MEGILLUS: Exactly.

ATHENIAN: Whereas the physician may often be too happy if he can restore health, and make the body whole, without any very great infliction of pain.

MEGILLUS: Certainly.

ATHENIAN: There was also another advantage possessed by the men of that day, which greatly lightened the task of passing laws.

MEGILLUS: What advantage?

ATHENIAN: The legislators of that day, when they equalized property, escaped the great accusation which generally arises in legislation, if a person attempts to disturb the possession of land, or to abolish debts, because he sees that without this reform there can never be any real equality. Now, in general, when the legislator attempts to make a new settlement of such matters, every one meets him with the cry, that 'he is not to disturb vested interests,' — declaring with imprecations that he is introducing agrarian laws and cancelling of debts, until a man is at his wits' end; whereas no one

could quarrel with the Dorians for distributing the land, — there was nothing to hinder them; and as for debts, they had none which were considerable or of old standing.

MEGILLUS: Very true.

ATHENIAN: But then, my good friends, why did the settlement and legislation of their country turn out so badly?

MEGILLUS: How do you mean; and why do you blame them?

ATHENIAN: There were three kingdoms, and of these, two quickly corrupted their original constitution and laws, and the only one which remained was the Spartan.

MEGILLUS: The question which you ask is not easily answered.

ATHENIAN: And yet must be answered when we are enquiring about laws, this being our old man's sober game of play, whereby we beguile the way, as I was saying when we first set out on our journey.

MEGILLUS: Certainly; and we must find out why this was.

ATHENIAN: What laws are more worthy of our attention than those which have regulated such cities? or what settlements of states are greater or more famous?

MEGILLUS: I know of none.

ATHENIAN: Can we doubt that your ancestors intended these institutions not only for the protection of Peloponnesus, but of all the Hellenes, in case they were attacked by the barbarian? For the inhabitants of the region about Ilium, when they provoked by their insolence the Trojan war, relied upon the power of the Assyrians and the Empire of Ninus, which still existed and had a great prestige; the people of those days fearing the united Assyrian Empire just as we now fear the Great King. And the second capture of Troy was a serious offence against them, because Troy was a portion of the Assyrian Empire. To meet the danger the single army was distributed between three cities by the royal brothers, sons of Heracles, — a fair

device, as it seemed, and a far better arrangement than the expedition against Troy. For, firstly, the people of that day had, as they thought, in the Heraclidae better leaders than the Pelopidae; in the next place, they considered that their army was superior in valour to that which went against Troy; for, although the latter conquered the Trojans, they were themselves conquered by the Heraclidae — Achaeans by Dorians. May we not suppose that this was the intention with which the men of those days framed the constitutions of their states?

MEGILLUS: Quite true.

ATHENIAN: And would not men who had shared with one another many dangers, and were governed by a single race of royal brothers, and had taken the advice of oracles, and in particular of the Delphian Apollo, be likely to think that such states would be firmly and lastingly established?

MEGILLUS: Of course they would.

ATHENIAN: Yet these institutions, of which such great expectations were entertained, seem to have all rapidly vanished away; with the exception, as I was saying, of that small part of them which existed in your land. And this third part has never to this day ceased warring against the two others; whereas, if the original idea had been carried out, and they had agreed to be one, their power would have been invincible in war.

MEGILLUS: No doubt.

ATHENIAN: But what was the ruin of this glorious confederacy? Here is a subject well worthy of consideration.

MEGILLUS: Certainly, no one will ever find more striking instances of laws or governments being the salvation or destruction of great and noble interests, than are here presented to his view.

ATHENIAN: Then now we seem to have happily arrived at a real and important question.

MEGILLUS: Very true.

ATHENIAN: Did you never remark, sage friend, that all men, and we ourselves at this moment, often fancy that they see some beautiful thing which might have effected wonders if any one had only known how to make a right use of it in some way; and yet this mode of looking at things may turn out after all to be a mistake, and not according to nature, either in our own case or in any other?

MEGILLUS: To what are you referring, and what do you mean?

ATHENIAN: I was thinking of my own admiration of the aforesaid Heracleid expedition, which was so noble, and might have had such wonderful results for the Hellenes, if only rightly used; and I was just laughing at myself.

MEGILLUS: But were you not right and wise in speaking as you did, and we in assenting to you?

ATHENIAN: Perhaps; and yet I cannot help observing that any one who sees anything great or powerful, immediately has the feeling that— ‘If the owner only knew how to use his great and noble possession, how happy would he be, and what great results would he achieve!’

MEGILLUS: And would he not be justified?

ATHENIAN: Reflect; in what point of view does this sort of praise appear just: First, in reference to the question in hand: — If the then commanders had known how to arrange their army properly, how would they have attained success? Would not this have been the way? They would have bound them all firmly together and preserved them for ever, giving them freedom and dominion at pleasure, combined with the power of doing in the whole world, Hellenic and barbarian, whatever they and their descendants desired. What other aim would they have had?

MEGILLUS: Very good.

ATHENIAN: Suppose any one were in the same way to express his admiration at the sight of great wealth or family honour, or the like, he would praise them under the idea that through them he would

attain either all or the greater and chief part of what he desires.

MEGILLUS: He would.

ATHENIAN: Well, now, and does not the argument show that there is one common desire of all mankind?

MEGILLUS: What is it?

ATHENIAN: The desire which a man has, that all things, if possible, — at any rate, things human, — may come to pass in accordance with his soul's desire.

MEGILLUS: Certainly.

ATHENIAN: And having this desire always, and at every time of life, in youth, in manhood, in age, he cannot help always praying for the fulfilment of it.

MEGILLUS: No doubt.

ATHENIAN: And we join in the prayers of our friends, and ask for them what they ask for themselves.

MEGILLUS: We do.

ATHENIAN: Dear is the son to the father — the younger to the elder.

MEGILLUS: Of course.

ATHENIAN: And yet the son often prays to obtain things which the father prays that he may not obtain.

MEGILLUS: When the son is young and foolish, you mean?

ATHENIAN: Yes; or when the father, in the dotage of age or the heat of youth, having no sense of right and justice, prays with fervour, under the influence of feelings akin to those of Theseus when he cursed the unfortunate Hippolytus, do you imagine that the son, having a sense of right and justice, will join in his father's prayers?

MEGILLUS: I understand you to mean that a man should not desire

or be in a hurry to have all things according to his wish, for his wish may be at variance with his reason. But every state and every individual ought to pray and strive for wisdom.

ATHENIAN: Yes; and I remember, and you will remember, what I said at first, that a statesman and legislator ought to ordain laws with a view to wisdom; while you were arguing that the good lawgiver ought to order all with a view to war. And to this I replied that there were four virtues, but that upon your view one of them only was the aim of legislation; whereas you ought to regard all virtue, and especially that which comes first, and is the leader of all the rest — I mean wisdom and mind and opinion, having affection and desire in their train. And now the argument returns to the same point, and I say once more, in jest if you like, or in earnest if you like, that the prayer of a fool is full of danger, being likely to end in the opposite of what he desires. And if you would rather receive my words in earnest, I am willing that you should; and you will find, I suspect, as I have said already, that not cowardice was the cause of the ruin of the Dorian kings and of their whole design, nor ignorance of military matters, either on the part of the rulers or of their subjects; but their misfortunes were due to their general degeneracy, and especially to their ignorance of the most important human affairs. That was then, and is still, and always will be the case, as I will endeavour, if you will allow me, to make out and demonstrate as well as I am able to you who are my friends, in the course of the argument.

CLEINIAS: Pray go on, Stranger; — compliments are troublesome, but we will show, not in word but in deed, how greatly we prize your words, for we will give them our best attention; and that is the way in which a freeman best shows his approval or disapproval.

MEGILLUS: Excellent, Cleinias; let us do as you say.

CLEINIAS: By all means, if Heaven wills. Go on.

ATHENIAN: Well, then, proceeding in the same train of thought, I say that the greatest ignorance was the ruin of the Dorian power, and that now, as then, ignorance is ruin. And if this be true, the legislator

must endeavour to implant wisdom in states, and banish ignorance to the utmost of his power.

CLEINIAS: That is evident.

ATHENIAN: Then now consider what is really the greatest ignorance. I should like to know whether you and Megillus would agree with me in what I am about to say; for my opinion is —

CLEINIAS: What?

ATHENIAN: That the greatest ignorance is when a man hates that which he nevertheless thinks to be good and noble, and loves and embraces that which he knows to be unrighteous and evil. This disagreement between the sense of pleasure and the judgment of reason in the soul is, in my opinion, the worst ignorance; and also the greatest, because affecting the great mass of the human soul; for the principle which feels pleasure and pain in the individual is like the mass or populace in a state. And when the soul is opposed to knowledge, or opinion, or reason, which are her natural lords, that I call folly, just as in the state, when the multitude refuses to obey their rulers and the laws; or, again, in the individual, when fair reasonings have their habitation in the soul and yet do no good, but rather the reverse of good. All these cases I term the worst ignorance, whether in individuals or in states. You will understand, Stranger, that I am speaking of something which is very different from the ignorance of handicraftsmen.

CLEINIAS: Yes, my friend, we understand and agree.

ATHENIAN: Let us, then, in the first place declare and affirm that the citizen who does not know these things ought never to have any kind of authority entrusted to him: he must be stigmatized as ignorant, even though he be versed in calculation and skilled in all sorts of accomplishments, and feats of mental dexterity; and the opposite are to be called wise, even although, in the words of the proverb, they know neither how to read nor how to swim; and to them, as to men of sense, authority is to be committed. For, O my friends, how can there be the least shadow of wisdom when there is

no harmony? There is none; but the noblest and greatest of harmonies may be truly said to be the greatest wisdom; and of this he is a partaker who lives according to reason; whereas he who is devoid of reason is the destroyer of his house and the very opposite of a saviour of the state: he is utterly ignorant of political wisdom. Let this, then, as I was saying, be laid down by us.

CLEINIAS: Let it be so laid down.

ATHENIAN: I suppose that there must be rulers and subjects in states?

CLEINIAS: Certainly.

ATHENIAN: And what are the principles on which men rule and obey in cities, whether great or small; and similarly in families? What are they, and how many in number? Is there not one claim of authority which is always just, — that of fathers and mothers and in general of progenitors to rule over their offspring?

CLEINIAS: There is.

ATHENIAN: Next follows the principle that the noble should rule over the ignoble; and, thirdly, that the elder should rule and the younger obey?

CLEINIAS: To be sure.

ATHENIAN: And, fourthly, that slaves should be ruled, and their masters rule?

CLEINIAS: Of course.

ATHENIAN: Fifthly, if I am not mistaken, comes the principle that the stronger shall rule, and the weaker be ruled?

CLEINIAS: That is a rule not to be disobeyed.

ATHENIAN: Yes, and a rule which prevails very widely among all creatures, and is according to nature, as the Theban poet Pindar once said; and the sixth principle, and the greatest of all, is, that the wise

should lead and command, and the ignorant follow and obey; and yet, O thou most wise Pindar, as I should reply him, this surely is not contrary to nature, but according to nature, being the rule of law over willing subjects, and not a rule of compulsion.

CLEINIAS: Most true.

ATHENIAN: There is a seventh kind of rule which is awarded by lot, and is dear to the Gods and a token of good fortune: he on whom the lot falls is a ruler, and he who fails in obtaining the lot goes away and is the subject; and this we affirm to be quite just.

CLEINIAS: Certainly.

ATHENIAN: 'Then now,' as we say playfully to any of those who lightly undertake the making of laws, 'you see, legislator, the principles of government, how many they are, and that they are naturally opposed to each other. There we have discovered a fountain-head of seditions, to which you must attend. And, first, we will ask you to consider with us, how and in what respect the kings of Argos and Messene violated these our maxims, and ruined themselves and the great and famous Hellenic power of the olden time. Was it because they did not know how wisely Hesiod spoke when he said that the half is often more than the whole? His meaning was, that when to take the whole would be dangerous, and to take the half would be the safe and moderate course, then the moderate or better was more than the immoderate or worse.'

CLEINIAS: Very true.

ATHENIAN: And may we suppose this immoderate spirit to be more fatal when found among kings than when among peoples?

CLEINIAS: The probability is that ignorance will be a disorder especially prevalent among kings, because they lead a proud and luxurious life.

ATHENIAN: Is it not palpable that the chief aim of the kings of that time was to get the better of the established laws, and that they were not in harmony with the principles which they had agreed to observe

by word and oath? This want of harmony may have had the appearance of wisdom, but was really, as we assert, the greatest ignorance, and utterly overthrew the whole empire by dissonance and harsh discord.

CLEINIAS: Very likely.

ATHENIAN: Good; and what measures ought the legislator to have then taken in order to avert this calamity? Truly there is no great wisdom in knowing, and no great difficulty in telling, after the evil has happened; but to have foreseen the remedy at the time would have taken a much wiser head than ours.

MEGILLUS: What do you mean?

ATHENIAN: Any one who looks at what has occurred with you Lacedaemonians, Megillus, may easily know and may easily say what ought to have been done at that time.

MEGILLUS: Speak a little more clearly.

ATHENIAN: Nothing can be clearer than the observation which I am about to make.

MEGILLUS: What is it?

ATHENIAN: That if any one gives too great a power to anything, too large a sail to a vessel, too much food to the body, too much authority to the mind, and does not observe the mean, everything is overthrown, and, in the wantonness of excess, runs in the one case to disorders, and in the other to injustice, which is the child of excess. I mean to say, my dear friends, that there is no soul of man, young and irresponsible, who will be able to sustain the temptation of arbitrary power — no one who will not, under such circumstances, become filled with folly, that worst of diseases, and be hated by his nearest and dearest friends: when this happens his kingdom is undermined, and all his power vanishes from him. And great legislators who know the mean should take heed of the danger. As far as we can guess at this distance of time, what happened was as follows: —

MEGILLUS: What?

ATHENIAN: A God, who watched over Sparta, seeing into the future, gave you two families of kings instead of one; and thus brought you more within the limits of moderation. In the next place, some human wisdom mingled with divine power, observing that the constitution of your government was still feverish and excited, tempered your inborn strength and pride of birth with the moderation which comes of age, making the power of your twenty-eight elders equal with that of the kings in the most important matters. But your third saviour, perceiving that your government was still swelling and foaming, and desirous to impose a curb upon it, instituted the Ephors, whose power he made to resemble that of magistrates elected by lot; and by this arrangement the kingly office, being compounded of the right elements and duly moderated, was preserved, and was the means of preserving all the rest. Since, if there had been only the original legislators, Temenus, Cresphontes, and their contemporaries, as far as they were concerned not even the portion of Aristodemus would have been preserved; for they had no proper experience in legislation, or they would surely not have imagined that oaths would moderate a youthful spirit invested with a power which might be converted into a tyranny. Now that God has instructed us what sort of government would have been or will be lasting, there is no wisdom, as I have already said, in judging after the event; there is no difficulty in learning from an example which has already occurred. But if any one could have foreseen all this at the time, and had been able to moderate the government of the three kingdoms and unite them into one, he might have saved all the excellent institutions which were then conceived; and no Persian or any other armament would have dared to attack us, or would have regarded Hellas as a power to be despised.

CLEINIAS: True.

ATHENIAN: There was small credit to us, Cleinias, in defeating them; and the discredit was, not that the conquerors did not win glorious victories both by land and sea, but what, in my opinion, brought discredit was, first of all, the circumstance that of the three

cities one only fought on behalf of Hellas, and the two others were so utterly good for nothing that the one was waging a mighty war against Lacedaemon, and was thus preventing her from rendering assistance, while the city of Argos, which had the precedence at the time of the distribution, when asked to aid in repelling the barbarian, would not answer to the call, or give aid. Many things might be told about Hellas in connexion with that war which are far from honourable; nor, indeed, can we rightly say that Hellas repelled the invader; for the truth is, that unless the Athenians and Lacedaemonians, acting in concert, had warded off the impending yoke, all the tribes of Hellas would have been fused in a chaos of Hellenes mingling with one another, of barbarians mingling with Hellenes, and Hellenes with barbarians; just as nations who are now subject to the Persian power, owing to unnatural separations and combinations of them, are dispersed and scattered, and live miserably. These, Cleinias and Megillus, are the reproaches which we have to make against statesmen and legislators, as they are called, past and present, if we would analyse the causes of their failure, and find out what else might have been done. We said, for instance, just now, that there ought to be no great and unmixed powers; and this was under the idea that a state ought to be free and wise and harmonious, and that a legislator ought to legislate with a view to this end. Nor is there any reason to be surprised at our continually proposing aims for the legislator which appear not to be always the same; but we should consider when we say that temperance is to be the aim, or wisdom is to be the aim, or friendship is to be the aim, that all these aims are really the same; and if so, a variety in the modes of expression ought not to disturb us.

CLEINIAS: Let us resume the argument in that spirit. And now, speaking of friendship and wisdom and freedom, I wish that you would tell me at what, in your opinion, the legislator should aim.

ATHENIAN: Hear me, then: there are two mother forms of states from which the rest may be truly said to be derived; and one of them may be called monarchy and the other democracy: the Persians have the highest form of the one, and we of the other; almost all the rest,

as I was saying, are variations of these. Now, if you are to have liberty and the combination of friendship with wisdom, you must have both these forms of government in a measure; the argument emphatically declares that no city can be well governed which is not made up of both.

CLEINIAS: Impossible.

ATHENIAN: Neither the one, if it be exclusively and excessively attached to monarchy, nor the other, if it be similarly attached to freedom, observes moderation; but your states, the Laconian and Cretan, have more of it; and the same was the case with the Athenians and Persians of old time, but now they have less. Shall I tell you why?

CLEINIAS: By all means, if it will tend to elucidate our subject.

ATHENIAN: Hear, then: — There was a time when the Persians had more of the state which is a mean between slavery and freedom. In the reign of Cyrus they were freemen and also lords of many others: the rulers gave a share of freedom to the subjects, and being treated as equals, the soldiers were on better terms with their generals, and showed themselves more ready in the hour of danger. And if there was any wise man among them, who was able to give good counsel, he imparted his wisdom to the public; for the king was not jealous, but allowed him full liberty of speech, and gave honour to those who could advise him in any matter. And the nation waxed in all respects, because there was freedom and friendship and communion of mind among them.

CLEINIAS: That certainly appears to have been the case.

ATHENIAN: How, then, was this advantage lost under Cambyses, and again recovered under Darius? Shall I try to divine?

CLEINIAS: The enquiry, no doubt, has a bearing upon our subject.

ATHENIAN: I imagine that Cyrus, though a great and patriotic general, had never given his mind to education, and never attended to the order of his household.

CLEINIAS: What makes you say so?

ATHENIAN: I think that from his youth upwards he was a soldier, and entrusted the education of his children to the women; and they brought them up from their childhood as the favourites of fortune, who were blessed already, and needed no more blessings. They thought that they were happy enough, and that no one should be allowed to oppose them in any way, and they compelled every one to praise all that they said or did. This was how they brought them up.

CLEINIAS: A splendid education truly!

ATHENIAN: Such an one as women were likely to give them, and especially princesses who had recently grown rich, and in the absence of the men, too, who were occupied in wars and dangers, and had no time to look after them.

CLEINIAS: What would you expect?

ATHENIAN: Their father had possessions of cattle and sheep, and many herds of men and other animals, but he did not consider that those to whom he was about to make them over were not trained in his own calling, which was Persian; for the Persians are shepherds — sons of a rugged land, which is a stern mother, and well fitted to produce a sturdy race able to live in the open air and go without sleep, and also to fight, if fighting is required (compare Arist. Pol.). He did not observe that his sons were trained differently; through the so-called blessing of being royal they were educated in the Median fashion by women and eunuchs, which led to their becoming such as people do become when they are brought up unproved. And so, after the death of Cyrus, his sons, in the fulness of luxury and licence, took the kingdom, and first one slew the other because he could not endure a rival; and, afterwards, the slayer himself, mad with wine and brutality, lost his kingdom through the Medes and the Eunuch, as they called him, who despised the folly of Cambyses.

CLEINIAS: So runs the tale, and such probably were the facts.

ATHENIAN: Yes; and the tradition says, that the empire came back

to the Persians, through Darius and the seven chiefs.

CLEINIAS: True.

ATHENIAN: Let us note the rest of the story. Observe, that Darius was not the son of a king, and had not received a luxurious education. When he came to the throne, being one of the seven, he divided the country into seven portions, and of this arrangement there are some shadowy traces still remaining; he made laws upon the principle of introducing universal equality in the order of the state, and he embodied in his laws the settlement of the tribute which Cyrus promised, — thus creating a feeling of friendship and community among all the Persians, and attaching the people to him with money and gifts. Hence his armies cheerfully acquired for him countries as large as those which Cyrus had left behind him. Darius was succeeded by his son Xerxes; and he again was brought up in the royal and luxurious fashion. Might we not most justly say: ‘O Darius, how came you to bring up Xerxes in the same way in which Cyrus brought up Cambyzes, and not to see his fatal mistake?’ For Xerxes, being the creation of the same education, met with much the same fortune as Cambyzes; and from that time until now there has never been a really great king among the Persians, although they are all called Great. And their degeneracy is not to be attributed to chance, as I maintain; the reason is rather the evil life which is generally led by the sons of very rich and royal persons; for never will boy or man, young or old, excel in virtue, who has been thus educated. And this, I say, is what the legislator has to consider, and what at the present moment has to be considered by us. Justly may you, O Lacedaemonians, be praised, in that you do not give special honour or a special education to wealth rather than to poverty, or to a royal rather than to a private station, where the divine and inspired lawgiver has not originally commanded them to be given. For no man ought to have pre-eminent honour in a state because he surpasses others in wealth, any more than because he is swift of foot or fair or strong, unless he have some virtue in him; nor even if he have virtue, unless he have this particular virtue of temperance.

MEGILLUS: What do you mean, Stranger?

ATHENIAN: I suppose that courage is a part of virtue?

MEGILLUS: To be sure.

ATHENIAN: Then, now hear and judge for yourself: — Would you like to have for a fellow-lodger or neighbour a very courageous man, who had no control over himself?

MEGILLUS: Heaven forbid!

ATHENIAN: Or an artist, who was clever in his profession, but a rogue?

MEGILLUS: Certainly not.

ATHENIAN: And surely justice does not grow apart from temperance?

MEGILLUS: Impossible.

ATHENIAN: Any more than our pattern wise man, whom we exhibited as having his pleasures and pains in accordance with and corresponding to true reason, can be intemperate?

MEGILLUS: No.

ATHENIAN: There is a further consideration relating to the due and undue award of honours in states.

MEGILLUS: What is it?

ATHENIAN: I should like to know whether temperance without the other virtues, existing alone in the soul of man, is rightly to be praised or blamed?

MEGILLUS: I cannot tell.

ATHENIAN: And that is the best answer; for whichever alternative you had chosen, I think that you would have gone wrong.

MEGILLUS: I am fortunate.

ATHENIAN: Very good; a quality, which is a mere appendage of

things which can be praised or blamed, does not deserve an expression of opinion, but is best passed over in silence.

MEGILLUS: You are speaking of temperance?

ATHENIAN: Yes; but of the other virtues, that which having this appendage is also most beneficial, will be most deserving of honour, and next that which is beneficial in the next degree; and so each of them will be rightly honoured according to a regular order.

MEGILLUS: True.

ATHENIAN: And ought not the legislator to determine these classes?

MEGILLUS: Certainly he should.

ATHENIAN: Suppose that we leave to him the arrangement of details. But the general division of laws according to their importance into a first and second and third class, we who are lovers of law may make ourselves.

MEGILLUS: Very good.

ATHENIAN: We maintain, then, that a State which would be safe and happy, as far as the nature of man allows, must and ought to distribute honour and dishonour in the right way. And the right way is to place the goods of the soul first and highest in the scale, always assuming temperance to be the condition of them; and to assign the second place to the goods of the body; and the third place to money and property. And if any legislator or state departs from this rule by giving money the place of honour, or in any way preferring that which is really last, may we not say, that he or the state is doing an unholy and unpatriotic thing?

MEGILLUS: Yes; let that be plainly declared.

ATHENIAN: The consideration of the Persian governments led us thus far to enlarge. We remarked that the Persians grew worse and worse. And we affirm the reason of this to have been, that they too

much diminished the freedom of the people, and introduced too much of despotism, and so destroyed friendship and community of feeling. And when there is an end of these, no longer do the governors govern on behalf of their subjects or of the people, but on behalf of themselves; and if they think that they can gain ever so small an advantage for themselves, they devastate cities, and send fire and desolation among friendly races. And as they hate ruthlessly and horribly, so are they hated; and when they want the people to fight for them, they find no community of feeling or willingness to risk their lives on their behalf; their untold myriads are useless to them on the field of battle, and they think that their salvation depends on the employment of mercenaries and strangers whom they hire, as if they were in want of more men. And they cannot help being stupid, since they proclaim by their actions that the ordinary distinctions of right and wrong which are made in a state are a trifle, when compared with gold and silver.

MEGILLUS: Quite true.

ATHENIAN: And now enough of the Persians, and their present mal-administration of their government, which is owing to the excess of slavery and despotism among them.

MEGILLUS: Good.

ATHENIAN: Next, we must pass in review the government of Attica in like manner, and from this show that entire freedom and the absence of all superior authority is not by any means so good as government by others when properly limited, which was our ancient Athenian constitution at the time when the Persians made their attack on Hellas, or, speaking more correctly, on the whole continent of Europe. There were four classes, arranged according to a property census, and reverence was our queen and mistress, and made us willing to live in obedience to the laws which then prevailed. Also the vastness of the Persian armament, both by sea and on land, caused a helpless terror, which made us more and more the servants of our rulers and of the laws; and for all these reasons an exceeding harmony prevailed among us. About ten years before the naval

engagement at Salamis, Datis came, leading a Persian host by command of Darius, which was expressly directed against the Athenians and Eretrians, having orders to carry them away captive; and these orders he was to execute under pain of death. Now Datis and his myriads soon became complete masters of Eretria, and he sent a fearful report to Athens that no Eretrian had escaped him; for the soldiers of Datis had joined hands and netted the whole of Eretria. And this report, whether well or ill founded, was terrible to all the Hellenes, and above all to the Athenians, and they dispatched embassies in all directions, but no one was willing to come to their relief, with the exception of the Lacedaemonians; and they, either because they were detained by the Messenian war, which was then going on, or for some other reason of which we are not told, came a day too late for the battle of Marathon. After a while, the news arrived of mighty preparations being made, and innumerable threats came from the king. Then, as time went on, a rumour reached us that Darius had died, and that his son, who was young and hot-headed, had come to the throne and was persisting in his design. The Athenians were under the impression that the whole expedition was directed against them, in consequence of the battle of Marathon; and hearing of the bridge over the Hellespont, and the canal of Athos, and the host of ships, considering that there was no salvation for them either by land or by sea, for there was no one to help them, and remembering that in the first expedition, when the Persians destroyed Eretria, no one came to their help, or would risk the danger of an alliance with them, they thought that this would happen again, at least on land; nor, when they looked to the sea, could they descry any hope of salvation; for they were attacked by a thousand vessels and more. One chance of safety remained, slight indeed and desperate, but their only one. They saw that on the former occasion they had gained a seemingly impossible victory, and borne up by this hope, they found that their only refuge was in themselves and in the Gods. All these things created in them the spirit of friendship; there was the fear of the moment, and there was that higher fear, which they had acquired by obedience to their ancient laws, and which I have several times in the preceding discourse called reverence, of which the good man ought to be a willing servant, and of which the coward is

independent and fearless. If this fear had not possessed them, they would never have met the enemy, or defended their temples and sepulchres and their country, and everything that was near and dear to them, as they did; but little by little they would have been all scattered and dispersed.

MEGILLUS: Your words, Athenian, are quite true, and worthy of yourself and of your country.

ATHENIAN: They are true, Megillus; and to you, who have inherited the virtues of your ancestors, I may properly speak of the actions of that day. And I would wish you and Cleinias to consider whether my words have not also a bearing on legislation; for I am not discoursing only for the pleasure of talking, but for the argument's sake. Please to remark that the experience both of ourselves and the Persians was, in a certain sense, the same; for as they led their people into utter servitude, so we too led ours into all freedom. And now, how shall we proceed? for I would like you to observe that our previous arguments have good deal to say for themselves.

MEGILLUS: True; but I wish that you would give us a fuller explanation.

ATHENIAN: I will. Under the ancient laws, my friends, the people was not as now the master, but rather the willing servant of the laws.

MEGILLUS: What laws do you mean?

ATHENIAN: In the first place, let us speak of the laws about music, — that is to say, such music as then existed — in order that we may trace the growth of the excess of freedom from the beginning. Now music was early divided among us into certain kinds and manners. One sort consisted of prayers to the Gods, which were called hymns; and there was another and opposite sort called lamentations, and another termed paeans, and another, celebrating the birth of Dionysus, called, I believe, 'dithyrambs.' And they used the actual word 'laws,' or *nomoi*, for another kind of song; and to this they added the term 'citharoedic.' All these and others were duly distinguished, nor were the performers allowed to confuse one style

of music with another. And the authority which determined and gave judgment, and punished the disobedient, was not expressed in a hiss, nor in the most unmusical shouts of the multitude, as in our days, nor in applause and clapping of hands. But the directors of public instruction insisted that the spectators should listen in silence to the end; and boys and their tutors, and the multitude in general, were kept quiet by a hint from a stick. Such was the good order which the multitude were willing to observe; they would never have dared to give judgment by noisy cries. And then, as time went on, the poets themselves introduced the reign of vulgar and lawless innovation. They were men of genius, but they had no perception of what is just and lawful in music; raging like Bacchanals and possessed with inordinate delights — mingling lamentations with hymns, and paeans with dithyrambs; imitating the sounds of the flute on the lyre, and making one general confusion; ignorantly affirming that music has no truth, and, whether good or bad, can only be judged of rightly by the pleasure of the hearer (compare Republic). And by composing such licentious works, and adding to them words as licentious, they have inspired the multitude with lawlessness and boldness, and made them fancy that they can judge for themselves about melody and song. And in this way the theatres from being mute have become vocal, as though they had understanding of good and bad in music and poetry; and instead of an aristocracy, an evil sort of teatrocracy has grown up (compare Arist. Pol.). For if the democracy which judged had only consisted of educated persons, no fatal harm would have been done; but in music there first arose the universal conceit of omniscience and general lawlessness; — freedom came following afterwards, and men, fancying that they knew what they did not know, had no longer any fear, and the absence of fear begets shamelessness. For what is this shamelessness, which is so evil a thing, but the insolent refusal to regard the opinion of the better by reason of an over-daring sort of liberty?

MEGILLUS: Very true.

ATHENIAN: Consequent upon this freedom comes the other freedom, of disobedience to rulers (compare Republic); and then the

attempt to escape the control and exhortation of father, mother, elders, and when near the end, the control of the laws also; and at the very end there is the contempt of oaths and pledges, and no regard at all for the Gods, — herein they exhibit and imitate the old so-called Titanic nature, and come to the same point as the Titans when they rebelled against God, leading a life of endless evils. But why have I said all this? I ask, because the argument ought to be pulled up from time to time, and not be allowed to run away, but held with bit and bridle, and then we shall not, as the proverb says, fall off our ass. Let us then once more ask the question, To what end has all this been said?

MEGILLUS: Very good.

ATHENIAN: This, then, has been said for the sake —

MEGILLUS: Of what?

ATHENIAN: We were maintaining that the lawgiver ought to have three things in view: first, that the city for which he legislates should be free; and secondly, be at unity with herself; and thirdly, should have understanding; — these were our principles, were they not?

MEGILLUS: Certainly.

ATHENIAN: With a view to this we selected two kinds of government, the one the most despotic, and the other the most free; and now we are considering which of them is the right form: we took a mean in both cases, of despotism in the one, and of liberty in the other, and we saw that in a mean they attained their perfection; but that when they were carried to the extreme of either, slavery or licence, neither party were the gainers.

MEGILLUS: Very true.

ATHENIAN: And that was our reason for considering the settlement of the Dorian army, and of the city built by Dardanus at the foot of the mountains, and the removal of cities to the seashore, and of our mention of the first men, who were the survivors of the deluge. And all that was previously said about music and drinking, and what

preceded, was said with the view of seeing how a state might be best administered, and how an individual might best order his own life. And now, Megillus and Cleinias, how can we put to the proof the value of our words?

CLEINIAS: Stranger, I think that I see how a proof of their value may be obtained. This discussion of ours appears to me to have been singularly fortunate, and just what I at this moment want; most auspiciously have you and my friend Megillus come in my way. For I will tell you what has happened to me; and I regard the coincidence as a sort of omen. The greater part of Crete is going to send out a colony, and they have entrusted the management of the affair to the Cnosians; and the Cnosian government to me and nine others. And they desire us to give them any laws which we please, whether taken from the Cretan model or from any other; and they do not mind about their being foreign if they are better. Grant me then this favour, which will also be a gain to yourselves: — Let us make a selection from what has been said, and then let us imagine a State of which we will suppose ourselves to be the original founders. Thus we shall proceed with our enquiry, and, at the same time, I may have the use of the framework which you are constructing, for the city which is in contemplation.

ATHENIAN: Good news, Cleinias; if Megillus has no objection, you may be sure that I will do all in my power to please you.

CLEINIAS: Thank you.

MEGILLUS: And so will I.

CLEINIAS: Excellent; and now let us begin to frame the State.

BOOK IV.

ATHENIAN: And now, what will this city be? I do not mean to ask what is or will hereafter be the name of the place; that may be determined by the accident of locality or of the original settlement — a river or fountain, or some local deity may give the sanction of a name to the newly-founded city; but I do want to know what the situation is, whether maritime or inland.

CLEINIAS: I should imagine, Stranger, that the city of which we are speaking is about eighty stadia distant from the sea.

ATHENIAN: And are there harbours on the seaboard?

CLEINIAS: Excellent harbours, Stranger; there could not be better.

ATHENIAN: Alas! what a prospect! And is the surrounding country productive, or in need of importations?

CLEINIAS: Hardly in need of anything.

ATHENIAN: And is there any neighbouring State?

CLEINIAS: None whatever, and that is the reason for selecting the place; in days of old, there was a migration of the inhabitants, and the region has been deserted from time immemorial.

ATHENIAN: And has the place a fair proportion of hill, and plain, and wood?

CLEINIAS: Like the rest of Crete in that.

ATHENIAN: You mean to say that there is more rock than plain?

CLEINIAS: Exactly.

ATHENIAN: Then there is some hope that your citizens may be virtuous: had you been on the sea, and well provided with harbours, and an importing rather than a producing country, some mighty saviour would have been needed, and lawgivers more than mortal, if

you were ever to have a chance of preserving your state from degeneracy and discordance of manners (compare Ar. Pol.). But there is comfort in the eighty stadia; although the sea is too near, especially if, as you say, the harbours are so good. Still we may be content. The sea is pleasant enough as a daily companion, but has indeed also a bitter and brackish quality; filling the streets with merchants and shopkeepers, and begetting in the souls of men uncertain and unfaithful ways — making the state unfriendly and unfaithful both to her own citizens, and also to other nations. There is a consolation, therefore, in the country producing all things at home; and yet, owing to the ruggedness of the soil, not providing anything in great abundance. Had there been abundance, there might have been a great export trade, and a great return of gold and silver; which, as we may safely affirm, has the most fatal results on a State whose aim is the attainment of just and noble sentiments: this was said by us, if you remember, in the previous discussion.

CLEINIAS: I remember, and am of opinion that we both were and are in the right.

ATHENIAN: Well, but let me ask, how is the country supplied with timber for ship-building?

CLEINIAS: There is no fir of any consequence, nor pine, and not much cypress; and you will find very little stone-pine or plane-wood, which shipwrights always require for the interior of ships.

ATHENIAN: These are also natural advantages.

CLEINIAS: Why so?

ATHENIAN: Because no city ought to be easily able to imitate its enemies in what is mischievous.

CLEINIAS: How does that bear upon any of the matters of which we have been speaking?

ATHENIAN: Remember, my good friend, what I said at first about the Cretan laws, that they looked to one thing only, and this, as you both agreed, was war; and I replied that such laws, in so far as they

tended to promote virtue, were good; but in that they regarded a part only, and not the whole of virtue, I disapproved of them. And now I hope that you in your turn will follow and watch me if I legislate with a view to anything but virtue, or with a view to a part of virtue only. For I consider that the true lawgiver, like an archer, aims only at that on which some eternal beauty is always attending, and dismisses everything else, whether wealth or any other benefit, when separated from virtue. I was saying that the imitation of enemies was a bad thing; and I was thinking of a case in which a maritime people are harassed by enemies, as the Athenians were by Minos (I do not speak from any desire to recall past grievances); but he, as we know, was a great naval potentate, who compelled the inhabitants of Attica to pay him a cruel tribute; and in those days they had no ships of war as they now have, nor was the country filled with ship-timber, and therefore they could not readily build them. Hence they could not learn how to imitate their enemy at sea, and in this way, becoming sailors themselves, directly repel their enemies. Better for them to have lost many times over the seven youths, than that heavy-armed and stationary troops should have been turned into sailors, and accustomed to be often leaping on shore, and again to come running back to their ships; or should have fancied that there was no disgrace in not awaiting the attack of an enemy and dying boldly; and that there were good reasons, and plenty of them, for a man throwing away his arms, and betaking himself to flight, — which is not dishonourable, as people say, at certain times. This is the language of naval warfare, and is anything but worthy of extraordinary praise. For we should not teach bad habits, least of all to the best part of the citizens. You may learn the evil of such a practice from Homer, by whom Odysseus is introduced, rebuking Agamemnon, because he desires to draw down the ships to the sea at a time when the Achaeans are hard pressed by the Trojans, — he gets angry with him, and says:

‘Who, at a time when the battle is in full cry, biddest to drag the well-benched ships into the sea, that the prayers of the Trojans may be accomplished yet more, and high ruin fall upon us. For the Achaeans will not maintain the battle, when the ships are drawn into

the sea, but they will look behind and will cease from strife; in that the counsel which you give will prove injurious.'

You see that he quite knew triremes on the sea, in the neighbourhood of fighting men, to be an evil; — lions might be trained in that way to fly from a herd of deer. Moreover, naval powers which owe their safety to ships, do not give honour to that sort of warlike excellence which is most deserving of it. For he who owes his safety to the pilot and the captain, and the oarsman, and all sorts of rather inferior persons, cannot rightly give honour to whom honour is due. But how can a state be in a right condition which cannot justly award honour?

CLEINIAS: It is hardly possible, I admit; and yet, Stranger, we Cretans are in the habit of saying that the battle of Salamis was the salvation of Hellas.

ATHENIAN: Why, yes; and that is an opinion which is widely spread both among Hellenes and barbarians. But Megillus and I say rather, that the battle of Marathon was the beginning, and the battle of Plataea the completion, of the great deliverance, and that these battles by land made the Hellenes better; whereas the sea-fights of Salamis and Artemisium — for I may as well put them both together — made them no better, if I may say so without offence about the battles which helped to save us. And in estimating the goodness of a state, we regard both the situation of the country and the order of the laws, considering that the mere preservation and continuance of life is not the most honourable thing for men, as the vulgar think, but the continuance of the best life, while we live; and that again, if I am not mistaken, is a remark which has been made already.

CLEINIAS: Yes.

ATHENIAN: Then we have only to ask, whether we are taking the course which we acknowledge to be the best for the settlement and legislation of states.

CLEINIAS: The best by far.

ATHENIAN: And now let me proceed to another question: Who are

to be the colonists? May any one come out of all Crete; and is the idea that the population in the several states is too numerous for the means of subsistence? For I suppose that you are not going to send out a general invitation to any Hellene who likes to come. And yet I observe that to your country settlers have come from Argos and Aegina and other parts of Hellas. Tell me, then, whence do you draw your recruits in the present enterprise?

CLEINIAS: They will come from all Crete; and of other Hellenes, Peloponnesians will be most acceptable. For, as you truly observe, there are Cretans of Argive descent; and the race of Cretans which has the highest character at the present day is the Gortynian, and this has come from Gortys in the Peloponnesus.

ATHENIAN: Cities find colonization in some respects easier if the colonists are one race, which like a swarm of bees is sent out from a single country, either when friends leave friends, owing to some pressure of population or other similar necessity, or when a portion of a state is driven by factions to emigrate. And there have been whole cities which have taken flight when utterly conquered by a superior power in war. This, however, which is in one way an advantage to the colonist or legislator, in another point of view creates a difficulty. There is an element of friendship in the community of race, and language, and laws, and in common temples and rites of worship; but colonies which are of this homogeneous sort are apt to kick against any laws or any form of constitution differing from that which they had at home; and although the badness of their own laws may have been the cause of the factions which prevailed among them, yet from the force of habit they would fain preserve the very customs which were their ruin, and the leader of the colony, who is their legislator, finds them troublesome and rebellious. On the other hand, the conflux of several populations might be more disposed to listen to new laws; but then, to make them combine and pull together, as they say of horses, is a most difficult task, and the work of years. And yet there is nothing which tends more to the improvement of mankind than legislation and colonization.

CLEINIAS: No doubt; but I should like to know why you say so.

ATHENIAN: My good friend, I am afraid that the course of my speculations is leading me to say something depreciatory of legislators; but if the word be to the purpose, there can be no harm. And yet, why am I disquieted, for I believe that the same principle applies equally to all human things?

CLEINIAS: To what are you referring?

ATHENIAN: I was going to say that man never legislates, but accidents of all sorts, which legislate for us in all sorts of ways. The violence of war and the hard necessity of poverty are constantly overturning governments and changing laws. And the power of disease has often caused innovations in the state, when there have been pestilences, or when there has been a succession of bad seasons continuing during many years. Any one who sees all this, naturally rushes to the conclusion of which I was speaking, that no mortal legislates in anything, but that in human affairs chance is almost everything. And this may be said of the arts of the sailor, and the pilot, and the physician, and the general, and may seem to be well said; and yet there is another thing which may be said with equal truth of all of them.

CLEINIAS: What is it?

ATHENIAN: That God governs all things, and that chance and opportunity co-operate with Him in the government of human affairs. There is, however, a third and less extreme view, that art should be there also; for I should say that in a storm there must surely be a great advantage in having the aid of the pilot's art. You would agree?

CLEINIAS: Yes.

ATHENIAN: And does not a like principle apply to legislation as well as to other things: even supposing all the conditions to be favourable which are needed for the happiness of the state, yet the true legislator must from time to time appear on the scene?

CLEINIAS: Most true.

ATHENIAN: In each case the artist would be able to pray rightly for

certain conditions, and if these were granted by fortune, he would then only require to exercise his art?

CLEINIAS: Certainly.

ATHENIAN: And all the other artists just now mentioned, if they were bidden to offer up each their special prayer, would do so?

CLEINIAS: Of course.

ATHENIAN: And the legislator would do likewise?

CLEINIAS: I believe that he would.

ATHENIAN: ‘Come, legislator,’ we will say to him; ‘what are the conditions which you require in a state before you can organize it?’ How ought he to answer this question? Shall I give his answer?

CLEINIAS: Yes.

ATHENIAN: He will say— ‘Give me a state which is governed by a tyrant, and let the tyrant be young and have a good memory; let him be quick at learning, and of a courageous and noble nature; let him have that quality which, as I said before, is the inseparable companion of all the other parts of virtue, if there is to be any good in them.’

CLEINIAS: I suppose, Megillus, that this companion virtue of which the Stranger speaks, must be temperance?

ATHENIAN: Yes, Cleinias, temperance in the vulgar sense; not that which in the forced and exaggerated language of some philosophers is called prudence, but that which is the natural gift of children and animals, of whom some live continently and others incontinently, but when isolated, was, as we said, hardly worth reckoning in the catalogue of goods. I think that you must understand my meaning.

CLEINIAS: Certainly.

ATHENIAN: Then our tyrant must have this as well as the other qualities, if the state is to acquire in the best manner and in the

shortest time the form of government which is most conducive to happiness; for there neither is nor ever will be a better or speedier way of establishing a polity than by a tyranny.

CLEINIAS: By what possible arguments, Stranger, can any man persuade himself of such a monstrous doctrine?

ATHENIAN: There is surely no difficulty in seeing, Cleinias, what is in accordance with the order of nature?

CLEINIAS: You would assume, as you say, a tyrant who was young, temperate, quick at learning, having a good memory, courageous, of a noble nature?

ATHENIAN: Yes; and you must add fortunate; and his good fortune must be that he is the contemporary of a great legislator, and that some happy chance brings them together. When this has been accomplished, God has done all that he ever does for a state which he desires to be eminently prosperous; He has done second best for a state in which there are two such rulers, and third best for a state in which there are three. The difficulty increases with the increase, and diminishes with the diminution of the number.

CLEINIAS: You mean to say, I suppose, that the best government is produced from a tyranny, and originates in a good lawgiver and an orderly tyrant, and that the change from such a tyranny into a perfect form of government takes place most easily; less easily when from an oligarchy; and, in the third degree, from a democracy: is not that your meaning?

ATHENIAN: Not so; I mean rather to say that the change is best made out of a tyranny; and secondly, out of a monarchy; and thirdly, out of some sort of democracy: fourth, in the capacity for improvement, comes oligarchy, which has the greatest difficulty in admitting of such a change, because the government is in the hands of a number of potentates. I am supposing that the legislator is by nature of the true sort, and that his strength is united with that of the chief men of the state; and when the ruling element is numerically small, and at the same time very strong, as in a tyranny, there the

change is likely to be easiest and most rapid.

CLEINIAS: How? I do not understand.

ATHENIAN: And yet I have repeated what I am saying a good many times; but I suppose that you have never seen a city which is under a tyranny?

CLEINIAS: No, and I cannot say that I have any great desire to see one.

ATHENIAN: And yet, where there is a tyranny, you might certainly see that of which I am now speaking.

CLEINIAS: What do you mean?

ATHENIAN: I mean that you might see how, without trouble and in no very long period of time, the tyrant, if he wishes, can change the manners of a state: he has only to go in the direction of virtue or of vice, whichever he prefers, he himself indicating by his example the lines of conduct, praising and rewarding some actions and reproving others, and degrading those who disobey.

CLEINIAS: But how can we imagine that the citizens in general will at once follow the example set to them; and how can he have this power both of persuading and of compelling them?

ATHENIAN: Let no one, my friends, persuade us that there is any quicker and easier way in which states change their laws than when the rulers lead: such changes never have, nor ever will, come to pass in any other way. The real impossibility or difficulty is of another sort, and is rarely surmounted in the course of ages; but when once it is surmounted, ten thousand or rather all blessings follow.

CLEINIAS: Of what are you speaking?

ATHENIAN: The difficulty is to find the divine love of temperate and just institutions existing in any powerful forms of government, whether in a monarchy or oligarchy of wealth or of birth. You might as well hope to reproduce the character of Nestor, who is said to have

excelled all men in the power of speech, and yet more in his temperance. This, however, according to the tradition, was in the times of Troy; in our own days there is nothing of the sort; but if such an one either has or ever shall come into being, or is now among us, blessed is he and blessed are they who hear the wise words that flow from his lips. And this may be said of power in general: When the supreme power in man coincides with the greatest wisdom and temperance, then the best laws and the best constitution come into being; but in no other way. And let what I have been saying be regarded as a kind of sacred legend or oracle, and let this be our proof that, in one point of view, there may be a difficulty for a city to have good laws, but that there is another point of view in which nothing can be easier or sooner effected, granting our supposition.

CLEINIAS: How do you mean?

ATHENIAN: Let us try to amuse ourselves, old boys as we are, by moulding in words the laws which are suitable to your state.

CLEINIAS: Let us proceed without delay.

ATHENIAN: Then let us invoke God at the settlement of our state; may He hear and be propitious to us, and come and set in order the State and the laws!

CLEINIAS: May He come!

ATHENIAN: But what form of polity are we going to give the city?

CLEINIAS: Tell us what you mean a little more clearly. Do you mean some form of democracy, or oligarchy, or aristocracy, or monarchy? For we cannot suppose that you would include tyranny.

ATHENIAN: Which of you will first tell me to which of these classes his own government is to be referred?

MEGILLUS: Ought I to answer first, since I am the elder?

CLEINIAS: Perhaps you should.

MEGILLUS: And yet, Stranger, I perceive that I cannot say, without more thought, what I should call the government of Lacedaemon, for it seems to me to be like a tyranny, — the power of our Ephors is marvellously tyrannical; and sometimes it appears to me to be of all cities the most democratical; and who can reasonably deny that it is an aristocracy (compare Ar. Pol.)? We have also a monarchy which is held for life, and is said by all mankind, and not by ourselves only, to be the most ancient of all monarchies; and, therefore, when asked on a sudden, I cannot precisely say which form of government the Spartan is.

CLEINIAS: I am in the same difficulty, Megillus; for I do not feel confident that the polity of Cnosus is any of these.

ATHENIAN: The reason is, my excellent friends, that you really have polities, but the states of which we were just now speaking are merely aggregations of men dwelling in cities who are the subjects and servants of a part of their own state, and each of them is named after the dominant power; they are not polities at all. But if states are to be named after their rulers, the true state ought to be called by the name of the God who rules over wise men.

CLEINIAS: And who is this God?

ATHENIAN: May I still make use of fable to some extent, in the hope that I may be better able to answer your question: shall I?

CLEINIAS: By all means.

ATHENIAN: In the primeval world, and a long while before the cities came into being whose settlements we have described, there is said to have been in the time of Cronos a blessed rule and life, of which the best-ordered of existing states is a copy (compare Statesman).

CLEINIAS: It will be very necessary to hear about that.

ATHENIAN: I quite agree with you; and therefore I have introduced the subject.

CLEINIAS: Most appropriately; and since the tale is to the point, you will do well in giving us the whole story.

ATHENIAN: I will do as you suggest. There is a tradition of the happy life of mankind in days when all things were spontaneous and abundant. And of this the reason is said to have been as follows: — Cronos knew what we ourselves were declaring, that no human nature invested with supreme power is able to order human affairs and not overflow with insolence and wrong. Which reflection led him to appoint not men but demigods, who are of a higher and more divine race, to be the kings and rulers of our cities; he did as we do with flocks of sheep and other tame animals. For we do not appoint oxen to be the lords of oxen, or goats of goats; but we ourselves are a superior race, and rule over them. In like manner God, in His love of mankind, placed over us the demons, who are a superior race, and they with great ease and pleasure to themselves, and no less to us, taking care of us and giving us peace and reverence and order and justice never failing, made the tribes of men happy and united. And this tradition, which is true, declares that cities of which some mortal man and not God is the ruler, have no escape from evils and toils. Still we must do all that we can to imitate the life which is said to have existed in the days of Cronos, and, as far as the principle of immortality dwells in us, to that we must hearken, both in private and public life, and regulate our cities and houses according to law, meaning by the very term ‘law,’ the distribution of mind. But if either a single person or an oligarchy or a democracy has a soul eager after pleasures and desires — wanting to be filled with them, yet retaining none of them, and perpetually afflicted with an endless and insatiable disorder; and this evil spirit, having first trampled the laws under foot, becomes the master either of a state or of an individual, — then, as I was saying, salvation is hopeless. And now, Cleinias, we have to consider whether you will or will not accept this tale of mine.

CLEINIAS: Certainly we will.

ATHENIAN: You are aware, — are you not? — that there are often said to be as many forms of laws as there are of governments, and of the latter we have already mentioned all those which are commonly

recognized. Now you must regard this as a matter of first-rate importance. For what is to be the standard of just and unjust, is once more the point at issue. Men say that the law ought not to regard either military virtue, or virtue in general, but only the interests and power and preservation of the established form of government; this is thought by them to be the best way of expressing the natural definition of justice.

CLEINIAS: How?

ATHENIAN: Justice is said by them to be the interest of the stronger (Republic).

CLEINIAS: Speak plainer.

ATHENIAN: I will:— ‘Surely,’ they say, ‘the governing power makes whatever laws have authority in any state’?

CLEINIAS: True.

ATHENIAN: ‘Well,’ they would add, ‘and do you suppose that tyranny or democracy, or any other conquering power, does not make the continuance of the power which is possessed by them the first or principal object of their laws’?

CLEINIAS: How can they have any other?

ATHENIAN: ‘And whoever transgresses these laws is punished as an evil-doer by the legislator, who calls the laws just’?

CLEINIAS: Naturally.

ATHENIAN: ‘This, then, is always the mode and fashion in which justice exists.’

CLEINIAS: Certainly, if they are correct in their view.

ATHENIAN: Why, yes, this is one of those false principles of government to which we were referring.

CLEINIAS: Which do you mean?

ATHENIAN: Those which we were examining when we spoke of who ought to govern whom. Did we not arrive at the conclusion that parents ought to govern their children, and the elder the younger, and the noble the ignoble? And there were many other principles, if you remember, and they were not always consistent. One principle was this very principle of might, and we said that Pindar considered violence natural and justified it.

CLEINIAS: Yes; I remember.

ATHENIAN: Consider, then, to whom our state is to be entrusted. For there is a thing which has occurred times without number in states —

CLEINIAS: What thing?

ATHENIAN: That when there has been a contest for power, those who gain the upper hand so entirely monopolize the government, as to refuse all share to the defeated party and their descendants — they live watching one another, the ruling class being in perpetual fear that some one who has a recollection of former wrongs will come into power and rise up against them. Now, according to our view, such governments are not polities at all, nor are laws right which are passed for the good of particular classes and not for the good of the whole state. States which have such laws are not polities but parties, and their notions of justice are simply unmeaning. I say this, because I am going to assert that we must not entrust the government in your state to any one because he is rich, or because he possesses any other advantage, such as strength, or stature, or again birth: but he who is most obedient to the laws of the state, he shall win the palm; and to him who is victorious in the first degree shall be given the highest office and chief ministry of the gods; and the second to him who bears the second palm; and on a similar principle shall all the other offices be assigned to those who come next in order. And when I call the rulers servants or ministers of the law, I give them this name not for the sake of novelty, but because I certainly believe that upon such service or ministry depends the well- or ill-being of the state. For that state in which the law is subject and has no authority, I perceive to be

on the highway to ruin; but I see that the state in which the law is above the rulers, and the rulers are the inferiors of the law, has salvation, and every blessing which the Gods can confer.

CLEINIAS: Truly, Stranger, you see with the keen vision of age.

ATHENIAN: Why, yes; every man when he is young has that sort of vision dullest, and when he is old keenest.

CLEINIAS: Very true.

ATHENIAN: And now, what is to be the next step? May we not suppose the colonists to have arrived, and proceed to make our speech to them?

CLEINIAS: Certainly.

ATHENIAN: ‘Friends,’ we say to them,— ‘God, as the old tradition declares, holding in his hand the beginning, middle, and end of all that is, travels according to His nature in a straight line towards the accomplishment of His end. Justice always accompanies Him, and is the punisher of those who fall short of the divine law. To justice, he who would be happy holds fast, and follows in her company with all humility and order; but he who is lifted up with pride, or elated by wealth or rank, or beauty, who is young and foolish, and has a soul hot with insolence, and thinks that he has no need of any guide or ruler, but is able himself to be the guide of others, he, I say, is left deserted of God; and being thus deserted, he takes to him others who are like himself, and dances about, throwing all things into confusion, and many think that he is a great man, but in a short time he pays a penalty which justice cannot but approve, and is utterly destroyed, and his family and city with him. Wherefore, seeing that human things are thus ordered, what should a wise man do or think, or not do or think’?

CLEINIAS: Every man ought to make up his mind that he will be one of the followers of God; there can be no doubt of that.

ATHENIAN: Then what life is agreeable to God, and becoming in His followers? One only, expressed once for all in the old saying that

'like agrees with like, with measure measure,' but things which have no measure agree neither with themselves nor with the things which have. Now God ought to be to us the measure of all things, and not man (compare Crat.; Theaet.), as men commonly say (Protagoras): the words are far more true of Him. And he who would be dear to God must, as far as is possible, be like Him and such as He is. Wherefore the temperate man is the friend of God, for he is like Him; and the intemperate man is unlike Him, and different from Him, and unjust. And the same applies to other things; and this is the conclusion, which is also the noblest and truest of all sayings, — that for the good man to offer sacrifice to the Gods, and hold converse with them by means of prayers and offerings and every kind of service, is the noblest and best of all things, and also the most conducive to a happy life, and very fit and meet. But with the bad man, the opposite of this is true: for the bad man has an impure soul, whereas the good is pure; and from one who is polluted, neither a good man nor God can without impropriety receive gifts. Wherefore the unholy do only waste their much service upon the Gods, but when offered by any holy man, such service is most acceptable to them. This is the mark at which we ought to aim. But what weapons shall we use, and how shall we direct them? In the first place, we affirm that next after the Olympian Gods and the Gods of the State, honour should be given to the Gods below; they should receive everything in even numbers, and of the second choice, and ill omen, while the odd numbers, and the first choice, and the things of lucky omen, are given to the Gods above, by him who would rightly hit the mark of piety. Next to these Gods, a wise man will do service to the demons or spirits, and then to the heroes, and after them will follow the private and ancestral Gods, who are worshipped as the law prescribes in the places which are sacred to them. Next comes the honour of living parents, to whom, as is meet, we have to pay the first and greatest and oldest of all debts, considering that all which a man has belongs to those who gave him birth and brought him up, and that he must do all that he can to minister to them, first, in his property, secondly, in his person, and thirdly, in his soul, in return for the endless care and travail which they bestowed upon him of old, in the days of his infancy, and which he is now to pay back to them

when they are old and in the extremity of their need. And all his life long he ought never to utter, or to have uttered, an unbecoming word to them; for of light and fleeting words the penalty is most severe; Nemesis, the messenger of justice, is appointed to watch over all such matters. When they are angry and want to satisfy their feelings in word or deed, he should give way to them; for a father who thinks that he has been wronged by his son may be reasonably expected to be very angry. At their death, the most moderate funeral is best, neither exceeding the customary expense, nor yet falling short of the honour which has been usually shown by the former generation to their parents. And let a man not forget to pay the yearly tribute of respect to the dead, honouring them chiefly by omitting nothing that conduces to a perpetual remembrance of them, and giving a reasonable portion of his fortune to the dead. Doing this, and living after this manner, we shall receive our reward from the Gods and those who are above us (i.e. the demons); and we shall spend our days for the most part in good hope. And how a man ought to order what relates to his descendants and his kindred and friends and fellow-citizens, and the rites of hospitality taught by Heaven, and the intercourse which arises out of all these duties, with a view to the embellishment and orderly regulation of his own life — these things, I say, the laws, as we proceed with them, will accomplish, partly persuading, and partly when natures do not yield to the persuasion of custom, chastising them by might and right, and will thus render our state, if the Gods co-operate with us, prosperous and happy. But of what has to be said, and must be said by the legislator who is of my way of thinking, and yet, if said in the form of law, would be out of place — of this I think that he may give a sample for the instruction of himself and of those for whom he is legislating; and then when, as far as he is able, he has gone through all the preliminaries, he may proceed to the work of legislation. Now, what will be the form of such prefaces? There may be a difficulty in including or describing them all under a single form, but I think that we may get some notion of them if we can guarantee one thing.

CLEINIAS: What is that?

ATHENIAN: I should wish the citizens to be as readily persuaded to virtue as possible; this will surely be the aim of the legislator in all his laws.

CLEINIAS: Certainly.

ATHENIAN: The proposal appears to me to be of some value; and I think that a person will listen with more gentleness and good-will to the precepts addressed to him by the legislator, when his soul is not altogether unprepared to receive them. Even a little done in the way of conciliation gains his ear, and is always worth having. For there is no great inclination or readiness on the part of mankind to be made as good, or as quickly good, as possible. The case of the many proves the wisdom of Hesiod, who says that the road to wickedness is smooth and can be travelled without perspiring, because it is so very short:

‘But before virtue the immortal Gods have placed the sweat of labour, and long and steep is the way thither, and rugged at first; but when you have reached the top, although difficult before, it is then easy.’ (Works and Days.)

CLEINIAS: Yes; and he certainly speaks well.

ATHENIAN: Very true: and now let me tell you the effect which the preceding discourse has had upon me.

CLEINIAS: Proceed.

ATHENIAN: Suppose that we have a little conversation with the legislator, and say to him— ‘O, legislator, speak; if you know what we ought to say and do, you can surely tell.’

CLEINIAS: Of course he can.

ATHENIAN: ‘Did we not hear you just now saying, that the legislator ought not to allow the poets to do what they liked? For that they would not know in which of their words they went against the laws, to the hurt of the state.’

CLEINIAS: That is true.

ATHENIAN: May we not fairly make answer to him on behalf of the poets?

CLEINIAS: What answer shall we make to him?
